**CNS depressants**, including **alcohol**, **antihistamines**, **antidepressants**, **opioids**, and **sedative/hypnotics**. **Antacids** may ↓ absorption of orally administered phenytoin. ↑ systemic clearance of antileukemic drugs **teniposide** and **methotrexate** which has been associated with a worse event free survival, phenytoin use is not recommended in children undergoing chemotherapy for acute lymphocytic leukemia. **Calcium** and **sucralfate** ↓ phenytoin absorption.
**Drug-Food:** Phenytoin may ↓ absorption of **folic acid**. Concurrent administration of **enteral tube feedings** may ↓ phenytoin absorption.

### Route/Dosage

IM administration is not recommended due to erratic absorption and pain on injection.

### Anticonvulsant

**PO (Adults):** Loading dose of 15–20 mg/kg as extended capsules in 3 divided doses given every 2–4 hr; maintenance dose 5–6 mg/kg/day given in 1–3 divided doses; usual dosing range = 200–1200 mg/day.
**PO (Children 10–16 yr):** 6–7 mg/kg/day in 2–3 divided doses.
**PO (Children 7–9 yr):** 7–8 mg/kg/day in 2–3 divided doses.
**PO (Children 4–6 yr):** 7.5–9 mg/kg/day in 2–3 divided doses.
**PO (Children 0.5–3 yr):** 8–10 mg/kg/day in 2–3 divided doses.
**PO (Neonates up to 6 mo):** 5–8 mg/kg/day in 2 divided doses, may require q 8 hr dosing.
**IV (Adults):** *Status epilepticus loading dose*—15–20 mg/kg. Rate not to exceed 25–50 mg/min. *Maintenance dose*—same as PO dosing above.
**IV (Children):** *Status epilepticus loading dose*—15–20 mg/kg at 1–3 mg/kg/min. *Maintenance dose*—same as PO dosing above.

### Antiarrhythmic

**IV (Adults):** 50–100 mg q 10–15 min until arrhythmia is abolished, or a total of 15 mg/kg has been given, or toxicity occurs.
**PO (Adults):** Loading dose: 250 mg QID for 1 day, then 250 mg BID for 2 days, then maintenance at 300–400 mg/day in divided doses 1–4 times/day.
**IV (Children):** 1.25 mg/kg q 5 min, may repeat up to total loading dose of 15 mg/kg. *Maintenance dose*—5–10 mg/kg/day in 2–3 divided doses IV or PO.

### Availability (generic available)

**Chewable tablets:** 50 mg. **Cost:** $41.99/90.
**Oral suspension:** 125 mg/5 mL. **Cost:** *Generic*—$28.99/237 mL. **Extended-release capsules:** 30 mg, 100 mg, 200 mg, 300 mg. **Cost:** *Dilantin*—30 mg $34.99/90; *Phenytek*—200 mg $65.97/90, 300 mg $95.27/90; *Generic*—100 mg $23.18/90. **Injection:** 50 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor closely for notable changes in behavior that could indicate the emergence or worsening of suicidal thoughts or behavior or depression.
- Assess oral hygiene. Vigorous cleaning beginning within 10 days of initiation of phenytoin therapy may help control gingival hyperplasia.
- Assess patient for phenytoin hypersensitivity syndrome (fever, skin rash, lymphadenopathy). Rash usually occurs within the first 2 wk of therapy. Hypersensitivity syndrome usually occurs at 3–8 wk but may occur up to 12 wk after initiation of therapy. May lead to renal failure, rhabdomyolysis, or hepatic necrosis; may be fatal.
- Observe patient for development of rash. Discontinue phenytoin at the first sign of skin reactions. Serious adverse reactions such as exfoliative, purpuric, or bullous rashes or the development of lupus erythematosus, Stevens-Johnson syndrome, or toxic epidermal necrolysis preclude further use of phenytoin or fosphenytoin. ⛓ Stevens-Johnson syndrome and toxic epidermal necrolysis are significantly more common in patients with a particular human leukocyte antigen (HLA) allele, HLA-B*1502 (occurs almost exclusively in patients with Asian ancestry, including including Han Chinese, Filipinos, Malaysians, South Asian Indians, and Thais). Avoid using phenytoin or fosphenytoin as alternatives to carbamazepine for patients who test positive. If less serious skin eruptions (measles-like or scarlatiniform) occur, phenytoin may be resumed after complete clearing of the rash. If rash reappears, further use of fosphenytoin or phenytoin should be avoided.
- **Seizures:** Assess location, duration, frequency, and characteristics of seizure activity. EEG may be monitored periodically throughout therapy.
- Monitor blood pressure, ECG, and respiratory function continuously during administration of IV phenytoin and throughout period when peak serum phenytoin levels occur (15–30 min after administration).

- **Arrhythmias:** Monitor ECG continuously during treatment of arrhythmias.
- ***Lab Test Considerations:*** Monitor CBC, serum calcium, albumin, and hepatic function tests prior to and monthly for the first several months, then periodically during therapy.
- May cause ↑ serum alkaline phosphatase, GGT, and glucose levels.
- Monitor serum folate concentrations periodically during prolonged therapy.
- ***Toxicity and Overdose:*** Monitor serum phenytoin levels routinely. Therapeutic blood levels are 10–20 mcg/mL (8–15 mcg/mL in neonates) in patients with normal serum albumin and renal function. In patients with altered protein binding (neonates, patients with renal failure, hypoalbuminemia, acute trauma), free phenytoin serum concentrations should be monitored. Therapeutic serum free phenytoin levels are 1–2 mcg/mL.
- Progressive signs and symptoms of phenytoin toxicity include nystagmus, ataxia, confusion, nausea, slurred speech, and dizziness.

## Potential Nursing Diagnoses

Risk for injury (Indications)
Impaired oral mucous membrane (Side Effects)

## Implementation

- Implement seizure precautions.
- When transferring from phenytoin to another anticonvulsant, dosage adjustments are made gradually over several weeks.
- When substituting *fosphenytoin* for oral *phenytoin* therapy, the same total daily dose may be given as a single dose. Unlike parenteral phenytoin, fosphenytoin may be given safely by the IM route.
- **PO:** Administer with or immediately after meals to minimize GI irritation. Shake liquid preparations well before pouring. Use a calibrated measuring device for accurate dose. Chewable tablets must be crushed or chewed well before swallowing. Capsules may be opened and mixed with food or fluids for patients with difficulty swallowing. To prevent direct contact of alkaline drug with mucosa, have patient swallow a liquid first, follow with mixture of medication, then follow with a full glass of water or milk or with food.
- If patient is receiving enteral tube feedings, 2 hr should elapse between feeding and phenytoin administration. If phenytoin is administered via nasogastric tube, flush tube with 2–4 oz water before and after administration.
- Do not interchange chewable phenytoin tablets with phenytoin sodium capsules, because they are not bioequivalent.
- Capsules labeled "extended" may be used for once-a-day dose; those labeled "prompt" may result in toxic serum levels if used for once-a-day dose.

### IV Administration

- **IV:** Slight yellow color will not alter solution potency. If refrigerated, may form precipitate, which dissolves after warming to room temperature. Discard solution that is not clear.
- To prevent precipitation and minimize local venous irritation, follow infusion with 0.9% NaCl through the same needle or catheter. Avoid extravasation; phenytoin is caustic to tissues; may lead to purple glove syndrome. Monitor infusion site closely.
- **Direct IV:** Administer undiluted. ***Rate:*** Administer at a rate not to exceed 50 mg over 1 min in adults or 1–3 mg/kg/min in neonates. Rapid administration may result in severe hypotension, cardiovascular collapse, or CNS depression.
- **Intermittent Infusion:** ***Diluent:*** Administer by mixing with no more than 50 mL of 0.9% NaCl. ***Concentration:*** 1–10 mg/mL. Administer immediately following admixture. Use tubing with a 0.45- to 0.22-micron in-line filter. ***Rate:*** Complete infusion within 1 hr at a rate not to exceed 50 mg/min. In patients who may develop hypotension, patients with cardiovascular disease, or geriatric patients maximum rate of 25 mg/min [may be as low as 5–10 mg/min]. Maximum rate in neonates is 1–3 mg/kg/min. Monitor cardiac function and blood pressure throughout infusion.
- **Y-Site Compatibility:** cisplatin, foscarnet, tacrolimus.
- **Y-Site Incompatibility:** acyclovir, alfentanil, amikacin, aminophylline, amphotericin B cholesteryl, amphotericin B colloidal, amphotericin B liposome, ampicillin, ampicillin/sulbactam, ascorbic acid, atracurium, atropine, azathioprine, aztreonam, benztropine, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gulconate, carboplatin, caspofungin, cefamandole, cefazolin, cefepime, cefmetazole, cefonocid, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime,

ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, chlorpormazine, cimetidine, ciprofloxacin, clindamycin, cyanocobalamine, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, dantrolene, daptomycin, dexamethasone, dexmeditomidine, diltiazem, diazoxide, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium, doxorubicin hydrochloride, doxycycline, enalaprilat, ephedrine, epinephrine, epirubicin, epoetin, ertapenem, erythromycin, etoposide, etoposide phosphate, fenoldopam, fentanyl, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hetastarch, hydralazine, hydrocortisone sodium succinate, hydromorphone, hydroxyzine, ifosfamide, imipenem/cilastatin, inamrinone, indomethacin, insulin, isoproterenol, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methadone, methotrexate, methoxamine, methyldopate, methylprednisolone, metoclopramide, mezlocillin, micafungin, miconazole, midazolam, milrinone, mitoxantrone, morphine, multivitamin infusion, nafcillin, nalbuphine, naloxone, nesiritide, netilmicin, nitroglycerin, nitroprusside, norepinpehrine, octreotide, ondansetron, oxacillin, oxytocin, paclitaxel, palonosetron, pantoprazole, papaverine, pemetrexed, penicillin G, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxime, quinapristin/dalfopristin, ranitidine, ritodrine, rocuronium, sodium acetate, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, teniposide, theophylline, thiamine, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimethaphan, trimethoprim/sulfamethoxazole, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, vitamin B complex with C, voriconazole.

- **Additive Incompatibility:** Do not admix with other solutions or medications, especially dextrose, because precipitation will occur.

## Patient/Family Teaching

- Instruct patient to take medication as directed, at the same time each day. If a dose is missed from a once-a-day schedule, take as soon as possible and return to regular dosing schedule. If taking several doses a day, take missed dose as soon as possible within 4 hr of next scheduled dose; do not double doses. Consult health care professional if doses are missed for 2 consecutive days. Abrupt withdrawal may lead to status epilepticus.
- May cause drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Do not resume driving until physician gives clearance based on control of seizure disorder.
- Caution patient to avoid taking alcohol, OTC medications, or herbal medications concurrently with phenytoin without consulting health care professional.
- Instruct patient on importance of maintaining good dental hygiene and seeing dentist frequently for teeth cleaning to prevent tenderness, bleeding, and gingival hyperplasia. Institution of oral hygiene program within 10 days of initiation of phenytoin therapy may minimize growth rate and severity of gingival enlargement. Patients under 23 yr of age and those taking doses >500 mg/day are at increased risk for gingival hyperplasia.
- Advise patient that brands of phenytoin may not be equivalent. Check with health care professional if brand or dose form is changed.
- Advise diabetic patients to monitor blood glucose carefully and to notify health care professional of significant changes.
- Instruct patient to notify health care professional of medication regimen prior to treatment or surgery.
- Advise patient not to take phenytoin within 2–3 hr of antacids.
- Advise female patients to use an additional nonhormonal method of contraception during therapy. Instruct patient to notify health care professional if pregnancy is planned or suspected.
- Advise patient to carry identification describing disease process and medication regimen at all times.
- Instruct patients that behavioral changes, skin rash, fever, sore throat, mouth ulcers, easy bruising, petechiae, unusual bleeding, abdominal pain, chills, pale stools, dark urine, jaundice, severe nausea or vomiting, drowsiness, slurred speech, unsteady gait. swollen glands,or persistent headache should be reported to health care professional immediately. Advise patient and family to notify health care professional if thoughts about suicide or dying,

attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.

- Emphasize the importance of routine exams to monitor progress. Patient should have routine physical exams, especially monitoring skin and lymph nodes, and EEG testing.

## Evaluation/Desired Outcomes

- Decrease or cessation of seizures without excessive sedation.
- Suppression of arrhythmias.
- Relief of neuropathic pain.

# phosphate/biphosphate

(**foss**-fate/bye-**foss**-fate)

Fleet Enema, OsmoPrep, Visicol

***Classification***

Therapeutic: laxatives (saline)

**Pregnancy Category C**

## Indications

Intermittent treatment of chronic constipation.
**Visicol and OsmoPrep:** Cleansing of the bowel as a preparation for colonoscopy in adults 18 yr of age or older.

## Action

Osmotically active in the lumen of the GI tract. Produces laxative effect by causing water retention and stimulation of peristalsis. Stimulates motility and inhibits fluid and electrolyte absorption from the small intestine. **Therapeutic Effects:** Relief of constipation. Emptying of the bowel.

## Pharmacokinetics

**Absorption:** 1–20% of rectally administered sodium and phosphate may be absorbed; some absorption follows oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Excreted by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE (laxative effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 0.5–3 hr | unknown | unknown |
| Rect | 2–5 min | unknown | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Abdominal pain, nausea, or vomiting, especially when associated with fever or other signs of an acute abdomen; Severe renal or cardiovascular disease; Intestinal obstruction; OB: Not recommended for use at term; *Visicol and OsmoPrep*—CHF, ascites, unstable angina, acute colitis, toxic megacolon, or hypomotility syndrome; Pedi: Children <2 yr.
**Use Cautiously in:** Excessive or chronic use (may lead to dependence); Renal or cardiovascular disease, dehydration or concurrent use of diuretics or other drugs known to alter electrolytes (correct abnormalities prior to administration); Dehydration, renal dysfunction, bowel obstruction, active colitis, or concurrent use of diuretics, ACE inhibitors, ARBs, or NSAIDs (↑ risk of acute phosphate nephropathy); OB: May cause sodium retention and edema; Geri: May be more sensitive to effects; *Visicol*—use cautiously within 3 mo of MI or cardiac surgery or in patients with acute exacerbations of inflammatory bowel disease.

## Adverse Reactions/Side Effects

**CNS:** *Visicol*—dizziness, headache. **CV:** ARRHYTHMIAS. **GI:** cramping, nausea, colonic aphtous ulcerations; *Visicol and OsmoPrep*, abdominal bloating, abdominal pain, vomiting. **F and E:** hyperphosphatemia, hypocalcemia, hypokalemia, sodium retention. **GU:** renal dysfunction.

## Interactions

**Drug-Drug:** *Visicol and OsmoPrep*—Concurrently administered oral medications may not be absorbed due to rapid peristalsis and diarrhea.

## Route/Dosage

Each Fleet Enema contains 4.4 g sodium/118 mL.
**PO (Adults:** *Visicol*—evening before colonoscopy: 3 tablets every 15 min (with at least 8 oz of water), last dose will be 2 tablets (total of 20 tablets); on morning of colonoscopy starting 3–5 hr before procedure, 3 tablets every 15 min (with at least 8 oz of clear liquids), last dose will be 2 tablets (total of 20 tablets); should not be repeated in less than 7 days; *OsmoPrep*—evening before colonoscopy: 4 tablets every 15 min (with at least 8 oz of water) for a total of 20 tablets; on morning of colonoscopy starting 3–5 hr before procedure, 4 tablets every 15 min (with at least 8 oz of clear liquids), for a total of 12 tablets; should not be repeated in less than 7 days.
**Rect (Adults and Children >12 yr):** 118 mL Fleet Enema.

**Rect (Children >2 yr):** ½ of the adult dose.

### Availability (generic available)

**Enema:** 7 g sodium phosphate and 19 g sodium biphosphate/118 mL in 67.5- and 133-mL containers. **Tablets (Visicol):** 1.5 g. **Tablets (OsmoPrep):** 1.5 g.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for fever, abdominal distention, presence of bowel sounds, and usual pattern of bowel function.
- Assess color, consistency, and amount of stool produced.
- May rarely cause arrhythmias. Monitor patients with underlying cardiovascular disease, renal disease, bowel perforation, misuse or overdose.
- ***Lab Test Considerations:*** May cause increased serum sodium and phosphorus levels, decreased serum calcium and potassium levels, and acidosis. Electrolyte changes are transient, self-limiting, do not require treatment and are not usually associated with adverse clinical events.

### Potential Nursing Diagnoses

Constipation (Indications)

### Implementation

- Do not administer at bedtime or late in the day.
- **PO:** Administer on an empty stomach for more rapid results. Mix dose in at least ½ glass cold water. May be followed by carbonated beverage or fruit juice to improve flavor.
- See Route and Dose section for dosing of *Visicol* and *OsmoPrep*. Undigested *Visicol* tablets may appear in the stool or be visualized during colonoscopy.
- **Rect:** Position patient on left side with knee slightly flexed. Insert prelubricated tip about 2 inches into rectum, aiming toward the umbilicus. Gently squeeze bottle until empty. Discontinue if resistance is met, because perforation may occur if contents are forced into rectum.

### Patient/Family Teaching

- Advise patient that laxatives should be used only for short-term therapy. Long-term therapy may cause electrolyte imbalance and dependence.
- Caution patient on sodium restriction that this product has a high sodium content.
- Advise patient not to take oral form of this medication within 2 hr of other medications.
- Encourage patient to use other forms of bowel regulation, such as increasing bulk in the diet, fluid intake, and mobility. Normal bowel habits may vary from 3 times/day to 3 times/wk.
- Advise patient to notify health care professional if unrelieved constipation, rectal bleeding, or symptoms of electrolyte imbalance (muscle cramps or pain, weakness, dizziness, and so forth) occur.

### Evaluation/Desired Outcomes

- Soft, formed bowel movement.
- Evacuation of the bowel.

## phytonadione

(fye-toe-na-**dye**-one)
Mephyton, vitamin K

***Classification***
Therapeutic: antidotes, vitamins
Pharmacologic: fat-soluble vitamins

**Pregnancy Category C**

### Indications

Prevention and treatment of hypoprothrombinemia, which may be associated with: Excessive doses of oral anticoagulants, Salicylates, Certain anti-infective agents, Nutritional deficiencies, Prolonged total parenteral nutrition. Prevention of hemorrhagic disease of the newborn.

### Action

Required for hepatic synthesis of blood coagulation factors II (prothrombin), VII, IX, and X.
**Therapeutic Effects:** Prevention of bleeding due to hypoprothrombinemia.

### Pharmacokinetics

**Absorption:** Well absorbed following oral or subcut administration. Oral absorption requires presence of bile salts. Some vitamin K is produced by bacteria in the GI tract.
**Distribution:** Crosses the placenta; does not enter breast milk.
**Metabolism and Excretion:** Rapidly metabolized by the liver.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK† | DURATION‡ |
|---|---|---|---|
| PO | 6–12 hr | unknown | unknown |
| Subcut | 1–2 hr | 3–6 hr | 12–14 hr |
| IV | 1–2 hr | 3–6 hr | 12 hr |

†Control of hemorrhage
‡Normal PT achieved

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hypersensitivity or intolerance to benzyl alcohol (injection only).

**Use Cautiously in:** Impaired liver function.
**Exercise Extreme Caution in:** Severe life-threatening reactions have occurred following IV administration, use other routes unless risk is justified.

### Adverse Reactions/Side Effects

**GI:** gastric upset, unusual taste. **Derm:** flushing, rash, urticaria. **Hemat:** hemolytic anemia. **Local:** erythema, pain at injection site, swelling. **Misc:** allergic reactions, hyperbilirubinemia (large doses in very premature infants), kernicterus.

### Interactions

**Drug-Drug:** Large doses will counteract the effect of **warfarin**. Large doses of **salicylates** or broad-spectrum **anti-infectives** may ↑ vitamin K requirements. **Bile acid sequestrants**, **mineral oil**, and **sucralfate** may ↓ vitamin K absorption from the GI tract.

### Route/Dosage

IV use of phytonadione should be reserved for patients with serious or life-threatening bleeding and elevated INR. Oral route is preferred in patients with elevated INRs and no serious or life-threatening bleeding. IM route should generally be avoided because of risk of hematoma formation.

### Treatment of Hypoprothrombinemia due to Vitamin K Deficiency (from factors other than warfarin)

**Subcut, IV (Adults):** 10 mg.
**PO (Adults):** 2.5–25 mg/day.
**Subcut, IV (Children >1 month):** 1–2 mg single dose.
**PO (Children >1 month):** 2.5–5 mg/day.

### Vitamin K Deficiency (Supratherapeutic INR) Secondary to Warfarin

**PO (Adults):** *INR ≥5 and <9 (no significant bleeding)* — Hold warfarin and give 1–2.5 mg vitamin K; if more rapid reversal required, given ≤5 mg vitamin K; *INR >9 (no significant bleeding)* — Hold warfarin and give 2.5–5 mg vitamin K.
**IV (Adults):** *Elevated INR with serious or life-threatening bleeding* — 10 mg slow infusion.

### Prevention of Hypoprothrombinemia during Total Parenteral Nutrition

**IV (Adults):** 5–10 mg once weekly.
**IV (Children):** 2–5 mg once weekly.

### Prevention of Hemorrhagic Disease of Newborn

**IM (Neonates):** 0.5–1 mg, within 1 hr of birth, may repeat in 6–8 hr if needed. May be repeated in 2–3 wk if mother received previous anticonvulsant/anticoagulant/anti-infective/antitubercular therapy. 1–5 mg may be given IM to mother 12–24 hr before delivery.

### Treatment of Hemorrhagic Disease of Newborn

**IM, Subcut (Neonates):** 1–2 mg/day.

### Availability (generic available)

**Tablets:** 5 mg. **Injection:** 2 mg/mL, 10 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor for frank and occult bleeding (guaiac stools, Hematest urine, and emesis). Monitor pulse and blood pressure frequently; notify physician immediately if symptoms of internal bleeding or hypovolemic shock develop. Inform all personnel of patient's bleeding tendency to prevent further trauma. Apply pressure to all venipuncture sites for at least 5 min; avoid unnecessary IM injections.
- Pedi: Monitor for side effects and adverse reactions. Children may be especially sensitive to the effects and side effects of vitamin K. Neonates, especially premature neonates, may be more sensitive than older children.
- ***Lab Test Considerations:*** Monitor prothrombin time (PT) prior to and throughout vitamin K therapy to determine response to and need for further therapy.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)
Ineffective tissue perfusion (Indications)

### Implementation

- The parenteral route is preferred for phytonadione therapy but, because of severe, potentially fatal hypersensitivity reactions, IV vitamin K is not recommended.
- Administration of whole blood or plasma may also be required in severe bleeding because of the delayed onset of this medication.
- Phytonadione is an antidote for warfarin overdose but does not counteract the anticoagulant activity of heparin.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute in 0.9% NaCl, D5W, or D5/0.9% NaCl. ***Rate:*** Administer over 30–60 min. Rate should not exceed 1 mg/min.
- **Y-Site Compatibility:** alfentanil, amikacin, aminophylline, ascorbic acid, atracurium, atropine, azathioprine, aztreonam, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, cefazolin, cefonocid, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol , chlorpromazine, cimetidine, clindamycin, cyanocobalamin, cyclosporine, dexamethasone sodium phosphate, digoxin, diphenhydramine, dopamine, doxycycline, enalaprilat, ephedrine, epinephrine, epoetin alfa, erythromycin, esmolol, famotidine, fentanyl, fluconazole, folic acid, furosemide, ganciclovir, gentamicin, glycopyrronate, heparin, hydrocortisone sodium succinate, imipenem/cilastatin, indomethacin, insulin, isoproterenol, ketorolac, labetalol, lidocaine, mannitol, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, metronidazole, midazolam, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, oxytocin, papaverine, penicillin G potassium, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, potassium chloride, procainamide, prochlorperazine, propranolol, pyridoxime, ranitidine, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, theophylline, thiamine, ticarcillin/clavulanate, tobramycin, tolazoline, trimethaphan, urokinase, vancomycin, vasopressin, verapamil, vitamin B with C.
- **Y-Site Incompatibility:** dantrolene, diazepam, diazoxide, magnesium sulfate, phenytoin, trimethoprim/sulfamethoxazole.

## Patient/Family Teaching

- Instruct patient to take phytonadione as directed. Take missed doses as soon as remembered unless almost time for next dose. Notify health care professional of missed doses.
- Cooking does not destroy substantial amounts of vitamin K. Patient should not drastically alter diet while taking vitamin K. See Appendix M for foods high in vitamin K.
- Caution patient to avoid IM injections and activities leading to injury. Use a soft toothbrush, do not floss, and shave with an electric razor until coagulation defect is corrected.
- Advise patient to report any symptoms of unusual bleeding or bruising (bleeding gums; nosebleed; black, tarry stools; hematuria; excessive menstrual flow).
- Patients receiving vitamin K therapy should be cautioned not to take other Rx, OTC, or herbal products without advice of health care professional.
- Advise patient to inform health care professional of medication regimen prior to treatment or surgery.
- Advise patient to carry identification at all times describing disease process.
- Emphasize the importance of frequent lab tests to monitor coagulation factors.

## Evaluation/Desired Outcomes

- Prevention of spontaneous bleeding or cessation of bleeding in patients with hypoprothrombinemia secondary to impaired intestinal absorption or oral anticoagulant, salicylate, or anti-infective therapy.
- Prevention of hemorrhagic disease in the newborn.

# pilocarpine (oral)†

(pye-loe-**kar**-peen)

Salagen

***Classification***

Therapeutic: none assigned

Pharmacologic: cholinergics

**Pregnancy Category C**

†For ophthalmic use of pilocarpine, see Appendix C

## Indications

Management of xerostomia, which may occur as a consequence of radiation therapy for cancer of the head and neck. Treatment of dry mouth in patients with Sjögren's syndrome.

## Action

Stimulates cholinergic receptors, resulting in primarily muscarinic action, including stimulation of exocrine glands. Other effects include: Increased sweating, gastric secretions, Increased bronchial secretions, Increased tone and motility of the urinary tract, gallbladder, and biliary duct smooth muscle. **Therapeutic Effects:** Increased salivary gland secretion.

## Pharmacokinetics

**Absorption:** Well absorbed after oral administration.

**Distribution:** Unknown.

**Metabolism and Excretion:** Inactivated at neuronal synapses and in plasma. Some unchanged pilocarpine and metabolites are excreted in urine. **Half-life:** *After 5-mg dose for 2 days*—0.8 hr; *after 10-mg dose for 2 days*—1.3 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 20 min | 1 hr | 3–5 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Uncontrolled asthma; Angle-closure glaucoma; Iritis. **Use Cautiously in:** History of pulmonary disease (asthma, bronchitis, or chronic obstructive pulmonary disease); Biliary tract disease or cholelithiasis; Cardiovascular disease; Retinal disease; Nephrolithiasis; History of psychiatric or cognitive disorders; OB: Pregnancy, lactation, or children (safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache, weakness. **EENT:** amblyopia, epistaxis, rhinitis. **CV:** edema, hypertension, tachycardia. **GI:** nausea, vomiting, dyspepsia, dysphagia. **GU:** urinary frequency. **Derm:** flushing, sweating. **Neuro:** tremors. **Misc:** chills, voice change.

### Interactions

**Drug-Drug:** Concurrent use of **anticholinergics** will ↓ the effectiveness of pilocarpine. Concurrent use of **bethanechol** or **ophthalmic cholinergics** may result in ↑ cholinergic effects. Concurrent use with **beta blockers** may ↑ the risk of adverse cardiovascular reactions (conduction disturbances).

### Route/Dosage

### Head and Neck Cancer Patients

**PO (Adults):** 5 mg three times daily initially, then titrated to need/response, usual range 15–30 mg/day (no single should exceed 10 mg).

### Patients with Sjögren's Syndrome

**PO (Adults):** 5 mg four times daily.

### Availability

**Tablets:** 5 mg, 7.5 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess oral mucosa for dryness and ulceration periodically during therapy.

### Potential Nursing Diagnoses

Impaired oral mucous membrane (Indications)

### Implementation

- **PO:** Use lowest dose that is tolerated and effective for maintenance.

### Patient/Family Teaching

- Instruct patient to take medication as directed.
- Caution patient that pilocarpine may cause visual changes, especially at night; avoid driving or other activities requiring alertness until effects of medication are known.
- Advise patient to drink adequate daily fluids (1500–2000 mL/day), especially if sweating occurs. Less than adequate fluid intake may lead to dehydration.

### Evaluation/Desired Outcomes

- Increased salivary gland secretion in patients with xerostomia.
- Decrease in dry mouth in patients with Sjögren's syndrome. Full effects in cancer patients may not be seen for up to 12 weeks or 6 weeks in patients with Sjögren's syndrome.

P

## pimecrolimus

(pi-me-**cro**-li-mus)

Elidel

***Classification***

Therapeutic: immunosuppressants (topical)

### Indications

Short-term and intermittent long-term management of mild to moderate atopic dermatitis unresponsive to or in patients intolerant of conventional treatment.

### Action

Inhibits T-cell and mast cell activation by interfering with production of inflammatory cytokines. **Therapeutic Effects:** Decreased severity of atopic dermatatis.

### Pharmacokinetics

**Absorption:** Minimally absorbed through intact skin.

**Distribution:** Local distribution after topical administration.

**Metabolism and Excretion:** Systemic metabolism and excretion is negligible with local application.

**Half-life:** Not applicable.

TIME/ACTION PROFILE (improvement in symptoms)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| topical | within 6 days | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Should not be applied to areas of active cutaneous viral infections (increased risk of dissemination); Concurrent use of occlusive dressings; Netherton's syndrome (increased absorption of pimecrolimus); Lactation: Discontinue breastfeeding.
**Use Cautiously in:** Possible risk of cancer. Do not use as first-line therapy; Clinical infection at treatment site (infection should be treated/cleared prior to use); Skin papillomas (warts); allow treatment/resolution prior to use; Natural/artificial sunlight (minimize exposure); OB: Use only if clearly needed; Pedi: Use only if other treatments have failed; safety not established in children <2 yr.

### Adverse Reactions/Side Effects

**Local:** burning. **Misc:** increased risk of lymphoma/skin cancer.

### Interactions

**Drug-Drug:** None significant as systemic absorption is negligible.

### Route/Dosage

**Topical (Adults and Children ≥2 yr):** Apply thin film twice daily; rub in gently and completely.

### Availability

**Cream:** 1% in 30-g, 60-g, and 100-g tubes. **Cost:** $75.99/30 g, $141.58/60 g, $220.98/100 g.

## NURSING IMPLICATIONS

### Assessment

- Assess skin lesions prior to and periodically during therapy. Discontinue therapy after signs and symptoms of atopic dermatitis have resolved. Resume treatment at the first signs and symptoms of recurrence.

### Potential Nursing Diagnoses

Impaired skin integrity (Indications)

### Implementation

- **Topical:** Apply a thin layer to affected area twice daily and rub in gently and completely. May be used on all skin areas including head, neck, and intertriginous areas. Do not use with occlusive dressings.

### Patient/Family Teaching

- Instruct patient on correct technique for application. Apply only as directed to external areas. Wash hands following application, unless hands are areas of application.
- Caution patient to avoid exposure to natural or artificial sunlight, including tanning beds, while using cream.
- Advise patient that pimecrolimus may cause skin burning. This occurs most commonly during first few days of application, is of mild to moderate severity, and improves within 5 days or as atopic dermatitis resolves.
- Advise patient to notify health care provider if no improvement is seen following 6 wk of treatment or at any time if condition worsens.

### Evaluation/Desired Outcomes

- Resolution of signs and symptoms of atopic dermatitis.

## **pioglitazone** (pi-o-**glit**-a-zone)

Actos

***Classification***

Therapeutic: antidiabetics (oral)
Pharmacologic: thiazolidinediones

**Pregnancy Category C**

### Indications

Type 2 diabetes mellitus (with diet and exercise); may be used with metformin, sulfonylureas, or insulin.

### Action

Improves sensitivity to insulin by acting as an agonist at receptor sites involved in insulin responsiveness and subsequent glucose production and utilization. Requires insulin for activity. **Therapeutic Effects:** Decreased insulin resistance, resulting in glycemic control without hypoglycemia.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration.
**Distribution:** Unknown.
**Protein Binding:** >99% bound to plasma proteins. Active metabolites are also highly (>99%) bound.
**Metabolism and Excretion:** Extensively metabolized by the liver; at least two metabolites have pharmacologic activity. Minimal renal excretion of unchanged drug.
**Half-life:** *Pioglitazone*—3–7 hr; *total pioglitazone (pioglitazone plus metabolites)*—16–24 hr.

TIME/ACTION PROFILE (effects on blood glucose)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30 min | 2–4 hr | 24 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Type 1 diabetes; Diabetic ketoacidosis; Clinical evidence of active liver disease or ↑ ALT (>2.5 times upper limit of normal); OB, Lactation: Insulin should be used to control blood glucose levels; Pedi: Children.

**Use Cautiously in:** Edema; CHF (avoid use in moderate to severe CHF); Hepatic impairment; Women (may ↑ distal upper and lower limb fractures); Women with childbearing potential (may restore ovulation and ↑ risk of pregnancy).

## Adverse Reactions/Side Effects

**CV:** CHF, edema. **EENT:** macular edema. **GI:** hepatitis, ↑ liver enzymes. **Hemat:** anemia. **Misc:** fractures (arm, hand, foot) in female patients.

## Interactions

**Drug-Drug:** May ↓ efficacy of **hormonal contraceptives**. Pioglitazone is metabolized by the **CYP450 3A4** enzyme system. Concurrent use of drugs that alter the activity of this system may result in drug-drug interactions. **Ketoconazole** may ↑ effects of pioglitazone. Concurrent use with **insulin** may ↑ risk of CHF (consider predisposing factors).

**Drug-Natural Products: Glucosamine** may worsen blood glucose control. **Chromium**, and **coenzyme Q-10** may produce ↑ hypoglycemic effects.

## Route/Dosage

**PO (Adults):** 15–30 mg once daily, may be ↑ to 45 mg/day if needed. Doses >30 mg have not been evaluated in combination with insulin and other antidiabetics.

## Availability

**Tablets:** 15 mg, 30 mg, 45 mg. **Cost:** 15 mg $329.97/90, 30 mg $505.97/90, 45 mg $549.97/90. ***In combination with:*** Metformin (Actoplus Met, Actoplus Met XR), glimepride (Duetact); see Appendix B.

# NURSING IMPLICATIONS

## Assessment

- Observe patient taking concurrent insulin for signs and symptoms of hypoglycemic reactions (sweating, hunger, weakness, dizziness, tremor, tachycardia, anxiety).
- Assess for signs and symptoms of heart failure (edema, dyspnea, rapid weight gain, unusual tiredness).
- ***Lab Test Considerations:*** Monitor serum glucose and Hb $A_{1c}$ periodically during therapy to evaluate effectiveness.
- Monitor CBC with differential periodically during therapy. May cause ↓ in hemoglobin and hematocrit, usually during the first 4–12 wk of therapy; then levels stabilize.
- Monitor serum ALT levels before starting therapy and periodically thereafter or if jaundice or symptoms of hepatic dysfunction occur. Pioglitazone should not be started in patients with active liver disease or ALT levels >2.5 times the upper limit of normal. Patients with mild ALT ↑ should have more frequent monitoring. If ALT ↑ to >3 times the upper limit of normal, recheck ALT promptly. Discontinue pioglitazone if ALT remains >3 times normal.
- May cause transient ↑ in CPK levels.

## Potential Nursing Diagnoses

Imbalanced nutrition: more than body requirements (Indications)
Noncompliance (Patient/Family Teaching)

## Implementation

- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin.
- **PO:** May be administered with or without meals.

## Patient/Family Teaching

- Instruct patient to take medication as directed. If dose for 1 day is missed, do not double dose the next day.
- Explain to patient that this medication controls hyperglycemia but does not cure diabetes. Therapy is long-term.
- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water and notify health care professional.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hypoglycemic or hyperglycemic episodes.
- Instruct patient in proper testing of serum glucose and ketones. These tests should be closely

P

monitored during periods of stress or illness, and health care professional should be notified if significant changes occur.
- Advise patient to notify health care professional immediately if signs of hepatic dysfunction (nausea, vomiting, abdominal pain, fatigue, anorexia, dark urine, jaundice) or CHF (edema, shortness of breath, rapid weight gain, tiredness) occur.
- Insulin is the preferred method of controlling blood glucose during pregnancy. Counsel female patients that higher doses of oral contraceptives or a form of contraception other than oral contraceptives may be required and to notify health care professional promptly if pregnancy is planned or suspected.
- Advise patient to inform health care professional of medication regimen before treatment or surgery.
- Advise patient to carry a form of sugar (sugar packets, candy) and identification describing disease process and medication regimen at all times.
- Emphasize the importance of routine follow-up exams.

### Evaluation/Desired Outcomes
- Control of blood glucose levels.

## piperacillin/tazobactam
(pi-**per**-a-sill-in/tay-zoe-**bak**-tam)
Zosyn

***Classification***
Therapeutic: anti-infectives
Pharmacologic: extended spectrum penicillins

**Pregnancy Category B**

### Indications
Appendicitis and peritonitis. Skin and skin structure infections. Gynecologic infections. Community-acquired and nosocomial pneumonia caused by piperacillin-resistant, beta-lactamase–producing bacteria.

### Action
**Piperacillin:** Binds to bacterial cell wall membrane, causing cell death. Spectrum is extended compared with other penicillins. **Tazobactam:** Inhibits beta-lactamase, an enzyme that can destroy penicillins. **Therapeutic Effects:** Death of susceptible bacteria. **Spectrum:** Active against piperacillin-resistant, beta-lactamase–producing: *Bacteroides fragilis*, *E. coli*, *Acinetobacter baumanii*, *Klebsiella pneumoniae*, *Pseudomonas aeruginosa*, *Staphylococcus aureus*, *Haemophilus influenzae*.

### Pharmacokinetics
**Absorption:** Piperacillin is well absorbed (80%) from IM sites.
**Distribution:** Widely distributed. Enter CSF well only when meninges are inflamed. Crosses the placenta and enters breast milk in low concentrations.
**Metabolism and Excretion:** Piperacillin (68%) and tazobactam (80%) are mostly excreted unchanged by the kidneys.
**Half-life:** Adults: 0.7–1.2 hr; Children 6 mo–12 yr: 0.7–0.9 hr; Infants 2–5 mo: 1.4 hr.

TIME/ACTION PROFILE (piperacillin blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | end of infusion | 4–6 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to penicillins, beta-lactams, cephalosporins, or tazobactam (cross-sensitivity may occur).
**Use Cautiously in:** Renal impairment (dosage reduction or increased interval recommended if CCr <40 mL/min); Sodium restriction; OB: Lactation: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** SEIZURES (higher doses), confusion, dizziness, headache, insomnia, lethargy. **GI:** PSEUDOMEMBRANOUS COLITIS, diarrhea, constipation, drug-induced hepatitis, nausea, vomiting. **GU:** interstitial nephritis. **Derm:** rashes ( ↑ in cystic fibrosis patients), urticaria. **Hemat:** bleeding, leukopenia, neutropenia, thrombocytopenia. **Local:** pain, phlebitis at IV site. **Misc:** hypersensitivity reactions, including ANAPHYLAXIS and SERUM SICKNESS, fever ( ↑ in cystic fibrosis patients), superinfection.

### Interactions
**Drug-Drug: Probenecid** ↓ renal excretion and ↑ blood levels. May alter excretion of **lithium**. **Potassium-losing diuretics**, **corticosteroids**, or **amphotericin B** may ↑ risk of hypokalemia. ↑ risk of hepatotoxicity with other **hepatotoxic agents**. May ↓ levels/effects of **aminoglycosides** in patients with renal impairment. May ↑ levels and risk of toxicity from **methotrexate**.

### Route/Dosage
Contains 2.79 mEq (64 mg) sodium/g of piperacillin; adult doses below expressed as combined piperacillin/tazobactam content.

**IV (Adults):** *Most infections*—3.375 g q 6 hr. *Nosocomial pneumonia*—4.5 g q 6 hr.
**IV (Adults):** *Nosocomial pneumonia*—4.5 g q 6 hr.
**IV (Adults and Children >40 kg):** *Appendicitis and/or peritonitis*—3.375 g q 6 hr.
**IV (Children ≥9 mo and ≤40 kg):** *Appendicitis and/or peritonitis*—300 mg piperacillin component/kg/day divided q 8 hr.
**IV (Infants 2–9 mo):** *Appendicitis and/or peritonitis*—240 mg piperacillin component/kg/day divided q 8 hr.
**IV (Infants and Children ≥6 mo):** 240–400 mg/piperacillin component/kg/day divided q 6–8 hr (higher end of dosing range for serious pseudomonal infections); Max dose: 16 g piperacillin/day.
**IV (Infants <6 mo):** 150–300 mg/piperacillin component/kg/day divided q 6–8 hr.

### Renal Impairment

**IV (Adults):** *CCr 20–40 mL/min*—2.25 g q 6 hr (3.375 g q 6 hr for nosocomial pneumonia); *CCr <20 mL/min*—2.25 g q 8 hr (2.25 g q 6 hr for nosocomial pneumonia); *Hemodialysis*—2.25 g q 12 h (2.25 g q 8 hr for nosocomial pneumonia).

### Availability (generic available)

**Powder for injection:** 2-g piperacillin/0.25-g tazobactam vials and 50-mL premixed frozen containers, 3-g piperacillin/0.375-g tazobactam vials and 50-mL premixed frozen containers, 4-g piperacillin/0.5-g tazobactam vials and 50-mL premixed frozen containers, 36– piperacillin/4.5-g tazobactam bulk vials.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and during therapy.
- Obtain a history before initiating therapy to determine previous use of and reactions to penicillins or cephalosporins. Persons with a negative history of penicillin sensitivity may still have an allergic response.
- Obtain specimens for culture and sensitivity prior to initiating therapy. First dose may be given before receiving results.
- Observe patient for signs and symptoms of anaphylaxis (rash, pruritus, laryngeal edema, wheezing). Discontinue the drug and notify health care professional immediately if these occur. Keep epinephrine, an antihistamine, and resuscitation equipment close by in the event of an anaphylactic reaction.
- Monitor bowel function. Diarrhea, abdominal cramping, fever, and bloody stools should be reported to health care professional promptly as a sign of pseudomembranous colitis. May begin up to several weeks following cessation of therapy.
- ***Lab Test Considerations:*** Evaluate renal and hepatic function, CBC, serum potassium, and bleeding times prior to and routinely during therapy.
- May cause positive direct Coombs' test result.
- May cause ↑ BUN, creatinine, AST, ALT, serum bilirubin, alkaline phosphatase, and LDH.
- May cause leukopenia and neutropenia, especially with prolonged therapy or hepatic impairment.
- May cause prolonged prothrombin and partial thromboplastin time.
- May cause ↓ hemoglobin and hematocrit and thrombocytopenia, eosinophilia, leukopenia, and neutropenia. It also may cause proteinuria; hematuria; pyuria; hyperglycemia; ↓ total protein or albumin; and abnormalities in sodium, potassium, and calcium levels.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Do not confuse Zosyn (piperacillin/tazobactam) with Zofran (ondansetron).

#### IV Administration

- **Intermittent Infusion:** Reconstitute each 1 g of piperacillin with at least 5 mL of 0.9% NaCl, sterile water for injection, or D5W. ***Diluent:*** Dilute further in 50–100 mL of 0.9% NaCl, D5W, D5/0.9% NaCl, or LR. Reconstituted vials stable for 24 hr at room temperature or 48 hr if refrigerated. Infusion stable for 24 hr at room temperature or 7 days if refrigerated. ***Rate:*** Infuse over 30 min.
- **Y-Site Compatibility:** alfentanil, allopurinol, amifostine, amikacin, aminophylline, amphotericin B liposome, anidulafungin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium acetate, calcium chloride, calcium gluconate, carboplatin, carmustine, cefepime, chloramphenicol , cimetidine, clindamycin, cyclophosphamide,

cyclosporine, cytarabine, dactinomycin, daptomycin, dexamethasone, dexmedetomidine, dexrazoxane, diazepam, digoxin, diphenhydramine, docetaxel, dopamine, doxacurium, enalaprilat, ephedrine, epinephrine, erythromycin, esmolol, etoposide, etoposide phosphate, fenoldopam, fentanyl, floxuridine, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, granisetron, heparin, hetastarch, hydrocortisone, hydromorphone, ifosfamide, isoproterenol, ketorolac, leucovorin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, mesna, metaraminol, methotrexate, methylprednisolone, metoclopramide, metoprolol, metronidazole, milrinone, morphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxytocin, paclitaxel, palonosetron, pancuronium, pantoprazole, pemetrexed, pentobarbital, phenobarbital, phentolamine, phenylephrine, plicamycin, potassium chloride, potassium phosphates, procainamide, ranitidine, remifentanil, rituximab, sargramostim, sodium acetate, sodium bicarbonate, sodium phosphates, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiotepa, tigecycline, tirofiban, trimethobenzamide, trimethoprim/sulfamethoxazole, vasopressin, vinblastine, vincristine, voriconazole, zidovudine.

- **Y-Site Incompatibility:** acyclovir, amiodarone, amphotericin B cholesteryl, amphotericin B colloidal, azithromycin, caspofungin, chlorpromazine, ciprofloxacin, cisplatin, codeine, dacarbazine, dantrolene, daunorubicin, diltiazem, dobutamine, doxorubicin, doxorubicin liposome, doxycycline, droperidol, drotrecogin, epirubicin, famotidine, ganciclovir, gemcitabine, glycopyrrolate, haloperidol, hydralazine, hydroxyzine, idarubicin, inamrinone, insulin, labetalol, levofloxacin, methyldopate, midazolam, mitomycin, mitoxantrone, nalbuphine, nesiritide, pentamidine, pentazocine, phenytoin, prochlorperazine, promethazine, propranolol, quinupristin/dalfopristin, rocuronium, streptozocin, thiopental, tobramycin, tranexamic acid, trastuzumab, vecuronium, verapamil, vinorelbine.

## Patient/Family Teaching

- Advise patient to report signs of superinfection (black furry overgrowth on tongue, vaginal itching or discharge, loose or foul-smelling stools) and allergy.
- Caution patient to notify health care professional if fever and diarrhea occur, especially if stool contains blood, pus, or mucus. Advise patient not to treat diarrhea without consulting health care professional. May occur up to several weeks after discontinuation of medication.

## Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of infection. Length of time for complete resolution depends on the organism and site of infection.

# piroxicam (peer-**ox**-i-kam)

Apo-Piroxicam, Feldene, Novo-Pirocam, Nu-Pirox, PMS-Piroxicam

***Classification***

Therapeutic: antirheumatics, nonsteroidal anti-inflammatory agents

**Pregnancy Category C**

## Indications

Management of inflammatory disorders, including: Rheumatoid arthritis, Osteoarthritis. **Unlabeled Use:** Management of dysmenorrhea.

## Action

Inhibits prostaglandin synthesis. **Therapeutic Effects:** Suppression of pain and inflammation.

## Pharmacokinetics

**Absorption:** Well absorbed from the GI tract.
**Distribution:** Unknown. Enters breast milk in small amounts.
**Metabolism and Excretion:** Mostly metabolized by the liver. Minimal amounts excreted unchanged by the kidneys.
**Half-life:** 50 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO (analgesic effect) | 1 hr | unknown | 48–72 hr |
| PO (anti-inflammatory effect) | 7–12 days | 2–3 wk† | unknown |

†May take up to 12 wk

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity may exist with other NSAIDs, including aspirin; Active GI bleeding or ulcer disease; Peri-operative pain from coronary artery bypass graft (CABG) surgery; Lactation: Lactation.
**Use Cautiously in:** Cardiovascular disease or risk factors for cardiovascular disease (may ↑ risk of serious cardiovascular thrombotic events, myocardial infarction, and stroke, especially with

prolonged use); Severe hepatic disease; History of ulcer disease; Renal impairment (dosage reduction recommended); OB: Avoid use during 2nd half of pregnancy; Pedi: Safety not established; Geri: Appears on Beers list; ↑ risk for GI bleeding, edema and renal failure.

### Adverse Reactions/Side Effects

**CNS:** drowsiness, headache, dizziness. **EENT:** blurred vision, tinnitus. **CV:** edema. **GI:** DRUG-INDUCED HEPATITIS, GI BLEEDING, discomfort, dyspepsia, nausea, vomiting, anorexia, constipation, diarrhea, flatulence. **GU:** renal failure. **Derm:** EXFOLIATIVE DERMATITIS, STEVENS-JOHNSON SYNDROME, TOXIC EPIDERMAL NECROLYSIS, rashes. **Hemat:** blood dyscrasias, prolonged bleeding time. **Misc:** allergic reactions including ANAPHYLAXIS.

### Interactions

**Drug-Drug:** Concurrent use with **aspirin** ↓ levels and may ↓ effectiveness. ↑ risk of bleeding with **anticoagulants**, **cefoperazone**, **cefotetan**, **heparin**, **ticlopidine**, **clopidogrel**, **eptifibatide**, **tirofiban**, **thrombolytic agents**, **valproic acid**. ↑ adverse GI side effects with **aspirin**, **corticosteroids**, and other **NSAIDs**. **Probenecid** ↑ levels and may ↑ toxicity. May ↓ response to **antihypertensives** or **diuretics**. May ↑ serum levels and risk of toxicity from **lithium**. May ↑ risk of hypoglycemia from **insulin** or **oral hypoglycemic agents**. ↑ risk of adverse renal effects with **cyclosporine** or chronic use of **acetaminophen**. May ↑ risk of hematologic toxicity from **antineoplastics** or **radiation therapy**.

**Drug-Natural Products:** ↑ bleeding risk with **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **garlic**, **ginger**, **ginkgo**, and **Panax ginseng**.

### Route/Dosage

**PO (Adults):** *Anti-inflammatory*—10–20 mg/day; may be given as single dose or 2 divided doses. *Antidysmenorrheal*—40 mg initially, then 20 mg/day.

**PO (Geriatric Patients):** 10 mg/day initially.

### Availability (generic available)

**Capsules:** 10 mg, 20 mg. **Suppositories:** 10 mg, 20 mg.

## NURSING IMPLICATIONS

### Assessment

- Patients who have asthma, aspirin-induced allergy, and nasal polyps are at increased risk for developing hypersensitivity reactions. Monitor for rhinitis, asthma, and urticaria.
- **Arthritis:** Assess pain and range of motion prior to and 1–2 hr following administration.
- ***Lab Test Considerations:*** Bleeding time may be prolonged for up to 2 wk following discontinuation of therapy.
- May cause ↓ hemoglobin, hematocrit, leukocyte, and platelet counts.
- Monitor liver function tests periodically during therapy. May cause ↑ serum alkaline phosphatase, LDH, AST, and ALT concentrations.
- Monitor BUN, serum creatinine, and electrolytes periodically during therapy. May cause ↑ BUN, serum creatinine, and electrolyte concentrations and ↓ urine electrolyte concentrations.

### Potential Nursing Diagnoses

Acute pain (Indications)
Impaired physical mobility (Indications)

### Implementation

- Administration in higher than recommended doses does not provide increased effectiveness but may cause increased side effects, especially in geriatric patients. Use lowest effective dose for shortest period of time.
- **PO:** Administer after meals or with food or an antacid containing aluminum or magnesium to minimize gastric irritation.
- Administer as soon as possible after the onset of menses. Prophylactic use has not been proved effective.

### Patient/Family Teaching

- Advise patient to take this medication with a full glass of water and to remain in an upright position for 15–30 min after administration.
- Instruct patient to take medication as directed. Take missed doses as soon as remembered but not if almost time for the next dose. Do not double doses.
- May cause drowsiness or dizziness. Advise patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Caution patient to avoid the concurrent use of alcohol, aspirin, acetaminophen, or other OTC or herbal products without consulting health care professional.
- Advise patient to inform health care professional of medication regimen prior to treatment or surgery.

- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reaction (rare).
- Advise patient to consult health care professional if rash, itching, visual disturbances, tinnitus, weight gain, edema, black stools, persistent headache, or influenza-like syndrome (chills, fever, muscle aches, pain) occurs.

### Evaluation/Desired Outcomes

- Decreased pain and improved joint mobility. Partial arthritic relief is usually seen within 2 wk, but maximum effectiveness may require up to 12 wk of continuous therapy. Patients who do not respond to one NSAID may respond to another.

**pitavastatin, See HMG-CoA REDUCTASE INHIBITORS (statins).**

## polyethylene glycol

(po-lee-**eth**-e-leen **glye**-kole)
GlycoLax, MiraLax

***Classification***
Therapeutic: laxatives
Pharmacologic: osmotics

**Pregnancy Category C**

### Indications

Treatment of occasional constipation.

### Action

Polyethylene glycol (PEG) in solution acts as an osmotic agent, drawing water into the lumen of the GI tract. **Therapeutic Effects:** Evacuation of the GI tract without water or electrolyte imbalance.

### Pharmacokinetics

**Absorption:** Nonabsorbable.
**Distribution:** Unknown.
**Metabolism and Excretion:** Excreted in fecal contents.
**Half-life:** Unknown.

TIME/ACTION PROFILE (bowel movement)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2–4 days | unknown |

### Contraindications/Precautions

**Contraindicated in:** GI obstruction; Gastric retention; Toxic colitis; Megacolon.
**Use Cautiously in:** Abdominal pain of uncertain cause, particularly if accompanied by fever; OB: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**GI:** abdominal bloating, cramping, flatulence, nausea.

### Interactions

**Drug-Drug:** None significant.

### Route/Dosage

**PO (Adults):** 17 g (heaping tablespoon) in 8 oz of water; may be used for up to 2 wk.

### Availability (generic available)

**Powder:** 14-oz, 24-oz, and 26-oz containers.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for abdominal distention, presence of bowel sounds, and usual pattern of bowel function.
- Assess color, consistency, and amount of stool produced.

### Potential Nursing Diagnoses

Constipation (Indications)
Diarrhea (Side Effects)

### Implementation

- **PO:** Dissolve powder in 8 oz of water prior to administration.

### Patient/Family Teaching

- Inform patient that 2–4 days may be required to produce a bowel movement. PEG should not be used for more than 2 wk. Prolonged, frequent, or excessive use may result in electrolyte imbalance and laxative dependence.
- Advise patient to notify health care professional if unusual cramps, bloating, or diarrhea occurs.

### Evaluation/Desired Outcomes

- A soft, formed bowel movement.

## polyethylene glycol/electrolyte

(po-lee-**eth**-e-leen **glye**-kole/e-**lek**-troe-lite)
Colyte, GoLYTELY, Klean-Prep, MoviPrep, NuLytely, TriLyte

***Classification***
Therapeutic: laxatives
Pharmacologic: osmotics

**Pregnancy Category C**

### Indications

Bowel cleansing in preparation for GI examination. **Unlabeled Use:** Treatment of acute iron overdose in children.

### Action
Polyethylene glycol (PEG) in solution acts as an osmotic agent, drawing water into the lumen of the GI tract. **Therapeutic Effects:** Evacuation of the GI tract without water or electrolyte imbalance.

### Pharmacokinetics
**Absorption:** Ions in the solution are nonabsorbable.
**Distribution:** Unknown.
**Metabolism and Excretion:** Solution is excreted in fecal contents.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1 hr | unknown | 4 hr |

### Contraindications/Precautions
**Contraindicated in:** GI obstruction; Gastric retention; Toxic colitis; Megacolon.
**Use Cautiously in:** Patients with absent or diminished gag reflex; Unconscious or semicomatose states, in which administration is via NG tube; History of ulcerative colitis (increased risk of hypoglycemia, dehydration, and hypokalemia); Barium enema using double-contrast technique (may not allow proper barium coating of mucosa); Abdominal pain of uncertain cause, particularly if accompanied by fever; Geri: May be more sensitive to effects; Pedi: Children (safety not established; children <2 yr more prone to hypoglycemia, dehydration, and hypokalemia).

### Adverse Reactions/Side Effects
**GI:** abdominal fullness, diarrhea, bloating, cramps, nausea, vomiting. **Misc:** allergic reactions (rare).

### Interactions
**Drug-Drug:** Interferes with the absorption of **orally administered medications** by decreasing transit time (do not administer within 1 hr of start of therapy).

### Route/Dosage
**PO (Adults):** 240 mL q 10 min (up to 4 L) until fecal discharge appears clear and has no solid material; may be given through NG tube at 20–30 mL/min (up to 4 L).
**PO (Children ≥6 mo):** 25 mL/kg/hr until fecal discharge is clear and has no solid material; may also be given through an NG tube (unlabeled).

### Availability (generic available)
**Powder for oral solution (regular, pineapple, citrus berry, lemon lime, orange, cherry flavor):** CoLyte, NuLytely, TriLyte—powder in bottles for reconstitution, GoLYTLEY—powder in packets and bottles for reconstitution, MoviPrep—powder in pouches for reconstitution.

## NURSING IMPLICATIONS

### Assessment
- Assess color, consistency, and amount of stool produced.
- Monitor semiconscious or unconscious patients closely for regurgitation when administering via NG tube.

### Potential Nursing Diagnoses
Diarrhea (Side Effects)

### Implementation
- Do not add extra flavorings or additional ingredients to solution prior to administration.
- Patient avoid solid food within1–2 hr of administration, but should be adequately hydrated prior to, during, and after administration.
- Patient should be allowed only clear liquids after administration.
- May be administered on the morning of the examination as long as time is allotted to drink solution (3 hr) and evacuate bowel (1 additional hr). For barium enema, administer solution early evening (6 PM) prior to exam to allow proper mucosal coating by barium.
- **PO:** Solution may be reconstituted with tap water. Shake vigorously until powder is dissolved.
- May be administered via NG tube at a rate of 20–30 mL/min.

### Patient/Family Teaching
- Instruct patient to drink 240 mL every 10 min until 4 L have been consumed or fecal discharge is clear and free of solid matter. Rapidly drinking each 240 mL is preferred over drinking small amounts continuously.

### Evaluation/Desired Outcomes
- Diarrhea, which cleanses the bowel within 4 hr. The first bowel movement usually occurs within 1 hr of administration.

## posaconazole
(po-sa-**kon**-a-zole)
Noxafil

***Classification***
Therapeutic: antifungals
Pharmacologic: triazoles

**Pregnancy Category C**

## Indications
Prevention of invasive aspergillus and candida infections in severely immunocompromised patients. Treatment of orpharyngeal candidiasis (including candidiasis unresponsive to itraconazole or fluconazole).

## Action
Blocks ergosterol synthesis, a major component of fungal plasma membrane. **Therapeutic Effects:** Fungistatic/fungicidal action against susceptible fungi.

## Pharmacokinetics
**Absorption:** Well absorbed following oral administration; absorption is optimized by food.
**Distribution:** Extensive extravascular distribution and penetration into body tissues.
**Protein Binding:** >98%.
**Metabolism and Excretion:** Some metabolism via UDP glucuronidation; 66% eliminated unchanged in feces, 13% in urine (mostly as metabolites).
**Half-life:** 35 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3–5 hr | 8 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent use of pimozide or quinidine (↑ risk of serious arrhythmias); Concurrent use of ergot alkaloids (↑ risk of ergotism); Concurrent use of sirolimus (↑ risk of sirolimus toxicity).
**Use Cautiously in:** History of/predisposition to QTc prolongation including congenital QTc prolongation, concurrent medications that prolong QTc, high cumulative anthracycline history or electrolyte abnormalities (hypokalemia, hypomagnesemia); correct pre-existing abnormalities prior to administration; Hypersensitivity to other azole antifungals; Severe diarrhea, vomiting, or renal impairment (monitor for breakthrough fungal infections); OB, Lactation: Use only if maternal benefit outweighs risk to child; Pedi: Children <13 yr (safety not established).

## Adverse Reactions/Side Effects
**GI:** HEPATOCELLULAR DAMAGE, diarrhea, nausea, vomiting. **Endo:** adrenal insufficiency. **Metab:** ALLERGIC REACTIONS.

## Interactions
**Drug-Drug:** Posaconazole inhibits the CYP3A4 enzyme systems and should be expected to interact with other drugs affected by this system. **Rifabutin**, **phenytoin**, **cimetidine**, and **efavirenz** ↓ levels and may ↓ antifungal effectiveness; avoid concurrent use. ↑ **cyclosporine**, **sirolimus**, and **tacrolimus** levels and risk of toxicity; use with sirolimus contraindicated; for cyclosporine and tacrolimus, ↓ dose initially and monitor levels frequently. **Esomeprazole** and **metoclopramide** may ↓ levels and may ↓ antifungal effectiveness. ↑ **rifabutin** levels; avoid concurrent use. May ↑ **digoxin** levels; monitor levels frequently. ↑ **phenytoin**, **midazolam**, **ritonavir**, and **atazanavir** levels; monitor for excess clinical effect. ↑ levels and risk of toxicity from **ergot alkaloids**, including **ergotamine** and **dihydroergotamine**; concurrent administration is contraindicated. ↑ levels and risk of neurotoxicity of **vinca alkaloids**, including **vincristine** and **vinblastine**; consider dose adjustment. ↑ levels and risk of toxicity of **HMG CoA reductase inhibitors (statins)**; consider ↓ statin dose. May ↑ levels and risk of adverse cardiovascular reactions to **calcium channel blockers**; consider dosage reduction.

## Route/Dosage
**PO (Adults and Children ≥13 yr):** *Prophylaxis of invasive fungal infections*—200 mg 3 times daily.
**PO (Adults):** *Oropharyngeal candidiasis*—100 mg 2 times daily for 1 day, then 100 mg daily for 13 days; *Refractory oropharyngeal candidiasis*—400 mg 2 times daily.

## Availability
**Oral suspension (cherry):** 40 mg/mL.

# NURSING IMPLICATIONS

## Assessment
- Assess for signs and symptoms of fungal infection.
- ***Lab Test Considerations:*** Monitor liver function tests prior to and periodically during therapy. May cause ↑ ALT, ↑ AST, ↑ alkaline phosphatase and ↑ total bilirubin levels; generally reversible on discontinuation. Discontinue posaconazole if clinical signs and symptoms of liver disease develop.

## Potential Nursing Diagnoses
Risk for infection (Indications)

## Implementation
- **PO:** Shake suspension well before use. Administer with a full meal, liquid nutritional supple-

ment or an acidic carbonated beverage (ginger ale) to enhance absorption. Rinse spoon for administration with water after each use. Alternative therapy or close monitoring for breakthrough fungal infections should be considered for patients unable to eat a full meal or tolerate a nutritional supplement.

### Patient/Family Teaching

- Instruct patient to take posaconazole during or immediately (within 20 min) following a full meal or liquid nutritional supplement in order to enhance absorption. Take missed doses as soon as remembered. Instruct patient to read the *Patient Information* before taking posaconazole and with each Rx refill; may be new information.
- Advise patient to notify health care professional if severe diarrhea or vomiting occur; may decrease posaconazole blood levels and allow breakthrough fungal infections.
- Instruct patient to consult health care professional prior to taking Rx, OTC, or herbal products during posaconazole therapy.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes

- Resolution of clinical and laboratory indications of fungal infections. Duration of therapy is based on recovery from infection or neutropenia or immunosuppression.

## potassium and sodium phosphates

(po-**tas**-e-um/**soe**-dee-yum **foss**-fates)

K-Phos M.F, K-Phos Neutral, K-Phos No. 2, Neutra-Phos, Uro-KP Neutral

***Classification***

Therapeutic: antiurolithics, mineral and electrolyte replacements/supplements

**Pregnancy Category C**

### Indications

Treatment and prevention of phosphate depletion in patients who are unable to ingest adequate dietary phosphate. Adjunct therapy of urinary tract infections with methenamine hippurate or mandelate. Prevention of calcium urinary stones. Phosphate salts of potassium may be used in hypokalemic patients with metabolic acidosis or coexisting phosphorus deficiency.

### Action

Phosphate is present in bone and is involved in energy transfer and carbohydrate metabolism. Serves as a buffer for the excretion of hydrogen ions by the kidneys. Dibasic potassium phosphate is converted in renal tubule to monobasic salt, resulting in urinary acidification, which is required for methenamine hippurate or mandelate to be active as urinary anti-infectives. Acidification of urine increases solubility of calcium, decreasing calcium stone formation. **Therapeutic Effects:** Replacement of phosphorus in deficiency states. Urinary acidification. Increased efficacy of methenamine. Decreased formation of calcium urinary tract stones.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration. Vitamin D promotes GI absorption of phosphates.

**Distribution:** Phosphates enter extracellular fluids and are then actively transported to sites of action.

**Metabolism and Excretion:** Excreted mainly (>90%) by the kidneys.

**Half-life:** Unknown.

TIME/ACTION PROFILE (effects on serum phosphate levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hyperkalemia (potassium salts); Hyperphosphatemia; Hypocalcemia; Severe renal impairment; Untreated Addison's disease (potassium salts).

**Use Cautiously in:** Hyperparathyroidism; Cardiac disease; Hypernatremia (sodium phosphate only); Hypertension (sodium phosphate only); Renal impairment.

### Adverse Reactions/Side Effects

Related to hyperphosphatemia, unless otherwise indicated.

**CNS:** confusion, dizziness, headache, weakness. **CV:** ARRHYTHMIAS, CARDIAC ARREST, bradycardia, ECG changes (absent P waves, widening of the QRS complex with biphasic curve, peaked T waves), edema. **GI:** diarrhea, abdominal pain, nausea, vomiting. **F and E:** hyperkalemia, hypernatremia, hyperphosphatemia, hypocalcemia, hy-

pomagnesemia. **MS:** *hypocalcemia, hyperkalemia*—muscle cramps. **Neuro:** flaccid paralysis, heaviness of legs, paresthesias, tremors.

### Interactions

**Drug-Drug:** Concurrent use of **potassium-sparing**, **diuretics**, **ACE inhibitors**, or **angiotensin II receptor blockers** with potassium phosphates may result in hyperkalemia. Concurrent use of **corticosteroids** with sodium phosphate may result in hypernatremia. Concurrent administration of **calcium-, magnesium-,** or **aluminum-containing compounds** ↓ absorption of phosphates by formation of insoluble complexes. **Vitamin D** enhances the absorption of phosphates.
**Drug-Food: Oxalates** (in spinach and rhubarb) and **phytates** (in bran and whole grains) may ↓ absorption of phosphates by binding them in the GI tract.

### Route/Dosage

### Phosphorous Supplementation

**PO (Adults and Children >4 yr):** 250–500 mg (8–16 mmol) phosphorus (1–2 packets) 4 times daily.
**PO (Children <4 yr):** 250 mg (8 mmol) phosphorus (1 packet) 4 times daily.

### Urinary Acidification

**PO (Adults):** 2 tablets 4 times/day.

### Maintenance Phosphorus

**PO (Adults):** 50–150 mmol/day in divided doses.
**PO (Children):** 2–3 mmol/kg/day in divided doses.

### Availability

### Potassium and Sodium Phosphates

**Tablets (K-Phos MF):** elemental phosphorus 125.6 mg (4 mmol), sodium 67 mg (2.9 mEq), and potassium 44.5 mg (1.1 mEq). **Tablets (K-Phos Neutral):** elemental phosphorus 250 mg (8 mmol), sodium 298 mg (13 mEq), and potassium 45 mg (1.1 mEq). **Tablets (K-Phos No.2):** elemental phosphorus 250 mg (8 mmol), sodium 134 mg (5.8 mEq), and potassium 88 mg (2.3 mEq). **Tablets (Uro-KP Neutral):** elemental phosphorus 258 mg, sodium 262.4 mg (10.8 mEq), and potassium 49.4 mg (1.3 mEq). **Powder for oral solution (Neutra-Phos):** elemental phosphorus 250 mg (8 mmol), sodium 164 mg (7.1 mEq), and potassium 278 mg (7.1 mEq)/packet.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for signs and symptoms of hypokalemia (weakness, fatigue, arrhythmias, presence of U waves on ECG, polyuria, polydipsia) and hypophosphatemia (anorexia, weakness, decreased reflexes, bone pain, confusion, blood dyscrasias) throughout therapy.
- Monitor intake and output ratios and daily weight. Report significant discrepancies.
- ***Lab Test Considerations:*** Monitor serum phosphate, potassium, sodium, and calcium levels prior to and periodically throughout therapy. Increased phosphate may cause hypocalcemia.
- Monitor renal function studies prior to and periodically throughout therapy.
- Monitor urinary pH in patients receiving potassium and sodium phosphate as a urinary acidifier.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)

### Implementation

- **PO:** Tablets should be dissolved in a full glass of water. Allow mixture to stand for 2–5 min to ensure it is fully dissolved. Solutions prepared by pharmacy should not be further diluted.
- Medication should be administered after meals to minimize gastric irritation and laxative effect.
- Do not administer simultaneously with antacids containing aluminum, magnesium, or calcium.

### Patient/Family Teaching

- Explain to the patient the purpose of the medication and the need to take as directed. Take missed doses as soon as remembered unless within 1 or 2 hr of the next dose. Explain that the tablets should not be swallowed whole. Tablets should be dissolved in water.
- Instruct patients in low-sodium diet (see Appendix M).
- Advise patient of the importance of maintaining a high fluid intake (drinking at least one 8-oz glass of water each hr) to prevent kidney stones.
- Instruct the patient to promptly report diarrhea, weakness, fatigue, muscle cramps, unexplained weight gain, swelling of lower extremities, shortness of breath, unusual thirst, or tremors.

### Evaluation/Desired Outcomes

- Prevention and correction of serum phosphate and potassium deficiencies.

- Maintenance of acid urine.
- Decreased urine calcium, which prevents formation of renal calculi.

**potassium iodide, See IODINE, IODIDE.**

HIGH ALERT

## POTASSIUM SUPPLEMENTS
(poe-**tass**-ee-um)

**potassium acetate**

**potassium bicarbonate**
K+Care ET, K-Electrolyte, K-Ide, Klor-Con/EF, K-Lyte, K-Vescent

**potassium bicarbonate/potassium chloride**
K-Lyte/Cl, Neo-K, Potassium Sandoz

**potassium bicarbonate/potassium citrate**
Effer-K, K-Lyte DS

**potassium chloride**

**potassium chloride/potassium bicarbonate/potassium citrate**
Kaochlor Eff

**potassium gluconate**
Kaon, Kaylixir, K-G Elixir, Potassium-Rougier

**potassium gluconate/potassium chloride**
Kolyum

**potassium gluconate/potassium citrate**
Twin-K

**trikates (potassium acetate/potassium bicarbonate/potassium citrate)**
Tri-K

***Classification***
Therapeutic: mineral and electrolyte replacements/supplements

**Pregnancy Category C**

### Indications
**PO, IV:** Treatment/prevention of potassium depletion. **IV:** Arrhythmias due to digoxin toxicity.

### Action
Maintain acid-base balance, isotonicity, and electrophysiologic balance of the cell. Activator in many enzymatic reactions; essential to transmission of nerve impulses; contraction of cardiac, skeletal, and smooth muscle; gastric secretion; renal function; tissue synthesis; and carbohydrate metabolism. **Therapeutic Effects:** Replacement. Prevention of deficiency.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Enters extracellular fluid; then actively transported into cells.
**Metabolism and Excretion:** Excreted by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE (increase in serum potassium levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1–2 hr | unknown |
| IV | rapid | end of infusion | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hyperkalemia; Severe renal impairment; Untreated Addison's disease; Severe tissue trauma; Hyperkalemic familial periodic paralysis; Some products may contain tartrazine (FDC yellow dye #5) or alcohol; avoid using in patients with known hypersensitivity or intolerance; Potassium acetate injection contains aluminum, which may become toxic with prolonged use to high risk groups (renal impairment, premature neonates).
**Use Cautiously in:** Cardiac disease; Renal impairment; Diabetes mellitus (liquids may contain sugar); Hypomagnesemia (may make correction

of hypokalemia more difficult); GI hypomotility including dysphagia or esophageal compression from left atrial enlargement (tablets, capsules); Patients receiving potassium-sparing drugs.

### Adverse Reactions/Side Effects

**CNS:** confusion, restlessness, weakness. **CV:** ARRHYTHMIAS, ECG changes. **GI:** abdominal pain, diarrhea, flatulence, nausea, vomiting; *tablets, capsules only*, GI ulceration, stenotic lesions. **Local:** irritation at IV site. **Neuro:** paralysis, paresthesia.

### Interactions

**Drug-Drug:** Use with **potassium-sparing diuretics** or **ACE inhibitors** or **angiotensin II receptor antagonists** may lead to hyperkalemia. **Anticholinergics** may ↑ GI mucosal lesions in patients taking wax-matrix potassium chloride preparations.

### Route/Dosage

Expressed as mEq of potassium. Potassium acetate contains 10.2 mEq/g; potassium bicarbonate contains 10 mEq potassium/g; potassium chloride contains 13.4 mEq potassium/g; potassium gluconate contains 4.3 mEq/g.

### Normal Daily Requirements

**PO, IV (Adults):** 40–80 mEq/day.
**PO, IV (Children):** 2–3 mEq/kg/day.
**PO, IV (Neonates):** 2–6 mEq/kg/day.

### Prevention of Hypokalemia during Diuretic Therapy

**PO (Adults):** 20–40 mEq/day in 1–2 divided doses; single dose should not exceed 20 mEq.
**PO (Neonates, Infants, and Children):** 1–2 mEq/kg/day in 1–2 divided doses.

### Treatment of Hypokalemia

**PO (Adults):** 40–100 mEq/day in divided doses.
**PO (Neonates, Infants, and Children):** 2–5 mEq/kg/day in divided doses.
**IV (Adults):** *Serum potassium >2.5 mEq/L*—Up to 20 mEq/day as an infusion (not to exceed 10 mEq/hr) or a concentration of 40 mEq/L via peripheral line (up to 100 mEq/L have been used via central line [unlabeled]). *Serum potassium <2 mEq/L with symptoms*—Up to 40 mEq/day as an infusion (rate should generally not exceed 20 mEq/hr).
**IV (Neonates, Infants, and Children):** 0.5–1 mEq/kg/dose (maximum 30 mEq/dose) as an infusion to infuse at 0.3–0.5 mEq/kg/hr (maximum infusion rate 1 mEq/kg/hr).

### Availability

#### Potassium Acetate (generic available)

**Concentrate for injection (contains aluminum):** 2 mEq/mL in 20-, 50-, and 100-mL vials, 4 mEq/mL in 50-mL vials.

#### Potassium Bicarbonate

**Tablets for effervescent oral solution:** 25 mEq.

#### Potassium Bicarbonate/Potassium Chloride

**Packets for effervescent oral solution:** 20 mEq/2.8-g packet. **Tablets for effervescent oral solution:** 12 mEq, 20 mEq, 25 mEq, 50 mEq.

#### Potassium Bicarbonate/Potassium Citrate

**Tablets for effervescent oral solution:** 25 mEq, 50 mEq. **Cost:** 25 mEq $122.98/90, 50 mEq $213.97/90.

#### Potassium Chloride (generic available)

**Extended-release tablets:** 8 mEq, 10 mEq, 20 mEq. **Cost:** *Generic*—10 mEq $22.49/90, 20 mEq $32.97/90. **Extended-release capsules:** 8 mEq, 10 mEq. **Cost:** *Generic*—10 mEq $24.74/90. **Oral solution:** 20 mEq/15 mL, 40 mEq/15 mL. **Cost:** *Generic*—20 mEq/15 mL $8.99/473 mL, 40 mEq/15 mL $19.97/480 mL. **Powder/packets for oral solution:** 20-mEq/1.5-g packet, 25-mEq/1.8-g packet. **Packets for oral suspension:** 20-mEq/1.5-g packet. **Concentrate for injection:** 0.1 mEq/mL in 10-mEq ampules and vials, 0.2 mEq/mL in 10- and 20-mEq ampules and vials, 0.3 mEq/mL in 30-mEq ampules and vials, 0.4 mEq/mL in 20- and 40-mEq ampules and vials, 1.5 mEq/mL, 2 mEq/mL, 3 mEq/mL. **Solution for IV infusion:** 10 mEq/L in various dextrose and saline solutions in 250-, 500-, and 100-mL containers, 20 mEq/L in dextrose/saline/LRs in 250-, 500-, and 100-mL containers, 30 mEq/L in various dextrose and saline solutions in 250-, 500-, and 100-mL containers, 40 mEq/L in various dextrose and saline solutions in 250-, 500-, and 100-mL containers.

#### Potassium Chloride/Potassium Bicarbonate/Potassium Citrate

**Tablets for effervescent oral solution:** 20 mEq.

#### Potassium Gluconate (generic available)

**Tablets:** 2 mEq, 5 mEq. **Elixir:** 20 mEq/15 mL.

#### Potassium Gluconate/Potassium Chloride

**Oral solution:** 20 mEq/15 mL. **Powder for oral solution:** 20 mEq/5-g packet.

### Potassium Gluconate/Potassium Citrate

**Oral solution:** 20 mEq/15 mL.

### Trikates (Potassium Acetate/Potassium Bicarbonate/Potassium Citrate)

**Oral solution:** 15 mEq/5 mL.

## NURSING IMPLICATIONS

### Assessment

- Assess for signs and symptoms of hypokalemia (weakness, fatigue, U wave on ECG, arrhythmias, polyuria, polydipsia) and hyperkalemia (see Toxicity and Overdose).
- Monitor pulse, blood pressure, and ECG periodically during IV therapy.
- ***Lab Test Considerations:*** Monitor serum potassium before and periodically during therapy. Monitor renal function, serum bicarbonate, and pH. Determine serum magnesium level if patient has refractory hypokalemia; hypomagnesemia should be corrected to facilitate effectiveness of potassium replacement. Monitor serum chloride because hypochloremia may occur if replacing potassium without concurrent chloride.
- ***Toxicity and Overdose:*** Symptoms of toxicity are those of hyperkalemia (slow, irregular heartbeat; fatigue; muscle weakness; paresthesia; confusion; dyspnea; peaked T waves; depressed ST segments; prolonged QT segments; widened QRS complexes; loss of P waves; and cardiac arrhythmias).
- Treatment includes discontinuation of potassium, administration of sodium bicarbonate to correct acidosis, dextrose and insulin to facilitate passage of potassium into cells, calcium salts to reverse ECG effects (in patients who are not receiving digoxin), sodium polystyrene used as an exchange resin, and/or dialysis for patient with impaired renal function.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)

### Implementation

- ***High Alert:*** Medication errors involving too rapid infusion or bolus IV administration of potassium chloride have resulted in fatalities. See IV administration guidelines below.
- Do not confuse K-Dur with Imdur (isosorbide mononitrate). Do not confuse Micro-K with micronase (glyburide).
- For most purposes, potassium chloride should be used, except for renal tubular acidoses (hyperchloremic acidosis), in which other salts are more appropriate (potassium bicarbonate, potassium citrate, or potassium gluconate).
- If hypokalemia is secondary to diuretic therapy, consideration should be given to decreasing the dose of diuretic, unless there is a history of significant arrhythmias or concurrent digitalis glycoside therapy.
- **PO:** Administer with or after meals to decrease GI irritation.
- Use of tablets and capsules should be reserved for patients who cannot tolerate liquid preparations.
- Dissolve effervescent tablets in 3–8 oz of cold water. Ensure that effervescent tablet is fully dissolved. Powders and solutions should be diluted in 3–8 oz of cold water or juice (do not use tomato juice if patient is on sodium restriction). Instruct patient to drink slowly over 5–10 min.
- Tablets and capsules should be taken with a meal and full glass of water. Do not chew or crush enteric-coated or extended-release tablets or capsules. Micro-K ExtenCaps capsules can be opened and sprinkled on soft food (pudding, applesauce) and swallowed immediately with a glass of cool water or juice.
- **IV:** Assess for extravasation; severe pain and tissue necrosis may occur. ***High Alert:*** Never administer potassium IV push or bolus.

### Potassium Acetate

- **Continuous Infusion:** ***High Alert:*** Do not administer undiluted. Each single dose *must* be diluted and thoroughly mixed in 100–1000 mL of dextrose, saline, Ringer's or LR, dextrose/saline, dextrose/Ringer's, or LR combinations. Usually limited to 80 mEq/L via peripheral line (200 mEq/L via central line).
- ***Rate: High Alert:*** Infuse slowly, at a rate up to 10 mEq/hr in adults or 0.5 mEq/kg/hr in children on general care areas. Check hospital policy for maximum infusion rates (maximum rate in monitored setting 40 mEq/hr in adults or 1 mEq/kg/hr in children).
- **Y-Site Compatibility:** ciprofloxacin.

### Potassium Chloride

- **Continuous Infusion:** ***High Alert:*** Do not administer concentrations of ≥1.5 mEq/mL undiluted; fatalities have occurred. Concentrated products have black caps on vials or black stripes above constriction on ampules and are labeled with a warning about dilution

requirement. Each single dose must be diluted and thoroughly mixed in 100–1000 mL of IV solution. Usually limited to 80 mEq/L via peripheral line (200 mEq/L via central line).

- Concentrations of 0.1 and 0.4 mEq/mL are intended for administration via calibrated infusion device and do not require dilution.
- ***Rate: High Alert:*** Infuse slowly, at a rate up to 10 mEq/hr in adults or 0.5 mEq/kg/hr in children in general care areas. Check hospital policy for maximum infusion rates (maximum rate in monitored setting 40 mEq/hr in adults or 1 mEq/kg/hr in children). Use an infusion pump.
- **Solution Compatibility:** May be diluted in dextrose, saline, Ringer's solution, LR, dextrose/saline, dextrose/Ringer's solution, and dextrose/LR combinations. Commercially available premixed with many of the above IV solutions.
- **Y-Site Compatibility:** acyclovir, allopurinol, amifostine, aminophylline, amiodarone, ampicillin, atropine, aztreonam, betamethasone, bivalirudin, calcium gluconate, chlordiazepoxide, chlorpromazine, ciprofloxacin, cisatracurium, cladribine, cyanocobalamin, dexamethasone sodium phosphate, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxorubicin liposome, droperidol, drotrecogin, edrophonium, enalaprilat, epinephrine, ertapenem, esmolol, conjugated estrogens, ethacrynate sodium, etoposide phosphate, famotidine, fenoldopam, fentanyl, filgrastim, fludarabine, fluorouracil, furosemide, gemcitabine, granisetron, heparin, hydralazine, idarubicin , inamrinone, indomethacin, insulin, isoproterenol, kanamycin, labetalol, lidocaine, linezolid, lorazepam, magnesium sulfate, melphalan, menadiol, meperidine, meropenem, methoxamine, methylergonovine, midazolam, milrinone, morphine, neostigmine, nicardipine, nitroprusside, norepinephrine, ondansetron, oxacillin, oxaliplatin, oxytocin, paclitaxel, pantoprazole, pemetrexed, penicillin G potassium, pentazocine, phytonadione, piperacillin/tazobactam, procainamide, prochlorperazine, propofol, propranolol, pyridostigmine, quinupristin/dalfopristin, remifentanil, sargramostim, scopolamine, sodium bicarbonate, succinylcholine, tacrolimus, teniposide, theophylline, thiotepa, tirofiban, vinorelbine, warfarin, zidovudine.
- **Y-Site Incompatibility:** amphotericin B cholesteryl sulfate complex, azithromycin, diazepam, ergotamine tartrate, lansoprazole, phenytoin.
- **Additive Compatibility:** calcium gluconate, cimetidine, dobutamine, dopamine, furosemide, heparin, hydrocortisone, hydromorphone, lidocaine, ranitidine, sodium bicarbonate, vitamin B complex with C.

### Patient/Family Teaching

- Explain to patient purpose of the medication and the need to take as directed, especially when concurrent digoxin or diuretics are taken. Take missed doses as soon as remembered within 2 hr; if not, return to regular dose schedule. Do not double dose.
- Emphasize correct method of administration. GI irritation or ulceration may result from chewing enteric-coated tablets or insufficient dilution of liquid or powder forms.
- Some extended-release tablets are contained in a wax matrix that may be expelled in the stool. This occurrence is not significant.
- Instruct patient to avoid salt substitutes or low-salt milk or food unless approved by health care professional. Patient should be advised to read all labels to prevent excess potassium intake.
- Advise patient regarding sources of dietary potassium (see Appendix M). Encourage compliance with recommended diet.
- Instruct patient to report dark, tarry, or bloody stools; weakness; unusual fatigue; or tingling of extremities. Notify health care professional if nausea, vomiting, diarrhea, or stomach discomfort persists. Dosage may require adjustment.
- Emphasize the importance of regular follow-up exams to monitor serum levels and progress.

### Evaluation/Desired Outcomes

- Prevention and correction of serum potassium depletion.
- Cessation of arrhythmias caused by digoxin toxicity.

## **pramipexole** (pra-mi-**pex**-ole)
Mirapex

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: dopamine agonists

**Pregnancy Category C**

### Indications

Management of Parkinson's disease. Restless leg syndrome.

## Action
Stimulates dopamine receptors in the striatum of the brain. **Therapeutic Effects:** Decreased tremor and rigidity in Parkinson's disease. Decreased leg restlessness.

## Pharmacokinetics
**Absorption:** >90% absorbed following oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** 90% excreted unchanged in urine.
**Half-life:** 8 hr (↑ in geriatric patients and patients with renal impairment).

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 hr | 8 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Renal impairment (↑ dosing interval recommended if CCr <60 mL/min); OB, Lactation: Pedi: Safety not established; Geri: ↑ risk of hallucinations.

## Adverse Reactions/Side Effects
**CNS:** SLEEP ATTACKS, amnesia, dizziness, drowsiness, hallucinations, weakness, abnormal dreams, confusion, dyskinesia, extrapyramidal syndrome, headache, insomnia, urges (gambling, sexual). **CV:** postural hypotension. **Derm:** melanoma. **GI:** constipation, dry mouth, dyspepsia, nausea, tooth disease. **GU:** urinary frequency. **MS:** leg cramps. **Neuro:** hypertonia, unsteadiness/falling.

## Interactions
**Drug-Drug:** Concurrent **levodopa** ↑ risk of hallucinations and dyskinesia. Effectiveness may be ↑ by **cimetidine**. Effectiveness may be ↓ by **dopamine antagonists**, including **butyrophenones**, **metoclopramide**, **phenothiazines**, or **thioxanthenes**.

## Route/Dosage
**PO (Adults):** *Parkinson's disease*—0.125 mg 3 times daily initially; may be ↑ q 5–7 days (range 1.5–4.5 mg/day in 3 divided doses). *Restless Leg Syndrome*—0.125 mg daily 1–3 hr before bedtime. May be ↑ at 4–7 day intervals to 0.25 mg daily, then up to 0.5 mg daily.

### Renal Impairment
**PO (Adults):** *Parkinson's disease—CCr 35–59 mL/min*—0.125 mg twice daily initially, may be ↑ q 5–7 days up to 1.5 mg twice daily; *CCr 15–34 mL/min*—0.125 mg daily initially, may be ↑ q 5–7 days up to 1.5 mg daily. *Restless Leg Syndrome*—0.125 mg daily 1–3 hr before bedtime. May be ↑ at 14-day intervals to 0.25 mg daily, then up to 0.5 mg daily.

## Availability (generic available)
**Tablets:** 0.125 mg, 0.25 mg, 0.5 mg, 0.75 mg, 1 mg, 1.5 mg. **Cost:** 0.125 mg $517.05/270, 0.25 mg $491.97/270, 0.5 mg $605.96/270, 1 mg $574.97/270, 1.5 mg $605.96/270.

# NURSING IMPLICATIONS

## Assessment
- Assess patient for confusion or hallucinations. Notify health care professional if these occur.
- Monitor ECG and blood pressure frequently during dosage adjustment and periodically throughout therapy.
- Assess patient for drowsiness and sleep attacks. Drowsiness is a common side effect of pramipexole, but sleep attacks or episodes of falling asleep during activities that require active participation may occur without warning. Assess patient for concomitant medications that have sedating effects or may increase serum pramipexole levels (see Interactions). May require discontinuation of therapy.
- **Parkinson's Disease:** Assess patient for signs and symptoms of Parkinson's disease (tremor, muscle weakness and rigidity, ataxia) before and throughout therapy.
- **Restless Leg Syndrome:** Assess sleep patterns and frequency of restless leg disturbances.

## Potential Nursing Diagnoses
Impaired physical mobility (Indications)
Risk for injury (Indications, Side Effects)

## Implementation
- An attempt to reduce the dose of levodopa/carbidopa may be made cautiously during pramipexole therapy.
- **PO:** Administer with meals to minimize nausea; usually resolves with continued therapy.

## Patient/Family Teaching
- Instruct patient to take medication as directed. Take missed doses as soon as remembered if it is not almost time for next dose. Do not double doses. Consult health care professional before reducing dose or discontinuing medication. Advise patient to read the *Patient Information*

P

sheet before taking and with each Rx refill, changes may occur.
- May cause drowsiness and unexpected episodes of falling asleep. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Advise patient to notify health care professional if episodes of falling asleep occur.
- Advise patient to change position slowly to minimize orthostatic hypotension. May occur more frequently during initial therapy.
- Instruct patient to consult health care professional before taking any other Rx, OTC, or herbal products with pramipexole.
- Advise patient to have periodic skin exams to check for lesions that may be melanoma.
- Advise patient to notify health care professional if new or increased gambling, sexual, or other intense urges occur.
- Advise female patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding or planning to breastfeed.

### Evaluation/Desired Outcomes
- Decreased tremor and rigidity in Parkinson's disease.
- Decrease in restless legs and improved sleep.

HIGH ALERT

## pramlintide (pram-lin-tide)
Symlin

***Classification***
Therapeutic: antidiabetics
Pharmacologic: hormones

**Pregnancy Category C**

### Indications
Used with mealtime insulin in the management of diabetics whose blood sugar cannot be controlled by optimal insulin therapy; can be used with other agents (sulfonylureas, metformin).

### Action
Acts as a synthetic analogue of amylin, an endogenous pancreatic hormone that helps to control postprandial hyperglycemia; effects include slowed gastric emptying, suppression of glucagon secretion and regulation of food intake. **Therapeutic Effects:** Improved control of postprandial hyperglycemia.

### Pharmacokinetics
**Absorption:** 30–40% absorbed following subcutaneous administration.
**Distribution:** Does not appear to significantly cross the placenta.
**Metabolism and Excretion:** Metabolized by the kidneys; major metabolite has pharmacologic properties similar to the parent compound.
**Half-life:** 48 min.

TIME/ACTION PROFILE (effect on blood sugar*)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Subcut | rapid | 20 min | 3 hr |

*Blood level

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivty; Inability to identify hypoglycemia; Gastroparesis or need for medications to stimulate gastric motility; Poor compliance with current insulin regimen or self-monitoring; HbA1c >9%; Recurring severe hypoglycemia within the last 6 mo, requiring treatment; OB: Insulin is the drug of choice for blood glucose control during pregnancy; Pedi: Safety not established.
**Use Cautiously in:** Lactation: Lactation.

### Adverse Reactions/Side Effects
Noted for concurrent use with insulin.
**CNS:** dizziness, fatigue, headache. **Resp:** cough. **GI:** nausea, abdominal pain, anorexia, vomiting. **Endo:** HYPOGLYCEMIA. **Derm:** local allergy. **MS:** arthralgia. **Misc:** injection site reactions, systemic allergic reactions.

### Interactions
**Drug-Drug:** ↑ likelihood of hypoglycemia with short-acting **insulin**; ↓ dose of short-acting premeal insulin by 50%. Avoid concurrent use with other agents that ↓ GI motility, including **atropine** and other **anticholinergics**. Avoid concurrent use with other agents that ↓ GI absorption of nutrients, including **α-glucosidase inhibitors** including **acarbose** and **miglitol**. May delay oral absorption of concurrently administered drugs; if prompt absorption is desired, administer 1 hr before or 2 hr after pramlintide.

### Route/Dosage
#### Insulin-using Type 2 Diabetes
**Subcut (Adults):** 60 mcg, immediately prior to major meals initially, if no significant nausea occurs, dose may be ↑ to 120 mcg.

#### Type 1 Diabetes
**Subcut (Adults):** 15 mcg, immediately prior to major meals initially, if no significant nausea occurs, dose may be ↑ by 15 mcg every 3 days up to 60 mcg.

### Availability

**Pen-injector:** 1000 mcg/mL. **Solution for injection:** 600 mcg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess hemoglobin A1c, recent blood glucose monitoring data, history of insulin-induced hypoglycemia, current insulin regimen, and body weight prior to initiation of therapy.
- Assess for signs and symptoms of hypoglycemia (hunger, headache, sweating, tremor, irritability, difficulty concentrating, loss of consciousness, coma, seizure), occurs within 3 hr of injection. Pramlintide alone does not cause hypoglycemia, may increase risk when administered with insulin.
- ***Lab Test Considerations:*** Monitor blood glucose frequently, including pre- and postmeals and at bedtime.

### Potential Nursing Diagnoses

Noncompliance (Patient/Family Teaching)

### Implementation

- ***High Alert:*** Dose errors are a potential problem with administration of pramlintide. Pramlintide is available in a concentration of 0.6 mg/mL, dosing is in mcg, and insulin syringe for administration is in units. Carefully review dosing and conversion table prior to administration.
- Administer pramlintide and insulin as separate injections; do not mix.
- Adjust insulin doses to optimize glycemic control once target dose of pramlintide is achieved and nausea has subsided.
- **Subcut:** Administer immediately prior to major meals ≥250 kcal or containing ≥30 g of carbohydrate. Reduce preprandial rapid-acting, short-acting, and fixed-mix insulin doses by 50%. Use a U-100 syringe (preferably a 0.3 mL size) for optimal accuracy. Administer into abdomen or thigh, rotating injection sites. Do not administer solutions that are cloudy. Store unopened vials in refrigerator. Opened vials may be refrigerated or kept at room temperature for up to 28 days.

### Patient/Family Teaching

- Instruct patient in proper use of pramlintide (injection technique, timing of doses, storage, and disposal of equipment). Make sure patient understands dosing and preparation of correct dose. Emphasize importance of adherence to meal planning, physical activity, recognition and management of hypoglycemia and hyperglycemia, and assessment of diabetes complications. Advise patient to read the *Medication Guide* before use and with each refill for new information.
- Review with patient how to handle illness or stress, inadequate or omitted insulin dose, inadvertent administration of increased dose of insulin or pramlintide, inadequate food intake or missed meals. If a dose is missed, wait until the next meal and take usual dose; do not give an additional injection.
- Instruct patient to contact health care professional at least once a week until target dose of pramlintide is achieved, pramlintide is well-tolerated, and blood glucose concentrations are stable.
- May cause difficulty concentrating. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that signs of local allergy (redness, swelling, itching at site of injection) usually resolve within a few days to a few weeks; may be related to pramlintide, irritants in skin cleansing agent or improper injection technique.
- Advise patient to contact health care professional if recurrent nausea or hypoglycemia occur; may lead to increased risk of severe hypoglycemia. Discontinue pramlintide therapy if recurrent unexplained hypoglycemia requiring medical assistance, persistent clinically significant nausea, or noncompliance with self-monitoring of blood glucose concentrations, insulin dose adjustments, or scheduled health care professional contacts or recommended clinic visits occur.
- Advise patient to contact health care professional before taking other Rx, OTC, vitamins, or herbal products with pramlintide and to avoid concurrent alcohol use.
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes

- Reduction in postprandial glucose concentrations.

## prasugrel (pra-soo-grel)
Effient

***Classification***
Therapeutic: antiplatelet agents
Pharmacologic: thienopyridines

**Pregnancy Category B**

### Indications
Reduction of thrombotic cardiovascular events (including stent thrombosis) in patients with acute coronary syndrome who will be managed with PCI including patients with unstable angina or non-ST-elevation myocardial infarction (NSTEMI). Reduction of thrombotic cardiovascular events (including stent thrombosis) in patients with STEMI when managed with either primary/delayed PCI.

### Action
Acts by irreversibly binding its active metabolite to the $P2Y_{12}$ class of ADP receptors on platelets; inhibiting platelet activation and aggregation. **Therapeutic Effects:** Decreased thrombotic events including cardiovascular death, nonfatal myocardial infarction (MI) and nonfatal stroke.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration (79%), then rapidly converted to an active metabolite.
**Distribution:** Unknown.
**Protein Binding:** *Active metabolite*—98%.
**Metabolism and Excretion:** Active metabolite is metabolized to two inactive compounds; 68% excreted in the urine and 27% in feces as inactive metabolites.
**Half-life:** *Active metabolite*—7 hr (range 2–15 hr).

TIME/ACTION PROFILE (effect on platelet function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 1 hr | 2 hr | 5–9 days† |

† Following discontinuation.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Active pathological bleeding; History of transient ischemic attack or stroke.
**Use Cautiously in:** Patients about to undergo coronary artery bypass grafting (CABG) (↑ risk of bleeding; discontinue at least 7 days prior to surgery); Premature discontinuation (↑ risk of stent thrombosis, MI, and death); Body weight <60 kg, propensity to bleed, severe hepatic impairment, concurrent use of medications that increase the risk of bleeding (↑ risk of bleeding); Hypotension in the setting of recent coronary angiography, PCI, CABG, or other surgical procedure (suspect bleeding but do not discontinue prasugrel); Geri: Use in patients ≥75 yr of age generally not recommended (↑ risk of fatal/intracranial bleeding and questionable benefit, except in high-risk patients such as diabetes or prior MI); OB: Use during pregnancy only if potential benefit to mother justifies potential risk to fetus; Lactation: Use during nursing only if potential benefit to the mother justifies potential risk to nursing infant; Pedi: Safe and effective use in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** dizziness, fatigue, headache. **Resp:** cough, dyspnea. **CV:** atrial fibrillation, bradycardia, hypertension, hypotension, peripheral edema. **GI:** diarrhea, nausea. **Derm:** rash. **Hemat:** BLEEDING, THROMBOTIC THROMBOCYTOPENIC PURPURA, leukopenia. **Metab:** hyperlipidemia/hypercholesterolemia. **MS:** back pain, extremity pain. **Misc:** fever, non-cardiac chest pain.

### Interactions
**Drug-Drug:** ↑ risk of bleeding with **warfarin**, **NSAIDs**.

### Route/Dosage
Aspirin 75–325 mg/daily should be taken concurrently.
**PO (Adults ≥60 kg):** 60 mg initially as a loading dose, then 10 mg once daily.
**PO (Adults < 60 kg):** Consider maintenance dose of 5 mg once daily.

### Availability
**Tablets:** 5 mg, 10 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for symptoms of stroke, peripheral vascular disease, or MI periodically during therapy.
- Monitor patient for signs of thrombotic thrombocytic purpura (thrombocytopenia, microangiopathic hemolytic anemia, neurologic findings, renal dysfunction, fever). May rarely occur, even after short exposure (<2 wk). Requires prompt treatment.
- ***Lab Test Considerations:*** Monitor bleeding time during therapy. Prolonged bleeding time, which is time- and dose-dependent, is expected.

- Monitor CBC with differential and platelet count periodically during therapy. Thrombocytopenia and anemia may rarely occur.

### Potential Nursing Diagnoses
Risk for injury (Indications, Side Effects)

### Implementation
- Discontinue prasugrel 7 days before planned surgical procedures.
- Patients should take aspirin 75–325 mg daily with prasugrel.
- **PO:** Administer once daily without regard to food.

### Patient/Family Teaching
- Instruct patient to take medication as directed. Take missed doses as soon as possible unless almost time for next dose; do not double doses. Do not discontinue without consulting health care professional. Advise patient to read *Medication Guide* before taking and with each Rx refill; new information may be available.
- Advise patient to notify health care professional promptly if fever, weakness, skin paleness, purple skin patches, yellowing of skin or eyes, chills, sore throat, neurological changes, or unusual bleeding or bruising occurs.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery.
- Instruct patient to avoid taking other Rx, OTC, or herbal products, especially those containing NSAIDs without consulting health care professional.

### Evaluation/Desired Outcomes
- Prevention of stroke, MI, and vascular death in patients at risk.

**pravastatin, See HMG-CoA REDUCTASE INHIBITORS (statins).**

## prazosin (pra-zoe-sin)
Minipress

***Classification***
Therapeutic: antihypertensives
Pharmacologic: peripherally acting antiadrenergics

**Pregnancy Category C**

### Indications
Mild to moderate hypertension. **Unlabeled Use:** Management of urinary outflow obstruction in patients with benign prostatic hyperplasia.

### Action
Dilates both arteries and veins by blocking postsynaptic alpha$_1$-adrenergic receptors. Decreases contractions in smooth muscle of prostatic capsule. **Therapeutic Effects:** Lowering of blood pressure. Decreased cardiac preload and afterload. Decreased symptoms of prostatic hyperplasia (urinary urgency, urinary hesitancy, nocturia).

### Pharmacokinetics
**Absorption:** 60% absorbed following oral administration.
**Distribution:** Widely distributed.
**Protein Binding:** 97%.
**Metabolism and Excretion:** Extensively metabolized by the liver. Minimal (5–10%) renal excretion of unchanged drug.
**Half-life:** 2–3 hr.

TIME/ACTION PROFILE (antihypertensive effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 2 hr | 2–4 hr† | 10 hr |

†Following single dose; maximal antihypertensive effects occur after 3–4 wk of chronic dosing

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Renal insufficiency (↑ sensitivity to effects; dose reduction may be required); OB, Lactation: Pedi: Safety not established; Angina pectoris; When adding diuretics (↓ dose of prazosin); Patients undergoing cataract surgery (↑ risk of intraoperative floppy iris syndrome).

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache, weakness, drowsiness, mental depression, syncope. **EENT:** blurred vision, intraoperative floppy iris syndrome. **CV:** first-dose orthostatic hypotension, palpitations, angina, edema. **GI:** abdominal cramps, diarrhea, dry mouth, nausea, vomiting. **GU:** erectile dysfunction, priapism.

### Interactions
**Drug-Drug:** Additive hypotension with acute ingestion of **alcohol**, other **antihypertensives**, or **nitrates**. Antihypertensive effects may be ↓ by **NSAIDs**.

### Route/Dosage

#### Hypertension

**PO (Adults):** 1 mg 2–3 times daily (give first dose at bedtime) for initial 3 days of therapy, then ↑ gradually to maintenance dose of 6–15 mg/day in 2–3 divided doses (not to exceed 20–40 mg/day).
**PO (Children):** 50–400 mcg (0.05–0.4 mg)/kg/day in 2–3 divided doses (not to exceed 7 mg/dose or 15 mg/day).

#### Benign Prostatic Hyperplasia

**PO (Adults):** 1–5 mg twice daily.

### Availability (generic available)

**Capsules:** 1 mg, 2 mg, 5 mg. **Cost:** *Generic*—1 mg $35.96/180, 2 mg $43.00/180, 5 mg $93.98/180. **Tablets:** 1 mg, 2 mg, 5 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess for first-dose orthostatic reaction (dizziness, weakness) and syncope. May occur 30 min–2 hr after initial dose and occasionally thereafter. Incidence may be dose related. Volume-depleted or sodium-restricted patients may be more sensitive. Observe patient closely during this period; take precautions to prevent injury. First dose may be given at bedtime to minimize this reaction.
- Monitor intake and output ratios and daily weight; assess for edema daily, especially at beginning of therapy.
- **Hypertension:** Monitor blood pressure and pulse frequently during initial dosage adjustment and periodically throughout therapy. Report significant changes.
- Monitor frequency of prescription refills to determine adherence.
- **Benign Prostatic Hyperplasia:** Assess patient for symptoms of prostatic hyperplasia (urinary hesitancy, feeling of incomplete bladder emptying, interruption of urinary stream, impairment of size and force of urinary stream, terminal urinary dribbling, straining to start flow, dysuria, urgency) before and periodically during therapy.
- Rule out prostatic carcinoma before therapy; symptoms are similar.

### Potential Nursing Diagnoses

Risk for injury (Side Effects)
Noncompliance (Patient/Family Teaching)

### Implementation

- May be used in combination with diuretics or beta blockers to minimize sodium and water retention. If these are added to prazosin therapy, reduce dose of prazosin initially and titrate to effect.
- **PO:** Administer daily dose at bedtime. If necessary, dose may be increased to twice daily.

### Patient/Family Teaching

- Instruct patient to take medication at the same time each day. Take missed doses as soon as remembered. If not remembered until next day, omit; do not double doses.
- Advise patient to weigh self twice weekly and assess feet and ankles for fluid retention.
- May cause dizziness or drowsiness. Advise patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Caution patient to avoid sudden changes in position to decrease orthostatic hypotension. Alcohol, CNS depressants, standing for long periods, hot showers, and exercising in hot weather should be avoided because of enhanced orthostatic effects.
- Advise patient to consult health care professional before taking any cough, cold, or allergy remedies.
- Instruct patient to notify health care professional of medication regimen before any surgery.
- Advise patient to notify health care professional if frequent dizziness, fainting, or swelling of feet or lower legs occurs.
- Emphasize the importance of follow-up exams to evaluate effectiveness of medication.
- **Hypertension:** Emphasize the importance of continuing to take this medication as directed, even if feeling well. Medication controls but does not cure hypertension.
- Encourage patient to comply with additional interventions for hypertension (weight reduction, low-sodium diet, smoking cessation, moderation of alcohol consumption, regular exercise, and stress management).
- Instruct patient and family on proper technique for blood pressure monitoring. Advise them to check blood pressure at least weekly and to report significant changes.

### Evaluation/Desired Outcomes

- Decrease in blood pressure without appearance of side effects.
- Decrease in symptoms of prostatic hyperplasia.

**prednicarbate, See CORTICOSTEROIDS (TOPICAL/LOCAL).**

**prednisoLONE, See CORTICOSTEROIDS (SYSTEMIC).**

**predniSONE, See CORTICOSTEROIDS (SYSTEMIC).**

## pregabalin (pre-gab-a-lin)
Lyrica

***Classification***
Therapeutic: analgesics, anticonvulsants
Pharmacologic: gamma aminobutyric acid (GABA) analogues, nonopioid analgesics

**Schedule V**

**Pregnancy Category C**

### Indications
Pain due to: diabetic peripheral neuropathy, postherpetic neuralgia, fibromyalgia. Adjunctive therapy of partial-onset seizures in adults.

### Action
Binds to calcium channels in CNS tissues which regulate neurotransmitter release. Does not bind to opioid receptors. **Therapeutic Effects:** Decreased neuropathic or post-herpetic pain. Decreased partial-onset seizures.

### Pharmacokinetics
**Absorption:** Well absorbed (90%) following oral administration.
**Distribution:** Probably crosses the blood-brain barrier.
**Metabolism and Excretion:** Minimally metabolized, 90% excreted unchanged in urine.
**Half-life:** 6 hr.

TIME/ACTION PROFILE (↓ post–herpetic pain)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2–4 wk | unknown |

### Contraindications/Precautions
**Contraindicated in:** Myopathy (known/suspected); Lactation: Lactation.
**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Renal impairment (dose alteration recommended for CCr <60 mL/min); CHF; History of drug dependence/drug-seeking behavior; OB: Use only if maternal benefit outweighs fetal risk; may ↑ risk of male-mediated teratogenicity; Pedi: Safety not established; Geri: Consider age-related ↓ in renal function when determining dose.

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, dizziness, drowsiness, impaired attention/concentration/thinking. **CV:** edema. **EENT:** blurred vision. **GI:** dry mouth, abdominal pain, constipation, ↑ appetite, vomiting. **Hemat:** ↓ platelet count. **Metab:** weight gain. **Misc:** allergic reactions, fever.

### Interactions
**Drug-Drug:** Concurrent use with **thiazolidinediones (pioglitazone,rosiglitazone)** may ↑ risk of fluid retention. ↑ risk of CNS depression with other **CNS depressants** including **opioids**, **alcohol**, **benzodiazepines**, or other **sedatives/hypnotics**.

### Route/Dosage
**PO (Adults):** *Diabetic neuropathic pain*—50 mg three times daily, ↑ over 7 days up to 100 mg 3 times daily; *Partial onset seizures*—150 mg/day initially in 2–3 divided doses, may be gradually ↑ to 600 mg/day; *Post-herpetic neuralgia*—75 mg twice daily or 50 mg 3 times daily initially, may be ↑ over 7 days to 300 mg/day in 2–3 divided doses, after 2–4 wk may be ↑ to 600 mg/day in 2–3 divided doses; *Fibromyalgia*—75 mg twice daily initially, may be ↑ to 150 mg twice daily within 1 wk based on efficacy and tolerability. May be ↑ to 225 twice daily.

### Renal Impairment
**PO (Adults):** *CCr 30–60 mL/min*—75–300 mg/day in 2–3 divided doses; *CCr 15–30 mL/min*—25–150 mg/day in 1–2 divided doses; *CCr < 15 mL/min*—25–75 mg/day as a single daily dose.

### Availability
**Capsules:** 25 mg, 50 mg, 75 mg, 100 mg, 150 mg, 200 mg, 225 mg, 300 mg. **Cost:** 25 mg $335.95/180, 50 mg $335.95/180, 75 mg $335.95/180, 100 mg $335.95/180, 150 mg $335.95/180, 200 mg $343.94/180, 225 mg $337.01/180, 300 mg $351.92/180.

## NURSING IMPLICATIONS

### Assessment
- Monitor closely for notable changes in behavior that could indicate the emergence or worsening of suicidal thoughts or behavior or depression.

- **Diabetic Peripheral Neuropathy, Postherpetic Neuralgia, and Fibromylagia:** Assess location, characteristics, and intensity of pain periodically during therapy.
- **Seizures:** Assess location, duration, and characteristics of seizure activity.
- ***Lab Test Considerations:*** May cause ↑ creatine kinase levels.
- May cause ↓ platelet count.

### Potential Nursing Diagnoses
Risk for injury (Adverse Reactions)

### Implementation
- Pregabalin should be discontinued gradually over at least 1 wk. Abrupt discontinuation may cause insomnia, nausea, headache, and diarrhea when used for pain and may cause increase in seizure frequency when treating seizures.
- **PO:** May be administered without regard to meals.

### Patient/Family Teaching
- Instruct patient to take medication as directed. Do not discontinue abruptly; may cause insomnia, nausea, headache, or diarrhea or increase in frequency of seizures. Advise patient to read the *Patient Information Leaflet* prior to taking pregabalin.
- May cause dizziness, drowsiness, and blurred vision. Caution patient to avoid driving or activities requiring alertness until response to medication is known. Advise patient to notify health care professional if changes in vision occur. Seizure patients should not resume driving until physician gives clearance based on control of seizure disorder.
- Instruct patient to promptly report unexplained muscle pain, tenderness, or weakness, especially if accompanied by malaise or fever. Discontinue therapy if myopathy is diagnosed or suspected or if markedly elevated creatine kinase levels occur.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Inform patient that pregabalin may cause edema and weight gain.
- Caution patient to avoid alcohol or other CNS depressants with pregabalin.
- Advise female patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding. Inform male patients who plan to father a child of the potential risk of male-mediated teratogenicity.
- Instruct patient to notify health care professional of medication regimen before treatment or surgery.
- Advise patient to carry identification describing disease process and medication regimen at all times.

### Evaluation/Desired Outcomes
- Decrease in intensity of chronic pain.
- Decrease in the frequency or cessation of seizures.

## procainamide
(proe-**kane**-ah-mide)

***Classification***
Therapeutic: antiarrhythmics (class IA)

**Pregnancy Category C**

### Indications
Treatment of a wide variety of ventricular and atrial arrhythmias, including: Atrial premature contractions, Premature ventricular contractions, Ventricular tachycardia, Paroxysmal atrial tachycardia. Maintenance of normal sinus rhythm after conversion from atrial fibrillation or flutter.

### Action
Decreases myocardial excitability. Slows conduction velocity. May depress myocardial contractility. **Therapeutic Effects:** Suppression of arrhythmias.

### Pharmacokinetics
**Absorption:** Well absorbed (75–90%) following IM administration.
**Distribution:** Rapidly and widely distributed.
**Metabolism and Excretion:** Converted by the liver to *N*-acetylprocainamide (NAPA), an active antiarrhythmic compound. Remainder (40–70%) excreted unchanged by the kidneys.
**Half-life:** 2.5–4.7 hr (NAPA—7 hr); prolonged in renal impairment.

TIME/ACTION PROFILE (antiarrhythmic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | immediate | 25–60 min | 3–4 hr |
| IM | 10–30 min | 15–60 min | 3–4 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; AV block; Myasthenia gravis; Hypersensitivity to tartrazine

(FDC yellow dye #5; present in some oral products).

**Use Cautiously in:** MI or cardiac glycoside toxicity; Geri: CHF, renal or hepatic insufficiency, geriatric patients (dose reduction or increased dosing intervals recommended); OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, confusion, dizziness. **CV:** ASYSTOLE, HEART BLOCK, VENTRICULAR ARRHYTHMIAS, hypotension. **GI:** diarrhea, anorexia, bitter taste, nausea, vomiting. **Derm:** rashes. **Hemat:** AGRANULOCYTOSIS, eosinophilia, leukopenia, thrombocytopenia. **Misc:** chills, drug-induced systemic lupus syndrome, fever.

### Interactions

**Drug-Drug:** May have additive or antagonistic effects with other **antiarrhythmics**. Additive neurologic toxicity (confusion, seizures) with **lidocaine**. **Antihypertensives** and **nitrates** may potentiate hypotensive effect. Potentiates **neuromuscular blocking agents**. May partially antagonize the therapeutic effects of **anticholinesterase agents** in myasthenia gravis. ↑ risk of arrhythmias with **pimozide**. Additive anticholinergic effects with other **drugs possessing anticholinergic properties**, including **antihistamines**, **antidepressants**, **atropine**, **haloperidol**, and **phenothiazines**. Effects of procainamide may be ↑ by **cimetidine**, **quinidine**, or **trimethoprim**.

### Route/Dosage

**IM (Adults):** 50 mg/kg/day in divided doses q 3–6 hr.

**IV (Adults):** 100 mg q 5 min until arrhythmia is abolished or 1000 mg have been given; wait at least 10 min until further dosing *or* loading infusion of 500–600 mg over 30–60 min followed by maintenance infusion of 1–4 mg/min.

### Availability (generic available)

**Injection:** 100 mg/mL, 500 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor ECG, pulse, and blood pressure continuously throughout IV administration. Parameters should be monitored periodically during oral administration. IV administration is usually discontinued if any of the following occur: arrhythmia is resolved, QRS complex widens by 50%, PR interval is prolonged, blood pressure drops >15 mm Hg, or toxic side effects develop. Patient should remain supine throughout IV administration to minimize hypotension.
- ***Lab Test Considerations:*** Monitor CBC every 2 wk during the first 3 mo of therapy. May cause ↓ leukocyte, neutrophil, and platelet counts. Therapy may be discontinued if leukopenia occurs. Blood counts usually return to normal within 1 mo of discontinuation of therapy.
- Monitor ANA periodically during prolonged therapy or if symptoms of lupus-like reaction occur. Therapy is discontinued if a steady increase in ANA titer occurs.
- May cause ↑ AST, ALT, alkaline phosphatase, LDH, bilirubin, and a positive Coombs' test result.
- ***Toxicity and Overdose:*** Serum procainamide and *N*-acetylprocainamide levels may be monitored periodically during dosage adjustment. Therapeutic blood level of procainamide is 4–8 mcg/mL.
- Toxicity may occur with procainamide blood levels of 8–16 mcg/mL or greater.
- Signs of toxicity include confusion, dizziness, drowsiness, decreased urination, nausea, vomiting, and tachyarrhythmias.

### Potential Nursing Diagnoses

Decreased cardiac output (Indications)

### Implementation

- **IM:** Used only when IV route is not feasible.

**IV Administration**

- **Direct IV:** (only to be used for life-threatening arrhythmias). ***Diluent:*** Dilute each 100 mg of procainamide with 10 mL of 0.9% NaCl. ***Rate:*** Not to exceed 25 mg/min. Rapid administration may cause ventricular fibrillation or asystole.
- **Intermittent Infusion (preferred route of administration):** ***Diluent:*** Add 2 g of procainamide to 250 mL of 0.9% NaCl. ***Concentration:*** 8 mg/mL. ***Rate:*** Administer initial infusion over 30–60 min. Administer maintenance infusion at rate of 1–4 mg/min to maintain control of arrhythmia.
- **Y-Site Compatibility:** alfentanil, amikacin, aminophylline, amiodarone, amphotericin B liposome, anidulafungin, ascorbic acid, atracurium, atropine, azathioprine, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, caspofungin, cefazo-

P

lin, cefotaxime, cefoxitin, ceftazidime, ceftriaxone, cefuroxime, chlorpromazine, cimetidine, cisatracurium, cisplatin, clindamycin, cyanocobalamin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexamethasone, dexmedetomidine, digoxin, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium doxorubicin, doxycycline, enalaprilat, ephedrine, epinephrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hetastarch, hydrocortisone, hydromorphone, idarubicin, ifosfamide, indomethacin, insulin, isoproterenol, ketorolac, labetalol, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylprednisolone, metoclopramide, metoprolol, midazolam, mitoxantrone, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, paclitaxel, palonosetron, pancuronium, pantoprazole, papaverine, penicillin G, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, prochlorperazine, promethazine, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, ranitidine, remifentanil, rocuronium, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiamine, thioptepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, vitamin B complex with C, voriconazole.

- **Y-Site Incompatibility:** acyclovir, azathioprine, carboplatin, ceftizoxime, chloramphenicol, dantrolene, diazepam, diazoxide, ganciclovir, hydralazine, metronidazole, milrinone, phenytointrimethoprim/sulfamethoxazole.

### Patient/Family Teaching

- May cause dizziness. Caution patient to request assistance with ambulation until response to medication is known.
- Advise patient to notify health care professional immediately if signs of drug-induced lupus syndrome (fever, chills, joint pain or swelling, pain with breathing, skin rash), leukopenia (sore throat, mouth, or gums), or thrombocytopenia (unusual bleeding or bruising) occur. Medication may be discontinued if these occur.
- Advise patient to carry identification at all times describing disease process and medication regimen.
- Emphasize the importance of routine follow-up exams to monitor progress.

### Evaluation/Desired Outcomes

- Resolution of cardiac arrhythmias without detrimental side effects.

**procaine penicillin G, See PENICILLINS.**

## procarbazine

(proe-**kar**-ba-zeen)
Matulane, Natulan

***Classification***
Therapeutic: antineoplastics
Pharmacologic: alkylating agents

**Pregnancy Category D**

### Indications

Hodgkin's disease (with other treatment modalities). **Unlabeled Use:** Other lymphomas. Brain and lung tumors. Multiple myeloma. Malignant melanoma. Polycythemia vera.

### Action

Appears to inhibit DNA, RNA, and protein synthesis (cell-cycle S-phase–specific). **Therapeutic Effects:** Death of rapidly replicating cells, particularly malignant ones.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration.
**Distribution:** Widely distributed; crosses the blood-brain barrier.
**Metabolism and Excretion:** Metabolized by the liver; <5% excreted unchanged by the kidneys; some respiratory elimination as methane and carbon dioxide.
**Half-life:** 1 hr.

TIME/ACTION PROFILE (effects on blood counts)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 14 days | 2–8 wk | 28 days or more (up to 6 wk) |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Alcoholism; Severe renal or liver impairment; Pheochromocytoma; CHF; OB, Lactation: Pregnancy or lactation.

**Use Cautiously in:** Infection; ↓ bone marrow reserve; Headache; Psychiatric illness; Liver impairment; Cardiovascular disease; OB: Women with childbearing potential should be advised to avoid pregnancy; Pedi: Very close clinical monitoring required due to potential for toxicity.

## Adverse Reactions/Side Effects

**CNS:** SEIZURES, confusion, dizziness, drowsiness, hallucinations, headache, mania, mental depression, nightmares, psychosis, syncope, tremor. **EENT:** nystagmus, photophobia, retinal hemorrhage. **Resp:** cough, pleural effusions. **CV:** edema, hypotension, tachycardia. **GI:** nausea, vomiting, anorexia, diarrhea, dry mouth, dysphagia, hepatic dysfunction, stomatitis. **GU:** gonadal suppression. **Derm:** alopecia, photosensitivity, pruritus, rashes. **Endo:** gynecomastia. **Hemat:** anemia, leukopenia, thrombocytopenia. **Neuro:** neuropathy, paresthesia. **Misc:** ascites, secondary malignancy.

## Interactions

**Drug-Drug:** Concurrent use with **sympathomimetics** including **methylphenidate** may produce life-threatening hypertension (avoid concurrent use during and for 14 days following procarbazine). Deep coma and death may result from concurrent use of **opioid analgesics**; avoid **meperidine**. Use small incremental doses of other agents and titrate to effect. ↑ bone marrow depression may occur with other **antineoplastics** or **radiation therapy**. Seizures and hyperpyrexia may occur with concurrent use of **MAO inhibitors**, **tricyclic antidepressants**, **SSRI antidepressants** (should not be used within 5 wk of **fluoxetine**), or **carbamazepine**. May ↓ serum **digoxin** levels. Concurrent use with **levodopa** may result in flushing and hypertension. ↑ CNS depression with other **CNS depressants**, including **alcohol**, **antidepressants**, **antihistamines**, **opioid analgesics**, **phenothiazines**, and **sedative/hypnotics**. Disulfiram-like reaction may occur with **alcohol**. **Cigarette smoking** may ↑ the risk of secondary lung cancer.

**Drug-Food:** Ingestion of foods high in **tyramine** content (see Appendix M) may result in hypertension. Ingestion of foods high in **caffeine** content may result in arrhythmias.

## Route/Dosage

**PO (Adults):** 2–4 mg/kg/day as a single dose or in divided doses for 1 wk, then 4–6 mg/kg/day until response is obtained; then maintenance dose of 1–2 mg/kg/day. Dosage should be rounded off to the nearest 50 mg.

**PO (Children):** 50 mg/m²/day for 7 days, then 100 mg/m²/day, maintenance dose of 50 mg/m²/day.

## Availability

**Capsules:** 50 mg.

# NURSING IMPLICATIONS

## Assessment

- Monitor blood pressure, pulse, and respiratory rate periodically during therapy. Report significant changes to health care professional.
- Assess nutritional status (appetite, intake and output ratios, weight, frequency and amount of emesis). Anorexia and weight loss can be decreased by feeding light, frequent meals. Nausea and vomiting can be minimized by administering an antiemetic at least 1 hr prior to receiving medication. Phenothiazine antiemetics should be avoided.
- Monitor for bone marrow depression. Assess for bleeding (bleeding gums, bruising, petechiae, guaiac stools, urine, and emesis) and avoid IM injections and taking rectal temperatures if platelet count is low. Apply pressure to venipuncture sites for 10 min. Assess for signs of infection during neutropenia. Anemia may occur. Monitor for increased fatigue, dyspnea, and orthostatic hypotension.
- Concurrent ingestion of tyramine-rich foods and many medications may result in life-threatening hypertensive crisis. Signs and symptoms of hypertensive crisis include chest pain, severe headache, nausea and vomiting, photosensitivity, and enlarged pupils. Treatment includes IV phentolamine.
- Procarbazine should be discontinued until side effects clear and then resumed at a lower dose if leukopenia, thrombocytopenia, hypersensitivity reaction, stomatitis (first small ulceration or persistent soreness), diarrhea, hemorrhage, or bleeding tendencies occur.
- ***Lab Test Considerations:*** Monitor hemoglobin, hematocrit, WBC, differential, reticulocytes, and platelet count prior to and every 3–4 days during therapy. Notify physician if WBC $<4000/mm^3$ or platelet count $<100,000/mm^3$.

P

Therapy should be discontinued and resumed at a lower dose when counts improve. The nadir of leukopenia and thrombocytopenia occurs in approximately 2–8 wk, and recovery usually occurs in about 6 wk. Anemia also may occur.
- Assess hepatic and renal function prior to therapy. Monitor urinalysis, AST, ALT, alkaline phosphatase, and BUN at least weekly during therapy.
- Closely monitor serum glucose in diabetic patients. Oral hypoglycemics or insulin dosage may need to be reduced, because hypoglycemic effects are enhanced.
- Bone marrow aspiration studies are recommended prior to initiation of therapy and at time of maximum hematologic response to ensure adequate bone marrow reserve.

### Potential Nursing Diagnoses
Risk for infection (Adverse Reactions)
Imbalanced nutrition: less than body requirements (Adverse Reactions)

### Implementation
- **PO:** Administer with food or fluids if GI irritation occurs. Confer with pharmacist regarding opening of capsules if patient has difficulty swallowing.

### Patient/Family Teaching
- Emphasize the need to take medication as directed. Take missed doses as soon as remembered within a few hours but not if several hours have passed or if almost time for next dose. Health care professional should be consulted if vomiting occurs shortly after a dose is taken.
- Instruct patient to notify health care professional promptly if signs of infection (fever, sore throat, chills, cough, thickened bronchial secretions, hoarseness, pain in lower back or side, difficult or painful urination); bleeding gums; bruising; petechiae; or blood in stool, urine, or emesis occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush and electric razor and to avoid falls. Patient should not receive IM injections or rectal temperatures. Caution patient not to drink alcoholic beverages or take medication containing aspirin or NSAIDs; may precipitate gastric bleeding.
- Caution patient to avoid alcohol, caffeinated beverages, CNS depressants, OTC drugs, and foods or beverages containing tyramine (see Appendix M for foods included) during therapy and for at least 2 wk after therapy has been discontinued, because they may precipitate a hypertensive crisis.
- Advise patient that an additional interaction of alcohol with procarbazine is a disulfiram-like reaction (flushing, nausea, vomiting, headache, abdominal cramps).
- Instruct patient to inspect oral mucosa for erythema and ulceration. If ulceration occurs, advise patient to notify health care professional and to use sponge brush and rinse mouth with water after eating and drinking. Topical agents may be used if mouth pain interferes with eating. Stomatitis pain may require treatment with opioid analgesics.
- May cause drowsiness or dizziness. Caution patient to avoid driving or other activities that require alertness until response to medication is known.
- Advise patient that this medication may have teratogenic effects. Contraception should be practiced during therapy and for at least 4 mo after therapy is concluded.
- Discuss the possibility of hair loss with patient. Explore methods of coping.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Instruct patient not to receive any vaccinations without advice of health care professional.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery. This therapy usually should be withdrawn at least 2 wk prior to surgery.
- Instruct patient to inform health care professional if muscle or joint pain, nausea, vomiting, sweating, tiredness, weakness, constipation, headache, difficulty swallowing, or loss of appetite becomes pronounced.
- Advise patient to carry identification describing medication regimen at all times.
- Emphasize the need for periodic lab tests to monitor for side effects.

### Evaluation/Desired Outcomes
- Decrease in size and spread of malignant tissue in Hodgkin's disease.

## prochlorperazine
(proe-klor-**pair**-a-zeen)
Compro, ✱Stemetil

***Classification***
Therapeutic: antiemetics, antipsychotics
Pharmacologic: phenothiazines

**Pregnancy Category C**

## Indications
Management of nausea and vomiting. Treatment of psychoses. Treatment of anxiety.

## Action
Alters the effects of dopamine in the CNS. Possesses significant anticholinergic and alpha-adrenergic blocking activity. Depresses the chemoreceptor trigger zone (CTZ) in the CNS.
**Therapeutic Effects:** Diminished nausea and vomiting. Diminished signs and symptoms of psychoses or anxiety.

## Pharmacokinetics
**Absorption:** Absorption from tablet is variable; may be better with oral liquid formulations. Well absorbed after IM administration.
**Distribution:** Widely distributed, high concentrations in the CNS. Crosses the placenta and probably enters breast milk.
**Protein Binding:** ≥90%.
**Metabolism and Excretion:** Highly metabolized by the liver and GI mucosa. Converted to some compounds with antipsychotic activity.
**Half-life:** Unknown.

TIME/ACTION PROFILE (antiemetic effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30–40 min | unknown | 3–4 hr |
| Rect | 60 min | unknown | 3–4 hr |
| IM | 10–20 min | 10–30 min | 3–4 hr |
| IV | rapid (min) | 10–30 min | 3–4 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Cross-sensitivity with other phenothiazines may exist; Angle-closure glaucoma; Bone marrow depression; Severe liver or cardiovascular disease; Hypersensitivity to bisulfites or benzyl alcohol (some parenteral products); Pedi: Children <2 yr or <9.1 kg.
**Use Cautiously in:** Diabetes mellitus; Respiratory disease; Prostatic hypertrophy; CNS tumors; Epilepsy; Intestinal obstruction; OB, Lactation: Safety not established; Geri: Dose ↓ recommended; ↑ risk of mortality in elderly patients treated for dementia-related psychosis.

## Adverse Reactions/Side Effects
**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, extrapyramidal reactions, sedation, tardive dyskinesia. **EENT:** blurred vision, dry eyes, lens opacities. **CV:** ECG changes, hypotension, tachycardia. **GI:** constipation, dry mouth, anorexia, drug-induced hepatitis, ileus. **GU:** pink or reddish-brown discoloration of urine, urinary retention. **Derm:** photosensitivity, pigment changes, rashes. **Endo:** galactorrhea. **Hemat:** AGRANULOCYTOSIS, leukopenia. **Metab:** hyperthermia. **Misc:** allergic reactions.

## Interactions
**Drug-Drug:** Additive hypotension with **antihypertensives**, **nitrates**, or acute ingestion of **alcohol**. Additive CNS depression with other **CNS depressants**, including **alcohol**, **antidepressants**, **antihistamines**, **opioid analgesics**, **sedative/hypnotics**, or **general anesthetics**. Additive anticholinergic effects with other **drugs possessing anticholinergic properties**, including **antihistamines**, some **antidepressants**, **atropine**, **haloperidol**, and other **phenothiazines**. **Lithium** ↑ risk of extrapyramidal reactions. May mask early signs of **lithium** toxicity. ↑ risk of agranulocytosis with **antithyroid agents**. ↓ beneficial effects of **levodopa**. **Antacids** may ↓ absorption.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, **chamomile**, or **hops** can ↑ CNS depression. ↑ anticholinergic effects with **angel's trumpet**, **jimson weed**, and **scopolia**.

## Route/Dosage
Pediatric dose should not exceed 10 mg on the 1st day and then should not exceed 20 mg/day in children 2–5 yr or 25 mg/day in children 6–12 yr.

### Antiemetic
**PO (Adults and Children ≥12 yr):** 5–10 mg 3–4 times daily (not to exceed 40 mg/day).
**PO (Children 18–39 kg):** 2.5 mg 3 times daily *or* 5 mg twice daily (not to exceed 15 mg/day).
**PO (Children 14–17 kg):** 2.5 mg 2–3 times daily (not to exceed 10 mg/day).
**PO (Children 9–13 kg):** 2.5 mg 1–2 times daily (not to exceed 7.5 mg/day).
**IM (Adults and Children ≥12 yr):** 5–10 mg q 3–4 hr as needed. *Nausea/vomiting associated with surgery*—5–10 mg; may be repeated once.
**IM (Children 2–12 yr):** 132 mcg (0.132 mg)/kg; usually only 1 dose is required.
**IV (Adults and Children ≥12 yr):** 2.5–10 mg (not to exceed 40 mg/day). *Nausea/vomiting associated with surgery*—5–10 mg; may be repeated once.
**Rect (Adults):** 25 mg twice daily.

**Rect (Children 18–39 kg):** 2.5 mg 3 times daily or 5 mg twice daily (not to exceed 15 mg/day).
**Rect (Children 14–17 kg):** 2.5 mg 2–3 times daily (not to exceed 10 mg/day).
**Rect (Children 9–13 kg):** 2.5 mg 1–2 times daily (not to exceed 7.5 mg/day).

### Antipsychotic

**PO (Adults and Children ≥12 yr):** 5–10 mg 3–4 times daily; may be increased q 2–3 days (up to 150 mg/day).
**PO (Children 2–12 yr):** 2.5 mg 2–3 times daily.
**IM (Adults):** 10–20 mg q 2–4 hr for up to 4 doses, then 10–20 mg q 4–6 hr (up to 200 mg/day).
**IM (Children 2–12 yr):** 132 mcg (0.132 mg)/kg (not to exceed 10 mg/dose).
**IV (Adults and Children ≥12 yr):** 2.5–10 mg (up to 40 mg/day).
**Rect (Adults):** 10 mg 3–4 times daily; may be increased by 5–10 mg q 2–3 days as needed.

### Antianxiety

**PO (Adults and Children ≥12 yr):** 5 mg 3–4 times daily (not to exceed 20 mg/day or longer than 12 wk).
**IM (Adults and Children ≥12 yr):** 5–10 mg q 3–4 hr as needed (up to 40 mg/day).
**IM (Children 2–12 yr):** 132 mcg (0.132 mg)/kg.
**IV (Adults):** 2.5–10 mg (up to 40 mg/day).

### Availability (generic available)

**Tablets:** 5 mg, 10 mg. **Syrup (fruit flavor):** 5 mg/5 mL (mesylate). **Solution for injection:** 5 mg/mL (edisylate), 5 mg/mL (mesylate). **Suppositories:** 25 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure (sitting, standing, lying down), ECG, pulse, and respiratory rate before and frequently during the period of dosage adjustment. May cause Q-wave and T-wave changes in ECG.
- Assess patient for level of sedation after administration.
- Monitor patient for onset of akathisia (restlessness or desire to keep moving) and extrapyramidal side effects (*parkinsonian*—difficulty speaking or swallowing, loss of balance control, pill rolling, mask-like face, shuffling gait, rigidity, tremors; and *dystonic*—muscle spasms, twisting motions, twitching, inability to move eyes, weakness of arms or legs) every 2 mo during therapy and 8–12 wk after therapy has been discontinued. Report these symptoms; reduction in dosage or discontinuation may be necessary. Trihexyphenidyl or diphenhydramine may be used to control these symptoms.
- Monitor for tardive dyskinesia (uncontrolled rhythmic movement of mouth, face, and extremities; lip smacking or puckering; puffing of cheeks; uncontrolled chewing; rapid or wormlike movements of tongue). Report immediately; may be irreversible.
- Monitor for development of neuroleptic malignant syndrome (fever, respiratory distress, tachycardia, seizures, diaphoresis, hypertension or hypotension, pallor, tiredness, severe muscle stiffness, loss of bladder control). Notify health care professional immediately if these symptoms occur.
- **Antiemetic:** Assess patient for nausea and vomiting before and 30–60 min after administration.
- **Antipsychotic:** Monitor patient's mental status (orientation to reality and behavior) before and periodically during therapy.
- Observe patient carefully when administering oral medication to ensure that medication is actually taken and not hoarded.
- Assess fluid intake and bowel function. Increased bulk and fluids in the diet may help minimize constipation.
- **Anxiety:** Assess degree and manifestations of anxiety and mental status before and periodically during therapy.
- ***Lab Test Considerations:*** CBC and liver function tests should be evaluated periodically during therapy. May cause blood dyscrasias, especially between wk 4 and 10 of therapy. Hepatotoxicity is more likely to occur between wk 2 and 4 of therapy. May recur if medication is restarted. Liver function abnormalities may require discontinuation of therapy.
- May cause false-positive or false-negative pregnancy test results and false-positive urine bilirubin test results.
- May cause ↑ serum prolactin levels.

### Potential Nursing Diagnoses

Deficient fluid volume (Indications)
Disturbed thought process (Indications)

### Implementation

- Do not confuse prochlorperazine with chlorpromazine.
- To prevent contact dermatitis, avoid getting solution on hands.

- Phenothiazines should be discontinued 48 hr before and not resumed for 24 hr after myelography; they lower seizure threshold.
- **PO:** Administer with food, milk, or a full glass of water to minimize gastric irritation.
- **IM:** Do not inject subcut. Inject slowly, deep into well-developed muscle. Keep patient recumbent for at least 30 min after injection to minimize hypotensive effects. Slight yellow color will not alter potency. Do not administer solution that is markedly discolored or that contains a precipitate.

### IV Administration

- **Direct IV:** ***Concentration:*** Dilute to a concentration of 1 mg/mL. ***Rate:*** Administer at a rate of 1 mg/min; not to exceed 5 mg/min.
- **Intermittent Infusion:** ***Diluent:*** Dilute 20 mg in up to 1 L dextrose, saline, Ringer's or LR, dextrose/saline, dextrose/Ringer's, or lactated Ringer's combinations.
- **Continuous Infusion:** Has been used as infusion with 20 mg/L of compatible solution.
- **Syringe Incompatibility:** Manufacturer does not recommend mixing prochlorperazine with other medications in syringe.
- **Y-Site Compatibility:** amsarcine, calcium gluconate, cisatracurium, cisplatin, cladribine, cyclophosphamide, cytarabine, dexmedetomidine, doxorubicin, doxorubicin liposome, fluconazole, granisetron, heparin, hydrocortisone sodium succinate, linezolid, melphalan, methotrexate, ondansetron, oxaliplatin, paclitaxel, potassium chloride, propofol, remifentanil, sargramostim, sufentanil, teniposide, thiotepa, topotecan, vinorelbine, vitamin B complex with C.
- **Y-Site Incompatibility:** aldesleukin, allopurinol, amifostine, amphotericin B cholesteryl, amifostine, aztreonam, bivalirudin, cefepime, etoposide phosphate, fenoldopam, filgrastim, fludarabine, foscarnet, gemcitabine, pemetrexed, piperacillin/tazobactam.

## Patient/Family Teaching

- Instruct patient to take medication as directed, not to skip doses or double up on missed doses. Take missed doses as soon as remembered unless almost time for next dose. If more than 2 doses are scheduled each day, missed dose should be taken within about 1 hr of the ordered time. Abrupt withdrawal may lead to gastritis, nausea, vomiting, dizziness, headache, tachycardia, and insomnia.
- Inform patient of possibility of extrapyramidal symptoms and tardive dyskinesia. Instruct patient to report these symptoms immediately to health care professional.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Caution patient to avoid taking alcohol or other CNS depressants concurrently with this medication.
- Advise patient to use sunscreen and protective clothing when exposed to the sun to prevent photosensitivity reactions. Extremes in temperature should also be avoided, because this drug impairs body temperature regulation.
- Instruct patient to use frequent mouth rinses, good oral hygiene, and sugarless gum or candy to minimize dry mouth. Consult health care professional if dry mouth continues for >2 wk.
- Advise patient not to take prochlorperazine within 2 hr of antacids or antidiarrheal medication.
- Advise patient that increasing bulk and fluids in the diet and exercise may help minimize the constipating effects of this medication.
- Inform patient that this medication may turn urine pink to reddish-brown.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional promptly if sore throat, fever, unusual bleeding or bruising, skin rashes, weakness, tremors, visual disturbances, dark-colored urine, or clay-colored stools are noted.
- Emphasize the importance of routine follow-up exams to monitor response to medication and detect side effects. Periodic ocular exams are indicated. Encourage continued participation in psychotherapy as ordered by health care professional.

## Evaluation/Desired Outcomes

- Relief of nausea and vomiting.
- Decrease in excitable, paranoic, or withdrawn behavior when used as an antipsychotic.
- Decrease in feelings of anxiety.

## progesterone

(proe-**jess**-te-rone)

Crinone, Endometrin, Prochieve, Prometrium

***Classification***

Therapeutic: hormones

Pharmacologic: progestins

**Pregnancy Category D**

### Indications

Secondary amenorrhea and abnormal uterine bleeding due to hormonal imbalance. **Prometrium:** Prevention of cell overgrowth in the uterine lining in postmenopausal women who have not had a hysterectomy (with estrogen). Part of assisted reproductive technology (ART) in the management of infertility (4% and 8% vaginal gel). **Endometrin:** Support of embryo implantation and early pregnancy. **Unlabeled Use:** Corpus luteum dysfunction.

### Action

Produces: Secretory changes in the endometrium, Increase in basal body temperature, Histologic changes in vaginal epithelium, Relaxation of uterine smooth muscle, Mammary alveolar tissue growth, Pituitary inhibition, Withdrawal bleeding in the presence of estrogen. **Therapeutic Effects:** Restoration of hormonal balance with control of uterine bleeding. Successful outcome in assisted reproduction.

### Pharmacokinetics

**Absorption:** Micronization increases oral and vaginal absorption.

**Distribution:** Enters breast milk.

**Protein Binding:** ≥90%.

**Metabolism and Excretion:** Metabolized by the liver; 50–60% eliminated by kidneys; 10% eliminated in feces.

**Half-life:** Several minutes.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2–4 hr | unknown |
| Vaginal | unknown | 34.8–55 hr | unknown |
| IM | unknown | 19.6–28 hr | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hypersensitivity to parabens or sesame oil (IM suspension only); Thromboembolic disease; Cerebrovascular disease; Severe liver disease; Breast or genital cancer; Porphyria; Missed abortion; OB: Contraindicated except in corpus luteum dysfunction.

**Use Cautiously in:** History of liver disease; Renal disease; Cardiovascular disease; Seizure disorders; Mental depression.

### Adverse Reactions/Side Effects

**CNS:** depression. **EENT:** retinal thrombosis. **CV:** PULMONARY EMBOLISM, THROMBOEMBOLISM, thrombophlebitis. **GI:** gingival bleeding, hepatitis. **GU:** cervical erosions. **Derm:** chloasma, melasma, rashes. **Endo:** amenorrhea, breakthrough bleeding, breast tenderness, changes in menstrual flow, galactorrhea, spotting. **F and E:** edema. **Local:** irritation or pain at IM injection site. **Misc:** allergic reactions including ANAPHYLAXIS and ANGIOEDEMA, weight gain, weight loss.

### Interactions

**Drug-Drug:** May ↓ effectiveness of **bromocriptine** when used concurrently for galactorrhea and amenorrhea.

### Route/Dosage

**PO (Adults):** *Secondary amenorrhea*—400 mg once daily in the evening for 10 days; *prevention of postmenopausal estrogen-induced endometrial hyperplasia*—200 mg once daily at bedtime for 14 days on days 8–21 of a 28-day cycle or on days 12–25 of a 30-day cycle; if patient currently receives ≥1.25 mg/day of estrogen, then a daily of dose of 300 mg of progesterone as 100 mg 2 hr after breakfast and 200 mg at bedtime is used; further adjustments may be required.

**Vag (Adults):** *Secondary amenorrhea*—45 mg (1 applicatorful of 4% gel) once every other day for up to 6 doses, may be increased to 90 mg (1 applicatorful of 8% gel) once every other day for up to 6 doses; *Corpus luteum insufficiency or assisted reproduction technology*—For luteal phase support: 90 mg (1 applicatorful of 8% gel) once daily; for *in vitro* fertilization: 90 mg (1 applicatorful of 8% gel) once daily beginning within 24 hr of embryo transfer and continued through day 30 post-transfer (if pregnancy occurs, treatment may be continued for up to 10–12 wk); *partial or complete ovarian failure*—90 mg (1 applicatorful of 8% gel) twice daily while undergoing donor oocyte transfer (if pregnancy occurs, treatment may be continued for up to 10–12 wk) *Support of embryo implantation and early pregnancy*—100 mg insert 2 or 3 times daily for up to 10 wk.

**IM (Adults):** *Secondary amenorrhea*—100–150 mg (single dose) or 5–10 mg daily for 6–8 days given 8–10 days before expected menstrual period. *Dysfunctional uterine bleeding*—5–10 mg daily for 6 days. *Corpus luteum insufficiency*—12.5 mg/day at onset of ovulation for 2

wk; may continue until 11th wk of gestation (unlabeled).

### Availability (generic available)

**Micronized capsules (Prometrium):** 100 mg, 200 mg. **Cost:** 100 mg $48.99/30, 200 mg $85.99/30. **Bioadhesive vaginal gel (Crinone, Prochieve):** 4%, 8%. **Vaginal tablets (Endometrin):** 100 mg. **Injection:** 50 mg/mL in 10-mL vials.

## NURSING IMPLICATIONS

### Assessment

- Blood pressure be monitored periodically during therapy.
- Monitor intake and output ratios and weekly weight. Report significant discrepancies or steady weight gain.
- **Amenorrhea:** Assess patient's usual menstrual history. Administration of drug usually begins 8–10 days before anticipated menstruation. Withdrawal bleeding usually occurs 48–72 hr after course of therapy. Therapy should be discontinued if menses occur during injection series.
- **Dysfunctional Bleeding:** Monitor pattern and amount of vaginal bleeding (pad count). Bleeding should end by sixth day of therapy. Therapy should be discontinued if menses occur during injection series.
- ***Lab Test Considerations:*** Monitor hepatic function before and periodically during therapy.
- May cause ↑ plasma amino acid and alkaline phosphatase levels.
- May ↓ pregnanediol excretion concentrations.
- May cause ↑ serum concentrations of LDL and ↓ concentrations of HDL.
- High doses may ↑ sodium and chloride excretion.
- May alter thyroid function test results.

### Potential Nursing Diagnoses

Sexual dysfunction (Indications)

### Implementation

- **IM:** Shake vial before preparing IM dose. Administer deep IM. Rotate sites.
- **Vag:** Vaginal gel and insert are administered with disposable applicator provided by manufacturer.
- If dose increase is required from 4% gel to 8% gel, doubling the volume of the 4% gel will not accomplish dose increase; changing to 8% gel is required.

### Patient/Family Teaching

- Advise patient to report signs and symptoms of fluid retention (swelling of ankles and feet, weight gain), thromboembolic disorders (pain, swelling, tenderness in extremities, headache, chest pain, blurred vision), mental depression, or hepatic dysfunction (yellowed skin or eyes, pruritus, dark urine, light-colored stools) to health care professional.
- Instruct patient to notify health care professional if change in vaginal bleeding pattern or spotting occurs.
- Instruct patient to stop taking medication and notify health care professional if pregnancy is suspected.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Emphasize the importance of routine follow-up physical exams, including blood pressure; breast, abdomen, and pelvic examinations; and Pap smears.
- **Vag:** Instruct patient not to use vaginal gel concurrently with other vaginal agents. If these agents must be used concurrently, administer at least 6 hr before or after vaginal gel.

### Evaluation/Desired Outcomes

- Development of normal cyclic menses.
- Successful outcome in assisted reproduction.

HIGH ALERT

## promethazine

(proe-**meth**-a-zeen)

Histantil, Promethacon

***Classification***

Therapeutic: antiemetics, antihistamines, sedative/hypnotics

Pharmacologic: phenothiazines

**Pregnancy Category C**

### Indications

Treatment of various allergic conditions and motion sickness. Preoperative sedation. Treatment and prevention of nausea and vomiting. Adjunct to anesthesia and analgesia.

## Action

Blocks the effects of histamine. Has inhibitory effect on the chemoreceptor trigger zone in the medulla, resulting in antiemetic properties. Alters the effects of dopamine in the CNS. Possesses significant anticholinergic activity. Produces CNS depression by indirectly decreased stimulation of the CNS reticular system. **Therapeutic Effects:** Relief of symptoms of histamine excess usually seen in allergic conditions. Diminished nausea or vomiting. Sedation.

## Pharmacokinetics

**Absorption:** Well absorbed after oral (88%) and IM administration; rectal administration may be less reliable.
**Distribution:** Widely distributed; crosses the blood-brain barrier and the placenta.
**Protein Binding:** 65–90%.
**Metabolism and Excretion:** Metabolized by the liver.
**Half-life:** 9–16 hr.

TIME/ACTION PROFILE (noted as antihistaminic effects; sedative effects last 2–8 hr)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, IM | 20 min | unknown | 4–12 hr |
| Rectal | 20 min | unknown | 4–12 hr |
| IV | 3–5 min | unknown | 4–12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Comatose patients; Prostatic hypertrophy; Bladder neck obstruction; Some products contain alcohol or bisulfites and should be avoided in patients with known intolerance; Angle-closure glaucoma; Pedi: May cause fatal respiratory depression in children <2 yr.
**Use Cautiously in:** IV administration may cause severe injury to tissue; Hypertension; Cardiovascular disease; Impaired liver function; Prostatic hypertrophy; Glaucoma; Asthma; Sleep apnea; Epilepsy; Underlying bone marrow depression; Pedi: For children >2 yr, use lowest effective dose, avoid concurrent respiratory depressants; OB: Has been used safely during labor; avoid chronic use during pregnancy; Lactation: Safety not established; may cause drowsiness in infant; Geri: Appears on Beers list. Sensitive to anticholinergic effects and have ↑ risk for side effects.

## Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, confusion, disorientation, sedation, dizziness, extrapyramidal reactions, fatigue, insomnia, nervousness. **EENT:** blurred vision, diplopia, tinnitus. **CV:** bradycardia, hypertension, hypotension, tachycardia. **GI:** constipation, drug-induced hepatitis, dry mouth. **Derm:** photosensitivity, severe tissue necrosis upon infiltration at IV site, rashes. **Hemat:** blood dyscrasias.

## Interactions

**Drug-Drug:** Additive CNS depression with other **CNS depressants**, including **alcohol**, other **antihistamines**, **opioid analgesics**, and other **sedative/hypnotics**. Neuroleptic malignant syndrome can occur when used concurrently with **antipsychotics**. Additive anticholinergic effects with other **drugs possessing anticholinergic properties**, including other **antihistamines**, **antidepressants**, **atropine**, **haloperidol**, other **phenothiazines**, **quinidine**, and **disopyramide**. May precipitate seizures when used with **drugs that lower seizure threshold**. Concurrent use with **MAO inhibitors** may result in ↑ sedation and anticholinergic side effects.

## Route/Dosage

### Antihistamine

**PO (Adults):** 6.25–12.5 mg 3 times/day and 25 mg at bedtime.
**PO (Children ≥2 yr):** 0.1 mg/kg/dose (not to exceed 12.5 mg) q 6 hr during the day and 0.5 mg/kg/dose (not to exceed 25 mg) at bedtime.
**IM, IV, Rect (Adults):** 25 mg; may repeat in 2 hr.
**Rect (Children ≥2 yr):** 0.125 mg/kg q 4–6 hr *or* 0.5 mg/kg at bedtime.

### Antivertigo (Motion Sickness)

**PO (Adults):** 25 mg 30–60 min before departure; may be repeated in 8–12 hr.
**PO, Rect (Children ≥2 yr):** 0.5 mg/kg (not to exceed 25 mg) 30–60 min before departure; may be given q 12 hr as needed.

### Sedation

**PO, Rect, IM, IV (Adults):** 25–50 mg; may repeat q 4–6 hr if needed.
**PO, Rect, IM (Children >2 yr):** 0.5–1 mg/kg (not to exceed 50 mg) q 6 hr as needed.

### Sedation during Labor

**IM, IV (Adults):** 50 mg in early labor; when labor is established, additional doses of 25–75 mg may be given 1–2 times at 4-hr intervals (should not exceed 100 mg/24 hr).

### Antiemetic

**PO, Rect, IM, IV (Adults):** 12.5–25 mg q 4 hr as needed; initial PO dose should be 25 mg.
**PO, Rect, IM, IV (Children ≥2 yr):** 0.25–1 mg/kg (not to exceed 25 mg) q 4–6 hr.

### Availability (generic available)

**Tablets:** 12.5 mg, 25 mg, 25 mg[OTC], 50 mg, 50 mg[OTC]. **Syrup (cherry flavor):** 6.25 mg/5 mL, 10 mg/5 mL[OTC]. **Injection:** 25 mg/mL, 50 mg/mL. **Suppositories:** 12.5 mg, 25 mg, 50 mg. ***In combination with:*** codeine, dextromethorphan, and/or phenylephrine in a variety of cough and cold preparations.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure, pulse, and respiratory rate frequently in patients receiving IV doses.
- Assess level of sedation after administration. Risk of sedation and respiratory depression are increased when administered concurrently with other drugs that cause CNS depression.
- Monitor patient for onset of extrapyramidal side effects (*akathisia*—restlessness; *dystonia*—muscle spasms and twisting motions; *pseudoparkinsonism*—mask-like face, rigidity, tremors, drooling, shuffling gait, dysphagia). Notify health care professional if these symptoms occur.
- Geri: Assess for adverse anticholinergic effects (delirium, acute confusion, dizziness, dry mouth, blurred vision, urinary retention, constipation, tachycardia).
- **Allergy:** Assess allergy symptoms (rhinitis, conjunctivitis, hives) before and periodically throughout course of therapy.
- **Antiemetic:** Assess patient for nausea and vomiting before and after administration.
- **IV:** ***High Alert:*** If administered IV, assess for burning and pain at IV site; may cause severe tissue injury. Avoid IV administration, if possible. If pain occurs, discontinue administration immediately.
- ***Lab Test Considerations:*** May cause false-positive or false-negative pregnancy test results.
- Evaluate CBC periodically during chronic therapy; blood dyscrasias may occur.
- May cause ↑ serum glucose.
- May cause false-negative results in skin tests using allergen extracts. Promethazine should be discontinued 72 hr before the test.

### Potential Nursing Diagnoses

Deficient fluid volume (Indications)
Risk for injury (Side Effects)

### Implementation

- When administering promethazine concurrently with opioid analgesics, supervise ambulation closely to prevent injury from increased sedation.
- **PO:** Administer with food, water, or milk to minimize GI irritation. Tablets may be crushed and mixed with food or fluids for patients with difficulty swallowing.
- **IM:** Administer deep into well-developed muscle. Subcut or inadvertent intra-arterial administration may cause severe tissue necrosis.

#### IV Administration

- **Direct IV:** ***Diluent:*** Dilute with 0.9% NaCl or D5W. ***Concentration:*** Doses should not exceed a concentration of 25 mg/mL. Administer through a large-bore vein through a running IV line into the most distal port. Slight yellow color does not alter potency. Do not use if precipitate is present. ***Rate:*** Administer each 25 mg slowly, over at least 10–15 min (maximum rate = 25 mg/min). Rapid administration may produce a transient fall in blood pressure.
- **Syringe Compatibility:** butorphanol, cimetidine, dihydroergotamine, droperidol, fentanyl, glycopyrrolate, hydromorphone, metoclopramide, midazolam, pentazocine, ranitidine, scopolamine.
- **Syringe Incompatibility:** heparin, ketorolac, pentobarbital, phenobarbital, phenytoin, thiopental.
- **Y-Site Compatibility:** alfentanil, amifostine, amikacin, amsacrine, anidulafungin, ascorbic acid, atracurium, atropine, benztropine, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, carboplatin, caspofungin, cimetidine, ciprofloxacin, cisatracurium, cisplatin, cladribine, codeine, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium, doxorubicin, enalaprilat, ephedrine, epinephrine, epirubicin, epoetin alfa, eftifibatide, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, filgrastim, fluconazole, fludarabine, gemcitabine, gentamycin, glycopyrrolate, granisetron, hetastarch, hydromorphone, ifosfamide, insulin, isoproterenol, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, metronidazole, midazolam, milri-

P

none, mitoxantrone, morphine, nalbuphine, naloxone, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, paclitaxel, palonosetron, pancuronium, pemetrexed, pentamidine, pentazocine, phentolamine, phenylephrine, procainamide, prochlorperazine, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, ranitidine, remifentanil, rituximab, rocuronium, sargramostim, sodium acetate, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, tigecycline, tirofiban, tobramycin, tolazoline, trastuzumab, trimetaphan, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, voriconazole.

- **Y-Site Incompatibility:** acyclovir, aldesleukin, allopurinol, aminophylline, amphotericin B cholesteryl, amphotericin B colloidal, amphotericin B liposome, ampicillin, ampicillin/sulbactam, azathioprine, cefazolin, cefepime, cefonocid, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, clindamycin, dantrolene, dexamethasone, diazepam, diazoxide, doxorubicin liposome, ertapenem, fluorouracil, folic acid, foscarnet, furosemide, ganciclovir, inamrinone, indomethacin, ketorolac, methylprednisolone, nafcillin, nitroprusside, oxacillin, pantoprazole, penicillin G, pentobarbital, phenobarbital, phenytoin, piperacillin/tazobactam, sodium bicarbonate, streptokinase, ticarcillin/clavulanate, trimethoprim/sulfamethoxazole, urokinase.

## Patient/Family Teaching

- Review dose schedule with patient. If medication is ordered regularly and a dose is missed, take as soon as remembered unless time for next dose. Pedi: Caution caregivers to use only the measuring device accompanying the liquid medication and not to use household measuring devices..
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient that frequent mouth rinses, good oral hygiene, and sugarless gum or candy may decrease dry mouth. Health care professional should be notified if dry mouth persists >2 wk.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to change positions slowly to minimize orthostatic hypotension. Geri: Geriatric patients are at increased risk.
- Caution patient to avoid concurrent use of alcohol and other CNS depressants with this medication.
- Instruct patient to notify health care professional if sore throat, fever, jaundice, or uncontrolled movements are noted.
- Geri: Teach patient and family about anticholinergic effects and to contact a health care professional if such effects persist.
- **Motion Sickness:** When used as prophylaxis for motion sickness, advise patient to take medication at least 30 min and preferably 1–2 hr before exposure to conditions that may cause motion sickness.

## Evaluation/Desired Outcomes

- Relief from allergic symptoms.
- Prevention of motion sickness.
- Sedation.
- Relief from nausea and vomiting.

# propafenone

(proe-**paff**-e-nown)

Rythmol, Rythmol SR

***Classification***

Therapeutic: antiarrhythmics (class IC)

**Pregnancy Category C**

## Indications

Treatment of life-threatening ventricular arrhythmias, including ventricular tachycardia (immediate-release only). Prolongs the time to recurrence of symptomatic paroxysmal atrial arrhythmias, including paroxysmal atrial fibrillation/flutter (PAF) and paroxysmal supraventricular tachycardia (PSVT). **Unlabeled Use:** Single dose treatment for atrial fibrillation.

## Action

Slows conduction in cardiac tissue by altering transport of ions across cell membranes. **Therapeutic Effects:** Suppression of ventricular arrhythmias.

## Pharmacokinetics

**Absorption:** Although well absorbed following oral administration, undergoes rapid hepatic metabolism (bioavailability 3–11%).

**Distribution:** Widely distributed; crosses the placenta.

**Metabolism and Excretion:** Extensively metabolized by the liver (CYP1A2, CYP2D6, and CYP3A4 enzyme systems), some metabolites have antiarrhythmic activity. >90% of patients are considered extensive metabolizers. Others metabolize propafenone more slowly.

**Half-life:** 2–10 hr in extensive metabolizers, 10–32 hr in slow metabolizers.

TIME/ACTION PROFILE (antiarrhythmic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | hr–days | 4–5 days† | hr |

†Chronic dosing

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cardiogenic shock; Conduction disorders including sick sinus syndrome and AV block (without a pacemaker); Bradycardia; Severe hypotension; Concurrent quinidine or amiodarone; Nonallergic bronchospasm; Electrolyte disturbances; Uncontrolled CHF.

**Use Cautiously in:** Severe hepatic or renal impairment (dose ↓ may be necessary); Geri: Lower doses may be necessary due to age-related ↓ in renal/hepatic/cardiovascular function, concurrent chronic illnesses and medications; OB, Lactation: Pedi: Safety not established.

## Adverse Reactions/Side Effects

**CNS:** dizziness, shaking, weakness. **EENT:** blurred vision. **CV:** SUPRAVENTRICULAR ARRHYTHMIA, VENTRICULAR ARRHYTHMIAS, conduction disturbances, angina, bradycardia, hypotension. **GI:** altered taste, constipation, nausea, vomiting, diarrhea, dry mouth. **Derm:** rash. **MS:** joint pain.

## Interactions

**Drug-Drug:** Any **inhibitors of the CYP1A2, CYP2D6, or CYP3A4 enzyme systems** may ↑ levels, including **desipramine**, **paroxetine**, **ritonavir**, **sertraline**, **ketoconazole**, **saquinavir**, **erythromycin** (blood level monitoring recommended). **Quinidine** is a strong inhibitor of CYP2D6 and significantly ↑ levels of propafenone; concurrent use is not recommended. Propafenone is also an inhibitor of CYP2D6 and may ↑ levels of **desipramine**, **imipramine**, **haloperidol**, and **venlafaxine**. Significantly ↑ serum **digoxin** levels (blood level monitoring recommended, ↓ dose may be required). ↑ blood levels of **metoprolol** and **propranolol** (↓ dose may be required). Concurrent use of **local anesthetics** may ↑ risk of CNS adverse reactions. ↑ effects of **warfarin** (↓ warfarin dose if necessary, monitor INR). Concurrent use with **amiodarone** can adversely effect conduction/repolarization and should be avoided. May ↑ risk of CNS adverse reactions with **lidocaine**. May ↑ **cyclosporine** trough blood levels and risk of nephrotoxicity. **Rifampin** may ↓ serum levels and effectiveness. **Cimetidine** may ↑ serum levels.

**Drug-Food: Grapefruit juice** may ↑ levels.

## Route/Dosage

**PO (Adults):** 150 mg q 8 hr; may be gradually ↑ at 3–4-day intervals as required up to 300 mg q 8–12 hr. *Single dose treatment of atrial fibrillation (unlabeled)*—450 or 600 mg; *Sustained release*—225 mg q 12 hr; may be gradually ↑ at a minimum of 5-day intervals as required to 325 mg q 12 hr; if further ↑ is needed, may ↑ to 425 mg q 12 hr.

## Availability (generic available)

**Tablets:** 150 mg, 225 mg, 300 mg. **Cost:** *Generic*—150 mg $316.95/270, 225 mg $355.00/270, 300 mg $593.95/270. **Sustained-release capsules:** 225 mg, 325 mg, 425 mg.

# NURSING IMPLICATIONS

## Assessment

- Monitor ECG or use Holter monitor prior to and periodically during therapy. May cause PR and QT prolongation.
- Monitor blood pressure and pulse periodically during therapy.
- Monitor intake and output ratios and daily weight. Assess patients for signs of CHF (peripheral edema, rales/crackles, dyspnea, weight gain, jugular venous distention). May require reduction or discontinuation of therapy.
- ***Lab Test Considerations:*** May cause ↑ ANA titer, which is usually asymptomatic and reversible.
- Monitor prothrombin level in patients taking warfarin; may ↑ effects of warfarin.
- ***Toxicity and Overdose:*** Signs of toxicity include hypotension, excessive drowsiness, and decreased or abnormal heart rate. Notify health care professional if these signs occur.

## Potential Nursing Diagnoses

Decreased cardiac output (Indications)

## Implementation

- **PO:** Propafenone therapy should be initiated in a hospital with facilities for cardiac rhythm monitoring. Most serious proarrhythmic effects are seen in the first 2 wk of therapy.
- Swallow sustained-release capsules whole; do not open, crush or chew.

- Previous antiarrhythmic therapy should be withdrawn 2–5 half-lives before starting propafenone.
- Dose adjustments should be at least 3–4 days apart because of the long half-life of propafenone.
- Correct pre-existing hypokalemia or hyperkalemia prior to instituting therapy.

### Patient/Family Teaching

- Instruct patient to take medication around the clock as directed, even if feeling better. Take missed doses as soon as remembered if within 4 hr; omit if remembered later. Gradual dosage reduction may be necessary.
- May cause dizziness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery.
- Instruct patient to notify health care professional if fever, sore throat, chills, or unusual bleeding or bruising occurs or if chest pain, shortness of breath, diaphoresis, palpitations, or visual changes become bothersome.
- Advise patient to carry identification describing disease process and medication regimen at all times.
- Emphasize the importance of follow-up exams to monitor progress.

### Evaluation/Desired Outcomes

- Decrease in frequency of ventricular arrhythmias.
- Prolonged time to recurrence of symptomatic paroxysmal atrial arrhythmias, including paroxysmal atrial fibrillation/flutter and PSVT.

HIGH ALERT

## propofol (proe-poe-fol)

Diprivan

***Classification***

Therapeutic: general anesthetics

**Pregnancy Category B**

### Indications

Induction of general anesthesia in children >3 yr and adults. Maintenance of balanced anesthesia when used with other agents in children >2 mo and adults. Initiation and maintenance of monitored anesthesia care (MAC). Sedation of intubated, mechanically ventilated patients in intensive care units (ICUs).

### Action

Short-acting hypnotic. Mechanism of action is unknown. Produces amnesia. Has no analgesic properties. **Therapeutic Effects:** Induction and maintenance of anesthesia.

### Pharmacokinetics

**Absorption:** Administered IV only, resulting in complete absorption.
**Distribution:** Rapidly and widely distributed. Crosses the blood-brain barrier well; rapidly redistributed to other tissues. Crosses the placenta and enters breast milk.
**Protein Binding:** 95–99%.
**Metabolism and Excretion:** Rapidly metabolized by the liver.
**Half-life:** 3–12 hr (blood-brain equilibration half-life 2.9 min).

TIME/ACTION PROFILE (loss of consciousness)

| ROUTE | ONSET | PEAK | DURATION† |
|---|---|---|---|
| IV | 40 sec | unknown | 3–5 min |

†Time to recovery is 8 min (up to 19 min if opioid analgesics have been used)

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to propofol, soybean oil, egg lecithin, or glycerol; OB: Crosses placenta; may cause neonatal depression; Lactation: Enters breast milk; effects on newborn unknown.
**Use Cautiously in:** Cardiovascular disease; Lipid disorders (emulsion may have detrimental effect); ↑ intracranial pressure; Cerebrovascular disorders; Hypovolemic patients (lower induction and maintenance dosage reduction recommended); Pedi: Not recommended for induction of anesthesia in children <3 yr, or for maintenance of anesthesia in infants <2 mo ; not for ICU or pre-procedure sedation; Geri: Lower induction and maintenance dose reduction recommended.

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **Resp:** APNEA, cough. **CV:** bradycardia, hypotension, hypertension. **GI:** abdominal cramping, hiccups, nausea, vomiting. **Derm:** flushing. **Local:** burning, pain, stinging, coldness, numbness, tingling at IV site. **MS:** involuntary muscle movements, perioperative myoclonia. **GU:** discoloration of urine (green). **Misc:** PROPOFOL INFUSION SYNDROME, fever.

### Interactions

**Drug-Drug:** Additive CNS and respiratory depression with **alcohol**, **antihistamines**, **opioid analgesics**, and **sedative/hypnotics** (dose ↓

may be required). **Theophylline** may antagonize the CNS effects of propofol. Propofol may ↑ levels of **alfentanil**. Cardiorespiratory instability can occur when used with **acetazolamide**. Serious bradycardia can occur with concurrent use of **fentanyl** in children. ↑ risk of hypertriglyceridemia with **intravenous fat emulsion**.

### Route/Dosage

#### General Anesthesia

**IV (Adults <55 yr):** *Induction*—40 mg q 10 sec until induction achieved (2–2.5 mg/kg total). *Maintenance*—100–200 mcg/kg/min. Rates of 150–200 mcg/kg/min are usually required during first 10–15 min after induction, then ↓ by 30–50% during first 30 min of maintenance. Rates of 50–100 mcg/kg/min are associated with optimal recovery time. May also be given intermittently in increments of 25–50 mg.
**IV (Geriatric Patients, Cardiac patients, Debilitated Patients, or Hypovolemic Patients):** *Induction*—20 mg q 10 sec until induction achieved (1–1.5 mg/kg total). *Maintenance*—50–100 mcg/kg/min (dose in cardiac anesthesia ranges from 50–150 mcg/kg/min depending on concurrent use of opioid).
**IV (Adults Undergoing Neurosurgical Procedures):** *Induction*—20 mg q 10 sec until induction achieved (1–2 mg/kg total). *Maintenance*—100–200 mcg/kg/min.
**IV (Children ≥3 yr–16 yr):** *Induction*—2.5–3.5 mg/kg, use lower dose for children ASA III or IV.
**IV (Children 2 mo–16 yr):** *Maintenance*—125–300 mcg/kg/min (following first 30 min of maintenance, rate should be ↓ if possible), younger children may require larger infusion rates compared to older children.

#### Monitored Anesthesia Care (MAC) Sedation

**IV (Adults <55 yr):** *Initiation*—100–150 mcg/kg/min infusion *or* 0.5 mg/kg as slow injection. *Maintenance*—25–75 mcg/kg/min infusion or incremental boluses of 10–20 mg.
**IV (Geriatric Patients, Debilitated Patients, or ASA III/IV Patients):** *Initiation*—Use slower infusion or injection rates. *Maintenance*—20% less than the usual adult infusion dose; rapid/repeated bolus dosing should be avoided.

#### ICU Sedation

**IV (Adults):** 5 mcg/kg/min for a minimum of 5 min. Additional increments of 5–10 mcg/kg/min over 5–10 min may be given until desired response is obtained. (Range 5–50 mcg/kg/min.) Dose should be reassessed every 24 hr.

#### Availability (generic available)

**Injection:** 10 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess respiratory status, pulse, and blood pressure continuously throughout propofol therapy. Frequently causes apnea lasting ≥60 sec. Maintain patent airway and adequate ventilation. Propofol should be used only by individuals experienced in endotracheal intubation, and equipment for this procedure should be readily available.
- Assess level of sedation and level of consciousness throughout and following administration.
- When using for ICU sedation, wake-up and assessment of CNS function should be done daily during maintenance to determine minimum dose required for sedation. Maintain a light level of sedation during these assessments; do not discontinue. Abrupt discontinuation may cause rapid awakening with anxiety, agitation, and resistance to mechanical ventilation.
- Monitor for propofol infusion syndrome (severe metabolic acidosis, hyperkalemia, lipemia, rhabdomyolysis, hepatomegaly, cardiac and renal failure). Most frequent with prolonged, high-dose infusions (>5 mg/kg/hr for >48 hr) but has also been reported following large-dose, short-term infusions during surgical anesthesia. If prolonged sedation or increasing dose is required, or metabolic acidosis occurs, consider alternative means of sedation.
- ***Toxicity and Overdose:*** If overdose occurs, monitor pulse, respiration, and blood pressure continuously. Maintain patent airway and assist ventilation as needed. If hypotension occurs, treatment includes IV fluids, repositioning, and vasopressors.

### Potential Nursing Diagnoses

Ineffective breathing pattern (Adverse Reactions)
Risk for injury (Side Effects)

### Implementation

- Do not confuse Diprivan (propofol) with Diflucan (fluconazole).

- Dose is titrated to patient response.
- Propofol has no effect on the pain threshold. Adequate analgesia should *always* be used when propofol is used as an adjunct to surgical procedures.

### IV Administration

- **Direct IV:** ***Diluent:*** Usually administered undiluted. If dilution is necessary, use only D5W. Shake well before use. Solution is opaque, making detection of contaminants difficult. Do not use if separation of the emulsion is evident. Contains no preservatives; maintain sterile technique and administer immediately after preparation. ***Concentration:*** Undiluted: 10 mg/mL. If dilution is necessary, dilute to concentration ≥2 mg/mL.
- Discard unused portions and IV lines at the end of anesthetic procedure or within 6 hr. For ICU sedation, discard after 12 hr if administered directly from vial or after 6 hr if transferred to a syringe or other container. Do not administer via filter <5–micron pore size.
- Aseptic technique is essential. Solution is capable of rapid growth of bacterial contaminants. Infections and subsequent deaths have been reported. ***Rate:*** Administer over 3–5 min. Titrate to desired level of sedation. Frequently causes pain, burning, and stinging at injection site; use larger veins of the forearm, antecubital fossa, or a dedicated IV catheter. Lidocaine 10–20 mg IV may be administered prior to injection to minimize pain. Pedi: Induction doses may be administered over 20–30 seconds.
- **Intermittent/Continuous Infusion:** ***Diluent:*** Administer undiluted. Allow 3 to 5 minutes between dose adjustments to allow for and assess the clinical effects. ***Concentration:*** 10 mg/mL. ***Rate:*** Based on patient's weight (see Route/Dosage section).
- **Solution Compatibility:** D5W, LR, D5/LR, D5/0.45% NaCl, D5/0.2% NaCl.
- **Y-Site Compatibility:** acyclovir, alfentanil, aminophylline, ampicillin, aztreonam, bumetanide, buprenorphine, butorphanol, calcium gluconate, carboplatin, cefazolin, cefepime, cefotaxime, cefoxitin, ceftizoxime, ceftriaxone, cefuroxime, chlorpromazine, cimetidine, cisplatin, clindamycin, cyclophosphamide, cyclosporine, cytarabine, dexamethasone , dexmedetomidine, diphenhydramine, dobutamine, dopamine, doxycycline, droperidol, enalaprilat, epinephrine, esmolol, famotidine, fenoldopam, fentanyl, fluconazole, fluorouracil, furosemide, ganciclovir, glycopyrrolate, granisetron, haloperidol, heparin, hydrocortisone sodium succinate, hydromorphone, ifosfamide, imipenem/cilastatin, inamrinone, insulin, isoproterenol, ketamine, labetalol, levorphanol, lidocaine, lorazepam, magnesium sulfate, mannitol, meperidine, milrinone, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, paclitaxel, pentobarbital, phenobarbital, potassium chloride, prochlorperazine, propranolol, ranitidine, scopolamine, sodium bicarbonate, succinylcholine, sufentanil, thiopental, ticarcillin/clavulanate, vecuronium.
- **Y-Site Incompatibility:** amikacin, amphotericin B, calcium chloride, ciprofloxacin, diazepam, digoxin, doxorubicin, gentamicin, levofloxacin, methotrexate, methylpredisolone sodium succinate, metoclopramide, mitoxantrone, phenytoin, tobramycin, verapamil.

### Patient/Family Teaching

- Inform patient that this medication will decrease mental recall of the procedure.
- May cause drowsiness or dizziness. Advise patient to request assistance prior to ambulation and transfer and to avoid driving or other activities requiring alertness for 24 hr following administration.
- Advise patient to avoid alcohol or other CNS depressants without the advice of a health care professional for 24 hr following administration.

### Evaluation/Desired Outcomes

- Induction and maintenance of anesthesia.
- Amnesia.
- Sedation in mechanically ventilated patients in an intensive care setting.

## PROPOXYPHENE

Darvon N

**propoxyphene napsylate/acetaminophen**
Darvocet A500, Darvocet-N 50, Darvocet-N 100

***Classification***
Therapeutic: opioid analgesics
Pharmacologic: opioid agonists, opioid agonists/nonopioid analgesic combinations

**Pregnancy Category C**

See also Acetaminophen monograph

## Indications
Mild to moderate pain.

## Action
Binds to opiate receptors in the CNS. Alters the perception of and response to painful stimuli, while producing generalized CNS depression.
**Therapeutic Effects:** Decrease in mild to moderate pain.

## Pharmacokinetics
**Absorption:** Well absorbed following oral administration. Napsylate salt is more slowly absorbed.
**Distribution:** Widely distributed. Probably crosses the placenta. Enters breast milk in small amounts.
**Metabolism and Excretion:** Mostly metabolized by the liver. Some conversion to norpropoxyphene, a toxic metabolite. This metabolite accumulates in elderly patients and patients with decreased renal function.
**Half-life:** 6–12 hr.

TIME/ACTION PROFILE (analgesic effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 15–60 min | 2–3 hr | 4–6 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; History of suicidal ideation; OB, Lactation: Pedi: Safety not established.
**Use Cautiously in:** Head trauma; ↑ intracranial pressure; Severe renal, hepatic, or pulmonary disease; Hypothyroidism; Adrenal insufficiency; Alcoholism; Geri: Appears on Beers list. Elderly or debilitated patients require reduced doses; Undiagnosed abdominal pain; Prostatic hyperplasia.

## Adverse Reactions/Side Effects
**CNS:** dizziness, weakness, dysphoria, euphoria, headache, insomnia, paradoxical excitement, sedation. **EENT:** blurred vision. **CV:** hypotension. **GI:** nausea, abdominal pain, constipation, vomiting. **Derm:** rashes. **Misc:** physical dependence, psychological dependence, tolerance.

## Interactions
**Drug-Drug:** Use with extreme caution in patients receiving **MAO inhibitors** (may result in unpredictable, severe, and potentially fatal reactions—decrease initial dose to 25% of usual dose). Use with extreme caution with **alcohol**, **antidepressants**, **sedative/hypnotics**, or **muscle relaxants** (may result in severe CNS depression and possibly death). CYP3A4 inhibitors, including **ritonavir**, **ketoconazole**, **itraconazole**, **clarithromycin**, **nelfinavir**, **nefazodone**, **amiodarone**, **aprepitant**, **diltiazem**, **erythromycin**, **fluconazole**, **fosamprenavir**, or **verapamil** may ↑ propoxyphene levels. CYP3A4 inducers, including **rifampin**, **carbamazepine**, or **phenytoin** may ↑ levels of norpropoxyphene. **Smoking** ↑ metabolism and may ↓ analgesic effectiveness. Administration of **partial-antagonist opioid analgesics** may precipitate withdrawal in physically dependent patients. **Nalbuphine**, **buprenorphine**, or **pentazocine** may ↓ analgesia.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, or **chamomile** can ↑ CNS depression. **St. John's wort** may ↓ levels of norpropoxyphene.
**Drug-Food: Grapefruit juice** may ↑ propoxyphene levels.

## Route/Dosage
Consider cumulative effects of additional acetaminophen (should not exceed 4 g acetaminophen/day); if toxic levels are exceeded, change to pure propoxyphene product.
**PO (Adults):** 65 mg q 4 hr (hydrochloride—Darvon) or 100 mg q 4 hr (napsylate—Darvon-N) as needed (not to exceed 390 mg/day as hydrochloride or 600 mg/day as napsylate). 100 mg propoxyphene napsylate = 65 mg propoxyphene hydrochloride.

## Availability (generic available)

### Propoxyphene Hydrochloride
**Capsules:** 65 mg. **Tablets:** 🍁65 mg.

### Propoxyphene Napsylate
**Capsules:** 🍁100 mg. **Tablets:** 100 mg.

### Propoxyphene Hydrochloride/Acetaminophen
**Tablets:** propoxyphene 65 mg/acetaminophen 650 mg.

### Propoxyphene Napsylate/Acetaminophen
**Tablets:** propoxyphene 50 mg/acetaminophen 325 mg, propoxyphene 100 mg/acetaminophen

650 mg, propoxyphene 100 mg/acetaminophen 500 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess type, location, and intensity of pain prior to and 2 hr (peak) following administration. When titrating opioid doses, increases of 25–50% should be administered until there is either a 50% reduction in the patient's pain rating on a numeric or visual analogue scale or the patient reports satisfactory pain relief. A repeat dose can be safely administered at the time of the peak if previous dose is ineffective and side effects are minimal.
- Use an equianalgesic chart (see Appendix K) when changing routes or when changing from one opioid to another.
- Prolonged, high-dose therapy may lead to physical and psychological dependence and tolerance. This should not prevent patient from receiving adequate analgesia. Most patients who receive propoxyphene for pain do not develop psychological dependence. Progressively higher doses or change to a stronger opioid may be required to relieve pain with long-term therapy.
- Assess blood pressure, pulse, and respirations before and periodically during administration. If respiratory rate is <10/min, assess level of sedation. Physical stimulation may be sufficient to prevent significant hypoventilation. Dose may need to be decreased by 25–50%. Initial drowsiness will diminish with continued use.
- Assess bowel function routinely. Prevention of constipation should be instituted with increased intake of fluids and bulk, and laxatives to minimize constipating effects. Stimulant laxatives should be administered routinely if opioid use exceeds 2–3 days, unless contraindicated.
- Geri: Geriatric patients may be more sensitive to CNS effects; monitor closely and assess falls risk.
- ***Lab Test Considerations:*** May cause ↑ serum amylase and lipase levels.
- May cause ↑ AST, ALT, serum alkaline phosphatase, LDH, and bilirubin concentrations.
- ***Toxicity and Overdose:*** If an opioid antagonist is required to reverse respiratory depression or coma, naloxone (Narcan) is the antidote. Dilute the 0.4-mg ampule of naloxone in 10 mL of 0.9% NaCl and administer 0.5 mL (0.02 mg) by direct IV push every 2 min. For patients weighing <40 kg, dilute 0.1 mg of naloxone in 10 mL of 0.9% NaCl for a concentration of 10 mcg/mL and administer 0.5 mcg/kg every 2 min. Titrate dose to avoid withdrawal, seizures, and severe pain.

### Potential Nursing Diagnoses

Acute pain (Indications)
Disturbed sensory perception (visual, auditory) (Side Effects)
Risk for injury (Side Effects)

### Implementation

- Explain therapeutic value of medication prior to administration, to enhance the analgesic effect.
- Regularly administered doses may be more effective than prn administration. Analgesic is more effective if given before pain becomes severe.
- Coadministration with nonopioid analgesics may have additive analgesic effects and may permit lower opioid doses.
- Medication should be discontinued gradually after long-term use to prevent withdrawal symptoms.
- **PO:** Doses may be administered with food or milk to minimize GI irritation.

### Patient/Family Teaching

- Advise patient to take medication as directed and not to take more than the recommended amount. Severe and permanent liver damage may result from prolonged use or high doses of acetaminophen. Renal damage may occur with prolonged use of acetaminophen or aspirin. Doses of nonopioid agents should not exceed the maximum recommended daily dose. Instruct patient to read *Medication Guide* before taking and with each Rx refill; new information may be available.
- Instruct patient on how and when to ask for pain medication.
- Caution patient to avoid drinking grapefruit juice during propoxyphene therapy.
- May cause drowsiness or dizziness. Caution patient to avoid driving and other activities requiring alertness until response to the drug is known.
- Geri: Advise geriatric patients of increased risk for CNS effects and potential for falls.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants with this medication and to notify health care professional before taking other Rx, OTC, or herbal products.
- Encourage patient to turn, cough, and breathe deeply every 2 hr to prevent atelectasis.

- Advise patient that good oral hygiene, frequent mouth rinses, and sugarless gum or candy may decrease dry mouth.

### Evaluation/Desired Outcomes

- Decrease in severity of pain without a significant alteration in level of consciousness.

HIGH ALERT

## propranolol

(proe-**pran**-oh-lole)

Apo-Propranolol, Betachron E-R, Inderal, Inderal LA, InnoPran XL, Novopranol, pms Propranolol

***Classification***

Therapeutic: antianginals, antiarrhythmics (Class II), antihypertensives, vascular headache suppressants

Pharmacologic: beta blockers

**Pregnancy Category C**

### Indications

Management of hypertension, angina, arrhythmias, hypertrophic cardiomyopathy, thyrotoxicosis, essential tremors, pheochromocytoma. Also used in the prevention and management of MI, and the prevention of vascular headaches. **Unlabeled Use:** Also used to manage alcohol withdrawal, aggressive behavior, antipsychotic-associated akathisia, situational anxiety, and esophageal varices. Post-traumatic stress disorder (PTSD) (Ongoing clinical trials at National Institute for Mental Health [NIMH]).

### Action

Blocks stimulation of $beta_1$ (myocardial) and $beta_2$ (pulmonary, vascular, and uterine)-adrenergic receptor sites. **Therapeutic Effects:** Decreased heart rate and blood pressure. Suppression of arrhythmias. Prevention of MI.

### Pharmacokinetics

**Absorption:** Well absorbed but undergoes extensive first-pass hepatic metabolism.
**Distribution:** Moderate CNS penetration. Crosses the placenta; enters breast milk.
**Protein Binding:** 93%.
**Metabolism and Excretion:** Almost completely metabolized by the liver (primarily for CYP2D6 isoenzyme) (the CYP2D6 enzyme system exhibits genetic polymorphism; ~7% of population may be poor metabolizers and may have significantly ↑ propranolol concentrations and an ↑ risk of adverse effects).
**Half-life:** 3.4–6 hr.

TIME/ACTION PROFILE (cardiovascular effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30 min | 60–90 min† | 6–12 hr |
| PO–ER | unknown | 6 hr | 24 hr |
| IV | immediate | 1 min | 4–6 hr |

†Following single dose, full effect not seen until several weeks of therapy

### Contraindications/Precautions

**Contraindicated in:** Uncompensated CHF; Pulmonary edema; Cardiogenic shock; Bradycardia or heart block.
**Use Cautiously in:** Renal or hepatic impairment; Pulmonary disease (including asthma); Diabetes mellitus (may mask signs of hypoglycemia); Thyrotoxicosis (may mask symptoms); History of severe allergic reactions (may ↑ intensity of response); OB: Crosses the placenta and may cause fetal/neonatal bradycardia, hypotension, hypoglycemia, or respiratory depression. May also ↓ blood supply to the placenta, increase the risk for premature birth or fetal death, and cause intrauterine growth retardation. May ↑ risk of cardiac and pulmonary complications in the infant during the neonatal time frame. Lactation: Appears in breast milk; use formula if propranolol must be taken; Pedi: ↑ risk of hypoglycemia, especially during periods of fasting such as before surgery, during prolonged exertion, or with coexisting renal insufficiency; Geri: ↑ sensitivity to all beta blockers; initial dose reduction and careful titration recommended.

### Adverse Reactions/Side Effects

**CNS:** fatigue, weakness, anxiety, dizziness, drowsiness, insomnia, memory loss, mental depression, mental status changes, nervousness, nightmares. **EENT:** blurred vision, dry eyes, nasal stuffiness. **Resp:** bronchospasm, wheezing. **CV:** ARRHYTHMIAS, BRADYCARDIA, CHF, PULMONARY EDEMA, orthostatic hypotension, peripheral vasoconstriction. **GI:** constipation, diarrhea, nausea. **GU:** erectile dysfunction, ↓ libido. **Derm:** itching, rashes. **Endo:** hyperglycemia, hypoglycemia (↑ in children). **MS:** arthralgia, back pain, muscle cramps. **Neuro:** paresthesia. **Misc:** drug-induced lupus syndrome.

### Interactions

**Drug-Drug: General anesthesia**, **IV phenytoin**, and **verapamil** may cause additive myocar-

dial depression. Additive bradycardia may occur with **digoxin**. Additive hypotension may occur with other **antihypertensives**, acute ingestion of **alcohol**, or **nitrates**. Concurrent use with **amphetamines**, **cocaine**, **ephedrine**, **epinephrine**, **norepinephrine**, **phenylephrine**, or **pseudoephedrine** may result in unopposed alpha-adrenergic stimulation (excessive hypertension, bradycardia). Concurrent **thyroid** administration may ↓ effectiveness. May alter the effectiveness of **insulin** or **oral hypoglycemics** (dose adjustments may be necessary). May ↓ effectiveness of **beta-adrenergic bronchodilators** and **theophylline**. May ↓ beneficial beta cardiovascular effects of **dopamine** or **dobutamine**. Use cautiously within 14 days of **MAO inhibitor** therapy (may result in hypertension). **Cimetidine** may ↑ blood levels and toxicity. Concurrent **NSAIDs** may ↓ antihypertensive action. **Smoking** ↑ metabolism and ↓ effects; smoking cessation may ↑ effects.

### Route/Dosage

**PO (Adults):** *Antianginal*—80–320 mg/day in 2–4 divided doses or once daily as extended/sustained-release capsules. *Antihypertensive*—40 mg twice daily initially; may be ↑ as needed (usual range 120–240 mg/day; doses up to 1 g/day have been used); *or* 80 mg once daily as extended/sustained-release capsules, ↑ as needed up to 120 mg. *InnoPran XL* dosing form is designed to be given once daily at bedtime. *Antiarrhythmic*—10–30 mg 3–4 times daily. *Prevention of MI*—180–240 mg/day in divided doses. *Hypertrophic cardiomyopathy*—20–40 mg 3–4 times daily. *Adjunct therapy of pheochromocytoma*—20 mg 3 times daily to 40 mg 3–4 times daily concurrently with alpha-blocking therapy, started 3 days before surgery is planned. *Vascular headache prevention*—20 mg 4 times daily *or* 80 mg/day as extended/sustained-release capsules; may be ↑ as needed up to 240 mg/day. *Management of tremor*—40 mg twice daily; may be ↑ up to 120 mg/day (up to 320 mg have been used).
**PO (Children):** *Antihypertensive/antiarrhythmic*—0.5–1 mg/kg/day in 2–4 divided doses; may be ↑ as needed (usual range for maintenance dose is 2–4 mg/kg/day in 2 divided doses).
**IV (Adults):** *Antiarrhythmic*—1–3 mg; may be repeated after 2 min and again in 4 hr if needed.
**IV (Children):** *Antiarrhythmic*—10–100 mcg (0.01–0.1 mg)/kg (up to 1 mg/dose); may be repeated q 6–8 hr if needed.

### Availability (generic available)

**Oral solution:** 4 mg/mL, 8 mg/mL. **Cost:** *Generic*—4 mg/mL $38.54/480 mL. **Tablets:** 10 mg, 20 mg, 40 mg, 60 mg, 80 mg. **Cost:** *Generic*—10 mg $8.99/100, 20 mg $7.99/100, 40 mg $12.22/100, 60 mg $86.65/100, 80 mg $15.59/100. **Sustained-release capsules (Inderal LA):** 60 mg, 80 mg, 120 mg, 160 mg. **Cost:** 60 mg $132.98/90, 80 mg $141.97/90, 120 mg $176.80/90, 120 mg $230.05/90. **Extended-release capsules:** 60 mg, 80 mg, 120 mg, 160 mg. **Cost:** *Generic*—60 mg $99.99/90, 80 mg $141.97/90, 120 mg $176.80/90, 160 mg $230.05/90. **Injection:** 1 mg/mL. ***In combination with:*** hydrochlorothiazide (Inderide). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure and pulse frequently during dose adjustment period and periodically during therapy.
- Abrupt withdrawal of propranolol may precipitate life-threatening arrhythmias, hypertension, or myocardial ischemia. Drug should be tapered over a 2-week period before discontinuation. Assess patient carefully during tapering and after medication is discontinued. Consider that patients taking propranolol for non-cardiac indications may have undiagnosed cardiac disease. Abrupt discontinuation or withdrawal over too-short a period of time (less than 9 days) should be avoided.
- Pedi: Assess pediatric patients for signs and symptoms of hypoglycemia, particularly when oral foods and fluids are restricted.
- Patients receiving **propranolol IV** must have continuous ECG monitoring and may have pulmonary capillary wedge pressure (PCWP) or central venous pressure (CVP) monitoring during and for several hours after administration.
- Assess for orthostatic hypotension when assisting patient up from supine position.
- Monitor intake and output ratios and daily weight. Assess patient routinely for evidence of fluid overload (peripheral edema, dyspnea, rales/crackles, fatigue, weight gain, jugular venous distention).
- **Angina:** Assess frequency and characteristics of anginal attacks periodically during therapy.
- **Vascular Headache Prophylaxis:** Assess frequency, severity, characteristics, and location of vascular headaches periodically during therapy.
- **PTSD:** Assess frequency of symptoms (flashbacks, nightmares, efforts to avoid thoughts or

activities that may trigger memories of the trauma, and hypervigilance) periodically throughout therapy.
- ***Lab Test Considerations:*** May cause ↑ BUN, serum lipoprotein, potassium, triglyceride, and uric acid levels.
- May cause ↑ ANA titers.
- May cause ↓ or ↑ in blood glucose levels. In labile diabetic patients, hypoglycemia may be accompanied by precipitous ↑ of blood pressure.
- ***Toxicity and Overdose:*** Monitor patients receiving beta blockers for signs of overdose (bradycardia, severe dizziness or fainting, severe drowsiness, dyspnea, bluish fingernails or palms, seizures). Notify health care professional immediately if these signs occur.
- Hypotension may be treated with modified Trendelenburg position and IV fluids unless contraindicated. Vasopressors (epinephrine, norepinephrine, dopamine, dobutamine) may also be used. Hypotension does not respond to beta agonists.
- Glucagon has been used to treat bradycardia and hypotension.

## Potential Nursing Diagnoses

Decreased cardiac output (Side Effects)
Noncompliance (Patient/Family Teaching)

## Implementation

- ***High Alert:*** IV vasoactive medications are inherently dangerous. Before administering intravenously, have second practitioner independently check the original order, dose calculations, and infusion pump settings. Also, patient harm or fatalities have occurred when switching from oral to IV *propranolol*; oral and parenteral doses are not interchangeable. IV dose is 1/10 of the oral dose. Change to oral therapy as soon as possible. Do not confuse propranolol with pravachol. Do not confuse Inderal (a brand name of propranolol) with Adderall (an amphetamine/dextroamphetamine combination drug).
- **PO:** Take apical pulse prior to administering. If <50 bpm or if arrhythmia occurs, withhold medication and notify physician or other health care professional.
- Administer with meals or directly after eating to enhance absorption.
- Extended-release capsules should be swallowed whole; do not crush, open, or chew. *Propranolol tablets* may be crushed and mixed with food.
- Mix propranolol oral solution with liquid or semisolid food (water, juices, applesauce, puddings). To ensure entire dose is taken, rinse glass with more liquid or have patient consume all of the applesauce or pudding. Do not store after mixing.

### IV Administration

- **Direct IV:** ***Diluent:*** Administer undiluted or dilute each 1 mg in 10 mL of D5W for injection. ***Concentration:*** Undiluted: 1 mg/mL. Diluted in 10 mL of D5W: 0.1 mg/mL. ***Rate:*** Administer at 0.5 mg/ min for adults to avoid hypotension and cardiac arrest; do not exceed 1 mg/ min. Pedi: Administer over 10 min.
- **Intermittent Infusion:** ***Diluent:*** May be diluted in 50 mL of 0.9% NaCl, D5W, D5/0.45% NaCl, D5/0.9% NaCl, or lactated Ringer's injection. ***Concentration:*** Depends on dose. ***Rate:*** Infuse over 10–15 min.
- **Y-Site Compatibility:** acyclovir, alfentanil, alteplase, amikacin, aminophylline, anidulafungin, ascorbic acid, atracurium, atropine, azathioprine, aztreonam, benztropine, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, carboplatin, caspofungin, cefazolin, cefonocid, cefoperazone, cefotetan, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, chlorpromazine, cimetidine, cisplatin, clindamycin, cyanocobalamin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexamethasone, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium, doxorubicin, doxycycline, enalaprilat, ephedrine, epinephrine, epirubicin, epoetin alfa, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, fluorouracil, folic acid, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hetastarch, hydrocortisone, hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, inamrinone, isoproterenol, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylprednisolone, metoclopramide, metoprolol, metronida-

P

zole, midazolam, milrinone, mitoxantrone, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, palonosetron, pancuronium, papaverine, pemetrexed, penicillin G, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, protamine, pyridoxime, quinupristin/dalfopristin, ranitidine, rocuronium, sodium acetate, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, vitamin B complex with C, voriconazole.

- **Y-Site Incompatibility:** amphotericin B cholesteryl, amphotericin B colloidal, amphotericin B liposome, dantrolene, diazepam, diazoxide, indomethacin, insulin, paclitaxel, pantoprazole, phenytoin, piperacillin/tazobactam, trimethoprim/sulfamethoxazole.

## Patient/Family Teaching

- Instruct patient to take medication as directed, at the same time each day, even if feeling well; do not skip or double up on missed doses. Take missed doses as soon as possible up to 4 hr before next dose (8 hr with extended-release propranolol). Inform patient that abrupt withdrawal can cause life-threatening arrhythmias, hypertension, or myocardial ischemia.
- Advise patient to make sure enough medication is available for weekends, holidays, and vacations. A written prescription may be kept in wallet in case of emergency.
- Teach patient and family how to check pulse daily and blood pressure biweekly. Advise patient to hold dose and contact health care professional if pulse is <50 bpm or blood pressure changes significantly.
- May cause drowsiness or dizziness. Caution patients to avoid driving or other activities that require alertness until response to the drug is known.
- Advise patients to change positions slowly to minimize orthostatic hypotension, especially during initiation of therapy or when dose is increased.
- Caution patient that this medication may increase sensitivity to cold.
- Instruct patient to ask a health care professional before taking any OTC medications or herbal products, especially cold preparations, when taking this medication.
- Diabetic patients should closely monitor blood glucose, especially if weakness, malaise, irritability, or fatigue occurs. May mask tachycardia and increased blood pressure as signs of hypoglycemia, but dizziness and sweating may still occur.
- Advise patient to notify health care professional if slow pulse, difficulty breathing, wheezing, cold hands and feet, dizziness, light-headedness, confusion, depression, rash, fever, sore throat, unusual bleeding, or bruising occurs.
- Instruct patient to inform health care professional of medication regimen prior to treatment or surgery.
- Advise patient to carry identification describing disease process and medication regimen at all times.
- **Hypertension:** Reinforce the need to continue additional therapies for hypertension (weight loss, sodium restriction, stress reduction, regular exercise, moderation of alcohol consumption, and smoking cessation). Medication controls but does not cure hypertension.
- **Angina:** Caution patient to avoid overexertion with decrease in chest pain.
- **Vascular Headache Prophylaxis:** Caution patient that sharing this medication may be dangerous.
- **PTSD:** Advise patient that medication may relieve distressing symptoms but that psychotherapy is the primary treatment for the disorder. Refer patient and family to a PTSD support group.

## Evaluation/Desired Outcomes

- Decrease in blood pressure.
- Control of arrhythmias without appearance of detrimental side effects.
- Reduction in frequency of anginal attacks.
- Increase in activity tolerance.
- Prevention of MI.
- Prevention of vascular headaches.
- Management of thyrotoxicosis.
- Management of pheochromocytoma.
- Decrease in tremors.
- Management of hypertrophic cardiomyopathy.
- Decrease in symptoms associated with PTSD.

**propylthiouracil**
(proe-pill-thye-oh-**yoor**-a-sill)
Propyl-Thyracil, PTU

***Classification***
Therapeutic: antithyroid agents

**Pregnancy Category D**

## Indications
Palliative treatment of hyperthyroidism. Adjunct in the control of hyperthyroidism in preparation for thyroidectomy or radioactive iodine therapy.

## Action
Inhibits the synthesis of thyroid hormones. **Therapeutic Effects:** Decreased signs and symptoms of hyperthyroidism.

## Pharmacokinetics
**Absorption:** Rapidly absorbed from the GI tract.
**Distribution:** Concentrates in the thyroid gland; crosses the placenta and enters breast milk in low concentrations.
**Metabolism and Excretion:** Metabolized by the liver.
**Half-life:** 1–2 hr.

TIME/ACTION PROFILE (effects on clinical thyroid status)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 10–21 days† | 6–10 wk | wk |

†Effects on serum thyroid hormone concentration may occur within 60 min of a single dose

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** ↓ bone marrow reserve; OB: May be used safely; however, fetus may develop thyroid problems; Lactation: Safety not established; Pedi: Children <6 yr (safety not established) .

## Adverse Reactions/Side Effects
**CNS:** drowsiness, headache, vertigo. **GI:** HEPATOTOXICITY, nausea, vomiting, diarrhea, loss of taste. **Derm:** rash, skin discoloration, urticaria. **Endo:** hypothyroidism. **Hemat:** AGRANULOCYTOSIS, leukopenia, thrombocytopenia. **MS:** arthralgia. **Misc:** fever, lymphadenopathy, parotitis.

## Interactions
**Drug-Drug:** Additive bone marrow depression with **antineoplastics** or **radiation therapy**. Additive antithyroid effects with **lithium**, **potassium iodide**, or **sodium iodide**. ↑ risk of agranulocytosis with **phenothiazines**.

## Route/Dosage
**PO (Adults):** *Thyrotoxic crisis*—200–400 mg q 4 hr during the first 24 hr. *Hyperthyroidism*—300–900 mg once daily or in 2–4 divided doses initially (up to 1.2 g/day); maintenance dose 50–600 mg/day once daily or in 2–4 divided doses.
**PO (Children >10 yr):** 50–300 mg/day given once daily or in 2–4 divided doses.
**PO (Children 6–10 yr):** 50–150 mg/day given once daily or in 2–4 divided doses.

## Availability (generic available)
**Tablets:** 50 mg, 100 mg.

# NURSING IMPLICATIONS

## Assessment
- Monitor response of symptoms of hyperthyroidism or thyrotoxicosis (tachycardia, palpitations, nervousness, insomnia, fever, diaphoresis, heat intolerance, tremors, weight loss, diarrhea).
- Assess patient for development of hypothyroidism (intolerance to cold, constipation, dry skin, headache, listlessness, tiredness, or weakness). Dose adjustment may be required.
- Assess patient for skin rash or swelling of cervical lymph nodes. Treatment may be discontinued if this occurs.
- ***Lab Test Considerations:*** Thyroid function studies should be monitored prior to therapy, monthly during initial therapy, and every 2–3 mo throughout therapy.
- WBC and differential counts should be monitored periodically throughout course of therapy. Agranulocytosis may develop rapidly and usually occurs during first 2 mo. This necessitates discontinuation of therapy.
- May cause increased AST, ALT, LDH, alkaline phosphatase, serum bilirubin, and prothrombin time.

## Potential Nursing Diagnoses
Deficient knowledge, related to medication regimen (Patient/Family Teaching)
Noncompliance (Patient/Family Teaching)

## Implementation
- Do not confuse propylthiouracil with Purinethol (mercaptopurine).
- Can be compounded by pharmacist into enema or suppository.
- **PO:** Administer at same time in relation to meals every day. Food may either increase or decrease absorption.

## Patient/Family Teaching
- Instruct patient to take medication exactly as directed, around the clock. If a dose is missed,

take as soon as remembered; take both doses together if almost time for next dose; check with health care professional if more than 1 dose is missed. Consult health care professional prior to discontinuing medication.
- Instruct patient to monitor weight 2–3 times weekly. Report significant changes.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to consult health care professional regarding dietary sources of iodine (iodized salt, shellfish).
- Advise patient to report sore throat, fever, chills, headache, malaise, weakness, yellowing of eyes or skin, unusual bleeding or bruising, symptoms of hyperthyroidism or hypothyroidism, or rash to health care professional promptly.
- Instruct patient to consult health care professional before taking any OTC medications containing iodine concurrently with this medication.
- Advise patient to carry identification describing medication regimen at all times and to notify health care professional of medication regimen prior to treatment or surgery.
- Emphasize the importance of routine exams to monitor progress and to check for side effects.

### Evaluation/Desired Outcomes
- Decrease in severity of symptoms of hyperthyroidism (lowered pulse rate and weight gain).
- Return of thyroid function studies to normal.
- May be used as short-term adjunctive therapy to prepare patient for thyroidectomy or radiation therapy or may be used in treatment of hyperthyroidism. Treatment of 6 mo to several yr may be necessary, usually averaging 1 yr.

## protamine sulfate
(**proe**-ta-meen)

***Classification***
Therapeutic: antidotes
Pharmacologic: antiheparins

**Pregnancy Category C**

### Indications
Acute management of severe heparin overdosage. Used to neutralize heparin received during dialysis, cardiopulmonary bypass, and other procedures. **Unlabeled Use:** Management of overdose of heparin-like compounds.

### Action
A strong base that forms a complex with heparin (an acid). **Therapeutic Effects:** Inactivation of heparin.

### Pharmacokinetics
**Absorption:** Administered IV only, resulting in complete bioavailability.
**Distribution:** Unknown.
**Metabolism and Excretion:** Metabolic fate not known. Protamine-heparin complex eventually degrades.
**Half-life:** Unknown.

TIME/ACTION PROFILE (reversal of heparin effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | 30 sec–1 min | unknown | 2 hr† |

†Depends on body temperature

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to protamine or fish.
**Use Cautiously in:** Patients who have received previous protamine-containing insulin or vasectomized men ( ↑ risk of hypersensitivity reactions); OB: Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects
**Resp:** dyspnea. **CV:** bradycardia, hypertension, hypotension, pulmonary hypertension. **GI:** nausea, vomiting. **Derm:** flushing, warmth. **Hemat:** bleeding. **MS:** back pain. **Misc:** hypersensitivity reactions, including ANAPHYLAXIS, ANGIOEDEMA , and PULMONARY EDEMA.

### Interactions
**Drug-Drug:** None significant.

### Route/Dosage
**IV (Adults and Children):** *Heparin overdose*— 1 mg/100 units of heparin. If given >30 min after heparin, give 0.5 mg/100 units of heparin (not to exceed 100 mg/2 hr). Further doses should be determined by coagulation tests. If heparin was administered subcutaneously, use 1–1.5 mg protamine per 100 units of heparin, give 25–50 mg of the protamine dose slowly followed by a continuous infusion over 8–16 hours. *Enoxaparin overdose*— 1 mg/each mg of enoxaparin to be neutralized (unlabeled). *Dalteparin overdose*— 1 mg/100 anti-Xa IU of dalteparin. If required, a second dose of 0.5 mg/100 anti-Xa IU of dalteparin may be given 2–4 hr later if laboratory assessment indicates need (unlabeled).

### Availability (generic available)
**Injection:** 10 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess for bleeding and hemorrhage throughout therapy. Hemorrhage may recur 8–9 hr after therapy because of rebound effects of heparin. Rebound may occur as late as 18 hr after therapy in patients heparinized for cardiopulmonary bypass.
- Assess for allergy to fish (salmon), previous reaction to or use of protamine insulin or protamine sulfate. Vasectomized and infertile men also have higher risk of hypersensitivity reaction.
- Observe patient for signs and symptoms of hypersensitivity reaction (hives, edema, coughing, wheezing). Keep epinephrine, an antihistamine, and resuscitative equipment close by in the event of anaphylaxis.
- Assess for hypovolemia before initiation of therapy. Failure to correct hypovolemia may result in cardiovascular collapse from peripheral vasodilating effects of protamine sulfate.
- ***Lab Test Considerations:*** Monitor clotting factors, activated clotting time (ACT), activated partial thromboplastin time (aPTT), and thrombin time (TT) 5–15 min after therapy and again as necessary.

### Potential Nursing Diagnoses

Risk for injury (Indications)
Ineffective tissue perfusion (Indications)

### Implementation

- Discontinue heparin infusion. In milder cases, overdosage may be treated by heparin withdrawal alone.
- In severe cases, fresh frozen plasma or whole blood may also be required to control bleeding.
- Dose varies with type of heparin, route of heparin therapy, and amount of time elapsed since discontinuation of heparin.
- Do not administer >100 mg in 2 hr without rechecking clotting studies, as protamine sulfate has its own anticoagulant properties.

#### IV Administration

- **Direct IV:** ***Diluent:*** May be administered undiluted. If further dilution is desired, D5W or 0.9% NaCl may be used. ***Concentration:*** 10 mg/mL. ***Rate:*** Administer by slow IV push over 1–3 min. Rapid infusion rate may result in hypotension, bradycardia, flushing, or feeling of warmth. If these symptoms occur, stop infusion and notify physician. No more than 50 mg should be administered within a 10–min period.
- **Y-Site Compatibility:** amikacin, aminophylline, atropine, aztreonam, bumetanide, calcium chloride, calcium gluconate, cimetidine, clindamycin, cyclosporine, digoxin, diphenhydramine, doxycycline, enalaprilat, epinephrine, erythromycin, esmolol, famotidine, fentanyl, fluconazole, ganciclovir, gentamicin, hydroxyzine, imipenem/cilastatin, isoproterenol, labetalol, lidocaine, meperidine, metoclopramide, metoprolol, metronidazole, midazolam, morphine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, phenylephrine, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, ranitidine, sodium bicarbonate, tobramycin, vancomycin, verapamil.
- **Y-Site Incompatibility:** ampicillin, ampicillin/sulbactam, cefazolin, cefotaxime, cefoxitin, ceftazidime, cefuroxime, chloramphenicol, dexamethasone sodium phosphate, diazepam, furosemide, hydrocortisone sodium succinate, insulin, ketorolac, methylprednisolone sodium succinate, nafcillin, penicillin G potassium, phenytoin, ticarcillin/clavulanate, trimethoprim/sulfamethoxazole.

### Patient/Family Teaching

- Explain purpose of the medication to patient. Instruct patient to report recurrent bleeding immediately.
- Advise patient to avoid activities that may result in bleeding (shaving, brushing teeth, receiving injections or rectal temperatures, or ambulating) until risk of hemorrhage has passed.

### Evaluation/Desired Outcomes

- Control of bleeding.
- Normalization of clotting factors in heparinized patients.

## pseudoephedrine

(soo-doe-e-**fed**-rin)

Balminil Decongestant Syrup, Cenafed, Congestaid, Decofed, Dimetapp Maximum Strength 12–Hour Non-Drowsy Extentabs, Dimetapp Decongestant Pediatric, Drixoral 12 Hour Non-Drowsy Formula, Efidac 24, Eltor 120, Genafed, Halofed, Kid Kare, Medi-First Sinus Decongestant,

PediaCare Infants' Decongestant Drops, Pediatric Nasal Decongestant, Simply Stuffy, Sinustop, Robidrine, Silfedrine, Sudafed, Sudafed Childrens's Non-Drowsy, Sudafed 12 Hour, Sudafed Non-Drowsy Maximum Strength, Sudodrin, Triaminic Allergy Congestion Softchews, Unifed

***Classification***

Therapeutic: allergy, cold, and cough remedies, nasal drying agents/decongestants
Pharmacologic: adrenergics

**Pregnancy Category B**

## Indications

Symptomatic management of nasal congestion associated with acute viral upper respiratory tract infections. Used in combination with antihistamines in the management of allergic conditions. Used to open obstructed eustachian tubes in chronic otic inflammation or infection.

## Action

Stimulates alpha- and beta-adrenergic receptors. Produces vasoconstriction in the respiratory tract mucosa (alpha-adrenergic stimulation) and possibly bronchodilation ($beta_2$-adrenergic stimulation). **Therapeutic Effects:** Reduction of nasal congestion, hyperemia, and swelling in nasal passages.

## Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Appears to enter the CSF; probably crosses the placenta and enters breast milk.
**Metabolism and Excretion:** Partially metabolized by the liver. 55–75% excreted unchanged by the kidneys (depends on urine pH).
**Half-life:** Children: 3.1 hr; Adults: 9–16 hr (depends on urine pH).

TIME/ACTION PROFILE (decongestant effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 15–30 min | unknown | 4–6 hr |
| PO-ER | 60 min | unknown | 12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to sympathomimetic amines; Hypertension, severe coronary artery disease; Concurrent MAO inhibitor therapy; Known alcohol intolerance (some liquid products).
**Use Cautiously in:** Hyperthyroidism; Diabetes mellitus; Prostatic hyperplasia; Ischemic heart disease; Glaucoma; OB, Lactation: Safety not established; Pedi: Avoid OTC cough and cold products containing this medication in children <4 yr.

## Adverse Reactions/Side Effects

**CNS:** SEIZURES, anxiety, nervousness, dizziness, drowsiness, excitability, fear, hallucinations, headache, insomnia, restlessness, weakness. **Resp:** respiratory difficulty. **CV:** CARDIOVASCULAR COLLAPSE, palpitations, hypertension, tachycardia. **GI:** anorexia, dry mouth. **GU:** dysuria. **Misc:** diaphoresis.

## Interactions

**Drug-Drug:** Concurrent use with **MAO inhibitors** may cause hypertensive crisis. Additive adrenergic effects with other **adrenergics**. Concurrent use with **beta blockers** may result in hypertension or bradycardia. **Drugs that acidify the urine** may ↓ effectiveness. **Phenothiazines** and **tricyclic antidepressants** potentiate pressor effects. **Drugs that alkalinize the urine (sodium bicarbonate, high-dose antacid therapy)** may intensify effectiveness.
**Drug-Food: Foods that acidify the urine** may ↓ effectiveness. **Foods that alkalinize the urine** may intensify effectiveness (see lists in Appendix M).

## Route/Dosage

**PO (Adults and Children >12 yr):** 60 mg q 6 hr as needed (not to exceed 240 mg/day) *or* 120 mg extended-release preparation q 12 hr *or* 240 mg extended-release preparation q 24 hr.
**PO (Children 6–12 yr):** 30 mg q 6 hr as needed (not to exceed 120 mg/day).
**PO (Children 4–5 yr):** 15 mg q 6 hr (not to exceed 60 mg/day).

## Availability (generic available)

**Tablets:** 30 mg[OTC], 60 mg[OTC]. **Extended-release tablets:** 120 mg[OTC]. **Controlled-release tablets:** 240 mg[OTC]. **Capsules:** 60 mg[OTC]. **Extended-release capsules:** 240 mg[OTC]. **Softgel capsules:** 30 mg[OTC]. **Liquid (grape and others):** 15 mg/5 mL[OTC], 30 mg/5 mL[OTC]. **Drops (cherry and fruit flavor):** 7.5 mg/0.8 mL [OTC]. ***In combination with:*** antihistamines, acetaminophen, cough suppressants, and expectorants[OTC]. See Appendix B.

# NURSING IMPLICATIONS

## Assessment

- Assess congestion (nasal, sinus, eustachian tube) before and periodically during therapy.
- Monitor pulse and blood pressure before beginning therapy and periodically during therapy.

- Assess lung sounds and character of bronchial secretions. Maintain fluid intake of 1500–2000 mL/day to decrease viscosity of secretions.

### Potential Nursing Diagnoses
Ineffective airway clearance (Indications)

### Implementation
- Administer pseudoephedrine at least 2 hr before bedtime to minimize insomnia.
- **PO:** Extended-release tablets and capsules should be swallowed whole; do not crush, break, or chew. Contents of the capsule can be mixed with jam or jelly and swallowed without chewing for patients with difficulty swallowing.

### Patient/Family Teaching
- Instruct patient to take medication as directed and not to take more than recommended. Take missed doses within 1 hr; if remembered later, omit. Do not double doses. Caution parents to avoid OTC cough and cold products while breastfeeding or to children <4 yr.
- Instruct patient to notify health care professional if nervousness, slow or fast heart rate, breathing difficulties, hallucinations, or seizures occur, because these symptoms may indicate overdose.
- Instruct patient to contact health care professional if symptoms do not improve within 7 days or if fever is present.

### Evaluation/Desired Outcomes
- Decreased nasal, sinus, or eustachian tube congestion.

## psyllium (sill-i-yum)
Alramucil, Cillium, Effer-Syllium, Fiberall, Fibrepur, Hydrocil, Karacil, Konsyl, Metamucil, Modane Bulk, Mylanta Natural Fiber Supplement, Naturacil Caramels, Natural Source Fibre Laxative, Perdiem, Prodiem, Pro-Lax, Reguloid Natural, Serutan, Siblin, Syllact, Vitalax, V-Lax

***Classification***
Therapeutic: laxatives
Pharmacologic: bulk-forming agents

**Pregnancy Category UK**

### Indications
Management of simple or chronic constipation, particularly if associated with a low-fiber diet. Useful in situations in which straining should be avoided (after MI, rectal surgery, prolonged bed rest). Used in the management of chronic watery diarrhea.

### Action
Combines with water in the intestinal contents to form an emollient gel or viscous solution that promotes peristalsis and reduces transit time. **Therapeutic Effects:** Relief and prevention of constipation.

### Pharmacokinetics
**Absorption:** Not absorbed from the GI tract.
**Distribution:** No distribution occurs.
**Metabolism and Excretion:** Excreted in feces.
**Half-life:** Unknown.

TIME/ACTION PROFILE (laxative effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 12–24 hr | 2–3 days | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Abdominal pain, nausea, or vomiting (especially when associated with fever); Serious adhesions; Dysphagia.
**Use Cautiously in:** Some dosage forms contain sugar, aspartame, or excessive sodium and should be avoided in patients on restricted diets; OB: Lactation: Has been used safely.

### Adverse Reactions/Side Effects
**Resp:** bronchospasm. **GI:** cramps, intestinal or esophageal obstruction, nausea, vomiting.

### Interactions
**Drug-Drug:** May ↓ absorption of **warfarin**, **salicylates**, or **digoxin**.

### Route/Dosage
**PO (Adults):** 1–2 tsp/packet/wafer (3–6 g psyllium) in or with a full glass of liquid 2–3 times daily. Up to 30 g daily in divided doses.
**PO (Children >6 yr):** 1 tsp/packet/wafer (1.5–3 g psyllium) in or with 4–8 oz glass of liquid 2–3 times daily. Up to 15 g daily in divided doses.

### Availability (generic available)
**Powder:** 3.3–3.5 g/dose or packet[OTC]. **Effervescent powder:** 3–3.5 g/dose or packet[OTC]. **Granules:** 2.5 g/dose[OTC]. **Wafers:** 3.4 g/dose[OTC].

## NURSING IMPLICATIONS

### Assessment

- Assess patient for abdominal distention, presence of bowel sounds, and usual pattern of bowel function.
- Assess color, consistency, and amount of stool produced.
- ***Lab Test Considerations:*** May cause elevated blood glucose levels with prolonged use of preparations containing sugar.

### Potential Nursing Diagnoses

Constipation (Indications)

### Implementation

- Packets are not standardized for volume, but each contains 3–3.5 g of psyllium.
- **PO:** Administer with a full glass of water or juice, followed by an additional glass of liquid. Solution should be taken immediately after mixing; it will congeal. Do not administer without sufficient fluid and do not chew granules.

### Patient/Family Teaching

- Encourage patient to use other forms of bowel regulation, such as increasing bulk in the diet, increasing fluid intake, and increasing mobility. Normal bowel habits are individualized and may vary from 3 times/day to 3 times/wk.
- May be used for long-term management of chronic constipation.
- Instruct patients with cardiac disease to avoid straining during bowel movements (Valsalva maneuver).
- Advise patient not to use laxatives when abdominal pain, nausea, vomiting, or fever is present.

### Evaluation/Desired Outcomes

- A soft, formed bowel movement, usually within 12–24 hr. May require 3 days of therapy for results.

## pyrazinamide

(peer-a-**zin**-a-mide)

PMS Pyrazinamide, Tebrazid

***Classification***

Therapeutic: antituberculars

**Pregnancy Category C**

### Indications

Used in combination with other agents in the treatment of active tuberculosis.

### Action

Mechanism not known. **Therapeutic Effects:** Bacteriostatic action against susceptible mycobacteria. **Spectrum:** Active against mycobacteria only.

### Pharmacokinetics

**Absorption:** Well absorbed after oral administration.

**Distribution:** Widely distributed. Reaches high concentrations in the CNS (same as plasma). Excreted in breast milk.

**Metabolism and Excretion:** Mostly metabolized by the liver. Metabolite (pyrazinoic acid) has antimycobacterial activity; 3–4% excreted unchanged by the kidneys.

**Half-life:** *Pyrazinamide*—9.5 hr. *Pyrazinoic acid*—12 hr. Both are prolonged in renal impairment.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1–2 hr (4–5 hr†) | 24 hr |

†For pyrazinoic acid

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity with ethionamide, isoniazid, niacin, or nicotinic acid may exist; Severe liver impairment.

**Use Cautiously in:** Gout; Diabetes mellitus; Acute intermittent porphyria; OB: Safety not established.

### Adverse Reactions/Side Effects

**GI:** HEPATOTOXICITY, anorexia, diarrhea, nausea, vomiting. **GU:** dysuria. **Derm:** acne, itching, photosensitivity, skin rash. **Hemat:** anemia, thrombocytopenia. **Metab:** hyperuricemia. **MS:** arthralgia, gouty arthritis.

### Interactions

**Drug-Drug:** Concurrent use with **rifampin** may result in life-threatening hepatoxicity and should be avoided. May ↓ blood levels and effectiveness of **cyclosporine**. May ↓ effectiveness of **antigout agents**.

### Route/Dosage

**PO (Adults and Children):** 15–30 mg/kg/day as a single dose. Up to 60 mg/kg/day has been used in isoniazid-resistant tuberculosis (not to exceed 2 g/day as a single dose or 3 g/day in divided doses). May also be given as 50–70 mg/kg 2–3 times weekly (not to exceed 2 g/dose on daily regimen, 3 g/dose for 3-times-weekly regimen, or 4 g/dose for twice-weekly regimen). *Patients with HIV*—20–30 mg/kg/day for first 2 mo of therapy; further dosing depends on regimen employed.

### Availability (generic available)

**Tablets:** 500 mg. ***In combination with:*** rifampin and isoniazid (Rifater). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Perform mycobacterial studies and susceptibility tests before and periodically during therapy to detect possible resistance.
- ***Lab Test Considerations:*** Evaluate hepatic function before and every 2–4 wk during therapy. Increased AST and ALT may not be predictive of clinical hepatitis and may return to normal levels during treatment. Patients with impaired liver function should receive pyrazinamide therapy only if crucial to treatment.
- Monitor serum uric acid concentrations during therapy. May cause ↑ resulting in precipitation of acute gout.
- May interfere with urine ketone determinations.

### Potential Nursing Diagnoses

Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- **PO:** May be given concurrently with isoniazid.

### Patient/Family Teaching

- Advise patient to take medication as directed and not to skip doses or double up on missed doses. Take missed doses as soon as remembered unless almost time for next dose. Emphasize the importance of continuing therapy even after symptoms have subsided. Length of therapy depends on regimen being used and underlying disease states.
- Inform diabetic patients that pyrazinamide may interfere with urine ketone measurements.
- Advise patients to notify health care professional if no improvement is noticed after 2–3 wk of therapy or if fever, anorexia, malaise, nausea, vomiting, darkened urine, yellowish discoloration of the skin and eyes, pain, or swelling of the joints occurs.
- Advise patients to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Emphasize the importance of regular follow-up exams to monitor progress and check for side effects.

### Evaluation/Desired Outcomes

- Resolution of signs and symptoms of tuberculosis.
- Negative sputum cultures.

## pyridostigmine

(peer-id-oh-**stig**-meen)
Mestinon, Mestinon SR, Mestinon Timespan, Regonol

***Classification***
Therapeutic: antimyasthenics
Pharmacologic: cholinergics

**Pregnancy Category C**

### Indications

Used to increase muscle strength in the symptomatic treatment of myasthenia gravis. Reversal of nondepolarizing neuromuscular blocking agents. Prophylaxis of lethal effects of poisoning with the nerve agent soman.

### Action

Inhibits the breakdown of acetylcholine and prolongs its effects (anticholinesterase). Effects include: Miosis, Increased intestinal and skeletal muscle tone, Bronchial and ureteral constriction, Bradycardia, Increased salivation, Lacrimation, Sweating. **Therapeutic Effects:** Improved muscular function in patients with myasthenia gravis. Reversal of paralysis from nondepolarizing neuromuscular blocking agents. Prevention of Soman nerve gas toxicity.

### Pharmacokinetics

**Absorption:** Poorly absorbed after oral administration, necessitating large oral doses compared with parenteral doses.
**Distribution:** Appears to cross the placenta.
**Metabolism and Excretion:** Metabolized by plasma cholinesterases and the liver.
**Half-life:** *PO*—3.7 hr; *IV*—1.9 hr.

TIME/ACTION PROFILE (cholinergic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30–35 min | unknown | 3–6 hr |
| PO-SR | 30–60 min | unknown | 6–12 hr |
| IM | 15 min | unknown | 2–4 hr |
| IV | 2–5 min | unknown | 2–3 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to pyridostigmine or bromides; Mechanical obstruction of the GI or GU tract; Known alcohol intolerance (syrup only).
**Use Cautiously in:** History of asthma; Ulcer disease; Cardiovascular disease; Epilepsy; Hyperthyroidism; OB: May cause uterine irritability after IV administration near term; 20% of newborns dis-

play transient muscle weakness; Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, dizziness, weakness. **EENT:** lacrimation, miosis. **Resp:** bronchospasm, excessive secretions. **CV:** bradycardia, hypotension. **GI:** abdominal cramps, diarrhea, excessive salivation, nausea, vomiting. **Derm:** sweating, rashes.

### Interactions

**Drug-Drug:** Cholinergic effects may be antagonized by other **drugs possessing anticholinergic properties**, including **antihistamines**, **antidepressants**, **atropine**, **haloperidol**, **phenothiazines**, **procainamide**, **quinidine** , or **disopyramide**. Prolongs the action of **depolarizing muscle-relaxing agents** and **cholinesterase inhibitors (succinylcholine, decamethonium)**. ↑ toxicity with other **cholinesterase inhibitors**, including **echothiophate**.

### Route/Dosage

### Myasthenia Gravis

**PO (Adults):** *Tablets/syrup*—30–60 mg q 3–4 hr initially; then adjusted as required; usual maintenance dose is 600 mg/day in divided doses (range 60–1500 mg/day). *Extended-release tablets*—180–540 mg 1–2 times daily (dosing interval should be at least 6 hr; may be associated with increased risk of cholinergic crisis; concurrent immediate-release products may be required).
**PO (Children):** 7 mg/kg (200 mg/m²)/day in 5–6 divided doses.
**IM, IV (Adults):** 2 mg (1/30 of oral dose); may be repeated q 2–3 hr. *During labor/delivery*—1 mg before second stage of labor is complete.
**IM (Neonates Born to Myasthenic Mothers):** 50–150 mcg/kg q 4–6 hr.

### Antidote for Nondepolarizing Neuromuscular Blocking Agents

**IV (Adults):** 10–20 mg; pretreat with 0.6–1.2 mg atropine IV.

### Prevention of Soman Nerve Gas Effects

**PO (Adults):** 30 mg every 8 hr before exposure, stopped on exposure to gas.

### Availability (generic available)

**Tablets:** 60 mg. **Extended-release tablets:** 180 mg. **Syrup:** 60 mg/5 mL. **Injection:** 5 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess pulse, respiratory rate, and blood pressure before administration. Report significant changes in heart rate.
- **Myasthenia Gravis:** Assess neuromuscular status, including vital capacity, ptosis, diplopia, chewing, swallowing, hand grasp, and gait before administering and at peak effect. Patients with myasthenia gravis may be advised to keep a daily record of their condition and the effects of this medication.
- Assess patient for overdose, underdose, or resistance. Both have similar symptoms (muscle weakness, dyspnea, dysphagia), but symptoms of overdosage usually occur within 1 hr of administration, whereas symptoms of underdose occur ≥3 hr after administration. Overdose (cholinergic crisis) symptoms may also include increased respiratory secretions and saliva, bradycardia, nausea, vomiting, cramping, diarrhea, and diaphoresis. A Tensilon test (edrophonium chloride) may be used to differentiate between overdosage and underdosage.
- **Antidote to Nondepolarizing Neuromuscular Blocking Agents:** Monitor reversal of effect of neuromuscular blocking agents with a peripheral nerve stimulator. Recovery usually occurs consecutively in the following muscles: diaphragm, intercostal muscles, muscles of the glottis, abdominal muscles, limb muscles, muscles of mastication, and levator muscles of eyelids. Closely observe patient for residual muscle weakness and respiratory distress throughout the recovery period. Maintain airway patency and ventilation until recovery of normal respirations occurs.
- ***Toxicity and Overdose:*** Atropine is the antidote.

### Potential Nursing Diagnoses

Impaired physical mobility (Indications)
Ineffective breathing pattern (Indications)

### Implementation

- For patients who have difficulty chewing, pyridostigmine may be administered 30 min before meals.
- Oral dose is not interchangeable with IV dose. Parenteral form is 30 times more potent.
- When used as an antidote to nondepolarizing neuromuscular blocking agents, atropine may be ordered before or currently with large doses of pyridostigmine to prevent or to treat bradycardia and other side effects.

- **PO:** Administer with food or milk to minimize side effects. Extended-release tablets should be swallowed whole; do not crush, break, or chew. Regular tablets or syrup may be administered with extended-release tablets for optimum control of symptoms. Mottled appearance of sustained-release tablet does not affect potency.

**IV Administration**

- **Direct IV:** Administer undiluted. Do not add to IV solutions. May be given through Y-site of infusion of D5W, 0.9% NaCl, LR, D5/Ringer's solution, or D5/LR. ***Concentration:*** 5 mg/mL. ***Rate:*** For myasthenia gravis, administer each 0.5 mg over 1 min. For reversal of nondepolarizing neuromuscular blocking agents, administer each 5 mg over 1 min.
- **Syringe Compatibility:** glycopyrrolate.
- **Y-Site Compatibility:** heparin, hydrocortisone sodium succinate, potassium chloride, vitamin B complex with C.

## Patient/Family Teaching

- Instruct patient to take medication as directed. Do not skip or double up on missed doses. Patients with a history of dysphagia should have a nonelectric or battery-operated back-up alarm clock to remind them of exact dose time. Patients with dysphagia may not be able to swallow medication if the dose is not taken exactly on time. Taking dose late may result in myasthenic crisis. Taking dose early may result in cholinergic crisis. Patients with myasthenia gravis must continue this regimen as a life-long therapy.
- Advise patient to carry identification describing disease and medication regimen at all times.
- Instruct patient to space activities to avoid fatigue.

## Evaluation/Desired Outcomes

- Relief of ptosis and diplopia; improved chewing, swallowing, extremity strength, and breathing without the appearance of cholinergic symptoms.
- Reversal of nondepolarizing neuromuscular blocking agents in general anesthesia.
- Prevention of Soman nerve gas toxicity.

# **pyridoxine** (peer-i-**dox**-een)

Beesix, Doxine, Nestrex, Pyri, Rodex, Vitabee 6, vitamin $B_6$

***Classification***
Therapeutic: vitamins
Pharmacologic: water soluble vitamins

**Pregnancy Category A**

## Indications

Treatment and prevention of pyridoxine deficiency (may be associated with poor nutritional status or chronic debilitating illnesses). Treatment of pyridoxine-dependent seizures in infants. Treatment and prevention of neuropathy, which may develop from isoniazid, penicillamine, or hydralazine therapy. Management of isoniazid overdose >10 g.

## Action

Required for amino acid, carbohydrate, and lipid metabolism. Used in the transport of amino acids, formation of neurotransmitters, and synthesis of heme. **Therapeutic Effects:** Prevention of pyridoxine deficiency. Prevention or reversal of neuropathy associated with hydralazine, penicillamine, or isoniazid therapy.

## Pharmacokinetics

**Absorption:** Well absorbed from the GI tract.
**Distribution:** Stored in liver, muscle, and brain. Crosses the placenta and enters breast milk.
**Metabolism and Excretion:** Converted in RBCs to pyridoxal phosphate and another active metabolite. Amounts in excess of requirements are excreted unchanged by the kidneys.
**Half-life:** 15–20 days.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, IM, IV | unknown | unknown | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to pyridoxine or any component.
**Use Cautiously in:** Parkinson's disease (treatment with levodopa only); OB: Chronic ingestion of large doses may produce pyridoxine-dependency syndrome in newborn.

## Adverse Reactions/Side Effects

Adverse reactions listed are seen with excessive doses only.
**Neuro:** sensory neuropathy, paresthesia. **Misc:** pyridoxine-dependency syndrome.

## Interactions

**Drug-Drug:** Interferes with the therapeutic response to **levodopa** when used without carbi-

dopa. Requirements are increased by **isoniazid**, **hydralazine**, **chloramphenicol**, **penicillamine**, **estrogens**, and **immunosuppressants**. Decreases serum levels of **phenobarbital** and **phenytoin**.

### Route/Dosage

#### Prevention of Deficiency (Recommended Daily Allowance)

**PO (Adults and Children >14 yr):** 1.2–1.7 mg/day (larger doses required with cycloserine, ethionamide, hydralazine, immunosuppressants, isoniazid, penicillamine, and estrogen-containing oral contraceptives).
**PO (Children 9–13 yr):** 1 mg/day (larger doses required with cycloserine, ethionamide, hydralazine, immunosuppressants, isoniazid, and penicillamine).
**PO (Children 1–8 yr):** 0.5–0.6 mg/day (larger doses required with cycloserine, ethionamide, hydralazine, immunosuppressants, isoniazid, and penicillamine).
**PO (Infants 6–12 mo):** 0.3 mg/day.
**PO (Infants < 6 mo):** 0.1 mg/day.

#### Treatment of Deficiency

**PO (Adults):** 2.5–10 mg/day until clinical signs are corrected, then 2–5 mg/day.
**PO (Children):** 5–25 mg/day for 3 weeks, then 1.5–2.5 mg/day.

#### Pyridoxine-Dependent Seizures

**PO, IM, IV (Neonates and Infants):** 10–100 mg initially then 50—100 mg/day orally.

#### Drug-Induced Neuritis

**PO (Adults):** Treatment—100–300 mg/day; Prophylaxis—25–100 mg/day.
**PO (Children):** Treatment—10–50 mg/day; Prophylaxis—1–2 mg/kg/day.

#### Isoniazid Overdose (>10 g)

**IM, IV (Adults and Children):** Amount in mg equal to amount of isoniazid ingested given as 1–4 g IV, then 1 g IM q 30 min.

#### Availability (generic available)

**Tablets:** 20 mg[OTC], 25 mg[OTC], 50 mg[OTC], 100 mg[OTC], 250 mg[OTC], 500 mg[OTC]. **Extended-release tablets:** 100 mg[OTC], 200 mg[OTC], 500 mg[OTC]. **Extended-release capsules:** 150 mg[OTC]. **Injection:** 100 mg/mL in 10- and 30-mL vials. ***In combination with:*** vitamins, minerals, and trace elements in a variety of multivitamin preparations[OTC].

## NURSING IMPLICATIONS

### Assessment

- Assess patient for signs of vitamin $B_6$ deficiency (anemia, dermatitis, cheilosis, irritability, seizures, nausea, and vomiting) before and periodically throughout therapy. Institute seizure precautions in pyridoxine-dependent infants.
- ***Lab Test Considerations:*** May cause false elevations in urobilinogen concentrations.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)

### Implementation

- Because of infrequency of single B-vitamin deficiencies, combinations are commonly administered.
- Administration of parenteral vitamin $B_6$ is limited to patients who are NPO or who have nausea and vomiting or malabsorption syndromes.
- Protect parenteral solution from light; decomposition will occur.
- **PO:** Extended-release capsules and tablets should be swallowed whole, without crushing, breaking, or chewing. For patients unable to swallow capsule, contents of capsules may be mixed with jam or jelly.
- **IM:** Rotate sites; burning or stinging at site may occur.
- **IV:** May be administered slowly by direct IV or as infusion in standard IV solutions. Monitor respiratory rate, heart rate, and blood pressure when administering large IV doses.
- Pyridoxine-dependent seizures should cease within 2–3 min of IV administration.
- ***Rate:*** Infusion rates of 15–30 min and up to 3 hr have been used.
- **Additive Incompatibility:** alkaline solutions, riboflavin.

### Patient/Family Teaching

- Instruct patient to take medication as directed. If a dose is missed, it may be omitted because an extended period of time is required to become deficient in vitamin $B_6$.
- Encourage patient to comply with diet recommended by health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the four basic food groups. Foods high in vitamin $B_6$ include bananas, whole-grain cereals, potatoes, lima beans, and meats.
- Patients self-medicating with vitamin supplements should be cautioned not to exceed RDA. The effectiveness of megadoses for treatment of various medical conditions is unproved and

may cause side effects, such as unsteady gait, numbness in feet, and difficulty with hand coordination.
- Emphasize the importance of follow-up exams to evaluate progress.

### Evaluation/Desired Outcomes
- Decrease in the symptoms of vitamin $B_6$ deficiency.

## pyrimethamine
(peer-i-**meth**-a-meen)
Daraprim

***Classification***
Therapeutic: antimalarials, antiprotozoals

**Pregnancy Category C**

### Indications
Used in combination with other antimalarials in the treatment of chloroquine-resistant malaria. Used in combination with a sulfonamide in the treatment of toxoplasmosis. **Unlabeled Use:** Used in combination with other agents (sulfonamides, dapsone) in the treatment of *Pneumocystis jirovecii* pneumonia.

### Action
Binds to an enzyme in the protozoa, which results in depletion of folic acid. **Therapeutic Effects:** Death and arrested growth of susceptible organisms (protozoa).

### Pharmacokinetics
**Absorption:** Well absorbed after oral administration.
**Distribution:** Widely distributed with high concentrations achieved in blood cells, kidneys, lungs, liver, and spleen. Some enters CSF (13–26% of serum levels). Crosses the placenta and enters breast milk.
**Metabolism and Excretion:** Mostly metabolized by the liver. 20–30% excreted unchanged by the kidneys.
**Half-life:** 4 days (shortened in patients with AIDS).

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3 hr | 2 wk† |

†Suppressive levels

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; OB: First 14–16 wk of pregnancy; Megaloblastic anemia caused by folate deficiency; Concurrent folate antagonist therapy (because of risk of megaloblastic anemia); Tablets contain lactose and potato starch and should be avoided in patients with known hypersensitivity/intolerance.
**Use Cautiously in:** History of seizures (high doses); Underlying anemia or bone marrow depression; Impaired liver function; G6PD deficiency; OB: Pregnancy >16 wk (may require concurrent leucovorin); Lactation: Large doses to mother may cause folic acid deficiency in infant.

### Adverse Reactions/Side Effects
**CNS:** SEIZURES (high doses), headache, insomnia, light-headedness, malaise, mental depression. **Resp:** dry throat, pulmonary eosinophilia. **CV:** ARRHYTHMIAS (large doses). **GI:** atrophic glossitis (high doses), anorexia, diarrhea, nausea. **GU:** hematuria. **Derm:** abnormal pigmentation, dermatitis. **Hemat:** megaloblastic anemia (high doses), pancytopenia, thrombocytopenia. **Misc:** fever.

### Interactions
**Drug-Drug:** ↑ risk of bone marrow depression with other **bone marrow depressants**, including **antineoplastics**, **proguanil**, or **radiation therapy**. ↑ risk of megaloblastic anemia with folate antagonists (**methotrexate**); concurrent use should be avoided.

### Route/Dosage

#### Treatment of Malaria
**PO (Adults and Children >10 yr):** 50 mg/day for 2 days, then 25 mg once weekly in combination with other agents.
**PO (Children 4–10 yr):** 25 mg daily for 2 days, then 12.5 mg once weekly in combination with other agents.

#### Toxoplasmosis
**PO (Adults):** 50–200 mg/day for 1–2 days, followed by 25–50 mg/day for 2–6 wk; given with a sulfonamide.
**PO (Children):** 1 mg/kg/day for 1–3 days, then 0.5 mg/kg/day for 4–6 wk; given with a sulfonamide.

#### Toxoplasmosis in AIDS Patients
**PO (Adults):** 100–200 mg/day for 1–2 days, followed by 50–100 mg/day for 3–6 wk, then 25–50 mg/day for life; given with clindamycin or sulfadiazine.

### Availability

**Tablets:** 25 mg. ***In combination with:*** sulfadoxine (Fansidar). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for improvement in signs and symptoms of infection daily during therapy.
- ***Lab Test Considerations:*** Monitor CBC and platelet count periodically during therapy; semiweekly in patients with toxoplasmosis. May cause ↓ WBC and platelet counts.

### Potential Nursing Diagnoses

Risk for infection (Indications)

### Implementation

- Leucovorin may be administered concurrently to prevent folic acid deficiency and restore normal hematopoiesis.
- **PO:** Administer with milk or meals to minimize GI distress.
- Tablets may be crushed and mixed with saline or with other vehicles by pharmacist for patients with difficulty swallowing.

### Patient/Family Teaching

- Instruct patient to take medication as directed on a regular schedule and continue full course of therapy, even if feeling better. Take missed doses as soon as remembered unless almost time for next dose; do not double doses.
- Advise patient to notify health care professional promptly if sore throat, pallor, purpura, or glossitis occurs. Instruct patient to stop taking pyrimethamine and notify health care professional immediately at the first sign of a skin rash or if no improvement is seen within a few days.
- Emphasize the importance of lab tests at scheduled intervals, especially in patients taking high doses. Tests should not be delayed or missed.

### Evaluation/Desired Outcomes

- Improvement in the signs and symptoms of malaria.
- Improvement in signs and symptoms of toxoplasmosis.

## quetiapine (kwet-**eye**-a-peen)

Seroquel, Seroquel XR

***Classification***

Therapeutic: antipsychotics, mood stabilizers

**Pregnancy Category C**

### Indications

Schizophrenia. Depressive episodes with bipolar disorder. Acute manic episodes associated with bipolar I disorder (as monotherapy or with lithium or divalproex). Maintenance treatment of bipolar I disorder (with lithium or divalproex).

### Action

Probably acts by serving as an antagonist of dopamine and serotonin. Also antagonizes histamine $H_1$ receptors and alpha$_1$-adrenergic receptors. **Therapeutic Effects:** Decreased manifestations of psychoses, depression, or acute mania.

### Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Extensively metabolized by the liver (mostly by P450 CYP3A4 enzyme system); <1% excreted unchanged in the urine.
**Half-life:** 6 hr.

TIME/ACTION PROFILE (antipsychotic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | 8–12 hr |
| PO-XR | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Lactation.
**Use Cautiously in:** Cardiovascular disease, cerebrovascular disease, dehydration or hypovolemia (↑ risk of hypotension); History of seizures, Alzheimer's dementia; Diabetes (may ↑ risk of hyperglycemia); Patients at risk for aspiration pneumonia; Hepatic impairment (dose ↓ may be necessary); Hypothyroidism (may be exacerbated); History of suicide attempt; OB: Safety not established; Pedi: May ↑ risk of suicide attempt/ideation especially during early treatment or dose adjustment; risk may be greater in children or adolescents; Geri: May require ↓ doses; ↑ risk of mortality in elderly patients treated for dementia-related psychosis.

### Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, SEIZURES, dizziness, cognitive impairment, extrapyramidal symptoms, sedation, tardive dyskinesia. **EENT:** ear pain, rhinitis, pharyngitis. **Resp:** cough, dyspnea. **CV:** palpitations, peripheral edema, postural hypotension. **GI:** anorexia, constipation, dry mouth, dyspepsia. **Derm:** sweating. **Hemat:** leukopenia. **Metab:** weight gain, hyperglycemia. **Misc:** flu-like syndrome.

### Interactions

**Drug-Drug:** ↑ CNS depression may occur with **alcohol**, **antihistamines**, **opioid analgesics**, and **sedative/hypnotics**. ↑ risk of hypotension with acute ingestion of **alcohol** or **antihypertensives**. **Phenytoin** and **thioridazine** ↑ clearance and ↓ effectiveness of quetiapine (dose change may be necessary); similar effects may occur with **carbamazepine**, **barbiturates**, **rifampin**, or **corticosteroids**. Effects may be ↑ by **ketoconazole**, **itraconazole**, **fluconazole**, **protease inhibitors** or **erythromycin**, as well as by other **agents that inhibit the cytochrome P450 CYP3A4 enzyme**.

### Route/Dosage

**PO (Adults):** *Schizophrenia*—25 mg twice daily initially, ↑ by 25–50 mg 2–3 times daily over 3 days, up to 300–400 mg/day in 2–3 divided doses by the 4th day (not to exceed 800 mg/day); or 300 mg once daily as extended-release tablets, ↑ by 300 mg/day, up to 400–800 mg/day (not to exceed 800 mg/day). Elderly patients or patients with hepatic impairment should be started on immediate-release product and converted to extended-release product once effective dose is reached. *Bipolar Mania*—Immediate-release: 50 mg twice daily on day 1, ↑ dose by 100 mg/day up to 200 mg twice daily on day 4, then may ↑ in ≤200 mg/day increments up to 400 mg twice daily on day 6 if required; Extended-release: 300 mg once daily on Day 1, then 600 mg once daily on Day 2, then 400–800 mg once daily starting on Day 3. *Bipolar Depression*—Immediate-release or extended-release: 50 mg once daily at bedtime on Day 1, then 100 mg daily at bedtime on Day 2, then 200 mg daily at bedtime on Day 3, then 300 mg daily at bedtime thereafter. *Bipolar Maintenance*—Continue at the dose required to maintain symptom remission (usual dosage: 400–800 mg/day given as once daily dose [extended-release] or in two divided doses [immediate-release]).

Q

### Availability

**Tablets:** 25 mg, 50 mg, 100 mg, 200 mg, 300 mg, 400 mg. **Cost:** 25 mg $360.95/180, 50 mg $604.78/180, 100 mg $610.97/180, 200 mg $1,142.96/180, 300 mg $1,579.93/180, 400 mg $1,787.40/180. **Extended-release Tablets:** 50 mg, 150 mg, 200 mg, 300 mg, 400 mg. **Cost:** 200 mg $395.00/60, 300 mg $510.00/60, 400 mg $595.00/60.

## NURSING IMPLICATIONS

### Assessment

- Monitor mental status (mood, orientation, behavior) before and periodically during therapy.
- Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient. Risk may be increased in children, adolescents, and adults ≤24 yr.
- Assess weight and BMI initially and throughout therapy.
- Monitor blood pressure (sitting, standing, lying) and pulse before and frequently during initial dose titration. If hypotension occurs during dose titration, return to the previous dose.
- Observe patient carefully when administering to ensure medication is swallowed and not hoarded or cheeked.
- Monitor for onset of extrapyramidal side effects (*akathisia*—restlessness; *dystonia*—muscle spasms and twisting motions; or *pseudoparkinsonism*—mask-like faces, rigidity, tremors, drooling, shuffling gait, dysphagia). Report these symptoms; reduction of dose or discontinuation may be necessary. Trihexyphenidyl or benztropine may be used to control these symptoms.
- Monitor for tardive dyskinesia (involuntary rhythmic movement of mouth, face, and extremities). Report immediately; may be irreversible.
- Monitor for development of neuroleptic malignant syndrome (fever, respiratory distress, tachycardia, seizures, diaphoresis, hypertension or hypotension, pallor, tiredness). Notify health care professional immediately if these symptoms occur.
- ***Lab Test Considerations:*** May cause asymptomatic ↑ in AST and ALT.
- May also cause anemia, thrombocytopenia, leukocytosis, and leukopenia.
- May cause ↑ total cholesterol and triglycerides.
- Obtain fasting blood glucose and cholesterol levels initially and throughout therapy.

### Potential Nursing Diagnoses

Risk for self-directed violence (Indications)
Disturbed thought process (Indications)
Imbalanced nutrition: risk for more than body requirements (Side Effects)

### Implementation

- If therapy is reinstituted after an interval of ≥1 wk off, follow initial titration schedule.
- **PO:** May be administered without regard to food. Extended-release tablets should be swallowed whole, do not break, crush, or chew.

### Patient/Family Teaching

- Instruct patient to take medication as directed.
- Inform patient of the possibility of extrapyramidal symptoms. Instruct patient to report symptoms immediately to health care professional.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to avoid extremes in temperature; this drug impairs body temperature regulation.
- Caution patient to avoid concurrent use of alcohol, other CNS depressants, and OTC or herbal medications without consulting health care professional.
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if they are breastfeeding or planning to breastfeed.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Refer patient for nutritional, weight or medical management of dyslipidemia as indicated.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional promptly of sore throat, fever, unusual bleeding or bruising, or rash.
- Emphasize importance of routine follow-up exams to monitor side effects and continued participation in psychotherapy as indicated to improve coping skills. Ophthalmologic exams

should be performed before and every 6 months during therapy.

### Evaluation/Desired Outcomes

- Decrease in excited, manic, behavior.
- Decrease in signs of depression in patients with bipolar disorder.
- Decrease in manic episodes in patients with bipolar I disorder.
- Decrease in positive symptoms (delusions, hallucinations) of schizophrenia.
- Decrease in negative symptoms (social withdrawal, flat, blunt affect) of schizophrenia.

**quinapril, See ANGIOTENSIN-CONVERTING ENZYME (ACE) INHIBITORS.**

## QUINIDINE (kwin-i-deen)

**quinidine gluconate**
Apo-Quin-G

**quinidine sulfate**
Apo-Quinidine

***Classification***
Therapeutic: antiarrhythmics (class IA)

**Pregnancy Category C**

### Indications

Restoration and maintenance of sinus rhythm in patients with atrial fibrillation or flutter. Prevention of recurrent ventricular arrhythmias. Treatment of malaria.

### Action

Decrease myocardial excitability. Slow conduction velocity. **Therapeutic Effects:** Suppression of arrhythmias.

### Pharmacokinetics

**Absorption:** Bioavailability of oral formulations is 70–80%. Extended-release preparations are absorbed slowly following oral administration.
**Distribution:** Widely distributed. Cross the placenta; enter breast milk.
**Metabolism and Excretion:** Metabolized by the liver; 5–20% excreted unchanged by the kidneys.
**Half-life:** 6–8 hr (increased in CHF or severe liver impairment).

TIME/ACTION PROFILE (antiarrhythmic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO (sulfate) | 30 min | 1–1.5 hr | 6–8 hr |
| PO (sulfate-ER) | unknown | 4 hr | 8–12 hr |
| PO (gluconate) | unknown | 3–4 hr | 6–8 hr |
| IV | 1–5 min | rapid | 6–8 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Conduction defects (in the absence of a pacemaker); Myasthenia gravis.
**Use Cautiously in:** CHF (dose reduction recommended); Severe liver disease (dose reduction recommended); Hypokalemia or hypomagnesemia (↑ risk of torsades de pointes); Bradycardia (↑ risk of torsades de pointes); Renal impairment; OB, Lactation: Pedi: Safety not established; extended-release preparations should not be used in children.

### Adverse Reactions/Side Effects

**CNS:** dizziness, confusion, fatigue, headache, syncope, vertigo. **EENT:** blurred vision, diplopia, mydriasis, photophobia, tinnitus. **CV:** HYPOTENSION, TORSADES DE POINTES, arrhythmias, palpitations, tachycardia. **GI:** anorexia, abdominal cramping, diarrhea, nausea, vomiting, drug-induced hepatitis. **Derm:** rash. **Hemat:** AGRANULOCYTOSIS, hemolytic anemia, thrombocytopenia. **Neuro:** ataxia, tremor. **Misc:** fever.

### Interactions

**Drug-Drug:** May ↑ risk of QT interval prolongation when used with **tricyclic antidepressants**, **erythromycin**, **clarithromycin**, **haloperidol**, **sotalol**, or **fluoroquinolones**. ↑ serum **digoxin** levels and may cause toxicity (dose reduction recommended). **Phenytoin**, **phenobarbital**, **carbamazepine**, or **rifampin** may ↑ metabolism and ↓ effectiveness. **Cimetidine**, **diltiazem**, **verapamil**, **amiodarone**, **ketoconazole**, **itraconazole**, and **protease inhibitors** ↓ metabolism and may ↑ blood levels. Excretion is delayed and effects ↑ by drugs that alkalinize the urine, including **carbonic anhydrase inhibitors**, **thiazide diuretics**, and **sodium bicarbonate**. Potentiates the effects of **neuromuscular blocking agents** and **warfarin**. Additive hypotension with **antihypertensives**, **nitrates**, and acute ingestion of **alcohol**. May increase **procainamide**, **haloper-**

**idol**, **mexiletine**, or **tricyclic antidepressant** levels and risk of toxicity. May antagonize **anticholinesterase therapy** in patients with myasthenia gravis. Additive anticholinergic effects may occur with **agents having anticholinergic properties** (including **antihistamines**, **tricyclic antidepressants**).
**Drug-Food: Grapefruit juice** ↑ serum levels and effect (avoid concurrent use). **Foods that alkalinize the urine** (see Appendix M) may ↑ serum quinidine levels and the risk of toxicity.

### Route/Dosage

#### Quinidine Gluconate (62% Quinidine)

**PO (Adults):** 324–972 mg q 8–12 hr.
**IV (Adults):** 200–400 mg given at a rate ≤10 mg/min until arrhythmia is suppressed, QRS complex widens, bradycardia or hypotension occurs.

#### Quinidine Sulfate (83% Quinidine)

**PO (Adults):** *Atrial/ventricular arrhythmias*—200–400 mg q 4–6 hr; may be ↑ to achieve therapeutic response (not to exceed 3–4 g/day).
**PO (Children):** 6 mg/kg 4–5 times daily.

### Availability (generic available)

#### Quinidine Gluconate

**Extended-release tablets:** 324 mg. **Solution for Injection:** 80 mg/mL in 10-mL vials.

#### Quinidine Sulfate

**Tablets:** 200 mg, 300 mg. **Extended-release tablets:** 300 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor ECG, pulse, and blood pressure continuously throughout IV administration and periodically during oral administration. IV administration is usually discontinued if any of the following occur: arrhythmia is resolved, QRS complex widens by 50%, PR or QT intervals are prolonged, or frequent ventricular ectopic beats or tachycardia, bradycardia, or hypotension develops. Patient should remain supine throughout IV administration to minimize hypotension.
- ***Lab Test Considerations:*** Monitor hepatic and renal function, CBC, and serum potassium and magnesium levels periodically during prolonged therapy.
- ***Toxicity and Overdose:*** Serum quinidine levels may be monitored periodically during dose adjustment. Therapeutic serum concentrations are 2–6 mcg/mL. Toxic effects usually occur at concentrations >8 mcg/mL.
- Signs and symptoms of toxicity or cinchonism include tinnitus, hearing loss, visual disturbances, headache, nausea, and dizziness. These may occur after a single dose.
- Cardiac signs of toxicity include QRS widening, cardiac asystole, ventricular ectopic beats, idioventricular rhythms (ventricular tachycardia, ventricular fibrillation), paradoxical tachycardia, and torsades de pointes.

### Potential Nursing Diagnoses

Decreased cardiac output (Indications)

### Implementation

- Do not confuse quinidine with quinine.
- **PO:** Administer with a full glass of water on an empty stomach either 1 hr before or 2 hr after meals for faster absorption. If GI irritation becomes a problem, may be administered with or immediately after meals. Extended-release preparations should be swallowed whole; do not break, crush, or chew.

#### IV Administration

- **IV:** Use only clear, colorless solution.
- **Intermittent Infusion:** ***Diluent:*** Dilute 800 mg of quinidine gluconate (10 mL) in 50 mL of D5W. Infusion is stable for 24 hr at room temperature or 48 hr if refrigerated. ***Concentration:*** 16 mg/mL. ***Rate:*** Administer quinidine gluconate at a rate not to exceed 0.25 mg/kg/min. Administer via infusion pump to ensure accurate dose. Rapid administration may cause peripheral vascular collapse and severe hypotension.
- **Y-Site Compatibility:** amikacin, atropine, bumetanide, calcium gluconate, caspofungin, cimetidine, cyclosporine, digoxin, diltiazem, diphenhydramine, dobutamine, dopamine, doxycycline, enalaprilat, epinephrine, erythromycin, esmolol, famotidine, fenoldopam, fentanyl, fluconazole, gentamicin, granisetron, hydromorphone, imipenem, isoproterenol, labetalol, lidocaine, linezolid, lorazepam, meperidine, metoclopramide, metoprolol, milrinone, morphine, nesiritide, nitroglycerin, norepinephrine, ondansetron, palonosetron, phenylephrine, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, ranitidine, succinylcholine, tacrolimus, tirofiban, tobramycin, vancomycin, vasopressin, verapamil, voriconazole.
- **Y-Site Incompatibility:** acyclovir, aminophylline, ampicillin, ampicillin/sulbactam, aztreonam, cefazolin, cefotaxime, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime,

chloramphenicol, clindamycin, daptomycin, dexamethasone, ertapenem, furosemide, ganciclovir, hydrocortisone sodium succinate, insulin, ketorolac, methylprednisolone sodium succinate, metronidazole, nafcillin, nitroprusside, pantoprazole, penicillin G potassium, phenytoin, piperacillin/tazobacatam, sodium bicarbonate, sulfamethoxazole/trimethoprim, ticarcillin/clavulanate.

### Patient/Family Teaching

- Instruct patient to take medication around the clock, exactly as directed, even if feeling well. Take missed doses as soon as remembered if within 2 hr; if remembered later, omit. Do not double doses.
- Instruct patient or family member on how to take pulse. Advise patient to report changes in pulse rate or rhythm to health care professional.
- May cause dizziness or blurred vision. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that quinidine may cause increased sensitivity to light. Dark glasses may minimize this effect.
- Advise patient to inform health care professional of medication regimen prior to treatment or surgery.
- Instruct patient not to take Rx, OTC, or herbal products with quinidine without consulting health care professional.
- Advise patient to consult health care professional if symptoms of cinchonism, rash, or dyspnea occur or if diarrhea is severe or persistent.
- Advise patient to carry identification at all times describing disease process and medication regimen.
- Emphasize the importance of routine follow-up exams to monitor progress.

### Evaluation/Desired Outcomes

- Decrease or cessation of cardiac arrhythmia.
- Resolution of malarial infection.

## **quinine** (**kwi**-nine)

Qualaquin

***Classification***

Therapeutic: antimalarials

**Pregnancy Category C**

### Indications

Chloroquine-resistant falciparum malaria (alone or with pyrimethamine and a sulfonamide or with a tetracycline; has also been used with clindamycin and mefloquine depending on origin of illness). **Unlabeled Use:** Leg cramps (not recommended due to cardiac side effects).

### Action

Disrupts metabolism of the erythrocytic phase of *Plasmodium falciparum*. Increases the refractory period of skeletal muscle, increases the distribution of calcium within muscle fibers, decreases the excitability of motor end-plate regions, resulting in decreased response to repetitive nerve stimulation and acetylcholine. **Therapeutic Effects:** Death of *P. falciparum*.

### Pharmacokinetics

**Absorption:** Rapidly and almost completely (80%) absorbed following oral administration.
**Distribution:** Varies with condition and patient; does not enter CSF well. Crosses the placenta and enters breast milk.
**Protein Binding:** >90% in patients with cerebral malaria, pregnant women, and children; 85–90% in patients with uncomplicated malaria; 70% in healthy adults.
**Metabolism and Excretion:** >80% metabolized by the liver; metabolites have less activity than quinine; metabolites excreted in urine. 20% excreted unchanged in urine. Excretion ↑ in acidic urine.
**Half-life:** 11 hr (↑ in patients with malaria).

TIME/ACTION PROFILE (antimalarial blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3.2–5.9 hr | 8 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to quinine, quinidine, or mefloquine; History of previous serious adverse reaction to quinine including thrombotic thrombocytopenic purpura, thrombocytopenia, acute intravascular hemolysis, hemoglobinuria, or hemoglobinemia; QTc prolongation or conditions predisposing to QTc prolongation including hypokalemia and bradycardia; Concurrent use of Class IA or Class III antiarrhythmics, mefloquine, pimozide, or macrolide anti-infectives (↑ risk of arrhythmias); G6PD deficiency; Myasthenia gravis; Optic neuritis; OB: Use only if potential maternal benefit outweighs

fetal risk; consider alternative therapies; Lactation: Discontinue drug or breastfeeding; Geri: Avoid if possible (↑ risk of arrhythmias).
**Use Cautiously in:** Recurrent or interrupted malaria therapy; History of arrhythmias, especially QTc prolongation; Atrial fibrillation/flutter (may cause paradoxical ↑ in ventricular response); Hypoglycemia; History of thrombocytopenic purpura; Pedi: Safety not established for children <16 yr.

### Adverse Reactions/Side Effects
**CV:** CARDIAC ARRHYTHMIAS. **GI:** abdominal cramps/pain, diarrhea, nausea, vomiting, hepatotoxicity. **Derm:** rash. **Endo:** hypoglycemia (↑ in pregnancy). **Hemat:** bleeding, blood dyscrasias, thrombotic thrombocytopenic pupura, thrombocytopenia. **Misc:** cinchonism, hypersensitivity reactions including fever and ANAPHYLAXIS, HEMOLYTIC UREMIC SYNDROME, STEVENS-JOHNSON SYNDROME.

### Interactions
**Drug-Drug:** Concurrent use of Class IA antiarrhythmics (**quinidine**, **procainamide**, **disopyramide**, Class III antiarrhythmics, mefloquine, pimozide, or macrolide anti-infectives ↑ risk of arrhythmias and should be avoided. **Antacids** ↓ absorption. **Cimetidine** ↓ metabolism and may ↑ effects. **Rifampin** and **rifabutin** ↑ metabolism and may ↓ effects; concurrent use with rifampin should be avoided. May ↑ effects of **neuromuscular blocking agents**. May ↑ **digoxin** levels; dose adjustments may be necessary. May ↑ risk of hemolytic, ototoxic, or neurotoxic reactions when used concurrently with **agents sharing these toxicities**. Concurrent use with **quinidine** may ↑ risk of adverse cardiovascular reactions. May ↑ risk of bleeding with **warfarin**. Concurrent use with **mefloquine** ↑ risk of seizures and adverse cardiovascular reactions. **Urinary alkalinizers** including **acetazolamide** and **sodium bicarbonate** may ↑ blood levels. Quinine inhibits the CYP3A4 and CYP2D6 enzyme systems and can ↑ levels of **carbamazepine**, **phenobarbital**, **phenytoin**, **atorvastatin**, **simvastatin**, **lovastatin**, **dextromethorphan**, **metoprolol**, **flecainide**, and **paroxetine**. **Carbamazepine**, **phenobarbital**, and **phenytoin** induce metabolism and ↓ levels of quinine; frequent monitoring recommended.

### Route/Dosage
**PO (Adults):** *Malaria*—648 mg every 8 hr for 7 days.

### Renal Impairment
**PO (Adults):** *Severe chronic renal failure*—648 mg initially, then 324 mg every 12 hr for 7 days.

### Availability
**Capsules:** 325 mg. **Tablets:** 324 mg.

## NURSING IMPLICATIONS

### Assessment
- **Malaria:** Assess patient for improvement in signs and symptoms of condition daily during therapy.
- ***Lab Test Considerations:*** May cause ↑ urinary 17-ketogenic steroids when metyrapone or Zimmerman method is used.
- ***Toxicity and Overdose:*** Plasma quinine levels of >10 mcg/mL may cause tinnitus and impaired hearing.
- Signs of toxicity or cinchonism include tinnitus, headache, nausea, and slightly disturbed vision; usually disappear rapidly upon discontinuing quinine.

### Potential Nursing Diagnoses
Risk for infection (Indications)

### Implementation
- **PO:** Administer with or after meals to minimize GI distress. Aluminum-containing antacids will decrease and delay absorption; avoid concurrent use.

### Patient/Family Teaching
- Instruct patient to take medication as directed and continue full course of therapy, even if feeling better. Take missed doses as soon as remembered, unless almost time for the next dose. If more than 4 hr has elapsed since missed dose, wait and take the next dose as scheduled. Do not double doses or take more than recommended. Advise patient to read the *Patient Information* leaflet prior to starting therapy and with each Rx refill.
- Review methods of minimizing exposure to mosquitoes with patients receiving quinine (use insect repellent, wear long-sleeved shirt and long trousers, use screen or netting).
- Quinine may cause visual changes. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- May cause diarrhea, nausea, stomach cramps or pain, vomiting, or ringing in the ears. Advise patient to notify health care professional promptly if these become pronounced.
- Advise patient to stop quinine and notify health care professional of any evidence of allergy

(flushing, itching, rash, fever, facial swelling, stomach pain, difficult breathing, ringing in the ears, visual problems).
- Instruct patient to consult health care professional before taking any Rx, OTC, or herbal products with quinine.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes
- Prevention of or improvement in signs and symptoms of malaria.

## quinupristin/dalfopristin
(kwin-oo-**pris**-tin/dal-foe-**pris**-tin)
Synercid

***Classification***
Therapeutic: anti-infectives
Pharmacologic: streptogramins

**Pregnancy Category B**

### Indications
Treatment of serious or life-threatening infections associated with vancomycin-resistant *Enterococcus faecium* (VREF). Complicated skin/skin structure infections caused by *Staphylococcus aureus* (methicillin, susceptible) or *Streptococcus pyogenes*.

### Action
Quinupristin inhibits the late phase of protein synthesis at the level of the bacterial ribosome; dalfopristin inhibits the early phase. **Therapeutic Effects:** Bacteriostatic effect against susceptible organisms. **Spectrum:** Active against vancomycin-resistant and multidrug-resistant strains of *E. faecium*, *S. aureus* (methicillin-susceptible), and *S. pyogenes*. Not active against *E. faecalis*.

### Pharmacokinetics
**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Unknown.
**Protein Binding:** Moderate.
**Metabolism and Excretion:** Both are converted to compounds with additional anti-infective activity; parent drugs and metabolites are mostly excreted in feces (75–77%); 15% of quinupristin and 17% of dalfopristin excreted in urine.
**Half-life:** *Quinupristin*—0.85 hr; *dalfopristin*—0.7 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | end of infusion | 8–12 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Concurrent use of other drugs metabolized by the cytochrome P450 3A4 enzyme system (serious interactions may occur); Hepatic impairment (dose adjustment may be necessary); Patients with a history of GI disease, especially colitis; OB, Lactation: Pedi: Pregnancy, lactation, or children <16 yr (safety not established).

### Adverse Reactions/Side Effects
**CNS:** headache. **CV:** thrombophlebitis. **GI:** PSEUDOMEMBRANOUS COLITIS, diarrhea, nausea, vomiting. **Derm:** pruritus, rash. **Local:** edema/inflammation/pain at infusion site, infusion site reactions. **Misc:** allergic reactions including ANAPHYLAXIS, pain.

### Interactions
**Drug-Drug:** Inhibits the cytochrome P450 3A4 drug metabolizing enzyme system; inhibits metabolism of **cyclosporine**, **midazolam**, and **nifedipine** and ↑ risk of toxicity (careful monitoring required). Similar effects may be expected with concurrent use of **delavirdine**, **nevirapine**, **indinavir**, **ritonavir**, **vinca alkaloids**, **docetaxel**, **paclitaxel**, **diazepam**, **verapamil**, **diltiazem**, **HMG CoA reductase inhibitors**, **tacrolimus**, **methylprednisolone**, **carbamazepine**, **quinidine**, **lidocaine**, and **disopyramide**.

### Route/Dosage
**IV (Adults):** *Vancomycin-resistant E. faecium*—7.5 mg/kg q 8 hr for at least 7 days; *complicated skin/skin structure infections*—7.5 mg/kg q 12 hr for at least 7 days.

### Availability
**Powder for injection:** 500 mg (150 mg quinupristin and 350 mg dalfopristin in 10-mL vials), 600 mg (180 mg quinupristin and 420 mg dalfopristin in 10-mL vials).

## NURSING IMPLICATIONS

### Assessment
- Assess patient for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and throughout therapy.

- Obtain specimens for culture and sensitivity before initiating therapy. First dose may be given before receiving results.
- Monitor patient for pain or inflammation at the infusion site frequently throughout infusion. Increasing the volume of diluent from 250 mL to 500 mL or 750 mL or infusing via a peripherally inserted central catheter or central venous catheter may be required.
- Observe patient for signs and symptoms of anaphylaxis (rash, pruritus, laryngeal edema, wheezing). Discontinue drug and notify physician or other health care professional immediately if these problems occur. Keep epinephrine, an antihistamine, and resuscitation equipment close by in case of an anaphylactic reaction.
- Assess patient for myalgia and arthralgia after infusion. May be severe. Reducing dose frequency to every 12 hr may decrease pain. Symptoms usually resolve upon discontinuation of medication.
- ***Lab Test Considerations:*** May cause ↑ serum total bilirubin concentrations.

## Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Diarrhea (Adverse Reactions)

## Implementation

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Reconstitute the 500-mg vial with 5 mL and the 600-mg vial with 6 mL of D5W or sterile water for injection, respectively, for a concentration of 100 mg/mL. Avoid shaking to prevent foam formation. Allow solution to sit until all foam has disappeared. Dilute further with 250 mL of D5W (100 mL can be used for central line administration). May dilute in 500 mL or 750 mL of D5W if severe venous irritation occurs after peripheral administration. Reconstituted vials should be used within 30 min. Infusion is stable for 5 hr at room temperature or 54 hr if refrigerated. ***Rate:*** Infuse over 60 min. Flush line before and after infusion with D5W.
- **Y-Site Compatibility:** amikacin, amiodarone, anidulafungin, aztreonam, caspofungin, cimetidine, ciprofloxacin, cyclosporine, daptomycin, diltiazem, diphenhydramine, dolasetron, doxycycline, droperidol, enalaprilat, epinephrine, esmolol, fenoldopam, fentanyl, fluconazole, granisetron, haloperidol, hydromorphone, hydroxyzine, isoproterenol, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, meperidine, metoclopramide, metoprolol, midazolam, milrinone, morphine, nicardipine, nitroglycerin, ondansetron, palonosetron, pancuronium, phenylephrine, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, tacrolimus, tirofiban, tobramycin, verapamil, voriconazole.
- **Y-Site Incompatibility:** acyclovir, aminophylline, ampicillin, ampicillin/sulbacatam, azithromycin, bumetanide, calcium chloride, calcium gluconate, cefazolin, cefepime, cefotaxime, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, clindamycin, dexamethasone sodium phosphate, diazepam, digoxin, ertapenem, furosemide, ganciclovir, heparin, hydrocortisone sodium succinate, imipenem/cilastatin, insulin, ketorolac, meropenem, methylprednisolone sodium succinate, nitroprusside, pantoprazole, phenytoin, piperacillin/tazobactam, potassium phosphate, ranitidine, sodium bicarbonate, trimethoprim/sulfamethoxazole, ticarcillin/clavulanate.
- **Solution Incompatibility:** 0.9% NaCl.

## Patient/Family Teaching

- Instruct patient to notify health care professional if fever and diarrhea develop, especially if stool contains blood, pus, or mucus. Advise patient not to treat diarrhea without consulting health care professional.

## Evaluation/Desired Outcomes

- Resolution of signs and symptoms of infection. Length of time for complete resolution depends on the organism and site of infection.

## rabeprazole (ra-bep-ra-zole)

Aciphex, Pariet

***Classification***

Therapeutic: antiulcer agents
Pharmacologic: proton-pump inhibitors

**Pregnancy Category B**

### Indications

Gastroesophageal reflux disease (GERD). Duodenal ulcers (including combination therapy with clarithromycin and amoxicillin to erradicate *H. pylori* and prevent recurrence). Pathological hypersecretory conditions, including Zollinger-Ellison syndrome.

### Action

Binds to an enzyme in the presence of acidic gastric pH, preventing the final transport of hydrogen ions into the gastric lumen. **Therapeutic Effects:** Diminished accumulation of acid in the gastric lumen, with lessened acid reflux. Healing of duodenal ulcers and esophagitis. Decreased acid secretion in hypersecretory conditions.

### Pharmacokinetics

**Absorption:** Delayed-release tablet is designed to allow rabeprazole, which is not stable in gastric acid, to pass through the stomach intact. Subsequently 52% is absorbed after oral administration.
**Distribution:** Unknown.
**Protein Binding:** 96.3%.
**Metabolism and Excretion:** Mostly metabolized by the liver (hepatic cytochrome P450 3A and 2C19 enzyme systems) (the CYP2C19 enzyme system exhibits genetic polymorphism; 15–20% of Asian patients and 3–5% of Caucasian and Black patients may be poor metabolizers and may have significantly ↑ rabeprazole concentrations and an ↑ risk of adverse effects); 10% excreted in feces; remainder excreted in urine as inactive metabolites.
**Half-life:** 1–2 hr.

TIME/ACTION PROFILE (acid suppression)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 1 hr | unknown | 24 hr† |

†Suppression continues to increase over the first week of therapy

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to rabeprazole or related drugs (benzimidazoles).
**Use Cautiously in:** Severe hepatic impairment (dose reduction may be necessary); Geri: ↑ risk of hip fractures in patients using high doses for >1 year; OB, Lactation: Pedi: Pregnancy, lactation, or children <12 yr (breastfeeding not recommended; use in pregnancy only if needed; safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache, malaise. **GI:** abdominal pain, constipation, diarrhea, nausea. **Derm:** photosensitivity, rash. **MS:** neck pain. **Misc:** allergic reactions, chills, fever.

### Interactions

**Drug-Drug:** Rabeprazole is metabolized by the CYP450 enzyme system and may interact with other drugs metabolized by this sytem. May ↓ absorption of drugs requiring acid pH, including **ketoconazole**, **itraconazole**, **atazanavir**-**ampicillin esters**, and **iron salts**. May ↑ blood levels of **digoxin**. May ↑ the risk of bleeding with **warfarin** (monitor INR/PT). May ↓ the antiplatelet effects of **clopidogrel**.

### Route/Dosage

**PO (Adults):** *GERD, duodenal ulcers*—20 mg once daily; *prevention of duodenal ulcer recurrence*—20 mg twice daily for 7 days with amoxicillin 1000 mg twice daily for 7 days and clarithromycin 500 mg twice daily for 7 days; *hypersecretory conditions*—60 mg once daily initially, may be adjusted as needed and continued as necessary; doses up to 100 mg daily or 60 mg twice daily have been used.
**PO (Children ≥12 yr):** *GERD*—20 mg once daily.

### Availability

**Delayed-release tablets:** 20 mg. **Cost:** 20 mg $419.97/90.

## NURSING IMPLICATIONS

### Assessment

- Assess routinely for epigastric or abdominal pain and frank or occult blood in the stool, emesis, or gastric aspirate.
- ***Lab Test Considerations:*** Monitor CBC with differential periodically during therapy.

### Potential Nursing Diagnoses

Acute pain (Indications)

### Implementation

- **PO:** Administer doses before meals, preferably in the morning. Tablets should be swallowed whole; do not break, crush, or chew.

### Patient/Family Teaching

- Instruct patient to take medication as directed for the full course of therapy, even if feeling better. Take missed doses as soon as remembered but not if almost time for next dose. Do not double doses.
- May cause occasional drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to avoid alcohol, products containing aspirin or NSAIDs, and foods that may cause an increase in GI irritation.
- Caution patients to wear sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to report onset of black, tarry stools; diarrhea; abdominal pain; or persistent headache to health care professional promptly.
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- Instruct patient to consult health care professional prior to taking other Rx, OTC, or herbal products.

### Evaluation/Desired Outcomes

- Decrease in abdominal pain or prevention of gastric irritation and bleeding. Healing of duodenal ulcers can be seen on x-ray examination or endoscopy.
- Decrease in symptoms of GERD. Therapy is continued for 4–8 wk after initial episode.

## **raloxifene** (ra-**lox**-i-feen)

Evista

***Classification***

Therapeutic: bone resorption inhibitors
Pharmacologic: selective estrogen receptor modulators

**Pregnancy Category X**

### Indications

Treatment and prevention of osteoporosis in postmenopausal women. Reduction of the risk of breast cancer in postmenopausal women with osteoporosis and those at high risk for invasive breast cancer.

### Action

Binds to estrogen receptors, producing estrogen-like effects on bone, resulting in reduced resorption of bone and decreased bone turnover. **Therapeutic Effects:** Prevention of osteoporosis in patients at risk. Decreased risk of breast cancer.

### Pharmacokinetics

**Absorption:** Although well absorbed (>60%), after oral administration, extensive first-pass metabolism results in 2% bioavailability.
**Distribution:** Highly bound to plasma proteins; remainder of distribution unknown.
**Protein Binding:** Highly bound to plasma proteins.
**Metabolism and Excretion:** Extensively metabolized by the liver; undergoes enterohepatic cycling; excreted primarily in feces.
**Half-life:** 27.7 hr.

TIME/ACTION PROFILE (effects on bone turnover)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3 mo | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; History of thromboembolic events; OB: Lactation: Not indicated for women with childbearing potential or who are breastfeeding; Pedi: Safety not established.
**Use Cautiously in:** Potential immobilization (increased risk of thromboembolic events); History of stroke or transient ischemic attack; Atrial fibrillation; Hypertension; Cigarette smoking.

### Adverse Reactions/Side Effects

**CV:** STROKE, deep vein thrombosis, pulmonary embolism, retinal vein thrombosis. **MS:** leg cramps. **Misc:** hot flashes.

### Interactions

**Drug-Drug: Cholestyramine** ↓ absorption (avoid concurrent use). May alter effects of **warfarin** and other **highly protein-bound drugs**. Concurrent systemic **estrogen** therapy is not recommended.

### Route/Dosage

**PO (Adults):** 60 mg once daily.

### Availability

**Tablets:** 60 mg. **Cost:** $269.96/90.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for bone mineral density with x-ray, serum, and urine bone turnover markers (bone-specific alkaline phosphatase, osteocalcin, and collagen breakdown products) before and periodically during therapy.
- ***Lab Test Considerations:*** May cause ↑ apolipoprotein A-I and reduced serum total cholesterol, LDL cholesterol, fibrinogen, apolipoprotein B, and lipoprotein.

- May cause ↑ hormone-binding globulin (sex steroid-binding globulin, thyroxine-binding globulin, corticosteroid-binding globulin) with ↑ total hormone concentrations.
- May cause small ↓ in serum total calcium, inorganic phosphate, total protein, and albumin.
- May also cause slight decrease in platelet count.

## Potential Nursing Diagnoses
Risk for injury (Indications)

## Implementation
- **PO:** May be administered without regard to meals.
- Calcium supplementation should be added to diet if daily intake is inadequate.

## Patient/Family Teaching
- Instruct patient to take raloxifene as directed. Discuss the importance of adequate calcium and vitamin D intake or supplementation. Advise patient to discontinue smoking and alcohol consumption.
- Emphasize the importance of regular weight-bearing exercise. Advise patient that raloxifene should be discontinued at least 72 hr before and during prolonged immobilization (recovery from surgery, prolonged bedrest). Instruct patient to avoid prolonged restrictions of movement during travel because of the increased risk of venous thrombosis.
- Advise patient that raloxifene will not reduce hot flashes or flushes associated with estrogen deficiency and may cause hot flashes.
- OB: Advise patient that raloxifene may have teratogenic effects. Instruct patient to notify health care provider immediately if pregnancy is planned or suspected.
- Instruct patient to read the patient package insert when initiating therapy and again with each prescription refill.

## Evaluation/Desired Outcomes
- Prevention of osteoporosis in postmenopausal women.
- Reduced risk of breast cancer in postmenopausal women with osteoporosis and those at high risk for invasive breast cancer.

# **raltegravir** (ral-**teg**-ra-veer)
Isentress

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: integrase strand transfer inhibitor (INSTI)

**Pregnancy Category C**

## Indications
HIV-1 infection (with other antiretrovirals) in treatment-experienced or treatment-naïve patients.

## Action
Inhibits HIV-1 integrase, which is required for viral replication. **Therapeutic Effects:** Evidence of decreased viral replication and reduced viral load with slowed progression of HIV and its sequelae.

## Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Mostly metabolized by the uridine diphosphate glucuronosyltransferase (UGT) A1A enzyme system; 23% excreted in urine as parent drug and metabolite.
**Half-life:** 9 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3 hr | 12 hr |

## Contraindications/Precautions
**Contraindicated in:** Lactation: Breast feeding not recommended in HIV-infected patients.
**Use Cautiously in:** Geri: Choose dose carefully, considering concurrent disease states, drug therapy and age-related ↓ in hepatic and renal function; Concurrent use of medications associated with rhabomyolysis/myopathy (may ↑ risk); OB: Use in pregnancy only if maternal benefit outweighs fetal risk; Pedi: Safety not established.

## Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, headache, depression, dizziness, fatigue, weakness. **CV:** myocardial infarction. **GI:** diarrhea, abdominal pain, gastritis, hepatitis, vomiting. **GU:** renal failure/impairment. **Hemat:** anemia, neutropenia. **Metab:** lipodystrophy. **Misc:** hypersensitivity reactions, immune reconstitution syndrome, fever.

## Interactions
**Drug-Drug:** Concurrent use with **strong inducers of the UGT A1A enzyme system** including

**rifampin** may ↓ blood levels and effectiveness. Concurrent use with **strong inhibitors of the UGT A1A enzyme system** including **atazanavir** may ↑ blood levels. ↑ risk of rhabomyolysis/myopathy **HMG-CoA reductase inhibitors**. **Proton pump inhibitors** may ↑ levels. **Efavirenz**, **etravirine**, and **tipranavir/ritonavir** may ↓ levels.

### Route/Dosage

**PO (Adults):** 400 mg twice daily; ↑ dose to 800 mg twice daily when used with rifampin.

### Availability

**Tablets:** 400 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for change in severity of HIV symptoms and for symptoms of opportunistic infections during therapy.
- Monitor for anxiety, depression (especially in patients with a history of psychiatric illness), suicidal ideation, and paranoia during therapy.
- ***Lab Test Considerations:*** Monitor viral load and CD4 counts regularly during therapy.
- May casue ↓ ANC, hemoglobin, and platelet counts.
- May cause ↑ serum glucose, AST, ALT, GGT, total bilirubin, alkaline phosphatase, pancreatic amylase, serum lipase, and creatinine kinase concentrations.

### Potential Nursing Diagnoses

Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- **PO:** May be administered without regard to meals.

### Patient/Family Teaching

- Emphasize the importance of taking raltegravir as directed, at evenly spaced times throughout day. Do not take more than prescribed amount and do not stop taking without consulting health care professional. Take missed doses as soon as remembered unless almost time for next dose. Do not double doses. Advise patient to read *Patient Information* sheet before starting therapy and with each prescription renewal in case changes have been made.
- Instruct patient that raltegravir should not be shared with others.
- Advise patient to avoid taking other Rx, OTC, or herbal products without consulting health care professional.
- Inform patient that raltegravir does not cure AIDS or prevent associated or opportunistic infections. Raltegravir does not reduce the risk of transmission of HIV to others through sexual contact or blood contamination. Caution patient to use a condom during sexual contact and to avoid sharing needles or donating blood to prevent spreading the AIDS virus to others. Advise patient that the long-term effects of raltegravir are unknown at this time.
- Advise patient to notify health care professional if they develop any unusual symptoms, if any known symptom persists or worsen, or if depression or suicidal thoughts occur.
- Advise patients to notify health care professional if pregnancy is planned or suspected. Breastfeeding should be avoided during therapy.
- Emphasize the importance of regular follow-up exams and blood counts to determine progress and monitor for side effects.

### Evaluation/Desired Outcomes

- Delayed progression of AIDS and decreased opportunistic infections in patients with HIV.
- Decrease in viral load and improvement in CD4 cell counts.

## **ramelteon** (ra-**mel**-tee-on)

Rozerem

***Classification***

Therapeutic: sedative/hypnotics
Pharmacologic: melatonin receptor agonists

**Pregnancy Category C**

### Indications

Treatment of insomnia characterized by difficult sleep onset.

### Action

Activates melatonin receptors, which promotes maintenance of circadian rhythm, a part of the sleep-wake cycle. **Therapeutic Effects:** Easier onset of sleep.

### Pharmacokinetics

**Absorption:** Well absorbed (84%), but bioavailability is low (1.8%) due to extensive first pass liver metabolism. Absorption in increased by a high fat meal.
**Distribution:** Widely distributed to body tissues.
**Metabolism and Excretion:** Extensively metabolized by the liver; mainly by CYP1A2 enzyme system. Metabolites are excreted mostly in urine (88%); 4% excreted in feces.
**Half-life:** 1–2.6 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 30–90 min | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; History of angioedema with previous use; Severe hepatic impairment; Concurrent use of fluvoxamine; Lactation: Lactation; Pedi: Safety not established.

**Use Cautiously in:** Depression or history of suicidal ideation; Moderate hepatic impairment; Concurrent use of CYP3A4 inhibitors, such as ketoconazole; Concurrent use of CYP2C9 inhibitors, such as fluconazole; OB: Use only if maternal benefit outweighs fetal risk.

### Adverse Reactions/Side Effects

**CNS:** abnormal thinking, behavior changes, dizziness, fatigue, hallucinations, headache, insomnia (worsened), sleep—driving. **GI:** nausea. **Endo:** ↑ prolactin levels, ↓ testosterone levels. **Misc:** ANGIOEDEMA.

### Interactions

**Drug-Drug:** Blood levels and effects are ↑ by **fluvoxamine**; concurrent use is contraindicated. Levels and effects may be ↓ by **rifampin**. Concurrent use of CYP3A4 inhibitors, such as **ketoconazole** may ↑ levels and effects; use cautiously. Concurrent use of CYP2C9 inhibitors, such as **fluconazole** may ↑ levels and effects; use cautiously. ↑ risk of excessive CNS depression with other CNS depressants including **alcohol**, **benzodiazepines**, **opioids**, and other **sedative/hypnotics**.

### Route/Dosage

**PO (Adults):** 8 mg within 30 min of going to bed.

### Availability

**Tablets:** 8 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess sleep patterns before and periodically throughout therapy.

### Potential Nursing Diagnoses

Insomnia (Indications)
Risk for injury (Side Effects)

### Implementation

- Do not administer with or immediately after a high-fat meal.
- Before administering, reduce external stimuli and provide comfort measures to increase effectiveness of medication.
- **PO:** Administer within 30 min prior to going to bed.

### Patient/Family Teaching

- Instruct patient to take ramelteon as directed, within 30 minutes of going to bed and to confine activities to those necessary to prepare for bed. Instruct patient to read the *Medication Guide* before starting and with each Rx refill, changes may occur.
- Causes drowsiness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Caution patient that complex sleep-related behaviors (sleep-driving, making phone calls, preparing and eating food) may occur while asleep.
- Advise patient to notify health care professional immediately if signs of anaphylaxis (swelling of the tongue or throat, trouble breathing, and nausea and vomiting) or angioedema (severe facial swelling) occur; may occur as early as the first time the product is taken.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants.

### Evaluation/Desired Outcomes

- Relief of insomnia.

R

**ramipril, See ANGIOTENSIN-CONVERTING ENZYME (ACE) INHIBITORS.**

**ranitidine, See HISTAMINE $H_2$ ANTAGONISTS.**

## ranolazine (ra-**nole**-a-zeen)

Ranexa

***Classification***

Therapeutic: antianginals

**Pregnancy Category C**

### Indications

Chronic angina pectoris.

### Action

Does not ↓ blood pressure or heart rate; remainder of mechanism is not known. **Therapeutic Effects:** Decreased frequency of angina.

### Pharmacokinetics

**Absorption:** Highly variable.
**Distribution:** Unknown.
**Metabolism and Excretion:** Metabolized in the gut (P-glycoprotein) and by the liver (primarily CYP3A and less by CYP2D6); <5% excreted unchanged in urine and feces.
**Half-life:** 7 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2–5 hr | 12 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent use of potent inhibitors of CYP3A; Concurrent use of inducers of CYP3A; Hepatic impairment; Lactation: Lactation.
**Use Cautiously in:** Renal impairment; OB: Use only when potential benefit outweighs risk to fetus; Pedi: Safety not established; Geri: ↑ risk of adverse reactions in patients >75 yr .

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **EENT:** tinnitus. **CV:** palpitations, QTc prolongation. **GI:** abdominal pain, constipation, dry mouth, nausea, vomiting.

### Interactions

**Drug-Drug: Ketoconazole**, **itraconazole**, **clarithromycin**, **nefazodone**, **nelfinavir**, **ritonavir**, **indinavir**, and **saquinavir** significantly ↑ levels (contraindicated). **Verapamil**, **diltiazem**, **aprepitant**, **erythromycin**, and **fluconazole** ↑ levels (do not exceed ranolazine dose of 500 mg twice daily). **Cyclosporine** may ↑ levels. **Rifampin**, **rifabutin**, **rifapentin**, **phenobarbital**, **phenytoin**, and **carbamazepine** significantly ↓ levels (contraindicated).
**Paroxetine** may ↑ levels. ↑ blood levels of **simvastatin** and its active metabolite. May ↓ metabolism and ↑ effects of **tricyclic antidepressants** and **antipsychotics**, dosage adjustments may be necessary. May ↑ **digoxin** levels; dose adjustment may be required.
**Drug-Natural Products: St. John's wort** significantly ↓ levels (contraindicated).
**Drug-Food: Grapefruit juice** ↑ levels (do not exceed ranolazine dose of 500 mg twice daily).

### Route/Dosage

**PO (Adults):** 500 mg twice daily initially, may be ↑ to 1000 mg twice daily.

### Availability

**Extended-release tablet:** 500 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess location, duration, intensity, and precipitating factors of anginal pain.
- Monitor ECG at baseline and periodically during therapy to evaluate effects on QT interval.
- ***Lab Test Considerations:*** May cause ↑ serum creatinine. Usually has a rapid onset, but does not progress during therapy and is reversible with discontinuation of ranolazine.
- May cause transient eosinophilia.
- May cause small mean ↓ in hematocrit.

### Potential Nursing Diagnoses

Ineffective tissue perfusion (Indications)
Activity intolerance (Indications)

### Implementation

- Ranolazine should be used in combination with amlodipine, beta blockers, or nitrates.
- Do not administer with grapefruit juice or grapefruit products.
- **PO:** May be administered without regard to food. Tablets should be swallowed whole; do not break, crush, or chew.

### Patient/Family Teaching

- Instruct patient to take ranolazine as directed. If a dose is missed, take the usual dose at the next scheduled time; do not double doses. Explain to patient that ranolazine is used for chronic therapy and will not help an acute angina episode.
- Advise patient to avoid grapefruit juice and grapefruit products when taking ranolazine.
- May cause dizziness and light-headedness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Inform patient that ranolazine may cause changes in the ECG. Patient should inform health care professional if they have a personal or family history of QTc prolongation, congenital long QT syndrome, or proarrhythmic conditions such as hypokalemia.
- Advise patient to consult health care professional prior to taking other Rx, OTC, or herbal products.

### Evaluation/Desired Outcomes

- Decrease in frequency of angina attacks.

**rasagiline** (raza-ji-leen)
Azilect

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: monoamine oxidase type B inhibitors

**Pregnancy Category C**

## Indications
Parkinson's disease (monotherapy and adjunctive to levodopa).

## Action
Irreversibly inactivates monoamine oxidase (MAO) by binding to it at type B (brain sites); inactivation of MAO leads to increased amounts of dopamine available in the CNS. Differs from selegiline by its nonamphetamine characteristics.
**Therapeutic Effects:** Improvement in symptoms of Parkinson's disease, allowing increase in function.

## Pharmacokinetics
**Absorption:** 36% absorbed following oral administration.
**Distribution:** Readily crosses the blood-brain barrier.
**Metabolism and Excretion:** Extensively metabolized by the liver (CYP1A2 enzyme) to an inactive metabolite; less than 1% excreted in urine.
**Half-life:** 1.3 hr; does not correlate with duration of MAO-B inhibition.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 1 hr | 40 days* |

*Recovery of MAO-B function.

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent meperidine, tramadol, propoxyphene, methadone, sympathomimetic amines, dextromethorphan, mirtazapine, cyclobenzaprine, cocaine, or St. John's wort; Moderate to severe hepatic impairment; Elective surgery requiring general anesthesia; allow 14 days after discontinuation; Pheochromocytoma.
**Use Cautiously in:** Mild hepatic impairment (↑ blood levels); OB: Use only if maternal benefit outweighs fetal risk; Lactation: May inhibit lactation; Pedi: Safety not established.

## Adverse Reactions/Side Effects
**CNS:** depression, dizziness, hallucinations, malaise, vertigo. **EENT:** conjunctivitis, rhinitis. **Resp:** asthma. **CV:** chest pain, postural hypotension (may ↑ levodopa-induced hypotension), syncope. **GI:** anorexia, dizziness, dyspepsia, gastroenteritis, vomiting. **GU:** albuminuria, ↓ libido. **Derm:** alopecia, ecchymosis, ↑ melanoma risk, rash. **Endo:** weight loss. **Hemat:** leukopenia. **MS:** arthralgia, arthritis, neck pain. **Neuro:** dyskinesia (may ↑ levodopa-induced dyskinesia), paresthesia. **Misc:** allergic reactions, flu-like syndrome, ↑ fall risk, fever.

## Interactions
**Drug-Drug: Ciprofloxacin** and other **inhibitors of the CYP1A2 enzyme** ↑ rasagiline levels; dose adjustment is recommended. **Meperidine** has resulted in life-threatening reactions when used with other MAO inhibitors; wait at least 14 days after discontinuation of rasagiline to initiate meperidine. Similar reactions may occur with **tramadol**, **methadone**, **propoxyphene**; concurrent use should be avoided. Concurrent use with **dextromethorphan** may result in psychosis/bizarre behavior and should be avoided. ↑ risk of adverse reactions with **mirtazapine** and **cyclobenzapine**; concurrent use should be avoided. Hypertensive crisis may occur with **sympathomimetic amines** including **amphetamines**, **cold products**, and some **weight loss products** containing **vasoconstrictors** such as **pseudoephedrine**, **phenylephrine**, or **ephedrine**; avoid concurrent use. ↑ risk of CNS toxicity with **tricyclic antidepressants**, **SSRI antidepressants**, **SNRI antidepressants**, and other **MAO inhibitors**; rasagiline should be discontinued ≥14 days prior to initiation of antidepressants (**fluoxetine** should be discontinued ≥5 weeks prior to rasagiline therapy). Hypertensive crisis may also occur when rasagiline is used with **other MAO inhibitors**; allow at least 14 days between usage.
**Drug-Natural Products:** Risk of toxicity is ↑ with **St. John's wort**.
**Drug-Food:** Ingestion of **tyramine-rich foods or beverages** may result in life-threatening hypertensive crisis.

## Route/Dosage
**PO (Adults):** *Monotherapy*—1 mg daily; *adjunct therapy*—0.5 mg daily, may be ↑ to 1 mg daily; *concurrent ciprofloxacin or other CYP1A2 inhibitors*—0.5 mg daily.

### Hepatic Impairment
**PO (Adults):** *Mild hepatic impairment*—1 mg daily; *adjunct therapy*—0.5 mg daily, may be ↑ to 1 mg daily.

### Availability
**Tablets:** 0.5 mg, 1 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess signs and symptoms of Parkinson's disease (tremor, muscle weakness and rigidity, ataxic gait) prior to and during therapy.
- Monitor blood pressure periodically during therapy.
- Assess skin for melanomas periodically during therapy.
- ***Lab Test Considerations:*** May cause albuminuria, leukopenia, and abnormal liver function tests.
- ***Toxicity and Overdose:*** Concurrent ingestion of tyramine-rich foods and many medications may result in a life-threatening hypertensive crisis. Signs and symptoms of hypertensive crisis include chest pain, tachycardia or bradycardia, severe headache, neck stiffness or soreness, nausea and vomiting, sweating, photosensitivity, and enlarged pupils.

### Potential Nursing Diagnoses
Impaired physical mobility (Indications)
Risk for injury (Indications, Side Effects)

### Implementation
- If used in combination with levodopa, a reduction in levodopa dose may be considered based on individual results.
- **PO:** Administer once daily.

### Patient/Family Teaching
- Instruct patient to take rasagiline as directed. Missed doses should be omitted and next dose taken at usual time the following day. Do not double doses.
- Caution patient to avoid alcohol, CNS depressants, and foods or beverages containing tyramine (see Appendix M) during and for at least 2 wk after therapy has been discontinued; they may precipitate a hypertensive crisis. Contact health care professional immediately if symptoms of hypertensive crisis develop.
- Instruct patient to consult health care professional before taking any Rx, OTC, or herbal products. Caution patient to avoid use of St. John's Wort and the analgesics meperidine, propoxyphene, tramadol, or methadone during therapy.
- Caution patient to avoid elective surgery requiring general anesthesia, cocaine, or local anesthesia containing sympathomimetic vasoconstrictors within 14 days of discontinuing rasagiline. If surgery is necessary sooner, benzodiazepines, mivacurium, rapacuronium, fentanyl, morphine, and codeine may be used cautiously.
- May cause dizziness or drowsiness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Caution patient to change positions slowly to minimize orthostatic hypotension. Geriatric patients are at increased risk for this side effect.
- Advise patient to monitor for melanomas frequently and on a regular basis.
- Advise patient to notify health care professional immediately if severe headache, neck stiffness, heart racing, or palpitations, occur.

### Evaluation/Desired Outcomes
- Improvement in symptoms of Parkinson's disease, allowing increase in function.

## rasburicase
(ras-**byoor**-i-case)
Elitek

***Classification***
Therapeutic: antigout agents, antihyperuricemics
Pharmacologic: enzymes

**Pregnancy Category C**

### Indications
Initial management of increased uric acid levels in children with leukemia, lymphoma, or other malignancies who are being treated with antineoplastics which are expected to produce hyperuricemia.

### Action
An enzyme which promotes the conversion of uric acid to allantoin, an inactive, water-soluble compound. Produced by recombinant DNA technology. **Therapeutic Effects:** Decreased sequelae of hyperuricemia (nephropathy, arthropathy).

### Pharmacokinetics
**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** 18 hr.

TIME/ACTION PROFILE (decrease in uric acid)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | unknown | 4–24 hr |

### Contraindications/Precautions

**Contraindicated in:** G6PD deficiency (↑ risk of severe hemolysis); Previous allergic reaction, hemolysis or methemoglobinemia from rasburicase; Lactation: Lactation.
**Use Cautiously in:** OB: Pregnancy (use only if clearly needed).

### Adverse Reactions/Side Effects

**CNS:** headache. **Resp:** respiratory distress. **GI:** abdominal pain, constipation, diarrhea, nausea, vomiting, mucositis. **Derm:** rash. **Hemat:** HEMOLYSIS, METHEMOGLOBINEMIA, neutropenia.
**Misc:** hypersensitivity reactions including ANAPHYLAXIS, fever, sepsis.

### Interactions

**Drug-Drug:** None known.

### Route/Dosage

**IV (Children):** 0.15 or 0.2 mg/kg daily as a single dose for 5 days.

### Availability

**Lyophilized powder for reconstitution:** 1.5 mg/vial.

## NURSING IMPLICATIONS

### Assessment

- Monitor patients for signs of allergic reactions and anaphylaxis (chest pain, dyspnea, hypotension, urticaria). If these signs occur, rasburicase should be immediately and permanently discontinued.
- ***Lab Test Considerations:*** Monitor patients for hemolysis. Screen patients at higher risk for G6PD deficiency (patients of African American or Mediterranean ancestry) prior to therapy. If hemolysis occurs, discontinue and do not restart rasburicase.
- Monitor patients for methemoglobinemia. Discontinue rasburicase and do not restart in patients who develop methemoglobinemia.
- May cause spuriously low uric acid levels in blood samples left at room temperature. Collect blood for uric acid levels in pre-chilled tubes containing heparin and immediately immerse and maintain in an ice water bath. Uric acid must be analyzed in plasma. Plasma samples must be assayed within 4 hr of collection.

### Potential Nursing Diagnoses

Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Chemotherapy is initiated 4–24 hr after first dose of rasburicase.

**IV Administration**

- **Intermittent Infusion:** Determine number of vials of rasburicase needed based on patient's weight and dose/kg. Reconstitute in diluent provided. Add 1 mL of diluent provided to each vial and mix by swirling very gently. Do not shake or vortex. Solution should be clear and colorless. Do not use solutions that are discolored or contain particulate matter. ***Diluent:*** Remove dose from reconstituted vials and inject into infusion bag of 0.9% NaCl for a final total volume of 50 mL. Administer within 24 hr of reconstitution. Store reconstituted or diluted solution in refrigerator for up to 24 hr. ***Rate:*** Administer over 30 min. Do not administer as a bolus.
- **Y-Site Incompatibility:** Infuse through a separate line. Do not use a filter with infusion. If separate line is not possible, flush line with at least 15 mL of 0.9% NaCl prior to rasburicase infusion.

### Patient/Family Teaching

- Inform patient and family of purpose of rasburicase infusion.

### Evaluation/Desired Outcomes

- Decrease in plasma uric acid levels in pediatric patients receiving antineoplastics expected to result in tumor lysis and subsequent elevation of plasma uric acid levels.

R

HIGH ALERT

## repaglinide (re-pag-gli-nide)

Gluconorm, Prandin

***Classification***
Therapeutic: antidiabetics
Pharmacologic: meglitinides

**Pregnancy Category C**

### Indications

Type 2 diabetes mellitus, with diet and exercise; may be used with metformin, rosiglitazone, or pioglitazone.

### Action

Stimulates the release of insulin from pancreatic beta cells by closing potassium channels, which results in the opening of calcium channels in beta

cells. This is followed by release of insulin. **Therapeutic Effects:** Lowering of blood glucose levels.

### Pharmacokinetics

**Absorption:** Well absorbed (56%) following oral administration.
**Distribution:** Unknown.
**Protein Binding:** >98%.
**Metabolism and Excretion:** Mostly metabolized by the liver; metabolites are excreted primarily in feces.
**Half-life:** 1 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 30 min | 60–90 min | <4 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Lactation; Diabetic ketoacidosis; Type 1 diabetes; Concurrent use of gemfibrozil.
**Use Cautiously in:** Impaired liver function (longer dosing intervals may be necessary); Severe renal impairment (dose ↓ recommended); Geri: Consider age-related ↓ in renal/hepatic/cardiovascular function; OB, Pedi: Safety not established; insulin recommended to control diabetes during pregnancy.

### Adverse Reactions/Side Effects

**CV:** angina, chest pain. **Endo:** HYPOGLYCEMIA, hyperglycemia.

### Interactions

**Drug-Drug: Ketoconazole**, **miconazole**, **gemfibrozil**, **itraconazole**, and **erythromycin** may ↓ metabolism and ↑ risk of hypoglycemia; concurrent use with **gemfibrozil** contraindicated. Effects may also be ↑ by **NSAIDs**, **cyclosporine**, **hormonal contraceptives**, **simvastatin**, **sulfonamides**, **chloramphenicol**, **warfarin**, **probenecid**, **MAO inhibitors**, and **beta blockers**. Effects may be ↓ by **corticosteroids**, **phenothiazines**, **thyroid preparations**, **estrogens**, **hormonal contraceptives**, **phenytoin**, **nicotinic acid**, **sympathomimetics**, **isoniazid**, and **calcium channel blockers**. **Drug-Natural Products: Glucosamine** may worsen blood glucose control. **Chromium** and **coenzyme Q-10** may produce ↑ hypoglycemic effects.

### Route/Dosage

**PO (Adults):** 0.5–4 mg taken before meals (not to exceed 16 mg/day).

### Renal Impairment

**PO (Adults):** *Severe renal impairment*—start with 0.5 mg/day and titrate carefully.

### Availability

**Tablets:** 0.5 mg, 1 mg, 2 mg. **Cost:** 0.5 mg $385.64/270, 1 mg $377.70/270, 2 mg $377.97/270. ***In combination with:*** metformin (PrandiMet); see Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Observe patient for signs and symptoms of hypoglycemic reactions (abdominal pain, sweating, hunger, weakness, dizziness, headache, tremor, tachycardia, anxiety). Hypoglycemia may be difficult to recognize in geriatric patients and in patients taking beta blockers. Hypoglycemia is more likely to occur with insufficient caloric intake, following intense prolonged exercise, or when alcohol or more than one hypoglycemic agent is used.
- ***Lab Test Considerations:*** Monitor fasting serum glucose and glycosylated hemoglobin periodically during therapy to evaluate effectiveness.

### Potential Nursing Diagnoses

Imbalanced nutrition: more than body requirements (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin. Withhold repaglinide and reinstitute after resolution of acute episode.
- Repaglinide therapy should be temporarily discontinued from patients requiring surgery involving restricted intake of food and fluids.
- There is no fixed dose of repaglinide. Dose is based on periodic monitoring of blood glucose and long-term response is based on glycolysated hemoglobin levels. If adequate response is not achieved, metformin may be added to regimen. If combination therapy is unsuccessful, oral hypoglycemic therapy may need to be discontinued and replaced with insulin.
- When replacing other oral hypoglycemic agents, repaglinide may be started on the day following discontinuation of the other agent. Monitor blood glucose closely. Discontinuation of long-acting oral hypoglycemics may require monitoring for a week or more.
- Short-term repaglinide therapy may be used for patients well controlled with diet experiencing transient loss of control.

- **PO:** Administer up to 30 min before meals. Patients who skip a meal or add an extra meal should skip or add a dose, respectively, for that meal.

### Patient/Family Teaching

- Instruct patient to take repaglinide before each meal, exactly as directed.
- Explain to patient that repaglinide helps control hyperglycemia but does not cure diabetes. Therapy is usually long term.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hyperglycemic or hypoglycemic episodes.
- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water, and notify health care professional.
- Instruct patient in proper testing of blood glucose. These tests should be monitored closely during periods of stress or illness and a health care professional notified if significant changes occur.
- Caution patient to avoid taking other Rx, OTC or herbal products, or alcohol during repaglinide therapy without consulting health care professional.
- Insulin is the recommended method of controlling blood glucose during pregnancy. Counsel female patients to use a form of contraception other than oral contraceptives and to notify health care professional promptly if pregnancy is planned or suspected.
- Advise patient to inform health care professional of medication regimen prior to treatment or surgery.
- Advise patient to carry a form of sugar (sugar packets, candy) and identification describing disease process and medication regimen at all times.
- Emphasize the importance of routine follow-up exams and regular testing of blood glucose and glycosylated hemoglobin.

### Evaluation/Desired Outcomes

- Control of blood glucose levels without the appearance of hypoglycemic or hyperglycemic episodes.

**reteplase, See THROMBOLYTIC AGENTS.**

## $Rh_o$(D) IMMUNE GLOBULIN

(arr aych oh dee im-**yoon glob** - yoo-lin)

**$Rh_o$(D) immune globulin standard dose IM**
HyperRHO S/D Full Dose, RhoGAM

**$Rh_o$(D) immune globulin microdose IM**
HyperRHO S/D Mini-Dose, MICRhoGAM, Mini-Gamulin R

**$Rh_o$(D) immune globulin IV**
WinRho SDF

**$Rh_o$(D) immune globulin microdose IM, IV**
Rhophylac

***Classification***
Therapeutic: vaccines/immunizing agents
Pharmacologic: immune globulins

**Pregnancy Category C**

### Indications

**IM, IV:** Administered to $Rh_o$(D)-negative patients who have been exposed to $Rh_o$(D)-positive blood by: Pregnancy or delivery of a $Rh_o$(D)-positive infant, Abortion of a $Rh_o$(D)-positive fetus, Fetal-maternal hemorrhage due to amniocentesis, other obstetrical manipulative procedure, or intra-abdominal trauma while carrying a $Rh_o$(D)-positive fetus, Transfusion of $Rh_o$(D)-positive blood or blood products to a $Rh_o$(D)-negative patient. **IV:** Management of immune thrombocytopenic purpura (ITP).

### Action

Prevent production of anti-$Rh_o$(D) antibodies in $Rh_o$(D)-negative patients who were exposed to $Rh_o$(D)-positive blood. Increase platelet counts in patients with ITP. **Therapeutic Effects:** Prevention of antibody response and hemolytic disease of the newborn (erythroblastosis fetalis) in future pregnancies of women who have conceived a $Rh_o$(D)-positive fetus. Prevention of $Rh_o$(D) sensitization following transfusion accident. Decreased bleeding in patients with ITP.

### Pharmacokinetics

**Absorption:** Completely absorbed with IV administration. Well absorbed from IM sites.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.

**Half-life:** approximately 25–30 days.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IM | rapid | 5–10 days | unknown |
| IV† | unknown | 2 hr | unknown |

†When given for ITP, platelet counts start to rise in 1–2 days, peak after 5–7 days, and last for 30 days

## Contraindications/Precautions

**Contraindicated in:** Prior hypersensitivity reaction to human immune globulin; $Rh_o$(D)- or Du-positive patients.

**Use Cautiously in:** ITP patients with pre-existing anemia (decrease dose if Hgb <10 g/dL). May also cause disseminated intravascular coagulation in ITP patients.

## Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **CV:** hypertension, hypotension. **Derm:** rash. **GI:** diarrhea, nausea, vomiting. **Hemat:** *ITP*—anemia, intravascular hemolysis. **MS:** arthralgia, myalgia. **Local:** pain at injection site. **Misc:** fever.

## Interactions

**Drug-Drug:** May decrease antibody response to some **live-virus vaccines** (**measles**, **mumps**, **rubella**).

## Route/Dosage

### $Rh_o$(D) Immune Globulin (for IM use only)

#### Following Delivery

**IM (Adults):** *HyperRHO S/D Full Dose, RhoGAM*—1 vial standard dose (300 mcg) within 72 hr of delivery.

#### Before Delivery

**IM (Adults):** *HyperRHO S/D Full Dose, RhoGAM*—1 vial standard dose (300 mcg) at 26–28 wk.

#### Termination of Pregnancy (<13 wk Gestation)

**IM (Adults):** *HyperRHO S/D Mini-Dose, MICRhoGAM*—1 vial of microdose (50 mcg) within 72 hr.

#### Termination of Pregnancy (>13 wk Gestation)

**IM (Adults):** *RhoGAM*—1 vial standard dose (300 mcg) within 72 hr.

#### Large Fetal-Maternal Hemorrhage (>15 mL)

**IM (Adults):** *RhoGAM*—20 mcg/mL of $Rh_o$(D)-positive fetal RBCs.

#### Transfusion Accident

**IM (Adults):** *HyperRHO S/D Full Dose, RhoGAM*—(Volume of Rh-positive blood administered × Hct of donor blood)/15 = number of vials of standard dose (300 mcg) preparation (round to next whole number of vials).

### $Rh_o$(D) Immune Globulin IV (for IM or IV Use)

#### Following Delivery

**IM, IV (Adults):** *WinRho SDF*—600 IU (120 mcg) within 72 hr of delivery. *Rhophylac*—1500 IU (300 mcg) within 72 hr of delivery.

#### Prior to Delivery

**IM, IV (Adults):** *WinRho SDF, Rhophylac*—1500 IU (300 mcg) at 28 wk; if initiated earlier in pregnancy, repeat q 12 wk.

#### Following Amniocentesis or Chorionic Villus Sampling

**IM, IV (Adults):** *WinRho SDF (before 34 wk gestation)*—1500 IU (300 mcg) immediately; repeat q 12 wk during pregnancy. *Rhophylac*—1500 IU (300 mcg) within 72 hr of procedure.

#### Termination of Pregnancy, Amniocentesis, or Any Other Manipulation

**IM, IV (Adults):** *WinRho SDF*—600 IU (120 mcg) within 72 hr after event.

#### Large Fetal-Maternal Hemorrhage/Transfusion Accident

**IM (Adults):** *WinRho SDF*—6000 IU (1200 mcg) q 12 hr until total dose is given (total dose determined by amount of blood loss/hemorrhage).

**IV (Adults):** 3000 IU (600 mcg) q 8 hr until total dose is given (total dose determined by amount of blood loss/hemorrhage).

#### Immune Thrombocytopenic Purpura

**IV (Adults and Children):** *WinRho SDF, Rhophylac*—50 mcg (250 IU)/kg initially (if Hgb <10 g/dL, ↓ dose to 25–40 mcg [125–200 IU]/kg); further dosing/frequency determined by clinical response (range 25–60 mcg [125–300 IU]/kg). Each dose may be given as a single dose or in 2 divided doses on separate days.

## Availability

### $Rh_o$(D) Immune Globulin (for IM Use)

**Injection:** 50 mcg/vial (microdose—MICRhoGAM, HyperRHO S/D Mini-Dose), 300 mcg/vial (standard dose—RhoGAM, HyperRHO S/D Full Dose).

### $Rh_o(D)$ Immune Globulin Intravenous (for IM or IV Use)

**Injection:** 600 IU (120 mcg)/vial, 1500 IU (300 mcg)/vial, 2500 IU (500 mcg)/vial, 5000 IU (1000 mcg)/vial, 15000 IU (3000 mcg)/vial. **Prefilled syringes:** 1500 IU (300 mcg/2 mL).

## NURSING IMPLICATIONS

### Assessment

- **IV:** Assess vital signs periodically during therapy in patients receiving IV $Rh_o(D)$ immune globulin.
- **ITP:** Monitor patient for signs and symptoms of intravascular hemolysis (IVH) (back pain, shaking chills, fever, hemoglobinuria), anemia, and renal insufficiency. If transfusions are required, use $Rh_o(D)$-negative packed red blood cells to prevent exacerbation of IVH.
- ***Lab Test Considerations:*** *Pregnancy:* Type and crossmatch of mother and newborn's cord blood must be performed to determine need for medication. Mother must be $Rh_o(D)$-negative and Du-negative. Infant must be $Rh_o(D)$-positive. If there is doubt regarding infant's blood type or if father is $Rh_o(D)$-positive, medication should be given.
- An infant born to a woman treated with $Rh_o(D)$ immune globulin antepartum may have a weakly positive direct Coombs' test result on cord or infant blood.
- *ITP:* Monitor platelet counts, RBC counts, hemoglobin, and reticulocyte levels to determine effectiveness of therapy.

### Potential Nursing Diagnoses

Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Do not give to infant, to $Rh_o(D)$-positive individual, or to $Rh_o(D)$-negative individual previously sensitized to the $Rh_o(D)$ antigen. However, there is no more risk than when given to a woman who is not sensitized. When in doubt, administer $Rh_o(D)$ immune globulin.
- Do not confuse IM and IV formulations. Rh immune globulin for IV administration is labelled 'Rh Immune Globulin Intravenous.' Rh Immune Globulin Intravenous may be given IM; however, Rh Immune Globulin (microdose and standard dose) is for IM use only and cannot be given IV.
- When using prefilled syringes, allow solution to reach room temperature before administration.
- **IM:** Reconstitute $Rh_o(D)$ immune globulin IV for IM use immediately before use with 1.25 mL of 0.9% NaCl. Inject diluent onto inside wall of vial and wet pellet by gently swirling until dissolved. Do not shake.
- Administer into the deltoid muscle. Dose should be given within 3 hr but may be given up to 72 hr after delivery, miscarriage, abortion, or transfusion.

#### IV Administration

- **Direct IV:** Reconstitute $Rh_o(D)$ immune globulin IV for IV administration immediately before use with 2.5 mL of 0.9% NaCl. Inject diluent onto inside wall of vial and wet pellet by gently swirling until dissolved. Do not shake. ***Rate:*** Administer over 3–5 min.

### Patient/Family Teaching

- **Pregnancy:** Explain to patient that the purpose of this medication is to protect future $Rh_o(D)$-positive infants.
- **ITP:** Explain purpose of medication to patient.

### Evaluation/Desired Outcomes

- Prevention of erythroblastosis fetalis in future $Rh_o(D)$-positive infants.
- Prevention of $Rh_o(D)$ sensitization following incompatible transfusion.
- Decreased bleeding episodes in patients with ITP.

R

## ribavirin (rye-ba-**vye**-rin)

Copegus, Rebetol, Virazole

***Classification***

Therapeutic: antivirals
Pharmacologic: nucleoside analogues

**Pregnancy Category X**

### Indications

**Inhaln:** Treatment of severe lower respiratory tract infections caused by the respiratory syncytial virus (RSV) in infants and young children. **PO:** *Rebetol*—with interferon alfa-2b (*Intron A*) or peginterferon alfa-2b (*PegIntron*) in the treatment of chronic hepatitis C in patients who have failed previous therapy. **PO:** *Copegus*—with peginterferon alfa-2a (Pegasys) in the treatment of chronic hepatitis C in patients who have failed previous therapy. **Unlabeled Use:** Early (within

24 hr of symptoms) secondary treatment of influenza A or B in young adults.

## Action

Inhibits viral DNA and RNA synthesis and subsequent replication. Must be phosphorylated intracellularly to be active. **Therapeutic Effects: Inhaln:** Virustatic action. **PO:** Decreased progression and sequelae of chronic hepatitis C.

## Pharmacokinetics

**Absorption:** Systemic absorption occurs following nasal and oral inhalation. Rapidly and extensively absorbed following oral administration, but undergoes first-pass hepatic metabolism (64% bioavailability).

**Distribution:** 70% of inhaled drug is deposited in the respiratory tract. Appears to concentrate in the respiratory tract and red blood cells. Enters breast milk.

**Metabolism and Excretion:** Eliminated from the respiratory tract by distribution across membranes, macrophages, and ciliary motion. Metabolized primarily by the liver; metabolites are renally excreted.

**Half-life:** *Inhaln*—9.5 hr (40 days in RBCs); *oral*—43.6 hr (single dose); 12 days (multiple dose).

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Inhaln | unknown | end of inhaln | unknown |
| PO | unknown | 1.7–3 hr | 12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; **Inhalation:** Patients receiving mechanically assisted ventilation; **Oral:** OB, Lactation: Pregnancy or lactation; OB: Male partners of pregnant patients; CCr <50 mL/min; Significant/unstable cardiovascular disease; Hemoglobinopathies; Autoimmune hepatitis or hepatic decompensation before/during treatment (for combined therapy with interferon alfa-2b or peginterferon alfa-2a); Concurrent use of didanosine, stavudine, or zidovudine.

**Use Cautiously in: PO:** Sarcoidosis (may exacerbate condition); Anemia (dose reduction/discontinuation may be required); Any pre-existing cardiac disease; OB: Patients with childbearing potential.

## Adverse Reactions/Side Effects

Inhalation.

**CNS:** dizziness, faintness. **EENT:** blurred vision, conjunctivitis, erythema of the eyelids, ocular irritation, photosensitivity. **CV:** CARDIAC ARREST, hypotension. **Derm:** rash. **Hemat:** hemolytic anemia (with interferon alpha 2b), reticulocytosis.

## Oral (may reflect combination with interferon)

**CNS:** emotional lability (↑ in children), fatigue (↓ in children), impaired concentration (↓ in children), insomnia (↓ in children), irritability (↓ in children). **EENT:** dry mouth. **Resp:** dyspnea(↓ in children). **GI:** anorexia (↑ in children), dyspepsia (↓ in children), vomiting (↑ in children). **Hemat:** hemolytic anemia. **Derm:** STEVENS-JOHNSON SYNDROME, pruritus (↓ in children). **MS:** arthralgia (↓ in children). **Misc:** fever (↑ in children).

## Interactions

**Drug-Drug: Oral:** May ↓ the antiretroviral action of **stavidine** and **zidovudine**. May ↑ hematologic toxicity of **zidovudine**. May ↑ blood levels and risk of toxicity of **didanosine**. Although used together in the management of hepatitis, concurrent use with **interferon alpha 2b** ↑ risk of hemolytic anemia.

## Route/Dosage

**Inhaln (Infants and Young Children):** 300 mL of 20 mg/mL solution delivered via mist for 12–18 hr/day.

## Rebetol (with peginterferon alfa-2b [PegIntron])

**PO (Adults >105 kg):** 600 mg in the morning, then 800 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Adults 86–105 kg):** 600 mg in the morning, then 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Adults 66–85 kg):** 400 mg in the morning, then 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Adults ≤65 kg):** 400 mg in the morning, then 400 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Children 3–17 yr and >73 kg):** 600 mg in the morning and 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Children 3–17 yr and 60–73 kg):** 400 mg in the morning and 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Children 3–17 yr and 47–59 kg):** 400 mg in the morning and 400 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

**PO (Children 3–17 yr and <47 kg):** 15 mg/kg/day in 2 divided doses (as oral solution) for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

### Rebetol (with interferon alfa-2b [Intron A])

**PO (Adults >75 kg):** 600 mg in the morning, then 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).
**PO (Adults ≤75 kg):** 400 mg in the morning, then 600 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).
**PO (Children >61 kg):** Refer to adult dosing.
**PO (Children 50–61 kg):** 400 mg in the morning and 400 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).
**PO (Children 37–49 kg):** 200 mg in the morning and 400 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).
**PO (Children 25–36 kg):** 200 mg in the morning and 200 mg in the evening for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).
**PO (Children <25 kg):** 15 mg/kg/day in 2 divided doses (as oral solution) for 48 wk (viral genotype 1) or 24 wk (viral genotypes 2 and 3).

### Copegus—viral genotype 1 or 4 (with peginterferon alfa-2a)

**PO (Adults ≥75 kg):** 600 mg twice daily for 48 wk.
**PO (Adults <75 kg):** 500 mg twice daily for 48 wk.

### Copegus—viral genotype 2 or 3 (with peginterferon alfa-2a)

**PO (Adults):** 400 mg twice daily for 24 wk.

### Availability

**Powder for reconstitution for aerosol use:** 6 g/vial. **Capsules (Rebetol):** 200 mg. **Oral solution (Rebetol):** 40 mg/mL. **Tablets (Copegus):** 200 mg, 400 mg, 600 mg. ***In combination with:*** Rebetrol with interferon alfa-2b (Intron A) as combination therapy for chronic hepatitis C (Rebetron). See Appendix B; *Copegus* is intended for combined therapy with pegylated interferon alfa-2a (*Pegasys*).

## NURSING IMPLICATIONS

### Assessment

- **RSV:** Assess patient for infection (vital signs, sputum, WBC) at beginning and during therapy.
- Obtain specimens for culture and sensitivity prior to initiating therapy. First dose may be given before receiving results.
- Assess respiratory (lung sounds, quality and rate of respirations) and fluid status prior to and frequently throughout therapy.
- **Chronic Hepatitis C:** Monitor symptoms of hepatitis during therapy.
- Assess patient for signs of depression during therapy. Monitor closely for neuropsychiatric changes, including suicidal thoughts.
- Assess patient for cardiovascular disorders (pulse, blood pressure, chest pain). May cause myocardial infarction.
- Assess for signs of colitis (abdominal pain, bloody diarrhea, fever) and pancreatitis (nausea, vomiting, abdominal pain) during therapy. Discontinue therapy if these occur; may be fatal.
- Assess pulmonary status (lung sounds, respirations) periodically during therapy. May require discontinuation.
- Monitor for hypersensitivity reactions (urticaria, angioedema, bronchoconstriction, anaphylaxis). Discontinue immediately and institute supportive therapy.
- ***Lab Test Considerations:*** **Chronic Hepatitis C:** Monitor CBC with differential and platelet count prior to initiation, at week 2, and week 4, and regularly during therapy. If hemoglobin <10 g/dL in patients with no history of cardiac disease or ↓ more than 2 g/dL in any 4 wk treatment period in patients with history of stable cardiac disease, decrease ribavirin dose to 600 mg (200 mg in AM and 400 mg in PM). If hemoglobin <8.5 g/dL in patients with no history of cardiac disease or <12 g/dL despite dose reduction in patients with history of stable cardiac disease, discontinue combination therapy permanently.
- Monitor liver function tests and thyroid stimulating hormone prior to and periodically during therapy.
- Monitor pregnancy tests prior to, monthly during, and for 6 mo following discontinuation of therapy in women of childbearing age. Ribavarin should be started following a negative pregnancy test.
- May cause ↑ serum bilirubin and uric acid levels.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Impaired gas exchange (Indications)

### Implementation

- **Inhaln:** Infants requiring assisted ventilation should be suctioned every 1–2 hr and pulmonary pressures monitored every 2–4 hr.
- Ribavirin treatment should begin within the first 3 days of RSV infection to be effective.
- Ribavirin aerosol should be administered using the Viratek SPAG model SPAG-2 only. Do not administer via other aerosol-generating devices. Usually administered using an infant oxygen hood attached to the SPAG-2 aerosol generator. Administration by face mask may be used if the oxygen hood cannot be used.
- Reconstitute ribavirin 6-g vial with preservative-free sterile water for injection or inhalation. Transfer to clean, sterilized Erlenmeyer flask of the SPAG-2 reservoir and dilute to a final volume of 300 mL. This recommended concentration (20 mg/mL) in the reservoir provides a concentration of aerosol ribavirin of 190 mcg/liter of air over a 12-hr period. Solution should be discarded and replaced every 24 hr.
- Aerosol treatments should be administered continuously 12–18 hr/day for 3–7 days.
- **PO:** Administer with food. Capsules should be swallowed whole; do not open, crush, or chew.

### Patient/Family Teaching

- **RSV:** Explain the purpose and route of treatment to the patient and parents.
- Inform patient and parents that ribavirin may cause blurred vision and photosensitivity.
- **Chronic Hepatitis C:** Instruct patient to take ribavirin at the same time each day for the full course of therapy. Take missed doses as soon as remembered. If total day dose is missed, notify health care professional; do not double doses. Emphasize the importance of routine lab test to monitor for side effects.
- Advise patient to brush teeth twice daily, have regular dental examinations, and rinse mouth thoroughly after vomiting to prevent dental and periodontal disorders.
- Inform patient about teratogenic effects of ribavirin. Instruct women with childbearing potential, and men, to use 2 forms of effective contraception during and for at least 6 mo following conclusion of therapy. Men must use a condom. Avoid breastfeeding during use.
- May cause dizziness, confusion, fatigue, and drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that ribavirin may not reduce the risk of transmission of HCV to others or prevent cirrhosis, liver failure, or liver cancer.
- Advise patient to consult health care professional before taking any other Rx, OTC, or herbal products.
- Advise patient to stop taking ribavirin and notify health care professional immediately if rash with fever, blisters or sores in mouth, nose, or eyes, or conjunctivitis occurs and to notify health care professional if trouble breathing, hives or swelling, chest pain, severe stomach pain or low back pain, bloody diarrhea or bloody or black stools, bruising or unusual bleeding, change in vision, fever >100.5°F, worsening psoriasis, worsening depression or suicidal thoughts occur.

### Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of RSV.
- Decreased progression and sequelae of chronic hepatitis C.

## **rifabutin** (riff-a-**byoo**-tin)

Mycobutin

***Classification***

Therapeutic: agents for atypical mycobacterium

**Pregnancy Category B**

### Indications

Prevention of disseminated *Mycobacterium avium* complex (MAC) disease in patients with advanced HIV infection. **Unlabeled Use:** Treatment of *Helicobacter pylori* ulcer disease which has failed on other regimens (with pantoprazole and amoxicillin).

### Action

Appears to inhibit DNA-dependent RNA polymerase in susceptible organisms. **Therapeutic Effects:** Antimycobacterial action against susceptible organisms. **Spectrum:** Active against *M. avium* and most strains of *M. tuberculosis*.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration (50–85%). Absorption is decreased in HIV-positive patients (20%).
**Distribution:** Widely distributed to body tissues and fluids.
**Metabolism and Excretion:** Mostly metabolized by the liver; <5% excreted unchanged by the kidneys.
**Half-life:** 45 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 2–4 hr | 24 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity. Cross-sensitivity with other rifamycins (rifampin) may occur; Active tuberculosis; Concurrent ritonavir or delavirdine.

**Use Cautiously in:** OB, Lactation: Pedi: Safety not established.

## Adverse Reactions/Side Effects

**EENT:** brown-orange discoloration of tears, ocular disturbances. **Resp:** dyspnea. **CV:** chest pain, chest pressure. **GI:** PSEUDOMEMBRANOUS COLITIS, brown-orange discoloration of saliva, altered taste, drug-induced hepatitis. **GU:** brown-orange discoloration of urine. **Derm:** rash, skin discoloration. **Hemat:** hemolysis, neutropenia, thrombocytopenia. **MS:** arthralgia, myositis. **Misc:** brown-orange discoloration of body fluids, flu-like syndrome.

## Interactions

**Drug-Drug:** Increases metabolism and may decrease the effectiveness of other drugs, including **amprenavir**, **efavirenz**, **indinavir**, **nelfinavir**, **nevirapine**, **saquinavir**, (dosage adjustment may be necessary), **delavirdine**, (concurrent use should be avoided), **corticosteroids**, **disopyramide**, **quinidine**, **opioid analgesics**, **oral hypoglycemic agents**, **warfarin**, **estrogens**, **estrogen-containing contraceptives**, **phenytoin**, **verapamil**, **fluconazole**, **quinidine**, **tocainide**, **theophylline**, **zidovudine**, and **chloramphenicol**. **Ritonavir** increases blood levels of rifabutin (concurrent use is contraindicated), similar effects occur with **efavirenz** and **nevirapine**.

## Route/Dosage

**PO (Adults):** 300 mg once daily. If GI upset occurs, may give as 150 mg twice daily with food. *H. pylori*— 300 mg/day (unlabeled).

## Availability

**Capsules:** 150 mg.

# NURSING IMPLICATIONS

## Assessment

- Monitor patient for signs of active tuberculosis (purified protein derivative [PPD], chest x-ray, sputum culture, blood culture, urine culture, biopsy of suspicious lymph nodes) prior to and throughout therapy. Rifabutin must not be administered to patients with active tuberculosis.
- Monitor bowel function. Diarrhea, abdominal cramping, fever, and bloody stools should be reported to health care professional promptly as a sign of pseudomembranous colitis. May begin up to several weeks following cessation of therapy.
- ***Lab Test Considerations:*** Monitor CBC periodically during therapy. May cause neutropenia and thrombocytopenia.

## Potential Nursing Diagnoses

Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

## Implementation

- Do not confuse rifabutin with rifampin.
- **PO:** May be administered without regard to meals. High-fat meals slow rate but not extent of absorption. May be mixed with foods such as applesauce. If GI upset occurs, administer with food.

## Patient/Family Teaching

- Advise patient to take medication as directed. Do not skip doses or double up on missed doses. Emphasize the importance of continuing therapy even if asymptomatic.
- Advise patient to notify health care professional promptly if signs and symptoms of neutropenia (sore throat, fever, signs of infection), thrombocytopenia (unusual bleeding or bruising), or hepatitis (yellow eyes and skin, nausea, vomiting, anorexia, unusual tiredness, weakness) occur.
- Caution patient to avoid the use of alcohol during this therapy, because this may increase the risk of hepatotoxicity.
- Instruct patient to notify health care professional immediately if diarrhea, abdominal cramping, fever, or bloody stools occur and not to treat with antidiarrheals without consulting health care professionals.
- Instruct patient to report symptoms of myositis (myalgia, arthralgia) or uveitis (intraocular inflammation) to health care professional promptly.
- Inform patient that saliva, sputum, sweat, tears, urine, and feces may become red-orange to red-brown and that soft contact lenses may become permanently discolored.
- Advise patient that this medication has teratogenic properties and may decrease the effectiveness of oral contraceptives. Counsel patient

R

to use a nonhormonal form of contraception throughout therapy.
- Emphasize the importance of regular follow-up exams to monitor progress and to check for side effects.

## Evaluation/Desired Outcomes
- Prevention of disseminated MAC in patients with advanced HIV infection.

# rifampin (rif-am-pin)
Rifadin, Rimactane, Rofact

***Classification***
Therapeutic: antituberculars
Pharmacologic: rifamycins

**Pregnancy Category C**

## Indications
Active tuberculosis (with other agents). Elimination of meningococcal carriers. **Unlabeled Use:** Prevention of disease caused by *Haemophilus influenzae* type B in close contacts.

## Action
Inhibits RNA synthesis by blocking RNA transcription in susceptible organisms. **Therapeutic Effects:** Bactericidal action against susceptible organisms. **Spectrum:** Broad spectrum notable for activity against: *Mycobacterium* spp, *Staphylococcus aureus*, *H. influenzae*, *Legionella pneumophila*, *Neisseria meningitidis*.

## Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Widely distributed; enters CSF. Crosses placenta; enters breast milk.
**Metabolism and Excretion:** Mostly metabolized by the liver; 60% eliminated in feces via biliary elimination.
**Half-life:** 3 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 2–4 hr | 12–24 hr |
| IV | rapid | end of infusion | 12–24 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent indinavir, nelfinavir, pyrazinamide, or saquinavir.
**Use Cautiously in:** History of liver disease; Concurrent use of other hepatotoxic agents; Pregnancy or lactation.

## Adverse Reactions/Side Effects
**CNS:** ataxia, confusion, drowsiness, fatigue, headache, weakness. **EENT:** red discoloration of tears. **GI:** abdominal pain, diarrhea, flatulence, heartburn, nausea, vomiting, drug-induced hepatitis, red discoloration of saliva. **GU:** red discoloration of urine. **Hemat:** hemolytic anemia, thrombocytopenia. **MS:** arthralgia, myalgia. **Misc:** red discoloration of all body fluids, flu-like syndrome.

## Interactions
**Drug-Drug:** ↑ risk of hepatotoxicity with other **hepatotoxic agents**, including **alcohol**, **ketoconazole**, **isoniazid**, **pyrazinamide** (concurrent use with **pyrazinamide** may result in potentially fatal hepatotoxicity and should be avoided). Rifampin significantly ↓ blood levels of **delavirdine**, **indinavir**, **nelfinavir**, and **saquinavir**; concurrent use is contraindicated. Rifampin stimulates liver enzymes, which may ↑ metabolism and ↓ effectiveness of other drugs, including **ritonavir**, **nevirapine**, and **efavirenz** (dose adjustment may be necessary), **corticosteroids**, **disopyramide**, **quinidine**, **opioid analgesics**, **oral hypoglycemic agents**, **warfarin**, **estrogens**, **phenytoin**, **verapamil**, **fluconazole**, **ketoconazole**, **itraconazole**, **quinidine**, **tocainide**, **theophylline**, **chloramphenicol**, and **hormonal contraceptive agents**.

## Route/Dosage

### Tuberculosis
**PO, IV (Adults):** 600 mg/day or 10 mg/kg/day (up to 600 mg/day) single dose; may also be given 2–3 times weekly.
**PO, IV (Children):** 10–20 mg/kg/day single dose (not to exceed 600 mg/day); may also be given 2–3 times weekly.

### Asymptomatic Carriers of Meningococcus
**PO, IV (Adults):** 600 mg q 12 hr for 2 days.
**PO, IV (Children ≥1 mo):** 10 mg/kg q 12 hr for 2 days.
**PO (Infants <1 mo):** 5 mg/kg q 12 hr for 2 days.

### Prevention of *H. influenzae* Type B Infection
**PO (Adults):** 600 mg/day for 4 days.
**PO (Children):** 20 mg/kg/day for 4 days.

## Availability (generic available)
**Capsules:** 150 mg, 300 mg. **Powder for injection:** 600 mg/vial. ***In combination with:*** isoniazid (IsonaRif, Rifamate); isoniazid and pyrazinamide (Rifater). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Perform mycobacterial studies and susceptibility tests prior to and periodically during therapy to detect possible resistance.
- Assess lung sounds and character and amount of sputum periodically during therapy.
- ***Lab Test Considerations:*** Evaluate renal function, CBC, and urinalysis periodically and during therapy.
- Monitor hepatic function at least monthly during therapy. May cause ↑ BUN, AST, ALT, and serum alkaline phosphatase, bilirubin, and uric acid concentrations.
- May cause false-positive direct Coombs' test results. May interfere with folic acid and vitamin B assays.
- May interfere with dexamethasone suppression test results; discontinue rifampin 15 days prior to test.
- May interfere with methods for determining serum folate and vitamin B levels and with urine tests based on color reaction.
- May delay hepatic uptake and excretion of sulfobromophthalein (SBP) during SBP uptake and excretion tests; perform test prior to daily dose of rifampin.

### Potential Nursing Diagnoses

Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- Do not confuse rifampin with rifabutin.
- **PO:** Administer medication on an empty stomach at least 1 hr before or 2 hr after meals with a full glass (240 mL) of water. If GI irritation becomes a problem, may be administered with food. Antacids may also be taken 1 hr prior to administration. Capsules may be opened and contents mixed with applesauce or jelly for patients with difficulty swallowing.
- Pharmacist can compound a syrup for patients unable to swallow solids.

#### IV Administration

- **Intermittent Infusion:** Reconstitute each 600-mg vial with 10 mL of sterile water for injection for a concentration of 60 mg/mL. ***Dilu-ent:*** Dilute further in 100 mL or 500 mL of D5W or 0.9% NaCl. Reconstituted vials are stable for 24 hr at room temperature. Infusion is stable at room temperature for 4 hr (in D5W) or 24 hr (in 0.9% NaCl). ***Concentration:*** Final concentration of infusion should not exceed 6 mg/mL. ***Rate:*** Administer solutions diluted in 100 mL over 30 min and solutions diluted in 500 mL over 3 hr.
- **Y-Site Compatibility:** amiodarone, bumetanide, midazolam, pantoprazole, vancomycin.
- **Y-Site Incompatibility:** diltiazem.

### Patient/Family Teaching

- Advise patient to take medication once daily (unless biweekly regimens are used), as directed, and not to skip doses or double up on missed doses. Emphasize the importance of continuing therapy even after symptoms have subsided. Length of therapy for tuberculosis depends on regimen being used and underlying disease states. Patients on short-term prophylactic therapy should also be advised of the importance of compliance with therapy.
- Advise patient to notify health care professional promptly if signs and symptoms of hepatitis (yellow eyes and skin, nausea, vomiting, anorexia, unusual tiredness, weakness) or of thrombocytopenia (unusual bleeding or bruising) occur.
- Caution patient to avoid the use of alcohol during this therapy, because this may increase the risk of hepatotoxicity.
- Instruct patient to report the occurrence of flu-like symptoms (fever, chills, myalgia, headache) promptly.
- Rifampin may occasionally cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that saliva, sputum, sweat, tears, urine, and feces may become red-orange to red-brown and that soft contact lenses may become permanently discolored.
- Advise patient that this medication has teratogenic properties and may decrease the effectiveness of oral contraceptives. Counsel patient to use a nonhormonal form of contraception throughout therapy.
- Emphasize the importance of regular follow-up exams to monitor progress and to check for side effects.

### Evaluation/Desired Outcomes

- Decreased fever and night sweats.
- Diminished cough and sputum production.
- Negative sputum cultures.
- Increased appetite.
- Weight gain.

- Reduced fatigue.
- Sense of well-being in patients with tuberculosis.
- Prevention of meningococcal meningitis.
- Prevention of *H. influenzae* type B infection. Prophylactic course is usually short-term.

## rifaximin (ri-fax-i-min)
Xifaxan

***Classification***
Therapeutic: anti-infectives
Pharmacologic: rifamycins

**Pregnancy Category C**

### Indications
Travelers' diarrhea due to noninvasive strains of *Escherichia coli*.

### Action
Inhibits bacterial RNA synthesis by binding to bacterial DNA-dependent RNA polymerase. **Therapeutic Effects:** Decreased severity of travelers' diarrhea. **Spectrum:** *Escherichia coli* (enterotoxigenic and enteroaggregative strains).

### Pharmacokinetics
**Absorption:** Poorly absorbed (<0.4%), action is primarily in GI tract.
**Distribution:** 80–90% concentrated in gut.
**Metabolism and Excretion:** Almost exclusively excreted unchanged in feces.
**Half-life:** 6 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to rifaximin or other rifamycins; Diarrhea with fever or bloody stools; Diarrhea caused by other infections agents; Lactation: Potential for adverse effects in the infant. Switch to formula for duration of treatment.
**Use Cautiously in:** OB: Use only if benefit to mother outweighs risk to fetus; Pedi: Safety not established in children <12 yr.

### Adverse Reactions/Side Effects
**CNS:** dizziness. **GI:** PSEUDOMEMBRANOUS COLITIS.

### Interactions
**Drug-Drug:** Although rifaximin induces the CYP 3A4 enzyme system, since it is not absorbed, drug interactions are unlikely.

### Route/Dosage
**PO (Adults and Children ≥12 yr):** 200 mg three times daily for 3 days.

### Availability
**Tablets:** 200 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess frequency and consistency of stools and bowel sounds prior to and during therapy.
- Assess fluid and electrolyte balance and skin turgor for dehydration.
- ***Lab Test Considerations:*** May cause lymphocytosis, monocytosis, and neutropenia.

### Potential Nursing Diagnoses
Diarrhea (Indications)
Risk for deficient fluid volume (Indications)

### Implementation
- **PO:** Administer with or without food, 3 times daily for 3 days.

### Patient/Family Teaching
- Instruct patient to take rifaximin as directed and to complete therapy, even if feeling better. Caution patient to stop taking rifaximin if diarrhea symptoms get worse, persist more than 24–48 hr, or are accompanied by fever or blood in the stool. Consult health care professional if these occur.
- May cause dizziness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Advise female patients to notify health care professional if pregnant or if pregnancy is suspected.

### Evaluation/Desired Outcomes
- Decreased severity of travelers' diarrhea.

## risedronate (riss-ed-roe-nate)
Actonel

***Classification***
Therapeutic: bone resorption inhibitors
Pharmacologic: biphosphonates

**Pregnancy Category C**

### Indications
Prevention and treatment of postmenopausal and corticosteroid-induced osteoporosis. Treatment of Paget's disease in men and women. Treatment of osteoporosis in men.

### Action
Inhibits bone resorption by binding to bone hydroxyapatite, which inhibits osteoclast activity.

**Therapeutic Effects:** Reversal of the progression of osteoporosis with decreased fractures and other sequelae. Reduced bone turnover and resorption; normalization of serum alkaline phosphatase with reduced complications of Paget's disease.

## Pharmacokinetics

**Absorption:** Rapidly but poorly absorbed following oral administration (0.63% bioavailability).
**Distribution:** 60% of absorbed dose distributes to bone.
**Metabolism and Excretion:** 40% of absorbed dose is excreted unchanged by kidneys; unabsorbed drug is excreted in feces.
**Half-life:** *Initial*—1.5 hr; *terminal*—220 hr (reflects dissociation from bone).

TIME/ACTION PROFILE (effects on serum alkaline phosphatase)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within days | 30 days | up to 16 mo |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hypocalcemia; Lactation: Lactation; Severe renal impairment (CCr <30 mL/min).
**Use Cautiously in:** History of upper GI disorders; Other disturbances of bone or mineral metabolism (correct abnormalities before initiating therapy); Dietary deficiencies (supplemental vitamin D and calcium may be required); Concurrent dental surgery (may ↑ risk of jaw osteonecrosis); OB, Pedi: Safety not established; use in pregnancy only if potential benefit justifies potential risks.

## Adverse Reactions/Side Effects

**CNS:** weakness. **EENT:** amblyopia, conjunctivitis, dry eyes, eye pain/inflammation, tinnitus. **CV:** chest pain, edema. **GI:** abdominal pain, diarrhea, belching, colitis, constipation, dysphagia, esophagitis, esophageal cancer, esophageal ulcer, gastric ulcer, nausea. **Derm:** rash. **MS:** arthralgia, musculoskeletal pain, osteonecrosis (primarily of jaw). **Misc:** flu-like syndrome.

## Interactions

**Drug-Drug:** Concurrent use with **NSAIDs** or **aspirin** ↑ risk of GI irritation. Absorption is ↓ by **calcium supplements** or **antacids**.
**Drug-Food:** Food ↓ absorption (administer at least 30 min before breakfast).

## Route/Dosage

**PO (Adults):** *Postmenopausal Osteoporosis*—5 mg daily; *or* 35 mg once weekly; *or* 75 mg taken on two consecutive days for a total of 2 tablets each month; *or*150 mg once monthly *Osteoporosis in Men*—35 mg once weekly; *Glucocorticoid-induced Osteoporosis*—5 mg daily; *Paget's disease*—30 mg daily for 2 mo; retreatment may be considered after 2 mo off therapy.

## Availability

**Tablets:** 5 mg, 30 mg, 35 mg, 75 mg, 150 mg.
**Cost:** 5 mg $272.31/90, 30 mg $1,282.24/90, 35 mg $90.97/4, 75 mg $97.47/2. ***In combination with:*** **calcium carbonate**.

# NURSING IMPLICATIONS

## Assessment

- **Osteoporosis:** Assess patients via bone density study for low bone mass before and periodically during therapy.
- **Paget's disease:** Assess for symptoms of Paget's disease (bone pain, headache, decreased visual and auditory acuity, increased skull size).
- ***Lab Test Considerations:*** *Osteoporosis:* Assess serum calcium before and periodically during therapy. Hypocalcemia and vitamin D deficiency should be treated before initiating alendronate therapy. May cause mild, transient ↑ of calcium and phosphate.
- *Paget's disease:* Monitor alkaline phosphatase prior to and periodically during therapy to monitor effectiveness of therapy.

## Potential Nursing Diagnoses

Risk for injury (Indications)

## Implementation

- **PO:** Administer first thing in the morning with 6–8 oz of plain water, 30 min prior to other medications, beverages, or food. Tablet should be swallowed whole; do not crush, break, or chew.
- Calcium-, magnesium-, or aluminum-containing agents may interfere with absorption of risedronate and should be taken at a different time of day with food.

## Patient/Family Teaching

- Instruct patient on the importance of taking as directed, first thing in the morning, 30 min prior to other medications, beverages, or food. Waiting longer than 30 min will improve absorption. Risedronate should be taken with 6–

R

8 oz of plain water (mineral water, orange juice, coffee, and other beverages decrease absorption). If a dose is missed, skip dose and resume the next morning; do not double doses or take later in the day. Do not discontinue without consulting health care professional.
- Caution patients to remain upright for 30 min following dose to facilitate passage to stomach and minimize risk of esophageal irritation.
- Advise patient to eat a balanced diet and consult health care professional about the need for supplemental calcium and vitamin D (see Appendix M).
- Inform patient that severe musculoskeletal pain may occur within days, months, or yr after starting risendronate. Symptoms my resolve completely after discontinuation or slow or incomplete resolution may occur. Notify health care professional if severe pain occurs.
- Encourage patient to participate in regular exercise and to modify behaviors that increase the risk of osteoporosis (stop smoking, reduce alcohol consumption).
- Advise patient to inform health care professional of risedronate therapy prior to dental surgery.
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if she is nursing.

## Evaluation/Desired Outcomes
- Reversal of the progression of osteoporosis with decreased fractures and other sequelae.
- Decrease in serum alkaline phosphatase and the progression of Paget's disease.

## risperidone (riss-**per**-i-done)
Risperdal, Risperdal M-TAB, Risperdal Consta

***Classification***
Therapeutic: antipsychotics, mood stabilizers
Pharmacologic: benzisoxazoles

**Pregnancy Category C**

## Indications
Schizophrenia in adults and adolescents age 13–17 yr. Short-term treatment of acute manic or mixed episodes associated with Bipolar I Disorder (oral only) in adults, and children and adolescents aged 10–17 yr, maintenance treatment of Bipolar I Disorder (IM only) in adults only; can be used with lithium or valproate (adults only). Treatment of irritability associated with autistic disorder in children age 5–16 yr.

## Action
May act by antagonizing dopamine and serotonin in the CNS. **Therapeutic Effects:** Decreased symptoms of psychoses, bipolar mania, or autism.

## Pharmacokinetics
**Absorption:** 70% after administration of tablets, solution or orally disintegrating tablets. Following IM administration, small initial release of drug, followed by 3–wk lag ; the rest of release starts at 3 wk and lasts 4–6 wk.
**Distribution:** Unknown.
**Metabolism and Excretion:** Extensively metabolized by the liver. Metabolism is genetically determined; extensive metabolizers (most patients) convert risperidone to 9-hydroxyrisperidone rapidly. Poor metabolizers (6–8% of Whites) convert it more slowly. The 9-hydroxyrisperidone is an antipsychotic compound. Risperidone and its active metabolite are renally eliminated.
**Half-life:** *Extensive metabolizers*—3 hr for risperidone, 21 hr for 9-hydroxyrisperidone. *Poor metabolizers*—20 hr for risperidone and 30 hr for 9-hydroxyrisperidone.

TIME/ACTION PROFILE (clinical effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1–2 wk | unknown | up to 6 wk† |
| IM | 3 wk | 4–6 wk | up to 6 wk† |

†After discontinuation

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Lactation: Discontinue drug or bottle feed.
**Use Cautiously in:** Debilitated patients, patients with renal or hepatic impairment (initial dose reduction recommended); Underlying cardiovascular disease (↑ risk of arrhythmias and hypotension); History of seizures; History of suicide attempt or drug abuse; Diabetes or risk factors for diabetes (may worsen glucose control); Patients at risk for aspiration; OB, Pedi: Safety not established; Geri: Initial dose ↓ recommended. ↑ risk of mortality in elderly patients treated for dementia-related psychosis.

## Adverse Reactions/Side Effects
**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, SUICIDAL THOUGHTS, aggressive behavior, dizziness, extrapyramidal reactions, headache, ↑ dreams, ↑ sleep duration, insomnia, sedation, fatigue, impaired temperature regulation, nervousness, tardive dyskinesia. **EENT:** pharyngitis, rhinitis, visual disturbances. **Resp:** cough, dyspnea. **CV:** arrhythmias, orthostatic hypotension, tachycardia. **GI:** constipation, diarrhea, dry mouth, nausea, abdominal pain, anorexia, dyspepsia, ↑ saliva-

tion, vomiting, weight gain, weight loss, polydipsia. **GU:** ↓ libido, dysmenorrhea/menorrhagia, difficulty urinating, polyuria. **Derm:** itching/skin rash, dry skin, ↑ pigmentation, sweating, photosensitivity, seborrhea. **Endo:** galactorrhea, hyperglycemia. **Hemat:** AGRANULOCYTOSIS, leukopenia, neutropenia. **MS:** arthralgia, back pain.

### Interactions

**Drug-Drug:** May ↓ the antiparkinsonian effects of **levodopa** or other **dopamine agonists**. **Carbamazepine**, **phenytoin**, **rifampin**, **phenobarbital**, and other **enzyme inducers** ↑ metabolism and may ↓ effectiveness; dose adjustments may be necessary. **Fluoxetine** and paroxetine ↑ blood levels and may ↑ effects; dose adjustments may be necessary. **Clozapine** ↓ metabolism and may ↑ effects of risperidone. ↑ CNS depression may occur with other **CNS depressants**, including **alcohol**, **antihistamines**, **sedative/hypnotics**, or **opioid analgesics**. **Drug-Natural Products:** Kava, valerian, or chamomile can ↑ CNS depression.

### Route/Dosage

#### Schizophrenia

**PO (Adults):** 1 mg twice daily, ↑ by 1–2 mg/day no more frequently than every 24 hr to 4–8 mg daily .
**PO (Children 13–17 yr):** 0.5 mg once daily, ↑ by 0.5–1.0 mg no more frequently than every 24 hr to 3 mg daily. May administer half the daily dose twice daily if drowsiness persists.
**IM (Adults):** 25 mg every 2 wk; some patients may benefit from a higher dose of 37.5 or 50 mg every 2 wk.

#### Acute Manic or Mixed Episodes Associated with Bipolar I Disorder

**PO (Adults):** 2–3 mg/day as a single daily dose, dose may be ↑ at 24–hr intervals by 1 mg (range 1–5 mg/day).
**PO (Children 13–17 yr):** 0.5 mg once daily, ↑ by 0.5–1 mg no more frequently than every 24 hr to 2.5 mg daily. May administer half the daily dose twice daily if drowsiness persists.
**PO (Geriatric Patients or Debilitated Patients):** Start with 0.5 mg twice daily; ↑ by 0.5 mg twice daily, up to 1.5 mg twice daily; then ↑ at weekly intervals if necessary. May also be given as a single daily dose after initial titration.

#### Maintenance Treatment of Bipolar I Disorder

**IM (Adults):** 25 mg every 2 wk; some patients may benefit from a higher dose of 37.5 or 50 mg every 2 wk.

#### Irritability Associated with Autistic Disorder

**PO (Children 5–16 yr weighing <20 kg):** 0.25 mg/day initially. After at least 4 days of therapy, may ↑ to 0.5 mg/day. Dose ↑ in increments of 0.25 mg/day may be considered at 2-wk or longer intervals. May be as a single or divided dose.
**PO (Children 5–16 yr weighing >20 kg):** 0.5 mg/day initially. After at least 4 days of therapy, may ↑ to 1 mg/day. Dose ↑ in increments of 0.5 mg/day may be considered at 2-wk or longer intervals. May be as a single or divided dose.

#### Renal Impairment

#### Hepatic Impairment

**PO (Adults):** Start with 0.5 mg twice daily; ↑ by 0.5 mg twice daily, up to 1.5 mg twice daily; then ↑ at weekly intervals if necessary. May also be given as a single daily dose after initial titration.

R

### Availability (generic available)

**Tablets:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg. **Cost:** 0.25 mg $605.97/180, 0.5 mg $671.96/180, 1 mg $751.93/180, 2 mg $1,219.95/180, 3 mg $1,489.95/180, 4 mg $1,831.84/180. **Orally disintegrating tablets (Risperdal M-Tabs):** 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg. **Cost:** 0.5 mg $122.93/28, 1 mg $138.95/28, 2 mg $130.68/28, 3 mg $148.49/28, 4 mg $194.02/28. **Oral solution:** 1 mg/mL. **Cost:** $136.66/30 mL. **Extended-release microspheres for injection (Risperdal Consta):** 12.5 mg/vial kit, 25 mg/vial kit, 37.5 mg/vial kit, 50 mg/vial kit.

## NURSING IMPLICATIONS

### Assessment

- Monitor patient's mental status (orientation, mood, behavior) before and periodically during therapy. Monitor closely for notable changes in behavior that could indicate the emergence or worsening of suicidal thoughts or behavior or depression.
- Assess weight and BMI initially and throughout therapy.

- Monitor mood changes. Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient.
- Monitor blood pressure (sitting, standing, lying down) and pulse before and frequently during initial dose titration. May cause prolonged QT interval, tachycardia, and orthostatic hypotension. If hypotension occurs, dose may need to be decreased.
- Observe patient when administering medication to ensure medication is swallowed and not hoarded or cheeked.
- Monitor patient for onset of extrapyramidal side effects (*akathisia*—restlessness; *dystonia*—muscle spasms and twisting motions; or *pseudoparkinsonism*—mask-like face, rigidity, tremors, drooling, shuffling gait, dysphagia). Report these symptoms; reduction of dose or discontinuation may be necessary. Trihexyphenidyl or benztropine may be used to control symptoms.
- Monitor for tardive dyskinesia (involuntary rhythmic movement of mouth, face, and extremities). Report immediately; may be irreversible.
- Monitor for development of neuroleptic malignant syndrome (fever, respiratory distress, tachycardia, seizures, diaphoresis, hypertension or hypotension, pallor, tiredness). Notify health care professional immediately if these symptoms occur.
- ***Lab Test Considerations:*** May cause ↑ serum prolactin levels.
- May cause ↑ AST and ALT.
- May also cause anemia, thrombocytopenia, leukocytosis, and leukopenia.
- Obtain fasting blood glucose and cholesterol levels initially and periodically during therapy.
- Monitor CBC frequently during initial months of therapy in patients with pre-existing or history of low WBC. May cause leukopenia, neutropenia, or agranulocytosis. Discontinue therapy if this occurs.

## Potential Nursing Diagnoses

Risk for self-directed violence (Indications)
Disturbed thought process (Indications)
Risk for injury (Side Effects)

## Implementation

- Do not confuse risperidone with reserpine.
- When switching from other antipsychotics, discontinue previous agents when starting risperidone and minimize the period of overlapping antipsychotic agents.
- If therapy is reinstituted after an interval off risperidone, follow initial titration schedule.
- For IM use, establish tolerance with oral dosing before IM use and continue oral dosing for 3 wk following initial IM injection. Do not increase dose more frequently than every 4 wk.
- **PO:** Daily doses can be taken in the morning or evening.
- For orally disintegrating tablets, open blister pack by pealing back foil to expose tablet; do not try to push tablet through foil. Use dry hands to remove tablet from blister and immediately place entire tablet on tongue. Tablets disintegrate in mouth within seconds and can be swallowed with or without liquid. Do not attempt to split or chew tablet. Do not try to store tablets once removed from blister.
- Oral solution can be mixed with water, coffee, orange juice, or low fat milk; do not mix with cola or tea.
- **IM:** Reconstitute with 2 mL of diluent provided by manufacturer. Administer via deep deltoid (1-inch needle) or gluteal (2-inch needle) injection using enclosed safety needle; alternate arms or buttocks with each injection. Allow solution to warm to room temperature prior to injection. Administer immediately after mixed with diluent; shake well to mix suspension. Must be administered within 6 hr of reconstitution. Store dose pack in refrigerator.
- Do not combine dose strengths in a single injection.

## Patient/Family Teaching

- Instruct patient to take medication as directed.
- Inform patient of the possibility of extrapyramidal symptoms. Instruct patient to report these symptoms immediately to health care professional.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Advise patient to use sunscreen and protective clothing when exposed to the sun to prevent photosensitivity reactions. Extremes in temper-

ature should also be avoided; this drug impairs body temperature regulation.
- Caution patient to avoid concurrent use of alcohol, other CNS depressants, and OTC medications or herbal products without consulting health care professional.
- Advise female patients to notify health care professional if pregnancy is planned or suspected, or if breastfeeding or planning to breastfeed.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional promptly if sore throat, fever, unusual bleeding or bruising, rash, or tremors occur.
- Emphasize the importance of routine follow up exams to monitor side effects and continued participation in psychotherapy to improve coping skills.

### Evaluation/Desired Outcomes
- Decrease in excited, manic behavior.
- Decrease in positive symptoms (delusions, hallucinations) of schizophrenia.
- Decreased aggression toward others, deliberate self—injury, temper tantrums, and mood changes in children with autism.
- Decrease in negative symptoms (social withdrawal, flat, blunted affects) of schizophrenia.

## ritonavir (ri-toe-na-veer)
Norvir

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: protease inhibitors

**Pregnancy Category B**

### Indications
HIV infection (with other antiretrovirals).

### Action
Inhibits the action of HIV protease and prevents the cleavage of viral polyproteins. **Therapeutic Effects:** Increased CD4 cell counts and decreased viral load with subsequent slowed progression of HIV infection and its sequelae.

### Pharmacokinetics
**Absorption:** Appears to be well absorbed after oral administration.
**Distribution:** Poor CNS penetration.
**Protein Binding:** 98–99%.
**Metabolism and Excretion:** Highly metabolized by the liver (by P450 CYP3A and CYP2D6 enzymes); one metabolite has antiretroviral activity; 3.5% excreted unchanged in urine.
**Half-life:** 3–5 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 4 hr* | 12 hr |

*Nonfasting

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent use of alfuzosin, amiodarone, dihydroergotamine, ergotamine, ergonovine, flecainide, fluticasone, lovastatin, meperidine, methylergonovine, midazolam, pimozide, propafenone, quinidine, simvastatin, St. John's wort, triazolam, or voriconazole; Hypersensitivity or intolerance to alcohol or castor oil (present in capsules and liquid).
**Use Cautiously in:** Impaired hepatic function, history of hepatitis; Diabetes mellitus; Hemophilia (↑ risk of bleeding); Structural heart disease, conduction abnormalities, ischemic heart disease or heart failure (↑ risk of heart block); OB, Pedi: Pregnancy or children <12 yr (safety not established); Lactation: Breastfeeding not recommended in HIV-infected patients.

### Adverse Reactions/Side Effects
**CNS:** SEIZURES, abnormal thinking, weakness, dizziness, headache, malaise, somnolence, syncope. **EENT:** pharyngitis, throat irritation. **Resp:** ANGIOEDEMA, bronchospasm. **CV:** heart block, orthostatic hypotension, vasodilation. **GI:** abdominal pain, altered taste, anorexia, diarrhea, nausea, vomiting, constipation, dyspepsia, flatulence. **GU:** renal insufficiency. **Derm:** rash, skin eruptions, sweating, urticaria. **Endo:** hyperglycemia. **F and E:** dehydration. **Metab:** hyperlipidemia. **MS:** ↑ creatine phosphokinase, myalgia. **Neuro:** circumoral paresthesia, peripheral paresthesia. **Misc:** hypersensitivity reactions including STEVENS-JOHNSON SYNDROME and ANAPHYLAXIS, fat redistribution, fever.

### Interactions
**Drug-Drug:** Produces large ↑ in levels and effects of **amiodarone**, **alfuzosin**, **flecainide**, **fluticasone (inhalation)**, **meperidine**, **pimozidepropafenone**, and **quinidine**; concurrent use should be avoided. Ergot toxicity may occur with concurrent use of **ergonovine**, **ergotamine methylergonovine**, or **dihydroergotamine**; concurrent use should be avoided. ↑ risk

of rhabdomyolysis with **lovastatin** or **simvastatin**; concurrent use should be avoided. ↑ levels and the risk of excessive sedation and/or respiratory depression from **midazolam** and **triazolam**; concurrent use should be avoided. ↑ levels of **maraviroc**; ↓ maraviroc dose to 150 mg twice daily. ↑ levels of **clarithromycin**; ↓ clarithromycin dose if CCr <60 mL/min. ↑ levels of **rifabutin**; ↓ rifabutin dose to 150 mg every other day or 3 times weekly. May lead to ↓ antifungal effects of **voriconazole**; concurrent use should be avoided. May also ↑ levels and effects of some **opioid analgesics (alfentanil, fentanyl, hydrocodone, oxycodone)**, **tramadol**; some **NSAIDs (diclofenac, ibuprofen, indomethacin)**; some **antiarrhythmics (disopyramide, lidocaine, mexiletine)**; many **antidepressants (amitriptyline, clomipramine, desipramine, imipramine, nortriptyline, nefazodone, sertraline, trazodone, fluoxetine, paroxetine, venlafaxine)**; some **antiemetics (dronabinol, ondansetron)**; some **beta blockers (metoprolol, pindolol, propranolol , timolol)**; many **calcium channel blockers (amlodipine, diltiazem, felodipine, isradipine, nicardipine, nifedipine, nimodipine, nisoldipine, verapamil)**; some **antineoplastics (etoposides, paclitaxel, tamoxifen, vinblastine, vincristine)**; some **corticosteroids (dexamethasone, prednisone)**, most **HMG CoA reductase inhibitors**; some **immunosuppressants (cyclosporine, tacrolimus)**; some **antipsychotics (chlorpromazine, haloperidol, perphenazine, risperidone, thioridazine)**; and also **quinidine**, **saquinavir**, **methamphetamine**, and **warfarin**. Dosage ↓ may be necessary. ↓ levels and effects of **hormonal contraceptives**, **zidovudine**, **bupropion**, and **theophylline**; dose alteration or alternative therapy may be necessary. Levels may be ↑ by **clarithromycin** or **fluoxetine**. ↑ risk of heart block with **beta blockers**, **verapamil**, **diltiazem**, **digoxin**, or **atazanavir**. May ↑ concentrations of phosphodiesterase type 5 inhibitors (PDE5) causing hypotension, visual changes, priapism; ↓ starting doses not to exceed 25 mg within 48 hr for **sildenafil**, 2.5 mg q 72 hr for **vardenafil** and 10 mg q 72 hr for **tadalafil**.
**Drug-Natural Products: St. John's wort** ↓ levels and may promote resistance; concurrent use not recommended.
**Drug-Food: Food** ↑ absorption.

### Route/Dosage

**PO (Adults):** 300 mg twice daily for 1 day, then 400 mg twice daily for 3 days, then 500 mg twice daily for 1 day, then 600 mg twice daily as maintenance.
**PO (Children):** 250 mg/m² twice daily initially; ↑ by 50 mg/m² twice daily q 2–3 days up to 400 mg/m² twice daily (if unable to get up to 400 mg/m² twice daily, additional antiretroviral therapy is required).

### Availability

**Capsules:** 100 mg. **Oral solution:** 80 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for change in severity of HIV symptoms and for symptoms of opportunistic infections during therapy.
- ***Lab Test Considerations:*** Monitor viral load and CD4 counts regularly during therapy.
- May cause hyperglycemia.
- May cause ↑ serum AST, ALT, GGT, total bilirubin, CPK, triglycerides, and uric acid concentrations.

### Potential Nursing Diagnoses

Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- Do not confuse with Retrovir (zidovudine).
- **PO:** Administer with a meal or light snack.
- Oral powder may be mixed with chocolate milk, Ensure, or Advera within 1 hr of dosing to improve taste. Capsules should be stored in the refrigerator and protected from light. Use calibrated oral dosing syringe for oral solution. Oral solution does not require refrigeration if used within 30 days and stored below 77°F in the original container. Keep cap tightly closed.
- If nausea occurs on dose of 600 mg twice daily, may titrate by 300 mg twice daily for 1 day, then 400 mg twice daily for 2 days, then 500 mg twice daily for 1 day, then 600 mg twice daily thereafter.
- Patients initiating concurrent therapy with nucleoside analogues may have less GI intolerance by initiating ritonavir for 2 wk and then adding the nucleoside analogue.

### Patient/Family Teaching

- Emphasize the importance of taking ritonavir as directed, at evenly spaced times throughout day. Do not take more than prescribed amount and do not stop taking without consulting health care professional. Take missed doses as soon as remembered; do not double doses.
- Instruct patient that ritonavir should not be shared with others.

- Advise patient to avoid taking other Rx, OTC, or herbal products without consulting health care professional.
- Inform patient that ritonavir does not cure AIDS or prevent associated or opportunistic infections. Ritonavir does not reduce the risk of transmission of HIV to others through sexual contact or blood contamination. Caution patient to use a condom during sexual contact and to avoid sharing needles or donating blood to prevent spreading the AIDS virus to others. Advise patient that the long-term effects of ritonavir are unknown at this time.
- Inform patient that ritonavir may cause hyperglycemia. Advise patient to notify health care professional if increased thirst or hunger; unexplained weight loss; increased urination; fatigue; or dry, itchy skin occurs.
- Advise patients taking oral contraceptives to use a nonhormonal method of birth control during ritonavir therapy.
- Inform patient that redistribution and accumulation of body fat may occur, causing central obesity, dorsocervical fat enlargement (buffalo hump), peripheral wasting, breast enlargement, and cushingoid appearance. The cause and long-term effects are not known.
- Emphasize the importance of regular follow-up exams and blood counts to determine progress and monitor for side effects.

### Evaluation/Desired Outcomes

- Delayed progression of AIDS and decreased opportunistic infections in patients with HIV.
- Decrease in viral load and improvement in CD4 cell counts.

## **rituximab** (ri-**tux**-i-mab)

Rituxan

***Classification***

Therapeutic: antineoplastics
Pharmacologic: monoclonal antibodies

**Pregnancy Category C**

### Indications

Treatment of low-grade or follicular, CD20-positive, B-cell non-Hodgkin's lymphoma alone, with, or following treatment with cyclophosphamide, vincristine, and prednisolone (CVP). Moderately-to-severely active rheumatoid arthritis with methotrexate in patients who have had an inadequate response to one of more TNF antagonist therapies.

### Action

Binds to the CD20 antigen on the surface of lymphoma cells, preventing the activation process for cell cycle initiation and differentiation. **Therapeutic Effects:** Death of lymphoma cells. Reduced signs and symptoms of rheumatoid arthritis.

### Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Binds specifically to CD20 binding sites on lymphoma cells.
**Metabolism and Excretion:** Unknown.
**Half-life:** 59.8–174 hr (depending on tumor burden).

TIME/ACTION PROFILE (B-cell depletion)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | within 14 days | 3–4 wk | 6–9 mo† |

†Duration of depletion after 4 wk of treatment.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to murine (mouse) proteins; OB: Can pass placental barrier potentially causing fetal B-cell depletion. Give only if clearly needed; Lactation: Potential for immunosuppresion in infant. Discontinue nursing.
**Use Cautiously in:** Pre-existing bone marrow depression; Hepatitis B infection (may reactivate infection during and for several months after treatment); Systemic lupus erythematosus (may cause fatal progressive multifocal leukoencephalopathy); HIV infection (may increase risk of HIV-associated lymphoma); Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** PROGRESSIVE MULTIFOCAL LEUKOENCEPHALOPATHY, headache. **Resp:** bronchospasm, cough, dyspnea. **CV:** ARRHYTHMIAS, hypotension, peripheral edema. **GI:** abdominal pain, altered taste, dyspepsia. **Derm:** MUCOCUTANEOUS SKIN REACTIONS, flushing, urticaria. **Endo:** hyperglycemia. **F and E:** hypocalcemia. **Hemat:** ANEMIA, NEUTROPENIA, THROMBOCYTOPENIA. **MS:** arthralgia, back pain. **Misc:** allergic reactions including ANAPHYLAXIS and ANGIOEDEMA, infections, INFUSION REACTIONS, TUMOR LYSIS SYNDROME, fever/chills/rigors (infusion related).

### Interactions

**Drug-Drug:** None known.

### Route/Dosage

#### Relapsed or refractory, low-grade or follicular, CD20–positive, B-cell Non-hodgkins lymphoma

**IV (Adults):** 375 mg/m² once weekly for 4–8 doses.

#### Retreatment Therapy

**IV (Adults):** 375 mg/m² once weekly for 4 doses.

#### Previously untreated follicular, CD20–positive, B-cell Non-Hodgkins lymphoma

**IV (Adults):** 375 mg/m² given on Day 1 of each cycle of CVP for up to 8 doses.

#### Previously untreated low-grade, CD20–positive, B-cell Non-Hodgkins lymphoma

**IV (Adults):** For patients who have not progressed following 6–8 cycles of CVP chemotherapy, 375 mg/m² given once weekly for 4 doses given every 6 mo for up to 16 doses.

#### Diffuse Large B-cell Non-Hodgkins lymphoma

**IV (Adults):** 375 mg/m² given on Day 1 of each cycle of CVP for up to 8 infusions.

#### Rheumatoid Arthritis

**IV (Adults):** Two 1000 mg separated by 2 wk.

### Availability

**Solution for injection (requires dilution):** 10 mg/mL in 100-mg and 500-mg vials.

## NURSING IMPLICATIONS

### Assessment

- Monitor patient for fever, chills/rigors, nausea, urticaria, fatigue, headache, pruritus, bronchospasm, dyspnea, sensation of tongue or throat swelling, rhinitis, vomiting, hypotension, flushing, and pain at disease sites. These infusion-related events occur frequently within 30 min–2 hr of beginning first infusion and may resolve with slowing or discontinuing infusion and treatment with IV saline, diphenhydramine, and acetaminophen. Patients with increased risk (females, patients with pulmonary infiltrates, chronic lymphocytic leukemia, or mantle cell leukemia) may have more severe reactions, which may be fatal. Signs of severe reactions include hypotension, angioedema, hypoxia, or bronchospasm and may require interruption of infusion. May result in pulmonary infiltrates, adult respiratory distress syndrome, MI, ventricular fibrillation, and cardiogenic shock. Monitor closely. Incidence decreases with subsequent infusions.
- Monitor patient for tumor lysis syndrome due to rapid reduction in tumor volume (acute renal failure, hyperkalemia, hypocalcemia, hyperuricemia, or hypophosphatemia) usually occurring 12–24 hr after first infusion. Risks are higher in patients with greater tumor burden; may be fatal. Correct electrolyte abnormalities, monitor renal function and fluid balance, and administer supportive care, including dialysis, as indicated.
- Assess patient for hypersensitivity reactions (hypotension, bronchospasm, angioedema) during administration. May respond to decrease in infusion rate. Premedication with diphenhydramine and acetaminophen is recommended. Treatment includes diphenhydramine, acetaminophen, bronchodilators, or IV saline as indicated. Epinephrine, antihistamines, and corticosteroids should be readily available in the event of a severe reaction. If severe reactions occur, discontinue infusion; may be resumed at 50% of the rate when symptoms have resolved completely.
- Monitor ECG during and immediately after infusion in patients with pre-existing cardiac conditions (arrhythmias, angina) or patients who have developed arrhythmias during previous infusions of rituximab. Life-threatening arrhythmias may occur.
- Assess for signs of progressive multifocal leukoencephalopathy (hemiparesis, apathy, confusion, cognitive deficiencies, and ataxia) periodically during therapy.
- ***Lab Test Considerations:*** Monitor CBC and platelet count regularly during therapy and frequently in patients with blood dyscrasias. May cause anemia, thrombocytopenia, or neutropenia.
- Frequently causes B-cell depletion with an associated ↓ in serum immunoglobulins in a minority of patients; does not appear to cause an increased incidence of infection.

### Potential Nursing Diagnoses

Risk for infection (Side Effects)

### Implementation

- Transient hypotension may occur during infusion; antihypertensive medications may be held for 12 hr before infusion.
- **Rheumatoid Arthritis:** Administer 100 mg methylprednisolone IV or equivalent 30 min prior to each infusion to minimize infusion reactions.

#### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute with 0.9% NaCl or D5W. ***Concentration:*** 1–4 mg/

mL. Gently invert bag to mix. Solution is clear and colorless; do not administer solutions that are discolored or contain particulate matter. Discard unused portion remaining in vial. Solution is stable for 12 hr at room temperature and for 24 hr if refrigerated. ***Rate:*** Do not administer as an IV push or bolus.

- *First infusion:* Administer at an initial rate of 50 mg/hr. If hypersensitivity or infusion-related events do not occur, rate may be escalated in 50 mg/hr increments every 30 min to a maximum of 400 mg/hr.
- *Subsequent infusions:* May be administered at an initial rate of 100 mg/hr and increased by 100-mg/hr increments at 30 min intervals to a maximum of 400 mg/hr.
- **Y-Site Compatibility:** acyclovir, amifostine, amikacin, aminophylline, ampicillin, ampicillin/sulbactam, aztreonan, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium gluconate, carboplatin, carmustine, cefazolin, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chlorproamzine, cimetidine, cisplatin, clindamycin, cyclophosphamide, cytarabine, dactinomycin, daunarubicin hydrochloride, dexamethasone sodium phosphate, dexrazoxane, digoxin, diphenhydramine, dobutamine, docetaxel, dopamine, doxorubicin liposome, doxycycline, droperidol, enalaprilat, etoposide phosphate, famotidine, fentanyl, filgrastim, floxuridine, fluconazole, fludarabine, fluorouracil, ganciclovir, gemcitabine, gentamicin, granisetron, haloperidol, heparin, hydrocortisone, hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, irinotecan, leucovorin, levorphanol, lorazepam, magnesium sulfate, mannitol, meperidine, mesna, methotrexate, methyprednisolone, metoclopramide, metronidazole, mitomycin, mitoxantrone, morphine, nalbuphine, netilmicin, paclitaxel, pentamidine, piperacillin/tazobactam, plicamycin, potassium chloride, prochlorperazine, promethazine, ranitidine, sargramostim, streptozocin, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tobramycin, trimethoprim/sulfamethoxazole, trimethobenzamide, vinblastine, vincristine, vinorelbine, zidovudine.
- **Y-Site Incompatibility:** aldesleukin, amphotericin B colloidal, ciprofloxacin, cyclosporine, daunorubicin liposome, doxorubicin hydrochloride, furosemide, levofloxacin, minocycline, ondansetron, quinapristin/dalfopristin, sodium bicarbonate, topotecan, vancomycin.
- **Additive Incompatibility:** Do not admix with other medications.

### Patient/Family Teaching

- Inform patient of the purpose of the medication.
- Advise patient to report infusion-related events or symptoms of hypersensitivity reactions immediately.
- Instruct patient to notify health care professional promptly if fever; chills; cough; hoarseness; sore throat; signs of infection; lower back or side pain; painful or difficult urination; bleeding gums; bruising; petechiae; blood in stools, urine, or emesis; increased fatigue; dyspnea; or orthostatic hypotension occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush and electric razor and to avoid falls. Caution patient not to drink alcoholic beverages or take medication containing aspirin or NSAIDs; may precipitate gastric bleeding.
- Instruct patient to use contraception throughout therapy.
- Advise patient to consult health care professional prior to receiving any vaccinations.

### Evaluation/Desired Outcomes

- Decrease in spread of malignancy.
- Reduced signs and symptoms of rheumatoid arthritis.

## **rivastigmine** (rye-va-**stig**-meen)
Exelon

***Classification***
Therapeutic: anti-Alzheimer's agents
Pharmacologic: cholinergics (cholinesterase inhibitors)

**Pregnancy Category B**

### Indications

**PO:** Mild to moderate dementia associated with Alzheimer's disease. **Transdermal:** Treatment of mild to moderate dementia associated with Alzheimer's disease and Parkinson's disease.

### Action

Enhances cholinergic function by reversible inhibition of cholinesterase. Does not cure the disease. **Therapeutic Effects:** Decreased dementia (temporary) associated with Alzheimer's disease

and Parkinson's disease. Enhanced cognitive ability.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration. Transdermal patch is slowly absorbed over 8 hr.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Rapidly and extensively metabolized by the liver; metabolites are excreted by the kidneys.
**Half-life:** *PO*—1.5 hr; *Transdermal*—24 hr.

TIME/ACTION PROFILE (improvement in dementia)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 2 wk | up to 12 wk | unknown |
| Transdermal | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to rivastigmine or other carbamates.
**Use Cautiously in:** History of asthma or obstructive pulmonary disease; History of GI bleeding; Sick sinus syndrome or other supraventricular cardiac conduction abnormalities.
**Transdermal:** Patients weighing <50 kg; at risk for ↑ adverse reactions; OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** weakness, dizziness, drowsiness, headache, sedation (unusual). **CV:** edema, heart failure, hypotension. **GI:** anorexia, dyspepsia, nausea, vomiting, abdominal pain, diarrhea, flatulence, weight gain (unusual). **Neuro:** tremor. **Misc:** fever, weight loss.

### Interactions

**Drug-Drug: Nicotine** may ↑ metabolism and ↓ levels.

### Route/Dosage

**PO (Adults):** 1.5 mg twice daily initially; after at least 2 wk, dose may be ↑ to 3 mg twice daily. Further increments may be made at 2-wk intervals up to 6 mg twice daily.
**Transdermal (Adults):** *Initial Dose*—4.6 mg/24-hr transdermal patch intially; may ↑ to 9.5 mg/24-hr transdermal patch after at least 4 wk.

### Availability

**Capsules:** 1.5 mg, 3 mg, 4.5 mg, 6 mg. **Oral Solution:** 2 mg/mL. **Transdermal Patch:** 4.6 mg/24 hr, 9.5 mg/24 hr.

## NURSING IMPLICATIONS

### Assessment

- Assess cognitive function (memory, attention, reasoning, language, ability to perform simple tasks) periodically throughout therapy.
- Monitor patient for nausea, vomiting, anorexia, and weight loss. Notify health care professional if these side effects occur.

### Potential Nursing Diagnoses

Disturbed thought process (Indications)
Impaired environmental interpretation syndrome (Indications)
Imbalanced nutrition: less than body requirements (Side Effects)

### Implementation

- Rivastigmine oral solution and capsules may be interchanged at equal doses.
- Patients switching from oral doses of <6 mg to transdermal doses should use 4.6 mg/24 hr patch. Patients taking oral doses of 6 mg–12 mg may be converted directly to 9.5 mg/24 hr patch. Apply patch on the day following the last oral dose.
- **PO:** Administer in the morning and evening with food.
- Oral solution may be administered directly from syringe provided or mixed with a small glass of water, cold fruit juice, or soda. Mixture should be stirred prior to drinking. Ensure patient drinks entire mixture. Oral solution is stable for 4 hours at room temperature when mixed with cold fruit juice or soda. Do not mix with other solutions.
- **Transdermal:** Apply patch to clean, dry, hairless area that will not be rubbed by tight clothing. Upper or lower back is recommended, may also use upper arm or chest. Do not apply to red, irritated or cut skin. Rotate sites to prevent irritation, do not use same site within 14 days. Remove adhesive liner and apply by pressing patch firmly until edges stick well. May be worn during bathing and hot weather. Each 24 hr, remove old patch and discard by folding in half and apply new patch to a new area.

### Patient/Family Teaching

- **PO:** Emphasize the importance of taking rivastigmine at regular intervals as directed.
- Explain to patient and caregiver how to use oral dosing syringe provided with oral solution. Remove syringe from protective case and push down and twist child resistant closure to open bottle. Insert syringe into opening in white stopper in bottle. Hold the syringe and pull

plunger to the level corresponding to the prescribed dose. Before removing syringe from bottle, push out larger bubbles (small bubbles will not alter dose) by moving plunger up and down a few times. After large bubbles are gone, move plunger to level of dose. Remove syringe from bottle.

- Caution patient and caregiver that rivastigmine may cause dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient and caregiver to notify health care professional if nausea, vomiting, anorexia, or weight loss occur. If adverse effects become intolerable during treatment with *transdermal patch,* instruct patient to discontinue patches for several days and then restart at same or next lower dose level. If treatment is interrupted for more than several days, lowest dose level should be used when restarting and titrate according to Route and Dosage section.
- Advise patient and caregiver to notify health care professional of medication regimen prior to treatment or surgery.
- Inform patient and caregivers that improvement in cognitive functioning may take weeks to months and that the degenerative process is not reversed.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- **Transdermal:** Instruct patient and caregiver on the correct application, rotation, and discarding of patch. Patch should be folded in half and discarded out of reach of children and pets; medication remains in discarded patch. Replace missed doses immediately and apply next patch at usual time. Advise patient and caregiver to avoid contact with eyes and to wash hands after applying patch. Avoid exposure to heat sources (excessive sunlight, saunas, heating pads) for long periods.
- Advise patient referred for MRI test to discuss patch with referring health care professional and MRI facility to determine if removal of patch is necessary prior to test and for directions for replacing patch.

### Evaluation/Desired Outcomes

- Temporary improvement in cognitive function (memory, attention, reasoning, language, ability to perform simple tasks) in patients with Alzheimer's disease.
- Improvement in cognitive function and overall functioning in patients with Parkinson's disease.

## rizatriptan (riz-a-**trip**-tan)

Maxalt, Maxalt-MLT

***Classification***

Therapeutic: vascular headache suppressants

Pharmacologic: 5-$HT_1$ agonists

**Pregnancy Category C**

### Indications

Acute treatment of migraine headache.

### Action

Acts as an agonist at specific 5-$HT_1$ receptor sites in intracranial blood vessels and sensory trigeminal nerves. **Therapeutic Effects:** Cranial vessel vasoconstriction with associated decrease in release of neuropeptides and resultant decrease in migraine headache.

### Pharmacokinetics

**Absorption:** Completely absorbed after oral administration, but first-pass metabolism results in 45% bioavailability.

**Distribution:** Unknown.

**Metabolism and Excretion:** Primarily metabolized by monoamine oxidase-A (MAO-A); minor conversion to an active compound; 14% excreted unchanged in urine.

**Half-life:** 2–3 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30 min | 1–1.5 hr | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Ischemic or vasospastic cardiovascular, cerebrovascular, or peripheral vascular syndromes; History of significant cardiovascular disease; Uncontrolled hypertension; Should not be used within 24 hr of other 5-$HT_1$ agonists or ergot-type compounds (dihydroergotamine); Basilar or hemiplegic migraine; Concurrent MAO-A inhibitor therapy or within 2 wk of discontinuing MAO-A inhibitor therapy; Phenylketonuria (orally disintegrating tablet contains aspartame).

**Use Cautiously in:** Severe renal impairment, especially in patients on dialysis; Moderate hepatic impairment; OB, Lactation: Pedi: Pregnancy, lac-

tation, or children <18 yr (safety not established).
**Exercise Extreme Caution in:** Cardiovascular risk factors (hypertension, hypercholesterolemia, cigarette smoking, obesity, diabetes, strong family history, menopausal women or men >40 yr); use only if cardiovascular status has been evaluated and determined to be safe and first dose is administered under supervision.

### Adverse Reactions/Side Effects
**CNS:** dizziness, drowsiness, weakness. **CV:** CORONARY ARTERY VASOSPASM, MI, VENTRICULAR ARRHYTHMIAS, chest pain, myocardial ischemia. **GI:** dry mouth, nausea. **Misc:** hypersensitivity reactions including ANGIOEDEMA, toxic epidermal necrolysis, pain.

### Interactions
**Drug-Drug:** Concurrent use with **MAO-A inhibitors** ↑ levels and adverse reactions (concurrent use or use within 2 wk or MAO inhibitor is contraindicated). Concurrent use with other **5-HT agonists** or **ergot-type compounds (dihydroergotamine)** may result in ↑ vasoactive properties (avoid use within 24 hr of each other). **Propranolol** ↑ levels and risk of adverse reactions (dosage reduction recommended). Concurrent use with **SSRI antidepressants** may result in weakness, hyperreflexia, and incoordination.
**Drug-Natural Products:** ↑ risk of serotinergic side effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage
**PO (Adults):** 5–10 mg (use 5-mg dose in patients receiving propranolol); may be repeated in 2 hr; not to exceed 3 doses/24 hr. Dose is same for both types of tablets.

### Availability
**Tablets:** 5 mg, 10 mg. **Cost:** 5 mg $107.44/6, 10 mg $231.99/12. **Orally disintegrating tablets (Maxalt-MLT) (peppermint flavor):** 5 mg, 10 mg. **Cost:** 5 mg $116.58/6, 10 mg $113.99/6.

## NURSING IMPLICATIONS

### Assessment
- Assess pain location, character, intensity, and duration and associated symptoms (photophobia, phonophobia, nausea, vomiting) during migraine attack.

### Potential Nursing Diagnoses
Acute pain (Indications)

### Implementation
- **PO:** Tablets should be swallowed whole with liquid.
- Orally disintegrating tablets should be left in the package until use. Remove from the blister pouch. Do not push tablet through the blister; peel open the blister pack with dry hands and place tablet on tongue. Tablet will dissolve rapidly and be swallowed with saliva. No liquid is needed to take the orally disintegrating tablet.

### Patient/Family Teaching
- Inform patient that rizatriptan should be used only during a migraine attack. It is meant to be used for relief of migraine attacks but not to prevent or reduce the number of attacks.
- Instruct patient to administer rizatriptan as soon as symptoms of a migraine attack appear, but it may be administered at any time during an attack. If migraine symptoms return, a second dose may be used. Allow at least 2 hr between doses, and do not use more than 30 mg in any 24-hr period.
- If first dose does not relieve headache, additional rizatriptan doses are not likely to be effective; notify health care professional.
- Caution patient not to take rizatriptan within 24 hr of other vascular headache suppressants.
- Advise patient that lying down in a darkened room after rizatriptan administration may further help relieve headache.
- Caution patient not to use rizatriptan if she is pregnant, suspects she is pregnant, plans to become pregnant, or is breastfeeding. Adequate contraception should be used during therapy.
- Advise patient to notify health care professional before next dose of rizatriptan if pain or tightness in the chest occurs during use. If pain is severe or does not subside, notify health care professional immediately. If feelings of tingling, heat, flushing, heaviness, pressure, drowsiness, dizziness, tiredness, or sickness develop, discuss with health care professional at next visit.
- May cause dizziness or drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to avoid alcohol, which aggravates headaches, during rizatriptan use.

### Evaluation/Desired Outcomes
- Relief of migraine attack.

**ropinirole** (roe-**pin**-i-role)
Requip, Requip XL

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: dopamine agonists

**Pregnancy Category C**

## Indications
Management of signs and symptoms of idiopathic Parkinson's disease. Restless leg syndrome (immediate-release only).

## Action
Stimulates dopamine receptors in the brain.
**Therapeutic Effects:** Decreased tremor and rigidity in Parkinson's disease. Decreased leg restlessness.

## Pharmacokinetics
**Absorption:** 55% absorbed following oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Extensively metabolized by the liver (by cytochrome P450 CYP1A2 enzyme system); <10% excreted unchanged in urine.
**Half-life:** 6 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | 8 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Hepatic impairment (slower titration may be required); Severe cardiovascular disease; OB, Lactation: Pedi: Safety not established; may inhibit lactation; Geri: ↑ risk of hallucinations in patients >65 yr.

## Adverse Reactions/Side Effects
**CNS:** SLEEP ATTACKS, dizziness, syncope, confusion, drowsiness, fatigue, hallucinations, headache, dyskinesia, urges (gambling, sexual), weakness. **EENT:** abnormal vision. **CV:** orthostatic hypotension, peripheral edema. **GI:** constipation, dry mouth, dyspepsia, nausea, vomiting. **Derm:** sweating, melanoma.

## Interactions
**Drug-Drug: Drugs that alter the activity of cytochrome P450 CYP1A2 enzyme system** may affect the activity of ropinirole. Effects may be ↑ by **estrogens**. Effects may be ↓ by **phenothiazines**, **butyrophenones**, **thioxanthenes**, or **metoclopramide**. May ↑ effects of **levodopa** (may allow dose reduction of levodopa).

## Route/Dosage
**PO (Adults):** *Parkinson's disease*—Immediate-release: 0.25 mg 3 times daily for 1 wk, then 0.5 mg 3 times daily for 1 wk, then 0.75 mg 3 times daily for 1 wk, then 1 mg 3 times daily for 1 wk; then may ↑ by 1.5 mg/day every wk up to 9 mg/day; then may ↑ by up to 3 mg/day every wk up to 24 mg/day; Extended-release: 2 mg once daily for 1–2 wk; may ↑ by 2 mg/day every wk up to 24 mg/day. *Restless leg syndrome*—0.25 mg once daily initially, 1–3 hr before bedtime. After 2 days, ↑ to 0.5 mg once daily and to 1 mg once daily by the end of first week of dosing, then ↑ by 0.5 mg weekly, up to 4 mg/day as needed/tolerated.

## Availability (generic available)
**Tablets:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg, 5 mg. **Cost:** 0.25 mg $569.92/270, 0.5 mg $569.92/270, 1 mg $568.84/270, 2 mg $575.94/270, 3 mg $638.87/270, 4 mg $638.87/270, 5 mg $639.98/270. **Extended-release tablets:** 2 mg, 4 mg, 6 mg, 8 mg, 12 mg.

# NURSING IMPLICATIONS

## Assessment
- Assess blood pressure periodically during therapy.
- Assess patient for drowsiness and sleep attacks. Drowsiness is a common side effect of ropinirole, but sleep attacks or episodes of falling asleep during activities that require active participation may occur without warning. Assess patient for concomitant medications that have sedating effects or may increase serum ropinirole levels (see Interactions). May require discontinuation of therapy.
- **Parkinson's Disease:** Assess patient for signs and symptoms of Parkinson's disease (tremor, muscle weakness and rigidity, ataxic gait) prior to and during therapy.
- **Restless Leg Syndrome:** Assess sleep patterns and frequency of restless leg disturbances.
- ***Lab Test Considerations:*** May cause ↑ BUN.

## Potential Nursing Diagnoses
Impaired physical mobility (Indications)
Risk for injury (Indications, Side Effects)

## Implementation
- **PO:** May be administered with or without food. Administration with food may decrease nausea.

Extended-release tablets should be swallowed whole; do not break, crush, or chew.

### Patient/Family Teaching

- Instruct patient to take medication exactly as directed. Missed doses should be taken as soon as possible, but not if almost time for next dose. Do not double doses.
- Caution patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness and unexpected episodes of falling asleep. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Advise patient to notify health care professional if episodes of falling asleep occur.
- Advise patient to avoid alcohol and other CNS depressants concurrently with ropinirole.
- Advise patient that increasing fluids, sugarless gum or candy, ice, or saliva substitutes may help minimize dry mouth. Consult health care professional if dry mouth continues for >2 wk.
- Advise patient to have periodic skin exams to check for lesions that may be melanoma.
- Advise patient to notify health care professional if new or increased gambling, sexual, or other intense urges occur.

### Evaluation/Desired Outcomes

- Decreased tremor and rigidity in Parkinson's disease.
- Decrease in restless legs and improved sleep.

**ropivacaine, See EPIDURAL LOCAL ANESTHETICS.**

## rosiglitazone

(roe-zi-**glit**-a-zone)
Avandia

***Classification***
Therapeutic: antidiabetics
Pharmacologic: thiazolidinediones

**Pregnancy Category C**

### Indications

Type 2 diabetes mellitus (with diet and exercise); may be used with metformin, sulfonylureas, or insulin.

### Action

Improves sensitivity to insulin by acting as an agonist at receptor sites involved in insulin responsiveness and subsequent glucose production and utilization. Requires insulin for activity. **Therapeutic Effects:** Decreased insulin resistance, resulting in glycemic control without hypoglycemia.

### Pharmacokinetics

**Absorption:** Well absorbed (99%) following oral administration.
**Distribution:** Unknown.
**Protein Binding:** 99.8% bound to plasma proteins.
**Metabolism and Excretion:** Entirely metabolized by the liver.
**Half-life:** 3.2–3.6 hr (increased in liver disease).

TIME/ACTION PROFILE (effects on blood glucose)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | 12–24 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Diabetic ketoacidosis; Clinical evidence of active liver disease or increased ALT (>2.5 times upper limit of normal); Renal disease or dysfunction (creatinine over 1.5 mg/dL in males or 1.4 mg/dL in females; OB, Lactation: Potential for fetal or infant harm. Insulin monotherapy should be used.; Pedi: Safety and effectiveness not established.
**Use Cautiously in:** Edema; CHF (avoid use in moderate to severe CHF unless benefits outweigh risks); Concurrent use with insulin (may increase risk of adverse cardiovascular reactions); Hepatic impairment; OB: May restore ovulation and risk of pregnancy in premenopausal women; Geri: Dose reduction and careful titration recommended due to age-related decline in renal function. Avoid maximum dose. Should not be given to patients older than 80 yr.

### Adverse Reactions/Side Effects

**CV:** CHF, edema. **EENT:** new onset and worsening diabetic macular edema. **Derm:** urticaria. **GI:** hepatitis, ↑ liver enzymes. **Hemat:** anemia. **Metab:** **lactic acidosis**, ↑ total cholesterol, LDL and HDL, weight gain. **Misc:** ANGIOEDEMA (rare), fractures (arm, hand, foot) in female patients.

### Interactions

**Drug-Drug:** Concurrent use with **rifampin** ↓ levels and may ↓ effectiveness. **Gemfibrozil** ↑ levels and may ↑ risk of hypoglycemia (↓ dose of rosiglitazone).
**Drug-Natural Products: Glucosamine** may worsen blood glucose control. **Chromium** and **coenzyme Q-10** may produce additive hypoglycemic effects.

### Route/Dosage

**PO (Adults):** 4 mg as a single dose once daily or 2 mg twice daily; after 8 wk, may be increased if necessary to 8 mg once daily or 4 mg twice daily.

### Availability

**Tablets:** 2 mg, 4 mg, 8 mg. **Cost:** 2 mg $218.99/90, 4 mg $338.96/90, 8 mg $575.95/90. ***In combination with:*** metformin (Avandamet), glimepiride (Avandaryl). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Observe patient taking concurrent insulin for signs and symptoms of hypoglycemia (sweating, hunger, weakness, dizziness, tremor, tachycardia, anxiety).
- Assess patient for edema and signs of CHF (dyspnea, rales/crackles, peripheral edema, weight gain, jugular venous distention). May require discontinuation of rosiglitazone.
- Assess patient for signs of lactic acidosis (malaise, myalgias, respiratory distress, somnolence, nonspecific abdominal distress).
- ***Lab Test Considerations:*** Monitor serum glucose and glycosylated hemoglobin periodically during therapy to evaluate effectiveness.
- Monitor CBC with differential periodically during therapy. May cause ↓ in hemoglobin, hematocrit, and WBC, usually during the first 4–8 wk of therapy; then levels stabilize.
- Monitor AST and ALT prior to initiating therapy and periodically thereafter or if jaundice or symptoms of hepatic dysfunction occur. May cause irreversible ↑ in AST and ALT or hepatic failure (rare). If ALT increases to >3 times the upper limit of normal, recheck ALT promptly. Discontinue rosiglitazone if ALT remains >3 times normal.
- May cause ↑ in total cholesterol, LDL, and HDL and ↓ in free fatty acids.
- Monitor renal function tests prior to initiating therapy and periodically thereafter (BUN, creatinine, creatinine clearance), especially in older adults.

### Potential Nursing Diagnoses

Imbalanced nutrition: more than body requirements (Indications)

### Implementation

- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin.
- **PO:** May be administered with or without meals.

### Patient/Family Teaching

- Instruct patient to take medication as directed. If dose for 1 day is missed, do not double dose the next day.
- Explain to patient that this medication controls hyperglycemia but does not cure diabetes. Therapy is long term.
- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water and notify health care professional.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hypoglycemic or hyperglycemic episodes.
- Instruct patient in proper testing of serum glucose and ketones. These tests should be closely monitored during periods of stress or illness and health care professional notified if significant changes occur.
- Advise patient to notify health care professional immediately if signs of hepatic dysfunction (nausea, vomiting, abdominal pain, fatigue, anorexia, dark urine, jaundice), CHF, or lactic acidosis (malaise, myalgias, respiratory distress, somnolence, nonspecific abdominal distress, hypothermia, hypotension, and bradyarrhythmias) occur.
- Advise patient to inform health care professional of medication regimen prior to treatment, studies using IV contrast, or surgery.
- Advise patient to carry a form of sugar (sugar packets, candy) and identification describing disease process and medication regimen at all times.
- Emphasize the importance of routine follow-up exams.
- OB: Insulin is the preferred method of controlling blood glucose during pregnancy. Counsel female patients that higher doses of oral contraceptives or a form of contraception other than oral contraceptives may be required and to notify health care professional promptly if pregnancy is planned or suspected.

### Evaluation/Desired Outcomes

- Control of blood glucose levels.

**rosuvastatin, See HMG-CoA REDUCTASE INHIBITORS (statins).**

# SALICYLATES

**aspirin** (**as**-pir-in)
Apo-ASA , Apo-ASEN, Arthrinol, Arthrisin, Artria S.R, ASA, Asaphen, Ascriptin, Aspercin, Aspergum, Aspirtab, Astrin, Bayer Aspirin, Bufferin, Coryphen, Easprin, Ecotrin, Entrophen, Genacote, Halfprin, Headache Tablets, Healthprin, Novasen, PMS-ASA, Rivasa, St. Joseph Adult Chewable Aspirin, ZORprin

**choline salicylate**
(**koe**-leen sal-**i**-sil-ate)
Arthropan

**choline and magnesium salicylates**
(**koe**-leen mag-**neez**-ee-um sal-**i**-sil-ates)
CMT, Tricosal, Trilisate

**magnesium salicylate**
(mag-**neez**-ee-um sal-**i**-sil-ate)
Doan's Backache Pills, Doan's Regular Strength Tablets, Magan, Mobidin

**salsalate** (**sal**-sa-late)
Amigesic , Anaflex, Disalcid , Marthritic, Mono-Gesic, Salflex, Salgesic, Salsitab

**sodium salicylate**
(**soe**-dee-yum sal-**i**-sil-ate)
Dodd's Extra Strength, Dodd's Pills, Gin Pain Pills

***Classification***
Therapeutic: antipyretics, nonopioid analgesics
Pharmacologic: salicylates

**Pregnancy Category D (aspirin—first trimester), C (magnesium salicylate, salsalate—first trimester)**

## Indications
Inflammatory disorders including: Rheumatoid arthritis, Osteoarthritis. Mild to moderate pain. Fever. **Aspirin:** Prophylaxis of transient ischemic attacks and MI.

## Action
Produce analgesia and reduce inflammation and fever by inhibiting the production of prostaglandins. **Aspirin Only:** Decreases platelet aggregation. **Therapeutic Effects:** Analgesia. Reduction of inflammation. Reduction of fever. **Aspirin:** Decreased incidence of transient ischemic attacks and MI.

## Pharmacokinetics
**Absorption:** *Aspirin*—Well absorbed from the upper small intestine; absorption from enteric-coated preparations may be unreliable; rectal absorption is slow and variable. *Choline and magnesium salicylates*—Well absorbed after oral administration. *Salsalate*—Splits into 2 molecules of salicylic acid after oral administration; absorbed in the small intestine.
**Distribution:** All salicylates are rapidly and widely distributed; cross the placenta and enter breast milk.
**Metabolism and Excretion:** Extensively metabolized by the liver; inactive metabolites excreted by the kidneys. Amount excreted unchanged by the kidneys depends on urine pH; as pH increases, amount excreted unchanged increases from 2–3% up to 80%.
**Half-life:** 2–3 hr for low doses; up to 15–30 hr with larger doses because of saturation of liver metabolism.

TIME/ACTION PROFILE (analgesia/fever reduction†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Aspirin–PO | 5–30 min | 1–3 hr | 3–6 hr |
| Aspirin–PO-ER | 5–30 min | 2–4 hr | 8–12 hr |
| Aspirin–Rect | 1–2 hr | 4–5 hr | 7 hr |
| All other salicylates–PO | 5–30 min | 1–3 hr | 3–6 hr |

†Antirheumatic effect may take 2–3 wk of chronic dosing

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to aspirin, tartrazine (FDC yellow dye #5), or other salicylates; Cross-sensitivity with other NSAIDs may exist (less with nonaspirin salicylates); Bleeding disorders or thrombocytopenia (more important with aspirin); Children or adolescents with viral infections (may increase the risk of Reye's syndrome); **Salsalate:** Peri-operative pain from coronary artery bypass graft (CABG) surgery.
**Use Cautiously in:** History of GI bleeding or ulcer disease; Chronic alcohol use/abuse; Severe

renal disease (magnesium toxicity may occur with magnesium salicylate); Severe hepatic disease; **Salsalate:** Cardiovascular disease or risk factors for cardiovascular disease (may ↑ risk of serious cardiovascular thrombotic events, myocardial infarction, and stroke, especially with prolonged use); OB: Salicylates may have adverse effects on fetus and mother and, in general, should be avoided during pregnancy, especially during the 3rd trimester; Lactation: Safety not established; Geri: ↑ risk of adverse reactions especially GI bleeding; more sensitive to toxic levels.

## Adverse Reactions/Side Effects

**EENT:** tinnitus. **GI:** GI BLEEDING, dyspepsia, epigastric distress, nausea, abdominal pain, anorexia, hepatotoxicity, vomiting. **Derm:** *salsalate*—EXFOLIATIVE DERMATITIS, STEVENS-JOHNSON SYNDROME, TOXIC EPIDERMAL NECROLYSIS. **Hemat:** *aspirin*—anemia, hemolysis, increased bleeding time. **Misc:** allergic reactions including ANAPHYLAXIS and LARYNGEAL EDEMA.

## Interactions

**Drug-Drug:** Aspirin may ↑ the risk of bleeding with **warfarin**, **heparin**, **heparin-like agents**, **thrombolytic agents**, **ticlopidine**, **clopidogrel**, **abciximab**, **tirofiban**, or **eptifibatide**, although these agents are frequently used safely in combination and in sequence. Ibuprofen may negate the cardioprotective antiplatelet effects of low-dose aspirin. Aspirin may ↑ risk of bleeding with **cefoperazone**, **cefotetan**, and **valproic acid**. May ↑ activity of **penicillins**, **phenytoin**, **methotrexate**, **valproic acid**, **oral hypoglycemic agents**, and **sulfonamides**. May ↓ beneficial effects of **probenecid** or **sulfinpyrazone**. **Corticosteroids** may ↓ serum salicylate levels. **Urinary acidification** ↑ reabsorption and may ↑ serum salicylate levels. **Alkalinization of the urine** or the ingestion of large amounts of **antacids** ↑ excretion and ↓ serum salicylate levels. May blunt the therapeutic response to **diuretics**, and **antihypertensives**. ↑ risk of GI irritation with **NSAIDs**.
**Drug-Natural Products:** ↑ anticoagulant effect and bleeding risk when using aspirin with **arnica**, **chamomile**, **clove**, **feverfew**, **garlic**, **ginger**, **ginkgo**, **Panax ginseng**, and others.
**Drug-Food: Foods capable of acidifying the urine** (see Appendix M) may ↑ serum salicylate levels.

## Route/Dosage

### Aspirin

#### Pain/Fever

**PO, Rect (Adults):** 325–1000 mg q 4–6 hr (not to exceed 4 g/day). *Extended-release tablets*—650 mg q 8 hr or 800 mg q 12 hr.
**PO, Rect (Children 2–11 yr):** 10–15 mg/kg q 4–6 hr (not to exceed 4 g/day).

#### Inflammation

**PO (Adults):** 2.4 g/day initially; increased to maintenance dose of 3.6–5.4 g/day in divided doses (up to 7.8 g/day for acute rheumatic fever).
**PO (Children):** 60–100 mg/kg/day in divided doses (up to 130 mg/kg/day for acute rheumatic fever).

#### Prevention of Transient Ischemic Attacks

**PO (Adults):** 50–325 mg once daily.

#### Prevention of Myocardial Infarction

**PO (Adults):** 80–325 mg once daily.
**PO (Children):** 3–10 mg/kg once daily (round dose to a convenient amount).

#### Kawasaki Disease

**PO (Children):** 80–100 mg/kg/day in 4 divided doses until fever resolves; may be followed by maintenance dose of 3–5 mg/kg/day as a single dose for up to 8 wk.

### Choline Salicylate

435 mg of choline salicylate is equivalent to 325 mg of aspirin.
**PO (Adults):** *Analgesic/antipyretic*—435–669 mg (½–¾ tsp) q 3 hr or 425–870 mg (½–1 tsp) q 4 hr or 870–1305 mg (1–1½ tsp) q 6 hr as needed. *Anti-inflammatory*—4.8–7.2 g/day in divided doses.
**PO (Children):** *Pain/fever*—2 g/m²/day in 4–6 divided doses. *Inflammation*—107–133 mg/kg/day in 4–6 divided doses (up to 174 mg/kg).

### Magnesium Salicylate

**PO (Adults):** 304 mg q 4 hr or 467 mg q 6 hr.

### Choline and Magnesium Salicylates

5 mL of liquid equivalent to 500 mg salicylate or 650 mg of aspirin. Tablet strength expressed in mg of salicylate: 500-mg tablet equivalent to 650 mg of aspirin, 750-mg tablet equivalent to 975 mg of aspirin, 1000-mg tablet equivalent to 1.3 g of aspirin.
**PO (Adults):** *Anti-inflammatory*—3 g/day of salicylate at bedtime or in 2–3 divided doses (not to exceed 4.5 g/day).
**PO (Children >37 kg):** 2.25 g of salicylate/day in 2 divided doses.

**PO (Children <37 kg):** 50 mg of salicylate/kg/day in 2 divided doses.

### Salsalate

**PO (Adults):** 1 g 3 times daily initially; further titration may be required.

### Sodium Salicylate

**PO (Adults):** *Pain/fever*—325–650 mg q 4 hr. *Inflammation*—3.6–5.4 g/day in divided doses. **PO (Children):** *Pain/fever*—1.5 g/m²/day in 4–6 divided doses. *Inflammation*—80–100 mg/kg/day in 4–6 divided doses.

### Availability

#### Aspirin (generic available)

**Tablets:** 81 mg[OTC], 162.5 mg[OTC], 325 mg[OTC], 500 mg[OTC], 650 mg[OTC], 975 mg[OTC]. **Chewable tablets:** 80 mg[OTC], 81 mg[OTC]. **Chewing gum:** 227 mg[OTC]. **Dispersible tablets:** 325 mg[OTC], 500 mg[OTC]. **Enteric-coated (delayed-release) tablets:** 80 mg[OTC], 165 mg[OTC], 300 mg[OTC], 325 mg[OTC], 500 mg[OTC], 600 mg[OTC], 650 mg[OTC], 975 mg[OTC]. **Extended-release tablets:** 325 mg[OTC], 650 mg[OTC], 800 mg. **Delayed-release capsules:** 325 mg[OTC], 500 mg[OTC]. **Suppositories:** 60 mg[OTC], 120 mg[OTC], 125 mg[OTC], 130 mg[OTC], 150 mg[OTC], 160 mg[OTC], 195 mg[OTC], 200 mg[OTC], 300 mg[OTC], 320 mg[OTC], 325 mg[OTC], 600 mg[OTC], 640 mg[OTC], 650 mg[OTC], 1.2 g[OTC]. ***In combination with:*** antihistamines, decongestants, cough suppressants[OTC], and opioids. See Appendix B.

#### Choline Salicylate

**Oral solution:** 870 mg/5 mL[OTC].

#### Magnesium Salicylate (generic available)

**Tablets:** 304 mg[OTC], 467 mg[OTC], 545 mg, 600 mg, 650 mg.

#### Choline and Magnesium Salicylates (listed as salicylate content)

**Tablets:** 500 mg, 750 mg, 1000 mg. **Liquid:** 500 mg/5 mL.

#### Salsalate (generic available)

**Tablets:** 500 mg, 750 mg. **Cost:** *Disalcid*—500 mg $22.90/20, 750 mg $41.87/30; *generic*—500 mg $32.74/100, 750 mg $41.04/100.

#### Sodium Salicylate (generic available)

**Tablets:** 325 mg[OTC], 650 mg[OTC]. **Delayed-release tablets:** 324 mg[OTC], 325 mg[OTC], 650 mg[OTC].

## NURSING IMPLICATIONS

### Assessment

- Patients who have asthma, allergies, and nasal polyps or who are allergic to tartrazine are at an increased risk for developing hypersensitivity reactions.
- **Pain:** Assess pain and limitation of movement; note type, location, and intensity before and at the peak (see Time/Action Profile) after administration.
- **Fever:** Assess fever and note associated signs (diaphoresis, tachycardia, malaise, chills).
- ***Lab Test Considerations:*** Monitor hepatic function before antirheumatic therapy and if symptoms of hepatotoxicity occur; more likely in patients, especially children, with rheumatic fever, systemic lupus erythematosus, juvenile arthritis, or pre-existing hepatic disease. May cause ↑ serum AST, ALT, and alkaline phosphatase, especially when plasma concentrations exceed 25 mg/100 mL. May return to normal despite continued use or dose reduction. If severe abnormalities or active liver disease occurs, discontinue and use with caution in future.
- Monitor serum salicylate levels periodically with prolonged high-dose therapy to determine dose, safety, and efficacy, especially in children with Kawasaki disease.
- *Aspirin:* Prolongs bleeding time for 4–7 days and, in large doses, may cause prolonged prothrombin time. Monitor hematocrit periodically in prolonged high-dose therapy to assess for GI blood loss.
- ***Toxicity and Overdose:*** Monitor patient for the onset of tinnitus, headache, hyperventilation, agitation, mental confusion, lethargy, diarrhea, and sweating. If these symptoms appear, withhold medication and notify physician or other health care professional immediately.

### Potential Nursing Diagnoses

Acute pain (Indications)
Impaired physical mobility (Indications)

### Implementation

- Use lowest effective dose for shortest period of time.
- **PO:** Administer after meals or with food or an antacid to minimize gastric irritation. Food slows but does not alter the total amount absorbed.
- Do not crush or chew enteric-coated tablets. Do not take antacids within 1–2 hr of enteric-

S

coated tablets. Chewable tablets may be chewed, dissolved in liquid, or swallowed whole. Some extended-release tablets may be broken or crumbled but must not be ground up before swallowing. See manufacturer's prescribing information for individual products.

### Patient/Family Teaching

- Instruct patient to take salicylates with a full glass of water and to remain in an upright position for 15–30 min after administration.
- Advise patient to report tinnitus; unusual bleeding of gums; bruising; black, tarry stools; or fever lasting longer than 3 days.
- Caution patient to avoid concurrent use of alcohol with this medication to minimize possible gastric irritation; 3 or more glasses of alcohol per day may increase the risk of GI bleeding. Caution patient to avoid taking concurrently with acetaminophen or NSAIDs for more than a few days, unless directed by health care professional to prevent analgesic nephropathy.
- Teach patients on a sodium-restricted diet to avoid effervescent tablets or buffered-aspirin preparations.
- Tablets with an acetic (vinegar-like) odor should be discarded.
- Advise patients on long-term therapy to inform health care professional of medication regimen before surgery. Aspirin may need to be withheld for 1 wk before surgery.
- Pedi: Centers for Disease Control and Prevention warns against giving aspirin to children or adolescents with varicella (chickenpox) or influenza-like or viral illnesses because of a possible association with Reye's syndrome.
- **Transient Ischemic Attacks or MI:** Advise patients receiving aspirin prophylactically to take only prescribed dose. Increasing the dose has not been found to provide additional benefits.

### Evaluation/Desired Outcomes

- Relief of mild to moderate discomfort.
- Increased ease of joint movement. May take 2–3 wk for maximum effectiveness.
- Reduction of fever.
- Prevention of transient ischemic attacks.
- Prevention of MI.

## **salmeterol** (sal-**me**-te-role)

Serevent Diskus

***Classification***
Therapeutic: bronchodilators
Pharmacologic: adrenergics

**Pregnancy Category C**

### Indications

Long-term control of reversible airway obstruction due to asthma and for maintenance treatment of asthma and prevention of bronchospasm. Prevention of exercise-induced asthma. Maintenance treatment to prevent bronchospasm in COPD including chronic bronchitis and emphysema.

### Action

Produces accumulation of cyclic adenosine monophosphate (cAMP) at $beta_2$-adrenergic receptors. Relatively specific for beta (pulmonary) receptors. **Therapeutic Effects:** Bronchodilation.

### Pharmacokinetics

**Absorption:** Minimal systemic absorption follows inhalation.
**Distribution:** Action is primarily local.
**Metabolism and Excretion:** Unknown.
**Half-life:** 3–4 hr.

TIME/ACTION PROFILE (bronchodilation)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Inhalation | 10–25 min | 3–4 hr | 12 hr† |

†9 hr in adolescents

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Acute attack of asthma (onset of action is delayed).
**Use Cautiously in:** Cardiovascular disease (including angina and hypertension); Seizure disorders; Diabetes; Glaucoma; Hyperthyroidism; Pheochromocytoma; Excessive use (may lead to tolerance and paradoxical bronchospasm); OB: Use only if potential benefit justifies potential risk to fetus; may inhibit contractions during labor; Lactation: Use only if potential benefit justifies potential risk to infant. Consider discontinuing breast-feeding while on salmeterol; Pedi: Safety not established in children <4 yr (dry powder inhalation may be used in children 4–12 yr; aerosol inhalation may be used in children >12 yr).

### Adverse Reactions/Side Effects

**CNS:** headache, nervousness. **CV:** palpitations, tachycardia. **GI:** abdominal pain, diarrhea, nausea. **MS:** muscle cramps/soreness. **Neuro:** trembling. **Resp:** paradoxical bronchospasm, cough.

### Interactions

**Drug-Drug: Beta blockers** may ↓ therapeutic effects of salmeterol. **MAO inhibitors** and **tricyclic antidepressants** potentiate cardiovascu-

lar effects. ↑ levels and ↑ risk of cardiovascular effects when used with potent CYP3A4 inhibitors (e.g., **ketoconazole**, **itraconazole**, **ritonavir**, **atazanavir**, **clarithromycin**, **indinavir**, **nefazodone**, **nelfinavir**, or **saquinavir**); concurrent use is not recommended.
**Drug-Natural Products:** Use with caffeine-containing herbs (**cola nut**, **guarana**, **mate**, **tea**, **coffee**) ↑ stimulant effect.

### Route/Dosage

**Inhaln (Adults and Children ≥4 yr):** 50 mcg (one inhalation) twice daily (approximately 12 hr apart). *Exercise-induced bronchospasm*—50 mcg (one inhalation) 30–60 min before exercise.

### Availability

**Powder for oral inhalation (Serevent Diskus):** 50 mcg/blister. ***In combination with:*** fluticasone (Advair Diskus, see Appendix B).

## NURSING IMPLICATIONS

### Assessment

- Assess lung sounds, pulse, and blood pressure before administration and periodically during therapy.
- Monitor pulmonary function tests before initiating therapy and periodically during therapy.
- Observe for paradoxical bronchospasm (wheezing, dyspnea, tightness in chest) and hypersensitivity reaction (rash; urticaria; swelling of the face, lips, or eyelids). Frequently occurs with first use of new canister or vial. If condition occurs, withhold medication and notify physician or other health care professional immediately.
- ***Lab Test Considerations:*** May cause ↑ serum glucose concentrations; occurs rarely with recommended doses and is more pronounced with frequent use of high doses.
- May cause ↓ serum potassium concentrations, which are usually transient and dose related; rarely occurs at recommended doses and is more pronounced with frequent use of high doses.
- ***Toxicity and Overdose:*** Symptoms of overdose include persistent agitation, chest pain or discomfort, decreased blood pressure, dizziness, hyperglycemia, hypokalemia, seizures, tachyarrhythmias, persistent trembling, and vomiting.
- Treatment includes discontinuing salmeterol and other beta-adrenergic agonists and providing symptomatic, supportive therapy. Cardioselective beta blockers are used cautiously because they may induce bronchospasm.

### Potential Nursing Diagnoses

Ineffective airway clearance (Indications)

### Implementation

- Do not confuse salmeretol with Salbutamol (albuterol).
- **Inhaln:** Once removed from foil overwrap, discard diskus when every blister has been used or 6 wk have passed, whichever comes first.
- Do not use a spacer with powder for inhalation.

### Patient/Family Teaching

- Advise patient to take salmeterol as directed. Do not use more than the prescribed dose. If a regularly scheduled dose is missed, use as soon as possible and resume regular schedule. Do not double doses. If symptoms occur before next dose is due, use a rapid-acting inhaled bronchodilator.
- Instruct patient using *powder for inhalation* never to exhale into diskus device and always to hold device in a level horizontal position. Mouthpiece should be kept dry; never wash.
- Caution patient not to use salmeterol to treat acute symptoms. A rapid-acting inhaled beta-adrenergic bronchodilator should be used for relief of acute asthma attacks.
- Advise patients on chronic therapy not to use additional salmeterol to prevent exercise-induced bronchospasm. Patients using salmeterol for prevention of exercise-induced bronchospasm should not use additional doses of salmeterol for 12 hr after prophylactic administration.
- Advise patient to notify health care professional immediately if difficulty in breathing persists after use of salmeterol, if condition worsens, if more inhalations of rapid-acting bronchodilator than usual are needed to relieve an acute attack, or if using 4 or more inhalations of a rapid-acting bronchodilator for 2 or more consecutive days or more than 1 canister in an 8-wk period.
- Salmeterol is often used with inhaled corticosteroids and is not a substitute for corticosteroids or adrenergic bronchodilators. Advise patients using inhalation or systemic corticosteroids to consult health care professional before stopping or reducing therapy.

- Emphasize the importance of regular follow-up exams to determine progress during therapy.

### Evaluation/Desired Outcomes

- Prevention of bronchospasm or reduction of frequency of acute asthma attacks in patients with chronic asthma.
- Prevention of exercise-induced asthma.

**salsalate, See SALICYLATES.**

## sargramostim

(sar-**gram**-oh-stim)

Leukine, rHu GM-CSF (recombinant human granulocyte/macrophage colony-stimulating factor)

***Classification***

Therapeutic: colony-stimulating factors
Pharmacologic: biologic response modifiers

**Pregnancy Category C**

### Indications

Acceleration of bone marrow recovery after: Autologous bone marrow transplantation in patients with non-Hodgkin's lymphoma, acute lymphoblastic leukemia, or Hodgkin's disease, Allogenic bone marrow transplantation from HLA-matched donors. Management of bone marrow transplant failure or engraftment delay. After induction chemotherapy for acute myelogenous leukemia (AML) in patients ≥55 yr. Mobilization and after transplant of autologous peripheral blood progenitor cells (PBPCs); increases harvest by leukapheresis.

### Action

Consists of a glycoprotein produced by recombinant DNA technique that is capable of binding to and stimulating the production, division, differentiation, and activation of granulocytes and macrophages. **Therapeutic Effects:** Accelerated recovery of bone marrow after autologous bone marrow transplantation, resulting in decreased risk of infection and other complications.

### Pharmacokinetics

**Absorption:** After IV administration, absorption is essentially complete. Well absorbed after subcut administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE (noted as effects on blood counts)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Subcut, IV | rapid | unknown | 3–7 days |

### Contraindications/Precautions

**Contraindicated in:** Presence of ≥10% leukemic myeloid blast cells in bone marrow or peripheral blood; Hypersensitivity to granulocyte macrophage colony-stimulating factor (GM-CSF), yeast products, or additives (mannitol, tromethamine, or sucrose); Pedi: Products containing benzyl alcohol should not be used in newborns.
**Use Cautiously in:** Pre-existing fluid retention, CHF, or pulmonary infiltrates; Pre-existing cardiac disease; Myeloid malignancies; Previous extensive radiation or chemotherapy (response may be limited); OB: Use only if clearly needed; Lactation, Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** headache, malaise, weakness. **Resp:** dyspnea. **CV:** pericardial effusion, peripheral edema, transient supraventricular tachycardia. **GI:** diarrhea. **Derm:** itching, rash. **MS:** arthralgia, bone pain, myalgia. **Misc:** chills, fever, first-dose reaction.

### Interactions

**Drug-Drug: Lithium** or **corticosteroids** may potentiate myeloproliferative effects of sargramostim (concurrent use should be undertaken cautiously).

### Route/Dosage

#### After Bone Marrow Transplantation

**IV (Adults):** 250 mcg/m²/day for 21 days.

#### Failure/Delay of Engraftment after Bone Marrow Transplantation

**IV (Adults):** 250 mcg/m²/day for 14 days; may be repeated after a 7-day rest between courses; if results are inadequate, a 3rd course at 500 mcg/m²/day for 14 days may be given after a 7-day rest.

#### After Chemotherapy for AML

**IV (Adults):** 250 mcg/m²/day started around day 11 or 4 days after induction if day 10 bone marrow is hypoplastic with <5% blast cells and continued until absolute neutrophil count (ANC) >1500 cells/mm³ for 3 consecutive days (not to exceed 42 days); if adverse reactions occur, decrease dose by 50% or temporarily discontinue.

#### Mobilization of PBPCs

**IV, Subcut (Adults):** 250 mcg/m²/day continued throughout collection of PBPCs.

### After PBPC Transplantation

**IV, Subcut (Adults):** 250 mcg/m²/day continued until ANC >1500 cells/mm³ for 3 consecutive days.

### Availability

**Powder for injection:** 250 mcg/vial. **Solution for injection:** 500 mcg/vial.

## NURSING IMPLICATIONS

### Assessment

- Monitor heart rate, blood pressure, and respiratory status during and immediately after infusion. If dyspnea develops, slow infusion rate by half. Reassess; medication may need to be discontinued. Assess for peripheral edema daily throughout therapy. Capillary leak syndrome (swelling of feet or lower legs, sudden weight gain, dyspnea) and pleural or pericardial effusion may occur, usually at doses >32 mcg/kg/day.
- Monitor for first-dose reaction (flushing, hypotension, syncope, weakness). Does not recur with first dose of each course but may occur with first dose of more than 1 course.
- Assess for fever daily during therapy. Usually mild and dose-related and resolves with discontinuation or administration of antipyretics.
- Assess for arthralgias and myalgias, usually in lower extremities, which tend to occur when granulocyte counts are returning to normal. May also cause mild to moderate bone pain, possibly from bone marrow expansion. Usually occurs over 1–3 days before myeloid recovery and occurs in the sternum, spine, pelvis, and long bones. Treat with analgesics.
- ***Lab Test Considerations:*** Obtain a CBC with differential and platelet count before chemotherapy and twice weekly during therapy to avoid leukocytosis. Monitor ANC; may increase rapidly. If ANC >20,000/mm³ or 10,000/mm³ after the nadir has occurred or if platelet count >500,000/mm³, interrupt administration and reduce dose by half or discontinue. Excessive blood levels usually return to baseline 3–7 days after discontinuation of therapy. If blast cells appear, sargramostim should be discontinued.
- Monitor renal and hepatic function before and biweekly throughout therapy in patients with renal or hepatic dysfunction. May cause ↑ BUN, creatinine, and hepatic enzymes.
- May cause ↓ serum albumin concentrations.

### Potential Nursing Diagnoses

Risk for infection (Indications)

### Implementation

- Do not confuse Leukine (sargramostim) with leukeran (chlorambucil) or leucovorin.
- Administer 2–4 hr after bone marrow transplant and no earlier than 24 hr after cytotoxic chemotherapy or 12 hr after last dose of radiotherapy.
- Refrigerate but do not freeze powder, reconstituted solution, or diluted solution. Reconstitute with 1 mL of sterile water without preservatives injected toward side of vial. Swirl gently to avoid foaming. Do not shake. Solution should be clear and colorless. Discard if left at room temperature for >6 hr. Vial is for 1-time use only.
- **Subcut:** Administer reconstituted solution without further dilution.

#### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute in 0.9% NaCl. ***Concentration:*** If final concentration is <10 mcg/mL, add 1 mg human albumin per 1 mL of 0.9% NaCl before addition of sargramostim to prevent absorption of the components of the drug delivery system. Do not administer with an in-line filter. ***Rate:*** Usually infused over 2–4 hr. Has been administered over 30–60 min, over 5–12 hr, and as a continuous infusion over 24 hr.
- *After bone marrow transplantation or failure of engraftment:* Administer over 2 hr.
- *Chemotherapy for AML:* Administer over 4 hr.
- *Mobilization of PBPCs or PBPC transplant:* Administer as a continuous infusion over 24 hr.
- **Y-Site Compatibility:** amikacin, aminophylline, aztreonam, bleomycin, butorphanol, calcium gluconate, carboplatin, carmustine, cefazolin, cefepime, cefotaxime, cefotetan, ceftizoxime, ceftriaxone, cefuroxime, cimetidine, cisplatin, clindamycin, cyclophosphamide, cyclosporine, cytarabine, dacarbazine, dactinomycin, dexamethasone sodium phosphate, diphenhydramine, dopamine, doxorubicin hydrochloride, doxycycline, droperidol, etoposide, famotidine, fentanyl, floxuridine, fluconazole, fluorouracil, furosemide, gentamicin, granisetron, heparin, idarubicin, ifosfamide, immune globulin, levofloxacin, magnesium sulfate, mannitol, mechlorethamine, meperidine, mesna, methotrexate, metoclopramide, metronidazole, mitoxantrone, pentostatin, pi-

S

peracillin/tazobactam, potassium chloride, prochlorperazine, promethazine, ranitidine, rituximab, sodium acetate, teniposide, ticarcillin/clavulanate, trastuzumab, trimethoprim/sulfamethoxazole, vinblastine, vincristine, zidovudine.

- **Y-Site Incompatibility:** acyclovir, ampicillin, ampicillin/sulbactam, cefoperazone, chlorpromazine, ganciclovir, haloperidol, hydrocortisone, hydromorphone, hydroxyzine, imipenem/cilastatin, lorazepam, methylprednisolone sodium succinate, mitomycin, morphine, nalbuphine, nesiritide, ondansetron, sodium bicarbonate, tobramycin.
- **Additive Incompatibility:** Do not admix with other medications.

### Patient/Family Teaching

- Instruct patient to notify health care professional if dyspnea or palpitations occur.

### Evaluation/Desired Outcomes

- Acceleration of bone marrow recovery and decreased incidence of infection in patients after autologous and allogenic bone marrow transplantation, bone marrow transplant failure or engraftment delay, chemotherapy for AML, and PBPC transplantation.

## **saxagliptin** (sax-a-**glip**-tin)
Onglyza

***Classification***
Therapeutic: antidiabetics
Pharmacologic: dipeptidyl peptidase-4 inhibitors

**Pregnancy Category B**

### Indications

Adjunct with diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

### Action

Acts as a competitive inhibitor of dipeptidyl peptidase-4 (DPP4) which slows inactivation of incretin hormones, thereby increasing their concentrations and reducing fasting and postprandial glucose concentrations. **Therapeutic Effects:** Improved control of blood glucose.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Metabolized by the liver via the P450 3A4/5 (CYP3A4/5) enzyme system, with conversion to 5–hydroxysaxagliptin, a pharmacologically active metabolite; 24% of saxagliptin is excreted unchanged in urine, 36% of hydroxysaxagliptin is excreted unchanged in urine, 22% is eliminated in feces as unabsorbed drug/metabolites excreted in bile.
**Half-life:** *Saxagliptin*—2.5 hr; *5–hydroxysaxagliptin*—3.1 hr.

TIME/ACTION PROFILE (DDP-4 inhibition)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 hr (4 hr for 5–hydroxysaxagliptin)† | 24 hr |

† Blood levels

### Contraindications/Precautions

**Contraindicated in:** Type 1 diabetes; Diabetic ketoacidosis.
**Use Cautiously in:** Geri: Elderly may be more sensitive to effects; consider age-related decrease in renal function; OB: use during pregnancy only if clearly needed.; Lactation: Use cautiously during breastfeeding; Pedi: Safe and effective use in children <18 yr has not been established.

### Adverse Reactions/Side Effects

**CNS:** headache. **CV:** peripheral edema (↑ with thiazolidinediones). **GI:** abdominal pain, vomiting. **Hemat:** ↓ lymphocyte count. **Endo:** hypoglycemia (↑ with sulfonylureas). **Misc:** hypersensitivity reactions including urticaria and facial edema.

### Interactions

**Drug-Drug:** Strong **CYP3A4/5 inhibitors**, including **ketoconazole**, **atazanavir**, **clarithromycin**, **indinavir**, **itraconazole**, **nefazodone**, **nelfinavir**, **ritonavir**, **saquinavir**, and **telithromycin** ↑ blood levels; daily dose should not exceed 2.5 mg. ↑ risk of hypoglycemia with **sulfonylureas**.

### Route/Dosage

**PO (Adults):** 2.5–5 mg once daily; *strong P450 3A4/5 (CYP3A4/5) inhibitors*—2.5 mg once daily.

#### Renal Impairment

**PO (Adults):** *CCr ≤50 mL/min*—2.5 mg once daily.

### Availability

**Tablets:** 2.5 mg, 5 mg.

## NURSING IMPLICATIONS

### Assessment

- Observe patient for signs and symptoms of hypoglycemic reactions (abdominal pain, sweating, hunger, weakness, dizziness, headache, tremor, tachycardia, anxiety).
- ***Lab Test Considerations:*** Monitor hemoglobin A1C prior to and periodically during therapy.
- Monitor renal function prior to and periodically during therapy.
- May cause ↓ absolute lymphocyte count.

### Potential Nursing Diagnoses

Imbalanced nutrition: more than body requirements (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin.
- **PO:** May be administered without regard to food.

### Patient/Family Teaching

- Instruct patient to take saxagliptin as directed. Take missed doses as soon as remembered, unless it is almost time for next dose; do not double doses. Advise patient to read the Patient Package Insert before starting and with each Rx refill; new information may be available.
- Explain to patient that saxagliptin helps control hyperglycemia but does not cure diabetes. Therapy is usually long term.
- Instruct patient not to share this medication with others, even if they have the same symptoms; it may harm them.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hyperglycemic or hypoglycemic episodes.
- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water, and notify health care professional.
- Instruct patient in proper testing of blood glucose and urine ketones. These tests should be monitored closely during periods of stress or illness and health care professional notified if significant changes occur.
- Advise patient to notify health care professional promptly if swelling of hands, feet, or ankles; rash; hives; or swelling of face, lips, or throat occur.
- Instruct patient to notify health care professional prior to taking any Rx, OTC, and herbal products.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes

- Improved hemoglobin A1C, fasting plasma glucose and 2-hr post-prandial glucose levels.

## scopolamine (scoe-**pol**-a-meen)

Scopace, Transderm-Scop, Transderm-V

***Classification***
Therapeutic: antiemetics
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications

**Transdermal:** Prevention of motion sickness. Management of nausea and vomiting associated with opioid analgesia or general anesthesia/recovery from anesthesia. **IM, IV, Subcut:** Preoperatively to produce amnesia and to decrease salivation and excessive respiratory secretions. **PO:** Symptomatic treatment of postencephalitis parkinsonism and paralysis agitans. Treatment of spasticity. Inhibits excessive motility and hypertonus of GI tract in irritable colon syndrome, mild dysentery, diverticulitis, and pylorospasm. Prevention of motion sickness.

### Action

Inhibits the muscarinic activity of acetylcholine. Corrects the imbalance of acetylcholine and norepinephrine in the CNS, which may be responsible for motion sickness. **Therapeutic Effects:** Reduction of nausea and vomiting. Preoperative amnesia and decreased secretions. Reduction of spasms.

### Pharmacokinetics

**Absorption:** Well absorbed following IM, subcut, and transdermal administration.
**Distribution:** Crosses the placenta and blood-brain barrier.
**Metabolism and Excretion:** Mostly metabolized by the liver.

**Half-life:** 8 hr.

TIME/ACTION PROFILE (antiemetic, sedative properties)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, IM, subcut | 30 min | 1 hr | 4–6 hr |
| IV | 10 min | 1 hr | 2–4 hr |
| Transdermal | 4 hr | unknown | 72 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hypersensitivity to bromides (injection only); Angle-closure glaucoma; Acute hemorrhage; Prostatic hyperplasia (oral only); Pyloric obstruction (oral only); Tachycardia secondary to cardiac insufficiency or thyrotoxicosis.

**Use Cautiously in:** Possible intestinal obstruction; Prostatic hyperplasia; Chronic renal, hepatic, pulmonary, or cardiac disease; OB, Lactation: Safety not established; to minimize exposure to fetus, apply 1 hr prior to cesarean section; Pedi: Geri: ↑ risk of adverse reactions.

## Adverse Reactions/Side Effects

**CNS:** drowsiness, confusion. **EENT:** blurred vision, mydriasis, photophobia. **CV:** tachycardia, palpitations. **GI:** dry mouth, constipation. **GU:** urinary hesitancy, urinary retention. **Derm:** ↓ sweating.

## Interactions

**Drug-Drug:** ↑ anticholinergic effects with **antihistamines**, **antidepressants**, **quinidine**, or **disopyramide**. ↑ CNS depression with **alcohol**, **antidepressants**, **antihistamines**, **opioid analgesics**, or **sedative/hypnotics**. May alter the absorption of other **orally administered drugs** by slowing motility of the GI tract. May ↑ GI mucosal lesions in patients taking oral **wax-matrix potassium chloride preparations**.

**Drug-Natural Products:** ↑ anticholinergic effects with **jimson weed** and **scopolia**.

## Route/Dosage

**Transdermal (Adults):** *Motion sickness*—Apply 1 patch 4 hr prior to travel and then every 3 days (as needed); *Preoperative*—Apply 1 patch the evening before surgery or 1 hr prior to cesarean section (remove 24 hr after surgery).

**PO (Adults):** 0.4–0.8 mg; may repeat every 8–12 hr as needed (dose may be ↑ in parkinsonism and spastic states); for motion sickness, give at least 1 hr before exposure to motion.

**IM, IV, Subcut (Adults):** *Antiemetic/anticholinergic*—0.3–0.6 mg; *antisecretory effect*—0.2–0.6 mg; *amnestic effect*—0.32–0.65 mg; *sedation*—0.6 mg 3–4 times daily.

**IM, IV, Subcut (Children):** *Antiemetic/anticholinergic*—6 mcg/kg or 0.2 mg/m$^2$.

**IM (Children 8–12 yr):** *Antisecretory*—0.3 mg.

**IM (Children 3–8 yr):** *Antisecretory*—0.2 mg.

**IM (Children 7 mo–3 yr):** *Antisecretory*—0.15 mg.

**IM (Children 4–7 mo):** *Antisecretory*—0.1 mg.

## Availability (generic available)

**Transdermal therapeutic system:** Transderm-Scop—1.5 mg scopolamine/patch releases 0.5 mg scopolamine over 3 days, Transderm-V—1.5 mg scopolamine/patch releases 1 mg scopolamine over 3 days. **Tablets:** 0.4 mg. **Injection:** 0.3 mg/mL, 0.4 mg/mL.

# NURSING IMPLICATIONS

## Assessment

- Assess patient for signs of urinary retention periodically during therapy.
- Monitor heart rate periodically during parenteral therapy.
- Assess patient for pain prior to administration. Scopolamine may act as a stimulant in the presence of pain, producing delirium if used without opioid analgesics.
- **Antiemetic:** Assess patient for nausea and vomiting periodically during therapy.

## Potential Nursing Diagnoses

Impaired oral mucous membrane (Indications, Side Effects)

Risk for injury (Side Effects)

## Implementation

- **PO:** Administer at least 1 hr prior to exposure to travel for motion sickness. Tablets may be crushed or dissolved in water to decrease onset.

### IV Administration

- **Direct IV:** ***Diluent:*** Scopolamine should be diluted with sterile water for injection prior to IV administration. ***Concentration:*** Dilute dose with an equal volume of diluent. ***Rate:*** Inject slowly over 2–3 min..
- **Syringe Compatibility:** atropine, butorphanol, chlorpromazine, cimetidine, diphenhydramine, droperidol, fentanyl, glycopyrrolate, hydromorphone, meperidine, metoclopramide, midazolam, morphine, nalbuphine, pentazocine, pentobarbital, perphenazine, prochlorperazine, promethazine, ranitidine, sufentanil, thiopental.

- **Y-Site Compatibility:** fentanyl, heparin, hydrocortisone sodium succinate, hydromorphone, methadone, morphine, potassium chloride, propofol, sufentanil, vitamin B complex with C.

## Patient/Family Teaching

- Instruct patient to take medication as directed. Take missed doses as soon as remembered. Do not double doses.
- May cause drowsiness or blurred vision. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Patient should use caution when exercising and in hot weather; overheating may result in heatstroke.
- Advise patient to avoid concurrent use of alcohol and other CNS depressants with this medication.
- Inform patient that frequent mouth rinses, good oral hygiene, and sugarless gum or candy may minimize dry mouth.
- **Transdermal:** Instruct patient on application of transdermal patches. Apply at least 4 hr (US product) before exposure to travel to prevent motion sickness. Wash hands and dry thoroughly before and after application. Apply to hairless, clean, dry area behind ear; avoid areas with cuts or irritation. Apply pressure over system to ensure contact with skin. System is effective for 3 days. If system becomes dislodged, replace with a new system on another site behind the ear. System is waterproof and not affected by bathing or showering.
- Instruct patient to remove patch and notify health care professional immediately if symptoms of acute angle-closure glaucoma (pain or reddening of the eyes with pupil dilation) occur.
- Caution patients engaging in underwater sports of potentially distorting effects of scopolamine.
- For *perioperative nausea and vomiting*, apply patch the night before surgery, or 1 hr prior to Cesarean section to minimize exposure to infant. Keep patch in place for 24 hr, then remove and discard.
- Advise patient referred for MRI test to discuss patch with referring health care professional and MRI facility to determine if removal of patch is necessary prior to test and for directions for replacing patch.

## Evaluation/Desired Outcomes

- Decrease in salivation and respiratory secretion preoperatively.
- Postoperative amnesia.
- Prevention of motion sickness.
- Prevention and treatment of opioid- or anesthesia-induced nausea and vomiting.
- Reduction in spasms.
- Reduction in excessive GI motility.

# selegiline (se-le-ji-leen)

Apo-Selegiline, Carbex, Eldepryl, Gen-Selegiline, Nu-Selegiline, Novo-Selegiline, SD-Deprenyl, Zelapar

***Classification***

Therapeutic: antiparkinson agents
Pharmacologic: monoamine oxidase type B inhibitors

**Pregnancy Category C**

## Indications

Management of Parkinson's disease (with levodopa or levodopa/carbidopa) in patients who fail to respond to levodopa/carbidopa alone.

## Action

Following conversion by MAO to its active form, selegiline inactivates MAO by irreversibly binding to it at type B (brain) sites. Inactivation of MAO leads to increased amounts of dopamine available in the CNS. **Therapeutic Effects:** Increased response to levodopa/dopamine therapy in Parkinson's disease.

## Pharmacokinetics

**Absorption:** Appears to be well absorbed following oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Metabolism involves some conversion to amphetamine and methamphetamine. 45% excreted in urine as metabolites.
**Half-life:** Unknown; orally disintegrating tablets 1.3 hr.

TIME/ACTION PROFILE (onset of beneficial effects in Parkinson's disease)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 2–3 days | 40–90 min | unknown |
| Orally disintegrating | 5 min | 10–15 min | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent meperidine or opioid analgesic therapy (possible fatal reactions); Concurrent use of SSRIs or tricyclic antidepressants.
**Use Cautiously in:** Doses >10 mg/day (↑ risk of hypertensive reactions with tyramine-containing foods and some medications); History of peptic ulcer disease.

### Adverse Reactions/Side Effects

**CNS:** confusion, dizziness, fainting, hallucinations, insomnia, urges (gambling, sexual), vivid dreams. **Derm:** melanoma. **GI:** nausea, abdominal pain, dry mouth.

### Interactions

**Drug-Drug:** Concurrent use with **meperidine** or other **opioid analgesics** may possibly result in a potentially fatal reaction (excitation, sweating, rigidity, and hypertension; or hypotension and coma). Serotonin syndrome (confusion, agitation, hyperpyrexia, hypertension, seizures) may occur with concurrent use of **nefazodone** or **SSRI antidepressants** (fluoxetine should be discontinued 5 wk prior to selegiline, **venlafaxine** should be discontinued 7 days before selegiline, other agents should be discontinued 2 wk before selegiline). Selegiline should be discontinued 2 wk before **SSRIs** are initiated. Concurrent use with **tricyclic antidepressants** may result in asystole, diaphoresis, hypertension, syncope, behavioral changes, altered consciousness, hyperpyrexia, tremors, muscle rigidity, and seizures (avoid concurrent use; discontinue selegiline 2 wk before initiating tricyclic antidepressant therapy). May initially ↑ risk of side effects of **levodopa/carbidopa** (dose of levodopa/carbidopa may need to be ↓ by 10–30%).
**Drug-Food:** Doses >10 mg/day may produce hypertensive reactions with **tyramine-containing foods** (see Appendix M).

### Route/Dosage

**PO (Adults):** 5 mg bid, with breakfast and lunch (some patients may require further dividing of doses—2.5 mg 4 times daily).
**PO (Adults):** *Orally disintegrating tablets*—1.25 mg once daily for at least 6 wk. After 6 wk, may increase to 2.5 mg if effect not achieved and patient is tolerating medication.

### Availability (generic available)

**Capsules:** 5 mg. **Tablets:** 5 mg. **Orally disintegrating tablets:** 1.25 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for signs and symptoms of Parkinson's disease (tremor, muscle weakness and rigidity, ataxic gait) prior to and during therapy.
- Assess blood pressure periodically during therapy.

### Potential Nursing Diagnoses

Impaired physical mobility (Indications)
Risk for injury (Indications, Side Effects)

### Implementation

- Do not confuse selegiline with sertraline.
- An attempt to reduce the dose of levodopa/carbidopa by 10–30% may be made after 2–3 days of selegiline therapy.
- **PO:** Administer 5-mg tablet with breakfast and lunch.
- Administer *orally disintegrating tablets* in the morning, before breakfast and without liquid. Remove tablet gently from blister pack with clean, dry hands immediately before administering. Do not attempt to push tablet through backing. Tablet will disintegrate within seconds when placed on tongue. Avoid food or liquid within 5 min of administering orally disintegrating tablets.

### Patient/Family Teaching

- Instruct patient to take medication as directed. Take missed doses as soon as possible, but not if late afternoon or evening or almost time for next dose. Do not double doses. Caution patient that taking more than the prescribed dose may increase side effects and place patient at risk for hypertensive crisis if foods containing tyramine are consumed (see Appendix M).
- Advise patients taking selegiline ≥20 mg/day to avoid large amounts of tyramine-containing foods (see Appendix M), alcoholic beverages, large quantities of caffeine-containing beverages, or OTC or herbal cough or cold medications.
- Inform patient and family of the signs and symptoms of MAO inhibitor–induced hypertensive crisis (severe headache, chest pain, nausea, vomiting, photosensitivity, enlarged pupils). Advise patient to notify health care professional immediately if severe headache or any other unusual symptom occurs.
- Caution patient to change positions slowly to minimize orthostatic hypotension.
- Instruct patient to consult health care professional before taking any other Rx, OTC, or herbal products with selegiline.

- Advise patient to have periodic skin exams to check for lesions that may be melanoma.
- Advise patient to notify health care professional if or new or increased gambling, sexual, or other intense urges occur.
- Advise patient that increasing fluids, sugarless gum or candy, ice, or saliva substitutes may help minimize dry mouth. Consult health care professional if dry mouth continues for >2 wk.
- Inform patient that selegiline may cause hallucinations.

### Evaluation/Desired Outcomes

- Improved response to levodopa/carbidopa in patients with Parkinson's disease.

## selegiline transdermal

(se-**le**-ji-leen)

Emsam

***Classification***

Therapeutic: antidepressants

Pharmacologic: monoamine oxidase type B inhibitors

**Pregnancy Category C**

### Indications

Major depressive disorder.

### Action

Following conversion by MAO to its active form, selegiline inactivates MAO by irreversibly binding to it at type B (brain) sites; this results in higher levels of monoamine neurotransmitters in the brain (dopamine, serotonin, norepinephrine).
**Therapeutic Effects:** Decreased symptoms of depression.

### Pharmacokinetics

**Absorption:** 25–30% of patch content is transdermally absorbed, blood levels are higher than those following oral administration because there is less first pass hepatic metabolism.
**Distribution:** Rapidly distributes to all body tissues; crosses the blood brain barrier.
**Metabolism and Excretion:** Mostly metabolized by the liver, primarily by the CYP2A6, CYP2C9, and CYP3A4/5 enzyme systems. 10% excreted in urine as metabolites, 2% in feces; negligible renal excretion of unchanged drug.
**Half-life:** 18–25 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| transdermal | unknown | 2 or more wk | 2 wk (after discontinuation) |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pheochromocytoma; Concurrent selective serotonin re-uptake inhibitors (fluoxetine, paroxetine citalopram, escitalopram and others), nonselective serotonin re-uptake inhibitors (venlafaxine, duloxetine), tricyclic antidepressants (amitriptyline, imipramine, and others), carbamazepine, oxcarbazepine, amphetamines, vasoconstrictors (ephedrine, pseudoephedrine), bupropion, meperidine, tramadol, methadone, propoxyphene, dextromethorphan, mirtazapine cyclobenzaprine, other MAO inhibitors (isocarboxazid, phenelzine, tranylcypromine) oral selegiline, sympathomimetic amines, amphetamines, cocaine or local anesthetics with vasoconstrictors; St. John's wort; Alcohol.
**Use Cautiously in:** Elective surgery within 10 days; benzodiazepines, mivacurium, rapacuronium, fentanyl, morphine and codeine may be used cautiously; May ↑ risk of suicide attempt/ideation especially during early treatment or dose adjustment; risk may be greater in children or adolescents (safe use in children <12 yr not established); History of mania; Dosing at 9 mg/24 hr or 12 mg/24 hr requires dietary modification (avoid foods containing large amounts of tyramine); Geri: May be more susceptible to orthostatic hypotension; OB: Use only if benefit outweighs risk to the fetus; Lactation: Safety not established; Pedi: Safe use in children and adolescents not established.

### Adverse Reactions/Side Effects

**CNS:** insomnia, abnormal thinking, agitation, amnesia, worsening of mania/hypomania. **EENT:** tinnitus. **Resp:** ↑ cough. **CV:** HYPERTENSIVE CRISIS, chest pain, orthostatic hypotension, peripheral edema. **GI:** diarrhea, altered taste, anorexia, constipation, flatulence, gastroenteritis, vomiting. **GU:** dysmenorrhea, metrorrhagia, urinary frequency. **Derm:** application site reactions, acne, ecchymoses, pruritus, sweating. **MS:** mylagia, neck pain, pathologic fracture. **Neuro:** paresthesia.

### Interactions

**Drug-Drug:** Concurrent **selective serotonin re-uptake inhibitors** (**fluoxetine**, **paroxetine**, **citalopram**, **escitalopram** and others), **nonselective serotonin re-uptake inhibitors** (**venlafaxine**, **duloxetine**), **tricyclic antidepressants** (**amitriptyline**, **imipramine**, and others), **carbamazepine**, **oxcarbazepine**, **amphetamines**, **vasoconstrictors** (**ephedrine**, **pseudoephedrine**, **phenylprolanolamine**), **bupropion**, **meperidine**, **tramadol**, **methadone**, **propoxyphene**, **dextromethorphan**, **mirtazapine**, **cyclobenzaprine**, other MAO inhibitors (**isocarboxazid**, **phenelzine**, **tranylcypromine**) oral **selegiline**, **sympathomimetic amines**, **amphetamines**, **cocaine**, or **local anesthetics with vasoconstrictors**; these may all ↑ risk of hypertensive crisis. (**Fluoxetine** should not be used within 2 wk of initiating therapy).

**Drug-Natural Products: St. John's wort** may ↑ risk of hypertensive crisis.

### Route/Dosage

**Transdermal (Adults):** 6 mg/24 hr, if necessary, may be increased at 2-wk intervals in increments of 3 mg, up to 12 mg/24 hr.

### Availability

**Transdermal patch :** 6 mg/24 hr, 9 mg/24 hr, 12 mg/24 hr.

## NURSING IMPLICATIONS

### Assessment

- Assess mental status, mood changes, and anxiety level frequently. Assess for suicidal tendencies, agitation, irritability, and unusual changes in behavior especially during early therapy. Monitor pediatric patients face-to-face weekly during first 4 wk, every other week for 4 wk, at 12 wk, and as clinically indicated during therapy. Restrict amount of drug available to patient.
- Monitor blood pressure and pulse rate before and frequently during therapy. Report significant changes promptly.
- ***Toxicity and Overdose:*** Concurrent ingestion of tyramine-rich foods and many medications may result in a life-threatening hypertensive crisis. Signs and symptoms of hypertensive crisis include chest pain, tachycardia or bradycardia, severe headache, neck stiffness or soreness, nausea and vomiting, sweating, photosensitivity, and enlarged pupils. If hypertensive crisis occurs, discontinue selegiline transdermal and administer phentolamine 5 mg or labetalol 20 mg slowly IV to control hypertension. Manage fever with external cooling. Monitor patient closely until symptoms have stabilized.

### Potential Nursing Diagnoses

Ineffective coping (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- **Transdermal:** Apply system to dry, intact skin on the upper torso such as chest, back, upper thigh, or outer surface of the upper arm once every 24 hr at the same time each day. Avoid areas that are hairy, oily, irritated, broken, scarred, or calloused. Wash area gently with soap and warm water, rinse thoroughly. Allow skin to dry completely before application. Apply immediately after removing from package. Do not alter the system (i.e., cut) in any way before application. Remove liner from adhesive layer and press firmly in place with palm of hand for 30 sec, especially around the edges, to make sure contact is complete. Remove used system and fold so that adhesive edges are together. Only one selegiline patch should be worn at a time. Dispose away from children and pets. Apply new system to a different site. Wash hands thoroughly with soap and water to remove any medicine that may have gotten on them.

### Patient/Family Teaching

- Instruct patient to apply patch as directed. Advise patients and caregivers to read the *Medication Guide about Using Antidepressants in Children and Teenagers*. Inform patient that improvement may be noticed after 1 to several weeks of therapy. Advise patient not to discontinue therapy without consulting health care professional.
- Caution patient to avoid alcohol and CNS depressants during and for at least 2 wk after therapy has been discontinued; they may precipitate a hypertensive crisis. Contact health care professional immediately if symptoms of hypertensive crisis develop. Patients taking 9 mg/24 hr or 12 mg/24 hr must avoid foods or beverages containing tyramine (see Appendix M) from the first day of the increased dose through 2 wk after discontinuation of selegiline transdermal therapy.
- Advise patient to avoid exposing application site to external sources of direct heat such as heating pads, electric blankets, heat lamps, saunas, hot tubs, heated water beds, and prolonged direct sunlight.

- May cause dizziness or drowsiness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Caution patient to change positions slowly to minimize orthostatic hypotension. Geriatric patients are at increased risk for this side effect.
- Advise patient referred for MRI test to discuss patch with referring health care professional and MRI facility to determine if removal of patch is necessary prior to test and for directions for replacing patch.
- Advise patients and caregivers to notify health care professional if severe headache, neck stiffness, heart racing or palpitations, anxiety, agitation, panic attacks, insomnia, irritability, hostility, aggressiveness, impulsivity, akathisia, hypomania, mania, change in behavior, worsening of depression, or suicidal ideation occur, especially during initial therapy or during changes in dose.
- Instruct patient to consult health care professional before taking any Rx, OTC, or herbal products. Caution patient to avoid use of St. John's Wort and the analgesics meperidine, propoxyphene, tramadol, or methadone during therapy.
- Advise patient to notify health care professional of medication regimen before treatment or surgery. If possible, therapy should be discontinued at least 2 wk before surgery.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes

- Improved mood in depressed patients.
- Decreased anxiety.
- Increased appetite.
- Improved energy level.
- Improved sleep. Evaluate effectiveness of therapy periodically.

## sennosides (sen-oh-sides)

Black-Draught, Ex-Lax, Ex-Lax Chocolated, Fletchers' Castoria, Maximum Relief Ex-Lax, Sena-Gen, Senexon, Senokot, SenokotXTRA

***Classification***

Therapeutic: laxatives
Pharmacologic: stimulant laxatives

**Pregnancy Category C**

### Indications

Treatment of constipation, particularly when associated with: Slow transit time, Constipating drugs, Irritable or spastic bowel syndrome, Neurologic constipation.

### Action

Active components of senna (sennosides) alter water and electrolyte transport in the large intestine, resulting in accumulation of water and increased peristalsis. **Therapeutic Effects:** Laxative action.

### Pharmacokinetics

**Absorption:** Minimally absorbed following oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE (laxative effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 6–12 hr† | unknown | 3–4 days |

†May take as long as 24 hr

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Abdominal pain of unknown cause, especially if associated with fever; Rectal fissures; Ulcerated hemorrhoids; Known alcohol intolerance (some liquid products).
**Use Cautiously in:** Chronic use (may lead to laxative dependence); Possible intestinal obstruction; OB, Lactation: Safety not established.

### Adverse Reactions/Side Effects

**GI:** cramping, diarrhea, nausea. **GU:** pink-red or brown-black discoloration of urine. **F and E:** electrolyte abnormalities (chronic use or dependence). **Misc:** laxative dependence.

### Interactions

**Drug-Drug:** May ↓ absorption of other **orally administered drugs** because of ↓ transit time.

### Route/Dosage

Larger doses have been used to treat/prevent opioid-induced constipation. Consult labeling of individual OTC products for more speceific dosing information.
**PO (Adults and Children >12 yr):** 12–50 mg 1–2 times daily.
**PO (Children 6–12 yr):** 6–25 mg 1–2 times daily.
**PO (Children 2–6 yr):** 3–12.5 mg 1–2 times daily.

### Availability (generic available)

### Noted as sennoside content

**Tablets:** 6 mg[OTC], 8.6 mg[OTC], 15 mg [OTC], 17 mg[OTC], 25 mg[OTC]. **Granules:** 15 mg/5 mL[OTC], 20 mg/5 mL[OTC]. **Syrup:** 8.8 mg/5 mL[OTC]. **Liquid:** 25 mg/15 mL[OTC], 33.3 mg/mL senna concentrate[OTC]. ***In combination with:*** psyllium and docusate[OTC]. See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for abdominal distention, presence of bowel sounds, and usual pattern of bowel function.
- Assess color, consistency, and amount of stool produced.

### Potential Nursing Diagnoses

Constipation (Indications)
Diarrhea (Side Effects)

### Implementation

- **PO:** Take with a full glass of water. Administer at bedtime for evacuation 6–12 hr later. Administer on an empty stomach for more rapid results.
- Shake oral solution well before administering.
- Granules should be dissolved or mixed in water or other liquid before administration.

### Patient/Family Teaching

- Advise patient that laxatives should be used only for short-term therapy. Long-term therapy may cause electrolyte imbalance and dependence.
- Encourage patient to use other forms of bowel regulation, such as increasing bulk in the diet, increasing fluid intake, and increasing mobility. Normal bowel habits are individualized and may vary from 3 times/day to 3 times/wk.
- Inform patient that this medication may cause a change in urine color to pink, red, violet, yellow, or brown.
- Instruct patients with cardiac disease to avoid straining during bowel movements (Valsalva maneuver).
- Advise patient not to use laxatives when abdominal pain, nausea, vomiting, or fever is present.

### Evaluation/Desired Outcomes

- A soft, formed bowel movement.

# sertaconazole

(ser-ta-**kon**-a-zole)
Ertaczo

***Classification***
Therapeutic: antifungals
Pharmacologic: imidazoles

### Indications

Topical treatment of interdigital tinea pedis in immunocompetent patients.

### Action

Inhibits synthesis of ergosterol, a component of fungal cell membrane, resulting in cytoplasmic leakage and fungal cell death. **Therapeutic Effects:** Resolution of fungal infection. **Spectrum:** Active against *Trichophyton rubrum*, *Trichophyton mentagrophytes*, *Epidermophyton floccosum*.

### Pharmacokinetics

**Absorption:** Minimal systemic absorption.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| top | within 2 wk | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to sertaconazole or other imidazoles.
**Use Cautiously in:** OB: Use only if clearly needed; Lactation, Pedi: Lactation and children <12 yr (safety not established).

### Adverse Reactions/Side Effects

**Derm:** application site reactions, burning, contact dermatitis, dry skin, tenderness.

### Interactions

**Drug-Drug:** None noted.

### Route/Dosage

**Topical (Adults and Children >12 yr):** Apply twice daily for 4 wk.

### Availability

**Cream:** 2%.

## NURSING IMPLICATIONS

### Assessment

- Inspect involved areas of skin and mucous membranes before and frequently during therapy. Increased skin irritation may indicate need to discontinue medication.

### Potential Nursing Diagnoses

Impaired skin integrity (Indications)
Risk for infection (Indications)

### Implementation

- **Topical:** Apply small amount to cover affected areas between the toes and the immediately surrounding healthy skin. Dry affected area well if applied after bathing. Avoid the use of occlusive wrappings or dressings unless directed by health care professional.

### Patient/Family Teaching

- Instruct patient to apply medication as directed for full course of therapy, even if symptoms have improved. Emphasize the importance of avoiding the eyes, nose, mouth, and other mucous membranes. Do not use for disorders other than for which it was prescribed.
- Patients with athlete's foot should be taught to wear well-fitting, ventilated shoes and to change shoes and socks at least once a day.
- Advise patient to report increased skin irritation, redness, itching, burning, blistering, swelling, oozing, or lack of response to therapy to health care professional.

### Evaluation/Desired Outcomes

- Decrease in skin irritation and resolution of infection. If no clinical improvement is seen in 2 wk, diagnosis should be reviewed. Recurrent fungal infections may be a sign of systemic illness.

## sertraline (ser-tra-leen)

Zoloft

***Classification***

Therapeutic: antidepressants
Pharmacologic: selective serotonin reuptake inhibitors (SSRIs)

**Pregnancy Category C**

### Indications

Major depressive disorder. Panic disorder. Obsessive-compulsive disorder (OCD). Post-traumatic stress disorder (PTSD). Social anxiety disorder (social phobia). Premenstrual dysphoric disorder (PMDD). **Unlabeled Use:** Generalized anxiety disorder (GAD).

### Action

Inhibits neuronal uptake of serotonin in the CNS, thus potentiating the activity of serotonin. Has little effect on norepinephrine or dopamine. **Therapeutic Effects:** Antidepressant action. Decreased incidence of panic attacks. Decreased obsessive and compulsive behavior. Decreased feelings of intense fear, helplessness, or horror. Decreased social anxiety. Decrease in premenstrual dysphoria.

### Pharmacokinetics

**Absorption:** Appears to be well absorbed after oral administration.
**Distribution:** Extensively distributed throughout body tissues.
**Protein Binding:** 98%.
**Metabolism and Excretion:** Extensively metabolized by the liver; one metabolite has some antidepressant activity; 14% excreted unchanged in feces.
**Half-life:** 24 hr.

TIME/ACTION PROFILE (antidepressant effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 2–4 wk | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent MAO inhibitor therapy (may result in serious, potentially fatal reactions); Concurrent pimozide; Oral concentrate contains alcohol; avoid in patients with known intolerance.
**Use Cautiously in:** Severe hepatic or renal impairment; Patients with a history of mania; History of suicide attempt; OB, Lactation: Pregnancy or lactation; Pedi: May ↑ risk of suicide attempt/ideation especially during early treatment or dose adjustment; risk may be greater in children or adolescents.

### Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, SUICIDAL THOUGHTS, dizziness, drowsiness, fatigue, headache, insomnia, agitation, anxiety, confusion, emotional lability, impaired concentration, manic reaction, nervousness, weakness, yawning. **EENT:** pharyngitis, rhinitis, tinnitus, visual abnormalities. **CV:** chest pain, palpitations. **GI:** diarrhea, dry mouth, nausea, abdominal pain, altered taste, anorexia, constipation, dyspepsia, flatulence, ↑ appetite, vomiting. **GU:** sexual dysfunction, menstrual disorders, urinary disorders, urinary frequency. **Derm:** ↑ sweating, hot flashes, rash. **F and E:** hyponatremia. **MS:** back pain, myalgia. **Neuro:** tremor, hypertonia, hypoesthesia, paresthesia, twitching. **Misc:** SEROTONIN SYNDROME, fever, thirst.

### Interactions

**Drug-Drug:** Serious, potentially fatal reactions (hyperthermia, rigidity, myoclonus, autonomic

instability, with fluctuating vital signs and extreme agitation, which may proceed to delirium and coma) may occur with concurrent **MAO inhibitors**. MAO inhibitors should be stopped at least 14 days before sertraline therapy. Sertraline should be stopped at least 14 days before MAO inhibitor therapy. May ↑ **pimozide** levels and the risk of potentially life-threatening cardiovascular reactions. Drugs that affect serotonergic neurotransmitter systems, including **linezolid**, **tramadol**, and **triptans**, ↑ risk of serotonin syndrome. May ↑ sensitivity to **adrenergics** and ↑ the risk of serotonin syndrome. Concurrent use with **alcohol** is not recommended. May ↑ levels/effects of **warfarin**, **phenytoin**, **tricyclic antidepressants**, some **benzodiazepines (alprazolam)**, **cloazapine**, or **tolbutamide**. ↑ risk of bleeding with **NSAIDS**, **aspirin**, **clopidogrel**, or **warfarin**. **Cimetidine** ↑ blood levels and effects.

**Drug-Natural Products:** ↑ risk of serotinergic side effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage

### Depression/OCD

**PO (Adults):** 50 mg/day as a single dose in the morning or evening initially; after several weeks may be ↑ at weekly intervals up to 200 mg/day, depending on response.

**PO (Children 13–17 yr):** *OCD*—50 mg once daily.

**PO (Children 6–12 yr):** *OCD*—25 mg once daily.

### Panic Disorder

**PO (Adults):** 25 mg/day initially, may ↑ after 1 wk to 50 mg/day.

### PTSD

**PO (Adults):** 25 mg once daily for 7 days, then ↑ to 50 mg once daily; may then be ↑ if needed at intervals of at least 7 days (range 50–200 mg once daily).

### Social Anxiety Disorder

**PO (Adults):** 25 mg once daily initially, then 50 mg once daily; may be ↑ at weekly intervals up to 200 mg/day.

### PMDD

**PO (Adults):** 50 mg/day initially either daily or daily during luteal phase of cycle. Daily dosing may be titrated upward in 50-mg increments at the beginning of a cycle. In luteal phase–only dosing a 50 mg/day titration step for 3 days at the beginning of each luteal phase dosing period should be used (range 50–150 mg/day).

### Availability (generic available)

**Tablets:** 25 mg, 50 mg, 100 mg. **Cost:** *Generic*—25 mg $87.98/90, 50 mg $89.98/90, 100 mg $99.96/90. **Capsules:** 🍁 50 mg, 🍁 100 mg. **Oral concentrate (12% alcohol):** 20 mg/mL in 60-mL bottles. **Cost:** $65.28/60 mL.

## NURSING IMPLICATIONS

### Assessment

- Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient. Risk may be increased in children, adolescents, and adults ≤24 yr. After starting therapy, children, adolescents, and young adults should be seen by health care professional at least weekly for 4 wk, every 3 wk for next 4 wk, and on advice of health care professional thereafter.
- Monitor appetite and nutritional intake. Weigh weekly. Notify health care professional of continued weight loss. Adjust diet as tolerated to support nutritional status.
- Assess for serotonin syndrome (mental changes [agitation, hallucinations, coma], autonomic instability [tachycardia, labile blood pressure, hyperthermia], neuromuscular aberrations [hyper-reflexia, incoordination], and/or GI symptoms [nausea, vomiting, diarrhea]), especially in patients taking other serotonergic drugs (SSRIs, SNRIs, triptans).
- **Depression:** Monitor mood changes. Inform health care professional if patient demonstrates significant increase in anxiety, nervousness, or insomnia.
- Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient.
- **OCD:** Assess patient for frequency of obsessive-compulsive behaviors. Note degree to which these thoughts and behaviors interfere with daily functioning.
- **Panic Attacks:** Assess frequency and severity of panic attacks.
- **PTSD:** Assess patient for feelings of fear, helplessness, and horror. Determine effect on social and occupational functioning.
- **Social Anxiety Disorder:** Assess patient for symptoms of social anxiety disorder (blushing, sweating, trembling, tachycardia during interactions with new people, people in authority, or groups) periodically during therapy.
- **Premenstrual Dysphoric Disorder:** Assess patient for symptoms of premenstrual dys-

phoric disorder (feeling angry, tense, or tired; crying easily, feeling sad or hopeless; arguing with family or friends for no reason; difficulty sleeping or paying attention; feeling out of control or unable to cope; having cramping, bloating, food craving, or breast tenderness) periodically during therapy.

### Potential Nursing Diagnoses

Ineffective coping (Indications)
Risk for injury (Side Effects)
Sexual dysfunction (Side Effects)

### Implementation

- Do not confuse sertraline with selegiline.
- Periodically reassess dose and continued need for therapy.
- **PO:** Administer as a single dose in the morning or evening.

### Patient/Family Teaching

- Instruct patient to take sertraline as directed. Take missed doses as soon as possible and return to regular dosing schedule. Do not double doses.
- May cause drowsiness or dizziness. Caution patient to avoid driving and other activities requiring alertness until response to the drug is known.
- Advise patient, family, and caregivers to look for suicidality, especially during early therapy or dose changes. Notify health care professional immediately if thoughts about suicide or dying, attempts to commit suicide; new or worse depression or anxiety; agitation or restlessness; panic attacks; insomnia; new or worse irritability, aggressiveness, acting on dangerous impulses, mania, or other changes in mood or behavior or if symptoms of serotonin syndrome occur.
- Advise patient to avoid alcohol or other CNS depressant drugs during therapy and to consult with health care professional before taking other medications with sertraline.
- Inform patient that frequent mouth rinses, good oral hygiene, and sugarless gum or candy may minimize dry mouth. If dry mouth persists for more than 2 wk, consult health care professional regarding use of saliva substitute.
- Advise patient to wear sunscreen and protective clothing to prevent photosensitivity reactions.
- Instruct female patient to inform health care professional if pregnancy is planned or suspected or if she is breastfeeding.
- Advise patient to notify health care professional if headache, weakness, nausea, anorexia, anxiety, or insomnia persists.
- Emphasize the importance of follow-up exams to monitor progress. Encourage patient participation in psychotherapy to improve coping skills.

### Evaluation/Desired Outcomes

- Increased sense of well-being.
- Renewed interest in surroundings. May require 1–4 wk of therapy to obtain antidepressant effects.
- Decrease in obsessive-compulsive behaviors.
- Decrease in frequency and severity of panic attacks.
- Decrease in symptoms of PTSD.
- Decrease in social anxiety disorder.
- Decrease in symptoms of premenstrual dysphoric disorder.

## sevelamer (se-vel-a-mer)

Renagel, Renvela

***Classification***

Therapeutic: electrolyte modifiers
Pharmacologic: phosphate binders

**Pregnancy Category C**

S

### Indications

Reduction of serum phosphate levels in patients with hyperphosphatemia associated with end-stage renal disease.

### Action

A polymer that binds phosphate in the GI tract, preventing its absorption. **Therapeutic Effects:** Decreased serum phosphate levels and reduction in the consequences of hyperphosphatemia (ectopic calcification, secondary hyperparathyroidism with osteitis fibrosa).

### Pharmacokinetics

**Absorption:** Not absorbed; action is local (in GI tract).
**Distribution:** Unknown.
**Metabolism and Excretion:** Eliminated in feces.
**Half-life:** Unknown.

TIME/ACTION PROFILE (decrease in serum phosphate levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 5 days | 2 wk | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Hypophosphatemia; Bowel obstruction.
**Use Cautiously in:** Dysphagia, swallowing disorders, severe GI motility disorders, or major GI tract surgery; OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects
**GI:** diarrhea, dyspepsia, vomiting, constipation, flatulence, nausea.

### Interactions
**Drug-Drug:** May ↓ absorption of other drugs and ↓ effectiveness, especially **drugs whose efficacy is dependent on tightly controlled blood levels**. ↓ absorption of **ciprofloxacin**.

### Route/Dosage
**PO (Adults):** 800–1600 mg with each meal; may titrate by 800 mg every 2 wk to achieve target serum phosphorus levels.

### Availability
**Tablets:** 400 mg, 800 mg. **Powder for oral suspension:** 800 mg/packet, 2400 mg/packet.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for GI side effects periodically during therapy.
- ***Lab Test Considerations:*** Monitor serum phosphorous, calcium, bicarbonate, and chloride levels periodically during therapy.

### Potential Nursing Diagnoses
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- Doses of concurrent medications, especially antiarrhythmics, should be spaced at least 1 hr before or 3 hr after sevelamer.
- **PO:** Administer with meals. Do not break, chew, or crush tablets; contents expand in water.
- Place contents of powder packet in a cup and mix thoroughly with at least 1 ounce of water for the 0.8 g dose or 2 ounces of water for the 2.4 g dose packet. Stir mixture vigorously (it does not dissolve) and drink entire preparation within 30 minutes or resuspend the preparation right before drinking.

### Patient/Family Teaching
- Instruct patient to take sevelamer with meals as directed and to adhere to prescribed diet.
- Caution patient to space concurrent medications at least 1 hr before or 3 hr after sevelamer.
- Advise patient to notify health care professional if GI effects are severe or prolonged.

### Evaluation/Desired Outcomes
- Decrease in serum phosphorous concentration to ≤6 mg/dL. Dose adjustment is based on serum phosphorous concentrations.

## **sibutramine** (si-**byoo**-tra-meen)
Meridia

***Classification***
Therapeutic: weight control agents
Pharmacologic: appetite suppressants

**Schedule IV**

**Pregnancy Category C**

### Indications
Treatment of obesity in patients with body mass index ≥30 kg/m² (or ≥27 kg/m² in patients with diabetes, hypertension, or other risk factors) in conjunction with other interventions (dietary restriction, exercise); used to produce and maintain weight loss.

### Action
Acts as an inhibitor of the reuptake of serotonin, norepinephrine, and dopamine; increases the satiety-producing effects of serotonin. **Therapeutic Effects:** Decreased hunger with resultant weight loss in obese patients.

### Pharmacokinetics
**Absorption:** 77% absorbed, then rapidly undergoes extensive first-pass hepatic metabolism (via the P450 3A4 metabolic pathway) to active metabolites (M1 and M2).
**Distribution:** Widely and rapidly distributed; high concentrations in liver and kidneys.
**Metabolism and Excretion:** Active metabolites are extensively metabolized to inactive metabolites that are mostly excreted by the kidneys.
**Half-life:** *M1 metabolite*—14 hr; *M2 metabolite*—16 hr.

TIME/ACTION PROFILE (appetite suppression/weight loss)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | days | 4 wk | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Anorexia nervosa; Concurrent use of other centrally acting appetite suppressants, MAO inhibitors, SSRIs, sumatriptan, naratriptan, zolmitriptan, dihydroergotamine, dextromethorphan, meperidine, pentazo-

cine, fentanyl, lithium, or tryptophan; Organic causes of obesity (untreated hypothyroidism); Severe hepatic/renal impairment; Uncontrolled/poorly controlled hypertension; History of coronary artery disease, CHF, arrhythmias, or stroke; Excessive consumption of alcohol; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** History of seizures; Angle-closure glaucoma; Geri: Geriatric patients; Pedi: Children <16 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, SEIZURES, headache, insomnia, CNS stimulation, dizziness, drowsiness, emotional lability, mania, nervousness, psychosis. **EENT:** laryngitis/pharyngitis, rhinitis, sinusitis. **CV:** hypertension, palpitations, tachycardia, vasodilation. **GI:** anorexia, constipation, dry mouth, altered taste, dyspepsia, ↑ appetite, nausea. **GU:** dysmenorrhea. **Derm:** ↑ sweating, rash. **Misc:** SEROTONIN SYNDROME.

### Interactions

**Drug-Drug:** Concurrent use of **other centrally acting appetite suppressants, MAO inhibitors, SSRIs, naratriptan, frovatriptan, rizatriptan, zolmitriptan, sumatriptan, dihydroergotamine, dextromethorphan, meperidine, pentazocine, fentanyl, lithium,** or **tryptophan** may result in potentially fatal "serotonin syndrome" (avoid concurrent use; allow 2 wk between use of MAO inhibitors and sibutramine). Concurrent use of **decongestants** may ↑ the risk of hypertension. **Drugs that affect the P450 3A4 enzyme system** may alter the effects of sibutramine. **Ketoconazole, cimetidine,** and **erythromycin** decrease metabolism and may ↑ blood levels and effects.

### Route/Dosage

**PO (Adults):** 10 mg once daily; may be ↑ to 15 mg/day after 4 wk. Patients who do not tolerate an initial dose of 10 mg/day may be started on 5 mg/day.

### Availability

**Capsules:** 5 mg, 10 mg, 15 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor patients for weight loss and adjust concurrent medications (antihypertensives, antidiabetics, lipid-lowering agents) as needed.
- Monitor blood pressure and heart rate regularly during therapy. Increases in blood pressure or heart rate, especially during early therapy, may require decrease in dose or discontinuation of sibutramine.
- Assess for serotonin syndrome (mental changes [agitation, hallucinations, coma], autonomic instability [tachycardia, labile blood pressure, hyperthermia], neuromuscular aberrations [hyper-reflexia, incoordination], and/or GI symptoms [nausea, vomiting, diarrhea]), especially in patients taking other serotonergic drugs (SSRIs, SNRIs, triptans).

### Potential Nursing Diagnoses

Disturbed body image (Indications)
Imbalanced nutrition: more than body requirements (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- **PO:** Capsules should be taken once daily without regard to meals.

### Patient/Family Teaching

- Instruct patient to take medication as directed and not to exceed dose recommended. Medication may need to be discontinued gradually. Advise patient to read *Patient Information* before taking and with each Rx refill, changes may occur.
- Advise patient to notify health care professional if signs of allergic reaction (rash, hives) or serotonin syndrome occur.
- Caution patient to avoid using other CNS depressants or excessive amounts of alcohol with this medication.
- Advise patient to consult health care professional before taking other Rx, OTC, or herbal products, especially weight-reducing agents, decongestants, antidepressants, cough suppressants, lithium, dihydroergotamine, tripatans, or tryptophan.
- Emphasize the need for follow-up visits to monitor pulse and blood pressure.

### Evaluation/Desired Outcomes

- Slow, consistent weight loss when combined with a reduced-calorie diet. If this does not occur, therapy should be re-evaluated. Loss of at least 10% of initial body weight should occur within 1 yr.

## **sildenafil** (sil-**den**-a-fil)
Revatio, Viagra

***Classification***
Therapeutic: erectile dysfunction agents, vasodilators
Pharmacologic: phosphodiesterase type 5 inhibitors

**Pregnancy Category B**

## Indications
*Viagra:* Erectile dysfunction. *Revatio:* Pulmonary arterial hypertension.

## Action
*Viagra:* Enhances effects of nitric oxide released during sexual stimulation. Nitric oxide activates guanylate cyclase, which produces increased levels of cyclic guanosine monophosphate (cGMP). cGMP produces smooth muscle relaxation of the corpus cavernosum, which promotes increased blood flow and subsequent erection. cGMP also leads to vasodilation of the pulmonary vasculature. Sildenafil inhibits the enzyme phosphodiesterase type 5 (PDE5), PDE5 inactivates cGMP. *Revatio:* Produces vasodilation of the pulmonary vascular bed. **Therapeutic Effects:** *Viagra:* Enhanced blood flow to the corpus cavernosum and erection sufficient to allow sexual intercourse. Requires sexual stimulation. *Revatio:* Improved exercise tolerance and delay worsening of disease.

## Pharmacokinetics
**Absorption:** Rapidly absorbed (41%) after oral administration.
**Distribution:** Widely distributed to tissues; negligible amount in semen.
**Protein Binding:** 96%.
**Metabolism and Excretion:** Mostly metabolized by the liver (by P450 3A4 enzyme system); one metabolite is active and accounts for 20% or more of drug effect. Metabolites excreted mostly (80%) in feces; 13% excreted in urine.
**Half-life:** 4 hr (for sildenafil and active metabolite).

TIME/ACTION PROFILE (vasodilation, ability to produce erection)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 1 hr | 30–120 min | up to 4 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent organic nitrate therapy (nitroglycerin, isosorbide mononitrate, isosorbide dinitrate), ritonavir, ketoconazole, and itraconazole; Pulmonary veno-occlusive disease; **Viagra:** OB, Pedi: Newborns, women, children.
**Use Cautiously in:** Serious underlying cardiovascular disease (including history of MI, stroke, or serious arrhythmia within 6 mo), cardiac failure, or coronary artery disease with unstable angina; History of CHF, coronary artery disease, uncontrolled hypertension (BP >170/110 mm Hg) or hypotension (BP <90/50 mm Hg), dehydration, autonomic dysfunction, or severe left ventricular outflow obstruction; Concurrent treatment with antihypertensives or glipizide; Renal impairment (CCr <30 mL/min, hepatic impairment; all result in ↑ blood levels; ↓ dose required with Viagra); Anatomic penile deformity (angulation, cavernosal fibrosis, Peyronie disease); Conditions associated with priapism (sickle cell anemia, multiple myeloma, leukemia); Bleeding disorders or active peptic ulceration; History of sudden severe vision loss or nonarteritic ischemic optic neuropathy (NAION); may ↑ risk of recurrence; Retinitis pigmentosa; Concurrent bosentan, erythromycin, or saquinavir (↓ dose recommended); Alpha adrenergic blockers (patients should be on stable dose of alpha blockers before starting sildenafil); Geri: ↑ blood levels and may require lower doses; consider age-related decrease in cardiac, hepatic, and renal function as well as concurrent drug therapy and chronic disease states; Lactation: Lactation; Pedi: ***Revatio*** Safe use in pediatric patients with pulmonary hypertension not established; May ↑ risk of bleeding with **warfarin**.

## Adverse Reactions/Side Effects
**CNS:** headache, dizziness, insomnia. **EENT:** epistaxis, hearing loss, nasal congestion, vision loss. **CV:** MYOCARDIAL INFARCTION, SUDDEN DEATH, CARDIOVASCULAR COLLAPSE. **GI:** dyspepsia, diarrhea. **GU:** priapism, urinary tract infection. **Derm:** flushing, rash. **MS:** mylagia. **Neuro:** paresthesias.

## Interactions
**Drug-Drug:** ↑ risk of hypotension with **nitrates** in any form or **ritonavir**; concurrent use is contraindicated because of the risk of serious and potentially fatal hypotension. Blood levels and effects, including the risk of hypotension may be ↑ by **enzyme inhibitors** including **cimetidine**, **erythromycin**, **tacrolimus**, **ketoconazole**, **itraconazole**, and **protease inhibitor antiretrovirals** including **nelfinavir**, **indinavir**, **saquinavir** (initial dose of sildenafil for erectile dysfunction should be ↓ to 25 mg). ↑ risk of hypotension with **alpha adrenergic blockers** and acute ingestion of **alcohol**. **Rifampin**, **bosentan**, **barbiturates**, **carbamazepine**, **phenytoin**, **efavirenz**, **nevirapine**, **rifampin** or **rifabutin** may ↓ blood levels and effects; dose adjustments may be necessary in the treat-

ment of pulmonary arterial hypertension. ↑ levels of **bosentan**. Use cautiously with **glipizide**.

### Route/Dosage

#### Viagra (for erectile dysfunction)

**PO (Adults):** 50 mg taken 1 hr before sexual activity (range 25–100 mg taken 30 min–4 hr before sexual activity); not more than once daily; *Concurrent use with alpha-blocker antihypertensives*—do not use 50–100 mg dose within 4 hr of alpha blocker, 25-mg dose may be taken anytime.

**PO (Geriatric Patients ≥65 yr or with concurrent enzyme inhibitors):** 25 mg taken 1 hr before sexual activity (range 25–100 mg taken 30 min–4 hr before sexual activity); not more than once daily.

#### Hepatic/Renal Impairment

**PO (Adults):** 25 mg taken 1 hr before sexual activity (range 25–100 mg taken 30 min–4 hr before sexual activity); not more than once daily.

#### Revatio (for pulmonary arterial hypertension)

**PO (Adults):** 20 mg 3 times daily; dose adjustments may be necessary for concurrent bosentan, barbiturates, carbamazepine, phenytoin, efavirenz, nevirapine, rifampin, or rifabutin.

### Availability

**Tablets (Viagra):** 25 mg, 50 mg, 100 mg. **Cost:** All strengths $115.99/10. **Tablets (Revatio):** 20 mg. **Cost:** $1,091.58/90.

## NURSING IMPLICATIONS

### Assessment

- **Viagra:** Determine erectile dysfunction before administration. Sildenafil has no effect in the absence of sexual stimulation.
- **Revatio:** Monitor hemodynamic parameters and exercise tolerance prior to and periodically during therapy.

### Potential Nursing Diagnoses

Sexual dysfunction (Indications)
Risk for activity intolerance (Indications)

### Implementation

- **PO:** Dose for *erectile dysfunction* is usually administered 1 hr before sexual activity. May be administered 30 min–4 hr before sexual activity.
- Dose for *pulmonary hypertension* is administered 3 times daily without regard to food. Doses should be spaced 4–6 hr apart.

### Patient/Family Teaching

- Instruct patient to take sildenafil as directed. For *erectile dysfunction,* take approximately 1 hr before sexual activity and not more than once per day.
- Advise patient that *Viagra* is not indicated for use in women.
- Caution patient not to take sildenafil concurrently with alpha-adrenergic blockers (unless on a stable dose) or nitrates. If chest pain occurs after taking tadalafil, instruct patient to seek immediate medical attention. Advise patient taking sildenafil for pulmonary hypertension to consult health care professional prior to taking other Rx, OTC, or herbal products.
- Instruct patient to notify health care professional promptly if erection lasts longer than 4 hr or if experience sudden or decreased vision loss in one or both eyes or loss or decrease in hearing, ringing in the ears, or dizziness.
- Inform patient that sildenafil offers no protection against sexually transmitted diseases. Counsel patient that protection against sexually transmitted diseases and HIV infection should be considered.

### Evaluation/Desired Outcomes

- Male erection sufficient to allow intercourse.
- Increased exercise tolerance.

## silodosin (si-lo-do-sin)

Rapaflo

***Classification***

Therapeutic: benign prostatic hyperplasia (BPH) agents
Pharmacologic: alpha-adrenergic blockers

**Pregnancy Category B**

### Indications

Treatment of the signs/symptoms or Benign Prostatic Hyperplasia (BPH).

### Action

Blocks post synaptic alpha$_1$-adrenergic receptors. Decreases contractions in the smooth muscle of the prostatic capsule. **Therapeutic Effects:** Decreased signs and symptoms of BPH (urinary urgency, hesitancy, nocturia).

### Pharmacokinetics

**Absorption:** 32% absorbed following oral administration.
**Distribution:** Unknown.

**Protein Binding:** 97%.
**Metabolism and Excretion:** Extensively metabolized (CYP3A4, UGT2B7 and other metabolic pathways involved); 33.5% excreted in urine and 54.9% in feces.
**Half-life:** 13.3 hr.

TIME/ACTION PROFILE (effect on symptoms of BPH)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 24 hr | 24 hr* |

*Following discontinuation.

## Contraindications/Precautions

**Contraindicated in:** Not indicated for use in women or children; Severe renal impairment (CrCl less than 30 mL/min); Severe hepatic impairment (Child-Pugh score of 10 or greater); Concurrent use of strong CYP3A4 inhibitors or P-gp inhibitors.
**Use Cautiously in:** Moderate inhibitors of the CYP3A4 enzyme system; Cataract surgery (may cause Intraoperative Floppy Iris Syndrome); Moderate renal impairment (lower dose recommended); Geri: Increased risk of orthostatic hypotention; Pedi: Safety and effectiveness have not been established.

## Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **CV:** orthostatic hypotension. **GI:** diarrhea. **GU:** retrograde ejaculation.

## Interactions

**Drug-Drug: Strong inhibitors of CYP3A4** (including **ketoconazole**, **clarithromycin**, **itraconazole**, and **ritonavir**) ↓ metabolism, ↑ blood levels and risk of toxicity; concurrent use is contraindicated. Concurrent use with **moderate CYP3A4 inhibitors** (including **diltiazem**, **erythromycin**, and **verapamil**) may ↑ silodosin levels; use cautiously. Concurrent use with **antihypertensives** (including **calcium channel blockers** and **thiazides**), other **alpha blockers** and **phosphodiesterase type 5 inhibitors** (including **sildenafil** and **tadalafil**) ↑ the risk of dizziness and orthostatic hypotension. **P-glycoprotein (P-gp) inhibitors** including **cyclosporine**) may ↑ levels; concurrent use not recommended.

## Route/Dosage

**PO (Adults):** 8 mg once daily.

### Renal Impairment

**PO (Adults CCr 30–50 mL/min):** 4 mg once daily.

## Availability

**Capsules:** 4 mg, 8 mg.

# NURSING IMPLICATIONS

## Assessment

- Assess patient for symptoms of benign prostatic hyperplasia (urinary hesitancy, feeling of incomplete bladder emptying, interruption of urinary stream, impairment of size and force of urinary stream, terminal urinary dribbling, straining to start flow, frequency, dysuria, nocturia, urgency) before and periodically during therapy.
- Assess patient for orthostatic reaction and syncope. Monitor BP (lying and standing) and during initial therapy and periodically thereafter.
- Rule out prostatic carcinoma before therapy; symptoms are similar.

## Potential Nursing Diagnoses

Risk for injury (Side Effects)
Noncompliance (Patient/Family Teaching)

## Implementation

- **PO:** Administer with food at the same meal each day.

## Patient/Family Teaching

- Instruct patient to take medication with the same meal each day.
- May cause dizziness. Caution patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Caution patient to avoid sudden changes in position to decrease orthostatic hypotension, especially patients with low blood pressure or concurrently taking antihypertensives.
- Advise patient to consult health care professional before taking any other Rx, OTC, or herbal products, especially cough, cold, or allergy remedies.
- Instruct patient to notify health care professional of medication regimen before any surgery. Patients planning cataract surgery should notify opthalmologist of silodosin therapy prior to surgery.
- Inform patient that silodosin may cause retrograde ejaculation (orgasm with reduced or no semen). This does not pose a safety concern and is reversible with discontinuation.
- Emphasize the importance of follow-up exams to evaluate effectiveness of medication.
- Geri: Assess risk for falls; implement fall prevention program and instruct patient and family in preventing falls at home.

## Evaluation/Desired Outcomes

- Decreased symptoms of benign prostatic hyperplasia.

## simethicone (si-meth-i-kone)

Degas, Extra Strength Gas-X, Extra Strength Maalox GRF Gas Relief Formula, Flatulex, Gas-X, Genasyme, Maalox GRF Gas Relief Formula, Maximum Strength Mylanta Gas, Mylanta Gas, Mylicon, Ovol, Ovol-40, Phazyme

***Classification***
Therapeutic: antiflatulent

**Pregnancy Category UK**

### Indications
Relief of painful symptoms of excess gas in the GI tract that may occur postoperatively or as a consequence of: Air swallowing, Dyspepsia, Peptic ulcer, Diverticulitis.

### Action
Causes the coalescence of gas bubbles. Does not prevent the formation of gas. **Therapeutic Effects:** Passage of gas through the GI tract by belching or passing flatus.

### Pharmacokinetics
**Absorption:** No systemic absorption occurs.
**Distribution:** Not systemically distributed.
**Metabolism and Excretion:** Excreted unchanged in the feces.
**Half-life:** Unknown.

TIME/ACTION PROFILE (antiflatulent effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | immediate | unknown | 3 hr |

### Contraindications/Precautions
**Contraindicated in:** Not recommended for infant colic.
**Use Cautiously in:** Abdominal pain of unknown cause, especially when accompanied by fever; OB: Lactation: Has been used safely.

### Adverse Reactions/Side Effects
None significant.

### Interactions
**Drug-Drug:** None significant.

### Route/Dosage
**PO (Adults):** 40–125 mg qid, after meals and at bedtime (up to 500 mg/day).
**PO (Children 2–12 yr):** 40 mg 4 times daily.
**PO (Children <2 yr):** 20 mg 4 times daily (up to 240 mg/day).

### Availability (generic available)
**Chewable tablets:** 40 mg[OTC], 80 mg[OTC], 125 mg[OTC], 150 mg[OTC]. **Tablets:** 60 mg[OTC], 80 mg[OTC], 95 mg[OTC]. **Capsules:** 95 mg[OTC], 125 mg[OTC]. **Drops:** 40 mg/0.6 mL[OTC], 40 mg/1 mL[OTC], 95 mg/1.425 mL[OTC]. ***In combination with:*** antacids[OTC]. See Appendix B.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for abdominal pain, distention, and bowel sounds prior to and periodically throughout course of therapy. Frequency of belching and passage of flatus should also be assessed.

### Potential Nursing Diagnoses
Acute pain (Indications)

### Implementation
- **PO:** Administer after meals and at bedtime for best results. Shake liquid preparations well prior to administration. Chewable tablets should be chewed thoroughly before swallowing, for faster and more complete results.
- Drops can be mixed with 30 mL of cool water, infant formula, or other liquid as directed. Shake well before using.

### Patient/Family Teaching
- Explain to patient the importance of diet and exercise in the prevention of gas. Also explain that this medication does not prevent the formation of gas.
- Advise patient to notify health care professional if symptoms are persistent.

### Evaluation/Desired Outcomes
- Decrease in abdominal distention and discomfort.

**simvastatin, See HMG-CoA REDUCTASE INHIBITORS (statins).**

## sirolimus (sir-oh-li-mus)

Rapamune

***Classification***
Therapeutic: immunosuppressants

**Pregnancy Category C**

## Indications
Prevention of organ rejection in allogenic kidney transplantation (with corticosteroids and cyclosporine). Sirolimus is also eluted from the Cypher coronary stent used in angioplasty procedures.

## Action
Inhibits T-lymphocyte activation/proliferation, which occurs as a response to antigenic and cytokine stimulation; antibody production is also inhibited. **Therapeutic Effects:** Decreased incidence and severity of organ rejection.

## Pharmacokinetics
**Absorption:** Rapidly absorbed following oral administration (14% bioavailability).
**Distribution:** Concentrates in erythrocytes; distributes to heart, intestines, kidneys, liver, lungs, muscle, spleen, and testes in high concentrations.
**Protein Binding:** 92%.
**Metabolism and Excretion:** Extensively metabolized (some metabolism by P450 3A4 system); 91% excreted in feces.
**Half-life:** 62 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 1–2 hr | 24 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Alcohol intolerance/sensitivity (solution contains ethanol); Concurrent ketoconazole, voriconazole, itraconazole, erythromycin, telithromycin, clarithromycin, rifampin, rifabutin, or grapefruit juice; Severe hepatic impairment; OB, Lactation: Pregnancy and lactation.
**Use Cautiously in:** Mild to moderate hepatic impairment; OB: Women with childbearing potential; Pedi: Children <13 yr (safety not established).

## Adverse Reactions/Side Effects
Reflects combined therapy with corticosteroids and cyclosporine.
**CNS:** insomnia. **Resp:** interstitial lung disease. **CV:** edema, hypotension, pericardial effusion. **GI:** hepatic toxicity. **GU:** renal impairment. **Derm:** acne, rash, thrombocytopenic purpura. **F and E:** hypokalemia. **Hemat:** leukopenia, thrombocytopenia, anemia. **Metab:** hyperlipidemia. **MS:** arthralgias. **Neuro:** tremor. **Misc:** infection (including activation of latent viral infections such as BK virus-associated nephropathy), lymphocele, lymphoma, ↓ wound healing.

## Interactions
**Drug-Drug: Cyclosporine (modified)** greatly ↑ blood levels (administer sirolimus 4 hr after cyclosporine). Drugs which inhibit the CYP3A4 enzyme system may be expected to ↑ blood levels and the risk of adverse reactions. **Ketoconazole**, **voriconazole**, **itraconazole**, **clarithromycin**, **erythromycin**, **telithromycin** significantly ↑ blood levels (concurrent use is contraindicated). Blood levels are also ↑ by **diltiazem** and **verapamil** (monitor sirolimus levels and adjust dose as necessary) and may be ↑ by **nicardipine**, **verapamil**, **clotrimazole**, **fluconazole**, **troleandomycin**, **metoclopramide**, **cimetidine**, **danazol**, and **protease inhibitor antiretrovirals**. **Rifampin** and **rifabutin** ↑ metabolism by stimulating the CYP3A4 enzyme system and significantly ↓ blood levels. Blood levels may also be ↓ by **carbamazepine**, **phenobarbital**, **phenytoin**, and **rifapentine**. Risk of renal impairment may be ↑ by concurrent use of other **nephrotoxic agents**. Concurrent use with **tacrolimus** and **corticosteroids** in lung transplantation may ↑ risk of anastamotic dehiscence; fatalites have been reported (not approved for this use). Concurrent use with **tacrolimus** and **corticosteroids** in liver transplantation may ↑ risk of hepatic artery thrombosis; fatalites have been reported (not approved for this use). May ↓ antibody response to and ↑ risk of adverse reactions to **live-virus vaccines** (avoid vaccination).
**Drug-Natural Products:** Concomitant use with **echinacea** and **melatonin** may interfere with immunosuppression. **St. John's wort** may ↑ blood levels and the risk of toxicity.
**Drug-Food: Grapefruit juice** ↓ CYP3A4 metabolism and ↑ levels; do not use as a diluent and avoid concurrent ingestion.

## Route/Dosage
**PO (Adults and Children ≥13 yr):** 6-mg loading dose, followed by 2 mg/day maintenance dose. *Dosing following cyclosporine withdrawal*—Patients at low to moderate risk for rejection after transplantation may be withdrawn from cyclosporine over 4–8 wk beginning 2–4 mo after transplant. Thereafter, sirolimus dose should be titrated upward to maintain a whole blood trough level of 12–14 ng/mL. Clinical assessment should also be used to gauge dose. Dose changes can be made at 7–14 day intervals. The following formula may also be used: sirolimus maintenance dose = current dose x (target concentration/current concentration). If a large increase is needed, a loading dose may be given and blood levels reassessed 3–4 days later. Loading dose may be calculated by the following formula: sirolimus loading dose = 3 × (new maintenance

dose-current maintenance dose). Loading doses >40 mg should be spread over 2 days.
**PO (Adults and Children ≥13 yr and <40 kg):** 3 mg/m² loading dose, followed by 1 mg/m²/day maintenance dose. *See adjustments above for doses following cyclosporine withdrawal.*

### Hepatic Impairment

**PO (Adults and Children ≥13 yr and <40 kg):** ↓ maintenance dose by 33%; loading dose is unchanged.

### Availability

**Tablet:** 1 mg, 2 mg. **Cost:** 1 mg $246.98/30.
**Oral solution:** 1 mg/mL in 60 mL bottles (with oral syringes). **Cost:** $480.95/60 mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure closely during therapy. Hypertension is a common complication of sirolimus therapy and should be treated.
- ***Lab Test Considerations:*** Monitor sirolimus blood levels when dose forms are changed and in patients likely to have altered drug metabolism, patients ≥13 yr who weigh <40 kg, patients with hepatic impairment, and during concurrent administration of drugs that may interact with sirolimus. Trough concentrations of ≥15 ng/mL are associated with an ↑ in adverse effects.
- Monitor patients for hyperlipidemia. May require additional interventions to treat hyperlipidemia.
- May cause anemia, leukopenia, thrombocytopenia, and hypokalemia.
- May cause ↑ AST, ↑ ALT, hypophosphatemia,and hyperglycemia.

### Potential Nursing Diagnoses

Risk for infection (Adverse Reactions)

### Implementation

- Therapy with sirolimus should be started as soon as possible post-transplant. Concurrent therapy with cyclosporine and corticosteroids is recommended. Sirolimus should be taken 4 hr after cyclosporine (MODIFIED, Neoral).
- Sirolimus should be ordered only by physicians skilled in immunosuppressive therapy, with the staff and facilities to manage renal transplant patients.
- Antimicrobial prophylaxis for *Pneumocystis jirovecii* pneumonia for 1 year and for cytomegalovirus protection for 3 months post-transplant are recommended.
- **PO:** Administer consistently with or without food. Do not administer with or mix with grapefruit juice.
- To dilute from bottle, use amber oral dose syringe to withdraw prescribed amount. Empty sirolimus from syringe into a glass or plastic container holding at least 2 oz (60 mL) of water or orange juice; do not use other liquids. Stir vigorously and drink at once. Refill container with at least 4 oz of additional liquid, stir vigorously, and drink at once.
- If using the pouch, empty entire contents of pouch into at least 2 oz of water or orange juice; do not use other liquids. Stir vigorously and drink at once. Refill container with at least 4 oz of additional liquid, stir vigorously, and drink at once.
- Store bottles and pouches in refrigerator. Solution may develop a slight haze when refrigerated; allow to stand at room temperature and shake gently until haze disappears. Sirolimus may remain in syringe at room temperature or refrigerated for up to 24 hr. Discard syringe after one use.

### Patient/Family Teaching

- Instruct patient to take sirolimus at the same time each day, as directed. Advise patient to avoid taking with or diluting with grapefruit juice. Do not skip or double up on missed doses. Do not discontinue medication without advice of health care professional.
- Reinforce the need for lifelong therapy to prevent transplant rejection. Review symptoms of rejection for transplanted organ and stress need to notify health care professional immediately if they occur.
- Advise patient to wear sunscreen and protective clothing due to increased risk of skin cancer.
- Caution patient to notify health care professional if signs of infection occur.
- Advise patient of the risk of taking sirolimus during pregnancy. Caution women of childbearing yr to use effective contraception prior to, during, and for 12 wk following therapy.
- Emphasize the importance of repeated lab tests during sirolimus therapy.

### Evaluation/Desired Outcomes

- Prevention of transplanted kidney rejection.

## sitagliptin (sit-a-glip-tin)
Januvia

***Classification***
Therapeutic: antidiabetics
Pharmacologic: enzyme inhibitors

**Pregnancy Category B**

### Indications
Adjunct to diet and exercise to improve glycemic control in patients with type 2 diabetes mellitus; may be used as monotherapy or combination therapy with metformin and a thiazolidinedione and/or a sulfonylurea.

### Action
Inhibits the enzyme dipeptidyl peptidase-4 (DPP-4), which slows the inactivation of incretin hormones, resulting in increased levels of active incretin hormones. These hormones are released by the intestine throughout the day, and are involved in regulation of glucose homeostasis. Increased/prolonged incretin levels, increase insulin release and decrease glucagon levels.
**Therapeutic Effects:** Improved control of blood glucose.

### Pharmacokinetics
**Absorption:** 87% absorbed following oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** 79% excreted unchanged in urine, minor metabolism.
**Half-life:** 12.4 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 1–4 hr | 24 hr |

### Contraindications/Precautions
**Contraindicated in:** Type 1 diabetes mellitus; Diabetic ketoacidosis; hypersensitivity.
**Use Cautiously in:** Renal impairment (dose ↓ required for CCr <50 mL/min; History of pancreatitis; OB: Use in pregnancy only if clearly needed. Lactation: Excretion into breast milk unknown; Pedi: Safety not established; Geri: Consider age-related ↓ in renal function when determining dose.

### Adverse Reactions/Side Effects
**CNS:** headache. **GI:** PANCREATITIS, nausea, diarrhea. **Resp:** upper respiratory tract infection, nasopharyngitis. **Misc:** hypersensitivity reactions including anaphylaxis, angioedema, and exfoliative skin conditions (Stevens-Johnson syndrome), rash, urticaria.

### Interactions
**Drug-Drug:** May slightly ↑ serum digoxin levels; monitoring recommended.

### Route/Dosage
**PO (Adults):** 100 mg once daily.

#### Renal Impairment
**PO (Adults):** *CCr 30– <50ml/min*—50 mg once daily; *CCr <30 mL/min*—25 mg once daily.

### Availability
**Tablets:** 25 mg, 50 mg, 100 mg. ***In combination with:*** metformin (Janumet) See Appendix B.

## NURSING IMPLICATIONS

### Assessment
- Observe patient for signs and symptoms of hypoglycemic reactions (abdominal pain, sweating, hunger, weakness, dizziness, headache, tremor, tachycardia, anxiety).
- Monitor for signs of pancreatitis (nausea, vomiting, anorexia, persistent severe abdominal pain, sometimes radiating to the back) during therapy. If pancreatitis occurs, discontinue sitagliptin and monitor serum and urine amylase, amylase/creatinine clearance ratio, electrolytes, serum calcium, glucose, and lipase.
- ***Lab Test Considerations:*** Monitor hemoglobin A1C prior to and periodically during therapy.
- Monitor renal function prior to and periodically during therapy.

### Potential Nursing Diagnoses
Imbalanced nutrition: more than body requirements (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation
- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin.
- **PO:** May be administered without regard to food.

### Patient/Family Teaching
- Instruct patient to take sitagliptin as directed. Take missed doses as soon as remembered, unless it is almost time for next dose; do not double doses.
- Explain to patient that sitagliptin helps control hyperglycemia but does not cure diabetes. Therapy is usually long term.

- Instruct patient not to share this medication with others, even if they have the same symptoms; it may harm them.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hyperglycemic or hypoglycemic episodes.
- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water, and notify health care professional.
- Instruct patient in proper testing of blood glucose and urine ketones. These tests should be monitored closely during periods of stress or illness and health care professional notified if significant changes occur.
- Instruct patient to notify health care professional prior to taking any Rx, OTC, and herbal products.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- Advise patient to stop taking sitagliptin and notify health care professional promptly if symptoms of hypersensitivity reactions (rash; hives; swelling of face, lips, tongue, and throat; difficulty in breathing or swallowing) or pancreatitis occur.

### Evaluation/Desired Outcomes

- Improved hemoglobin A1C, fasting plasma glucose and 2-hr post-prandial glucose levels.

## sodium bicarbonate

(**soe**-dee-um bye-**kar**-boe-nate)

Baking Soda, Bell-Ans, Citrocarbonate, Neut, Soda Mint

***Classification***

Therapeutic: antiulcer agents

Pharmacologic: alkalinizing agents

**Pregnancy Category C**

### Indications

**PO, IV:** Management of metabolic acidosis. **PO, IV:** Used to alkalinize urine and promote excretion of certain drugs in overdosage situations (phenobarbital, aspirin). **PO:** Antacid. **Unlabeled Use:** Stabilization of acid-base status in cardiac arrest and treatment of life-threatening hyperkalemia.

### Action

Acts as an alkalinizing agent by releasing bicarbonate ions. Following oral administration, releases bicarbonate, which is capable of neutralizing gastric acid. **Therapeutic Effects:** Alkalinization. Neutralization of gastric acid.

### Pharmacokinetics

**Absorption:** Following oral administration, excess bicarbonate is absorbed and results in metabolic alkalosis and alkaline urine.
**Distribution:** Widely distributed into extracellular fluid.
**Metabolism and Excretion:** Sodium and bicarbonate are excreted by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE (PO = antacid effect; IV = alkalinization)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | immediate | 30 min | 1–3 hr |
| IV | immediate | rapid | unknown |

### Contraindications/Precautions

**Contraindicated in:** Metabolic or respiratory alkalosis; Hypocalcemia; Hypernatremia; Excessive chloride loss; As an antidote following ingestion of strong mineral acids; Patients on sodium-restricted diets (oral use as an antacid only); Renal failure (oral use as an antacid only); Severe abdominal pain of unknown cause, especially if associated with fever (oral use as an antacid only).
**Use Cautiously in:** CHF; Renal insufficiency; Concurrent corticosteroid therapy; Chronic use as an antacid (may cause metabolic alkalosis and possible sodium overload); Pedi: May ↑ risk of cerebral edema in children with diabetic ketoacidosis.

### Adverse Reactions/Side Effects

**CV:** edema. **GI:** *PO*—flatulence, gastric distention. **F and E:** metabolic alkalosis, hypernatremia, hypocalcemia, hypokalemia, sodium and water retention. **Local:** irritation at IV site. **Neuro:** tetany, cerebral hemorrhage (with rapid injection in infants).

### Interactions

**Drug-Drug:** Following oral administration, may ↓ absorption of **ketoconazole**. Concurrent use with **calcium-containing antacids** may lead to milk-alkali syndrome. Urinary alkalinization may result in ↓ **salicylate** or **barbiturate** blood levels; ↑ blood levels of **quinidine**, **mexiletine**,

**flecainide**, or **amphetamines**; ↑ risk of crystalluria from **fluoroquinolones**; ↓ effectiveness of **methenamine**. May negate the protective effects of **enteric-coated products** (do not administer within 1–2 hr of each other).

### Route/Dosage

Contains 12 mEq of sodium/g.

### Alkalinization of Urine

**PO (Adults):** 48 mEq (4 g) initially. Then 12–24 mEq (1–2 g) q 4 hr (up to 48 mEq q 4 hr) or 1 tsp of powder q 4 hr as needed.
**PO (Children):** 1–10 mEq/kg (84–840 mg/kg) per day in divided doses.
**IV (Adults and Children):** 2–5 mEq/kg as a 4–8 hr infusion.

### Antacid

**PO (Adults):** *Tablets/powder*—325 mg–2 g 1–4 times daily or ½ tsp q 2 hr as needed. *Effervescent powder*—3.9–10 g in water after meals; patients >60 yr should receive 1.9–3.9 g after meals.

### Systemic Alkalinization/Cardiac Arrest

**IV (Adults and Children and Infants):** *Cardiac arrest/urgent situations*—1 mEq/kg; may repeat 0.5 mEq/kg q 10 min. *Less urgent situations*—2–5 mEq/kg as a 4–8 hr infusion.

### Renal Tubular Acidosis

**PO (Adults):** 0.5–2 mEq/kg/day in 4–5 divided doses.
**PO (Children):** 2–3 mEq/kg/day in 3–4 divided doses.

### Availability (generic available)

**Oral powder:** (20.9 mEq Na/½ tsp) in 120-, 240-, 480-, and 2400-g containers[OTC]. **Tablets:** 325 mg (3.9 mEq Na/tablet)[OTC], 500 mg (6.0 mEq Na/tablet[OTC], 520 mg (6.2 mEq Na/tablet)[OTC], 650 mg (7.7 mEq Na/tablet)[OTC]. **Solution for injection:** 4.2% (0.5 mEq/mL) in 2.5-, 5-, and 10-mL prefilled syringes, 5% (0.6 mEq/mL) in 500-mL containers, 7.5% (0.9 mEq/mL) in 50-mL vials and prefilled syringes and 200-mL vials, 8.4% (1 mEq/mL) in 10- and 50-mL vials and prefilled syringes. **Neutralizing additive solution for injection:** 4% (0.48 mEq/mL) in 5-mL vials, 4.2% (0.5 mEq/mL) in 6-mL vials.

## NURSING IMPLICATIONS

### Assessment

- **IV:** Assess fluid balance (intake and output, daily weight, edema, lung sounds) throughout therapy. Report symptoms of fluid overload (hypertension, edema, dyspnea, rales/crackles, frothy sputum) if they occur.
- Assess patient for signs of acidosis (disorientation, headache, weakness, dyspnea, hyperventilation), alkalosis (confusion, irritability, paresthesia, tetany, altered breathing pattern), hypernatremia (edema, weight gain, hypertension, tachycardia, fever, flushed skin, mental irritability), or hypokalemia (weakness, fatigue, U wave on ECG, arrhythmias, polyuria, polydipsia) throughout therapy.
- Observe IV site closely. Avoid extravasation, as tissue irritation or cellulitis may occur. If infiltration occurs, confer with physician or other health care professional regarding warm compresses and infiltration of site with lidocaine or hyaluronidase.
- **Antacid:** Assess patient for epigastric or abdominal pain and frank or occult blood in the stool, emesis, or gastric aspirate.
- ***Lab Test Considerations:*** Monitor serum sodium, potassium, calcium, bicarbonate concentrations, serum osmolarity, acid-base balance, and renal function prior to and periodically throughout therapy.
- Obtain arterial blood gases (ABGs) frequently in emergency situations and during parenteral therapy.
- Monitor urine pH frequently when used for urinary alkalinization.
- Antagonizes effects of pentagastrin and histamine during gastric acid secretion test. Avoid administration during the 24 hr preceding the test.

### Potential Nursing Diagnoses

Impaired gas exchange (Indications)
Excess fluid volume (Side Effects)

### Implementation

- This medication may cause premature dissolution of enteric-coated tablets in the stomach.
- **PO:** Tablets must be taken with a full glass of water.
- When used in treatment of peptic ulcers, may be administered 1 and 3 hr after meals and at bedtime.

#### IV Administration

- **Direct IV:** Used in cardiac arrest or urgent situations. ***Diluent:*** Use premeasured ampules or prefilled syringes to ensure accurate dose. ***Rate:*** Administer by rapid bolus. Flush IV line before and after administration to prevent incompatible medications used in arrest management from precipitating.
- **Continuous Infusion:** ***Diluent:*** May be diluted in dextrose, saline, and dextrose/saline combinations. Premixed infusions are already

diluted and ready to use. ***Rate:*** May be administered over 4–8 hr.

- **Y-Site Compatibility:** acyclovir, amifostine, amikacin, aminophylline, asparaginase, atropine, aztreonam, bivalirudin, bumetanide, cefazolin, cefepime, ceftazidime, ceftizoxime, ceftriaxone, chloramphenicol, cimetidine, cladribine, clindamycin, cyclophosphamide, cyclosporine, cytarabine, daptomycin, daunorubicin, dexamethasone sodium phosphate-exmedetomidine, digoxin, docetaxel, doxorubicin, enalaprilat, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fentanyl, filgrastim, fluconazole, fludarabine, furosemide, gallium nitrate, gemcitabine, gentamicin, granisetron, heparin, hydrocortisone sodium succinate, ifosfamide, indomethacin, insulin, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, melphalan, mesna, meperidine, methylprednisolone sodium succinate, metoclopramide, metoprolol, metronidazole, milrinone, morphine, nafcillin, nitroglycerin, nitroprusside, paclitaxel, palonosetron, pantoprazole, pemetrexed, penicillin G potassium, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, propranolol, propofol, protamine, ranitidine, remifentanil, tacrolimus, teniposide, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, tolazoline, vasopressin, vitamin B complex with C, voriconazole.
- **Y-Site Incompatibility:** allopurinol, amiodarone, amphotericin B, amphotericin B cholesteryl sulfate complex, ampicillin, anidulafungin, calcium chloride, calcium gluconate, caspofungin, cefotaxime, cefoxitin, cefuroxime, diazepam, diphenhydramine, dobutamine, doxorubicin liposome, doxycycline, epinephrine, fenoldopam, ganciclovir, haloperidol, hydroxyzine, idarubicin, imipenem/cilastatin, inamrinone, isoproterenol, lansoprazole, leucovorin, midazolam, nalbuphine, norepinephrine, ondansetron, phenytoin, prochlorperazine, promethazine, quinupristin/dalfopristin, sargramostim, trimethoprim/sulfamethoxazole, verapamil, vincristine, vinorelbine.
- **Solution Incompatibility:** Do not add to Ringer's solution, LR, or Ionosol products, as compatibility varies with concentration.

## Patient/Family Teaching

- Instruct patient to take medication as directed. Take missed doses as soon as remembered unless almost time for next dose.
- Review symptoms of electrolyte imbalance with patients on chronic therapy; instruct patient to notify health care professional if these symptoms occur.
- Advise patient not to take milk products concurrently with this medication. Renal calculi or hypercalcemia (milk-alkali syndrome) may result.
- Emphasize the importance of regular follow-up examinations to monitor serum electrolyte levels and acid-base balance and to monitor progress.
- **Antacid:** Advise patient to avoid routine use of sodium bicarbonate for indigestion. Dyspepsia that persists >2 wk should be evaluated by a health care professional.
- Advise patient on sodium-restricted diet to avoid use of baking soda as a home remedy for indigestion.
- Instruct patient to notify health care professional if indigestion is accompanied by chest pain, difficulty breathing, or diaphoresis or if stools become dark and tarry.

## Evaluation/Desired Outcomes

- Increase in urinary pH.
- Clinical improvement of acidosis.
- Enhanced excretion of selected overdoses and poisonings.
- Decreased gastric discomfort.

S

HIGH ALERT

# sodium chloride (IV/oral)

(**soe**-dee-um **klor**-ide)

Slo-Salt

***Classification***

Therapeutic: mineral and electrolyte replacements/supplements

**Pregnancy Category C**

## Indications

**IV:** Hydration and provision of NaCl in deficiency states. Maintenance of fluid and electrolyte status in situations in which losses may be excessive (excess diuresis or severe salt restriction). 0.45% ("half-normal saline") solution is most commonly used for hydration and the treatment of hyperosmolar diabetes (hypotonic). 0.9% ("normal

saline") solution is used for: Replacement, Treatment of metabolic alkalosis, A priming fluid for hemodialysis, To begin and end blood transfusions. Small volumes of 0.9% NaCl (preservative-free or bacteriostatic) are used to reconstitute or dilute other medications. Hypertonic solution (3%, 5%) may be required in situations in which rapid replacement of sodium is necessary: Hyponatremia, Hypochloremia, Renal failure, Heart failure. **PO:** Prevention of or management of volume depletion due to salt restriction or heat prostration when excessive sweating occurs during exposures to high temperatures. **Irrigating Solutions:** 0.9% and 0.45% may be used as irrigating solutions. **Concentrated sodium chloride:** Used as an additive to parenteral fluid therapy in very specific situations.

## Action

Sodium is a major cation in extracellular fluid and helps maintain water distribution, fluid and electrolyte balance, acid-base equilibrium, and osmotic pressure. Chloride is the major anion in extracellular fluid and is involved in maintaining acid-base balance. Solutions of NaCl resemble extracellular fluid. Reduces corneal edema by an osmotic effect. **Therapeutic Effects: IV, PO:** Replacement in deficiency states and maintenance of homeostasis.

## Pharmacokinetics

**Absorption:** Well absorbed following oral administration. Replacement solutions of NaCl are administered IV only.
**Distribution:** Rapidly and widely distributed.
**Metabolism and Excretion:** Excreted primarily by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE (various clinical effects†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |
| IV | rapid (min) | end of infusion | unknown |

†PO, IV = electrolyte effects

## Contraindications/Precautions

**Contraindicated in: IV solution:** Hypertonic (3%, 5%) solutions should not be used in patients with elevated, slightly decreased, or normal serum sodium; Fluid retention or hypernatremia. **Use Cautiously in: IV:** Patients prone to metabolic, acid-base, or fluid and electrolyte abnormalities, including: geriatric patients, those with nasogastric suctioning, vomiting, diarrhea, diuretic therapy, glucocorticoid therapy, fistulas, CHF, severe renal failure, severe liver diseases (additional electrolytes may be required); Pedi: NaCl preserved with benzyl alcohol should not be used in neonates. **PO:** Inadequate hydration (water and other electrolytes must be replaced).

## Adverse Reactions/Side Effects

Seen primarily during PO and IV use.
**CV:** CHF, PULMONARY EDEMA, edema. **F and E:** hypernatremia, hypervolemia, hypokalemia. **Local:** *IV*—extravasation, irritation at IV site.

## Interactions

**Drug-Drug:** Excessive amounts of NaCl may partially antagonize the effects of **antihypertensives**. Use with **corticosteroids** may result in excess sodium retention.

## Route/Dosage

**IV (Adults):** *0.9% NaCl (isotonic)*—1 L (contains 150 mEq sodium/L), rate and amount determined by condition being treated. *0.45% NaCl (hypotonic)*—1–2 L (contains 75 mEq sodium/L), rate and amount determined by condition being treated. *3%, 5% NaCl (hypertonic)*—100 mL over 1 hr (3% contains 50 mEq sodium per 100 mL; 5% contains 83.3 mEq sodium per 100 mL).
**PO (Adults):** 1–2 g 3 times daily.
**PO, IV (Children and Infants):** *Maintenance sodium requirements*—3–4 mEq/kg/day (maximum: 150 mEq/day).
**PO, IV (Neonates):** *Maintenance sodium requirements*—1–4 mEq/kg/day .

## Availability (generic available)

**IV solutions:** 0.45%, 0.9%, 3%, 5%. **Diluents:** 0.9%. **Concentrate for dilution:** 14.6%, 23.4%. **Tablets:** 650 mg[OTC]. ***In combination with:*** potassium (Slo-Salt-K), dextrose, electrolytes.

# NURSING IMPLICATIONS

## Assessment

- Assess fluid balance (intake and output, daily weight, edema, lung sounds) throughout therapy.
- Assess patient for symptoms of hyponatremia (headache, tachycardia, lassitude, dry mucous membranes, nausea, vomiting, muscle cramps) or hypernatremia (edema, weight gain, hypertension, tachycardia, fever, flushed skin, mental irritability) throughout therapy. Sodium is measured in relation to its concentration to fluid in the body, and symptoms may change based on patient's hydration status.
- ***Lab Test Considerations:*** Monitor serum sodium, potassium, bicarbonate, and chloride

concentrations and acid-base balance periodically for patients receiving prolonged therapy with sodium chloride.
- Monitor serum osmolarity in patients receiving hypertonic saline solutions.

### Potential Nursing Diagnoses
Deficient fluid volume (Indications)
Excess fluid volume (Side Effects)

### Implementation
- ***High Alert:*** Accidental administration of hypertonic sodium chloride solutions (greater than 0.9%) have resulted in serious electrolyte imbalances. Do not confuse vials of concentrated sodium chloride (23.4%) with vials of sodium chloride flush solution (0.9%).
- Dose of NaCl depends on patient's age, weight, condition, fluid and electrolyte balance, and acid-base balance.
- Do not administer bacteriostatic NaCl containing benzyl alcohol as a preservative to neonates. This should not be used to reconstitute or to dilute solutions or to flush intravascular catheters in neonates.
- Infusion of 0.45% NaCl is hypotonic, 0.9% NaCl is isotonic, and 3% and 5% NaCl are hypertonic.

#### IV Administration
- **Intermittent Infusion:** Administer 3% or 5% NaCl via a large vein and prevent infiltration. After the first 100 mL, sodium, chloride, and bicarbonate concentrations should be re-evaluated to determine the need for further administration. ***Rate:*** Rate of hypertonic NaCl solutions should not exceed 100 mL/hr or 1 mEq/kg/hr.
- **Solution Compatibility:** D5W, D10W, Ringer's and lactated Ringer's injection, dextrose/Ringer's solution combinations, dextrose/LR combinations, dextrose/saline combinations, ⅙ M sodium lactate.

### Patient/Family Teaching
- Explain to patient the purpose of the infusion.
- Advise patients at risk for dehydration due to exposure to extreme temperatures when and how to take NaCL tablets. Inform patients that undigested tablets may be passed in the stool; oral electrolyte solutions are preferable.

### Evaluation/Desired Outcomes
- Prevention or correction of dehydration.
- Normalization of serum sodium and chloride levels.
- Prevention of heat prostration during exposure to high temperatures.

## sodium citrate and citric acid
(**soe**-dee-um **sye**-trate and **sit**-rik **as**-id)
Bicitra, Oracit, PMS-Dicitrate, Shohl's Solution modified

***Classification***
Therapeutic: antiurolithics, mineral and electrolyte replacements/supplements
Pharmacologic: alkalinizing agents

**Pregnancy Category C**

### Indications
Management of chronic metabolic acidosis associated with chronic renal insufficiency or renal tubular acidosis. Alkalinization of urine. Prevention of cystine and urate urinary calculi. Prevention of aspiration pneumonitis during surgical procedures. Used as a neutralizing buffer.

### Action
Converted to bicarbonate in the body, resulting in increased blood pH. As bicarbonate is renally excreted, urine is also alkalinized, increasing the solubility of cystine and uric acid. Neutralizes gastric acid. **Therapeutic Effects:** Provision of bicarbonate in metabolic acidosis. Alkalinization of the urine. Prevention of cystine and urate urinary calculi. Prevention of aspiration pneumonitis.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Rapidly and widely distributed.
**Metabolism and Excretion:** Rapidly oxidized to bicarbonate, which is excreted primarily by the kidneys. Small amounts (<5%) excreted unchanged by the lungs.
**Half-life:** Unknown.

TIME/ACTION PROFILE (effects on serum pH)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid (min–hr) | unknown | 4–6 hr |

### Contraindications/Precautions
**Contraindicated in:** Severe renal insufficiency; Severe sodium restriction; CHF, untreated hypertension, edema, or toxemia of pregnancy.

**Use Cautiously in:** OB: Lactation: Safety not established.

### Adverse Reactions/Side Effects
**GI:** diarrhea. **F and E:** fluid overload, hypernatremia (severe renal impairment), hypocalcemia, metabolic alkalosis (large doses only). **MS:** tetany.

### Interactions
**Drug-Drug:** May partially antagonize the effects of **antihypertensives**. Urinary alkalinization may result in ↓ **salicylate** or **barbiturate** levels or ↑ levels of **quinidine**, **flecainide**, or **amphetamines**.

### Route/Dosage
Adjust dosage according to urine pH. Contains 1 mEq sodium and 1 mEq bicarbonate/mL solution.

### Alkalinizer
**PO (Adults):** 10–30 mL solution diluted in water 4 times daily.
**PO (Children):** 5–15 mL solution diluted in water 4 times daily.

### Antiurolithic
**PO (Adults):** 10–30 mL solution diluted in water 4 times daily.

### Neutralizing Buffer
**PO (Adults):** 15–30 mL solution diluted in 15–30 mL of water.

### Availability
**Oral solution:** 500 mg sodium citrate/334 mg citric acid/5 mL (Bicitra, PMS-Dicitrate), 490 mg sodium citrate/640 mg citric acid/5 mL (Oracit).

## NURSING IMPLICATIONS

### Assessment
- Assess patient for signs of alkalosis (confusion, irritability, paresthesia, tetany, altered breathing pattern) or hypernatremia (edema, weight gain, hypertension, tachycardia, fever, flushed skin, mental irritability) throughout therapy.
- Monitor patients with renal dysfunction for fluid overload (discrepancy in intake and output, weight gain, edema, rales/crackles, and hypertension).
- ***Lab Test Considerations:*** Prior to and every 4 mo throughout chronic therapy, monitor hematocrit, hemoglobin, electrolytes, pH, creatinine, urinalysis, and 24-hr urine for citrate.
- Monitor urine pH if used to alkalinize urine.

### Potential Nursing Diagnoses
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- **PO:** Solution is more palatable if chilled. Administer with 30–90 mL of chilled water. Administer 30 min after meals or as bedtime snack to minimize saline laxative effect.
- When used as preanesthetic, administer 15–30 mL of sodium citrate with 15–30 mL of chilled water.

### Patient/Family Teaching
- Instruct patient to take as directed. Missed doses should be taken within 2 hr. Do not double doses.
- Instruct patients receiving chronic sodium citrate on correct method of monitoring urine pH, maintenance of alkaline urine, and the need to increase fluid intake to 3000 mL/day. When treatment is discontinued, pH begins to fall toward pretreatment levels.
- Advise patients receiving long-term therapy on need to avoid salty foods.

### Evaluation/Desired Outcomes
- Correction of metabolic acidosis.
- Maintenance of alkaline urine with resulting decreased stone formation.
- Buffering the pH of gastric secretions, thereby preventing aspiration pneumonitis associated with intubation and anesthesia.

**sodium ferric gluconate complex, See IRON SUPPLEMENTS.**

## sodium polystyrene sulfonate
(**soe**-dee-um po-lee-**stye**-reen **sul**-fon-ate)
Kalexate, Kayexalate, K-Exit, Kionex, PMS-Sodium Polystyrene Sulfonate, SPS

***Classification***
Therapeutic: hypokalemic, electrolyte modifiers
Pharmacologic: cationic exchange resins

**Pregnancy Category C**

### Indications
Mild to moderate hyperkalemia (if severe, more immediate measures such as sodium bicarbonate IV, calcium, or glucose/insulin infusion should be instituted).

## Action
Exchanges sodium ions for potassium ions in the intestine (each 1 g is exchanged for 1 mEq potassium). **Therapeutic Effects:** Reduction of serum potassium levels.

## Pharmacokinetics
**Absorption:** Distributed throughout the intestine but is nonabsorbable.
**Distribution:** Not distributed.
**Metabolism and Excretion:** Eliminated in the feces.
**Half-life:** Unknown.

TIME/ACTION PROFILE (decrease in serum potassium)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 2–12 hr | unknown | 6–24 hr |
| Rectal | 2–12 hr | unknown | 4–6 hr |

## Contraindications/Precautions
**Contraindicated in:** Life-threatening hyperkalemia (other, more immediate measures should be instituted); Hypersensitivity to saccharin or parabens (some products); Ileus; Known alcohol intolerance (suspension only).
**Use Cautiously in:** Geri: Geriatric patients; CHF, hypertension, edema; Sodium restriction; Constipation.

## Adverse Reactions/Side Effects
**GI:** constipation, fecal impaction, anorexia, gastric irritation, nausea, vomiting. **F and E:** hypocalcemia, hypokalemia, sodium retention, hypomagnesemia.

## Interactions
**Drug-Drug:** Administration with **calcium** or **magnesium-containing antacids** may ↓ resin-exchanging ability and ↑ risk of systemic alkalosis. Hypokalemia may enhance **digoxin** toxicity.

## Route/Dosage
4 level tsp = 15 g (4.1 mEq sodium/g).
**PO (Adults):** 15 g 1–4 times daily in water or sorbitol (up to 40 g 4 times daily).
**Rect (Adults):** 30–50 g as a retention enema; repeat as needed q 6 hr.
**PO, Rect (Children):** 1 g/kg/dose q 6 hr.

## Availability (generic available)
**Suspension:** 15 g sodium polystyrene sulfonate with 20 g sorbitol/60 mL, 15 g sodium polystyrene sulfonate with 14.1 g sorbitol/60 mL. **Powder:** 15 g/4 level tsp.

# NURSING IMPLICATIONS

## Assessment
- Monitor response of symptoms of hyperkalemia (fatigue, muscle weakness, paresthesia, confusion, dyspnea, peaked T waves, depressed ST segments, prolonged QT segments, widened QRS complexes, loss of P waves, and cardiac arrhythmias). Assess for development of hypokalemia (weakness, fatigue, arrhythmias, flat or inverted T waves, prominent U waves).
- Monitor intake and output ratios and daily weight. Assess for symptoms of fluid overload (dyspnea, rales/crackles, jugular venous distention, peripheral edema). Concurrent low-sodium diet may be ordered for patients with CHF (see Appendix M).
- In patients receiving concurrent digoxin, assess for symptoms of digoxin toxicity (anorexia, nausea, vomiting, visual disturbances, arrhythmias).
- Assess abdomen and note character and frequency of stools. Concurrent sorbitol or laxatives may be ordered to prevent constipation or impaction. Some products contain sorbitol to prevent constipation. Patient should ideally have 1–2 watery stools each day during therapy. Monitor for colonic necrosis if sorbitol is added.
- ***Lab Test Considerations:*** Monitor serum potassium daily during therapy. Notify health care professional when potassium ↓ to 4–5 mEq/L.
- Monitor renal function and electrolytes (especially sodium, calcium, bicarbonate, and magnesium) prior to and periodically throughout therapy.

## Potential Nursing Diagnoses
Constipation (Side Effects)

## Implementation
- Solution is stable for 24 hr when refrigerated.
- Consult health care professional regarding discontinuation of medications that may increase serum potassium (angiotensin-converting enzyme inhibitors, potassium-sparing diuretics, potassium supplements, salt substitutes).
- **PO:** An osmotic laxative (sorbitol) is usually administered concurrently to prevent constipation.
- For oral administration, shake commercially-available suspension well before use. When using powder, add prescribed amount to 3–4 mL

S

water/g of powder. Shake well. Syrup may be ordered to improve palatability. Resin cookie or candy recipes are available; discuss with pharmacist or dietitian.

- **Retention Enema:** Precede retention enema with cleansing enema. Administer solution via rectal tube or 28-French Foley catheter with 30-mL balloon. Insert tube at least 20 cm and tape in place.
- For retention enema, add powder to 100 mL of prescribed solution (usually sorbitol or 20% dextrose in water). Shake well to dissolve powder thoroughly; should be of liquid consistency. Position patient on left side and elevate hips on pillow if solution begins to leak. Follow administration of medication with additional 50–100 mL of diluent to ensure administration of complete dose. Encourage patient to retain enema as long as possible, at least 30–60 min.
- After retention period, irrigate colon with 1–2 L of non–sodium-containing solution. Y-connector with tubing may be attached to Foley or rectal tube; cleansing solution is administered through one port of the Y and allowed to drain by gravity through the other port.

### Patient/Family Teaching

- Explain purpose and method of administration of medication to patient.
- Advise patient to avoid taking antacids or laxatives during therapy, unless approved by health care professional; may cause systemic alkalosis.
- Inform patient of need for frequent lab tests to monitor effectiveness.

### Evaluation/Desired Outcomes

- Normalization of serum potassium levels.

**sodium salicylate, See SALICYLATES.**

## solifenacin (so-li-**fen**-a-sin)

VESIcare

***Classification***

Therapeutic: urinary tract antispasmodics
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications

Overactive bladder with symptoms (urge incontinence, urgency, frequency).

### Action

Acts as a muscarinic (cholinergic) receptor antagonist; antagonizes bladder smooth muscle contraction. **Therapeutic Effects:** Decreased symptoms of overactive bladder.

### Pharmacokinetics

**Absorption:** Well absorbed (90%).
**Distribution:** Unknown.
**Protein Binding:** 98%.
**Metabolism and Excretion:** Extensively metabolized by the CYP3A4 enzyme system. 69% excreted in urine as metabolites, 22% in feces.
**Half-life:** 45–68 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Oral | unknown | 3–8 hr | 24 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Urinary retention; Gastric retention; Uncontrolled angle-closure glaucoma; Severe hepatic impairment; Lactation: Lactation.
**Use Cautiously in:** Concurrent use of CYP3A4 inhibitors (use lower dose/clinical monitoring may be necessary); Moderate hepatic impairment (lower dose recommended); Renal impairment (dose should not exceed 5 mg/day if CCr < 30 mL/min); Bladder outflow obstruction; GI obstructive disorders, severe constipation or ulcerative colitis; Myasthenia gravis; Angle-closure glaucoma; OB: Use only if maternal benefit outweighs fetal risk; Pedi: Safety not established.

### Adverse Reactions/Side Effects

**EENT:** blurred vision. **GI:** constipation, dry mouth, dyspepsia, nausea.

### Interactions

**Drug-Drug: Drugs that induce or inhibit the CYP3A4 enzyme system** may significantly alter levels; **ketoconazole** ↑ levels and risk of toxicity (do not exceed 5 mg/day).

### Route/Dosage

**PO (Adults):** 5 mg once daily, may be ↑ to 10 mg once daily; *hepatic impairment/severe renal impairment, concurrent use of ketoconazole or other inhibitors of CYP3A4*—dose should not exceed 5 mg/day.

### Availability

**Tablets:** 5 mg, 10 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor voiding pattern and assess symptoms of overactive bladder (urinary urgency, urinary incontinence, urinary frequency) to and periodically during therapy.

### Potential Nursing Diagnoses
Impaired urinary elimination (Indications)

### Implementation
- **PO:** Administer once daily without regard to food. Tablets must be swallowed whole; do not break, crush, or chew.

### Patient/Family Teaching
- Instruct patient to take solifenacin as directed. Advise patient to read the *Patient Information* before starting therapy and with each prescription refill. If a dose is missed, skip dose and take next day; do not take 2 doses in same day.
- Do not share solifenacin with others; may be dangerous.
- Inform patient of potential anticholinergic side effects (constipation, urinary retention, blurred vision, heat prostration in a hot environment).
- May cause dizziness and blurred vision. Caution patient to avoid driving and other activities that require alertness until response to medication is known.
- Advise patient to consult health care professional prior to taking Rx, OTC, or herbal products with solifenacin.

### Evaluation/Desired Outcomes
- Decrease in symptoms of overactive bladder (urge urinary incontinence, urgency, frequency).

**somatropin (recombinant), See GROWTH HORMONES.**

## sotalol (soe-ta-lole)
Betapace, Betapace AF, Sorine, Sotacor

***Classification***
Therapeutic: antiarrhythmics (class III)

**Pregnancy Category B**

### Indications
Management of life-threatening ventricular arrhythmias. **Betapace AF:** Maintenance of normal sinus rhythm in patients with highly symptomatic atrial fibrillation/atrial flutter (AF/AFL) who are currently in sinus rhythm.

### Action
Blocks stimulation of $beta_1$ (myocardial) and $beta_2$ (pulmonary, vascular, and uterine) -adrenergic receptor sites. **Therapeutic Effects:** Suppression of arrhythmias.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration (bioavailability 90–100%); IV administration results in complete bioavailability.
**Distribution:** Crosses the placenta; enters breast milk.
**Metabolism and Excretion:** Elimination is mostly renal.
**Half-life:** 12 hr (↑ in renal impairment).

TIME/ACTION PROFILE (antiarrhythmic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | hr | 2–3 days | 8–12 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Uncompensated CHF; Pulmonary edema; Asthma; Cardiogenic shock; Congenital or acquired long QT syndromes; Sinus bradycardia, 2nd- and 3rd-degree AV block (unless a functioning pacemaker is present); CCr <40 mL/min in patients who are being treated with Betapace AF.
**Use Cautiously in:** Renal impairment (↑ dosing interval recommended if CCr ≤60 mL/min for patients with ventricular arrhythmias); Hepatic impairment; Hypokalemia (↑ risk of arrhythmias); Geri: ↑ sensitivity to beta blockers; Diabetes mellitus (may mask signs of hypoglycemia); Thyrotoxicosis (may mask symptoms); Patients with a history of severe allergic reactions (intensity of reactions may be increased); OB, Lactation: Pedi: Safety not established; may cause fetal/neonatal bradycardia, hypotension, hypoglycemia, or respiratory depression.

### Adverse Reactions/Side Effects
**CNS:** fatigue, weakness, anxiety, dizziness, drowsiness, insomnia, memory loss, mental depression, mental status changes, nervousness, nightmares. **EENT:** blurred vision, dry eyes, nasal stuffiness. **Resp:** bronchospasm, wheezing. **CV:** ARRHYTHMIAS, BRADYCARDIA, CHF, PULMONARY EDEMA, orthostatic hypotension, peripheral vasoconstriction. **GI:** constipation, diarrhea, nausea. **GU:** erectile dysfunction, decreased libido. **Derm:** itching, rashes. **Endo:** hyperglycemia, hypoglycemia. **MS:** arthralgia, back pain, muscle cramps. **Neuro:** paresthesia. **Misc:** drug-induced lupus syndrome.

### Interactions

**Drug-Drug:** Concurrent use with other **class 1A antiarrhythmics** is not recommended due to ↑ risk of arrhythmias. **General anesthesia**, **IV phenytoin**, and **verapamil** may cause additive myocardial depression. Concurrent use with other **calcium channel blockers** may ↑ the risk of adverse cardiovascular reactions. Additive bradycardia may occur with **digoxin**. Additive hypotension may occur with other **antihypertensives**, acute ingestion of **alcohol**, or **nitrates**. Concurrent use with **amphetamines**, **cocaine**, **ephedrine**, **epinephrine**, **norepinephrine**, **phenylephrine**, or **pseudoephedrine** may result in unopposed alpha-adrenergic stimulation (excessive hypertension, bradycardia). Concurrent **thyroid hormone** administration may ↓ effectiveness. May alter the effectiveness of **insulin** or **oral hypoglycemic agents** (dose adjustments may be necessary). May ↓ the effectiveness of **beta-adrenergic bronchodilators** and **theophylline**. May ↓ the beneficial beta$_1$ cardiovascular effects of **dopamine** or **dobutamine**. Discontinuation of **clonidine** in patients receiving sotalol may result in excessive rebound hypertension. Use cautiously within 14 days of **MAO inhibitors** (may result in hypertension).

### Route/Dosage

#### Ventricular Arrhythmias

**PO (Adults):** 80 mg twice daily; may be gradually ↑ (usual maintenance dose is 160–320 mg/day in 2–3 divided doses; some patients may require up to 480–640 mg/day).
**IV (Adults):** *Oral dose of 80 mg twice daily*—75 mg twice daily; *Oral dose of 120 mg twice daily*—112.5 mg twice daily; *Oral dose of 160 mg twice daily*—150 mg twice daily.

#### Renal Impairment

**PO (Adults):** *CCr 30–59 mL/min*—initial dose of 80 mg, with subsequent doses given q 24 hr; *CCr 10 –29 mL/min*—initial dose of 80 mg, with subsequent doses given q 36–48 hr.

#### Renal Impairment

**IV (Adults):** *CCr 30–59 mL/min*—Administer q 24 hr; *CCr 10–29 mL/min*—Administer q 36–48 hr.

#### Atrial Fibrillation/Atrial Flutter

**PO (Adults):** 80 mg twice daily, may be ↑ during careful monitoring to 120 mg twice daily if necessary.
**IV (Adults):** *Oral dose of 80 mg twice daily*—75 mg twice daily; *Oral dose of 120 mg twice daily*—112.5 mg twice daily.

#### Renal Impairment

**PO, IV (Adults):** *CCr 40–60 mL/min*—Administer q 24 hr.

### Availability (generic available)

**Tablets :** 80 mg, 120 mg, 160 mg, 240 mg. **Cost:** *Generic*—80 mg $204.95/180, 120 mg $304.99/180, 160 mg $359.41/180, 240 mg $366.44/180. **Tablets (Betapace AF):** 80 mg, 120 mg, 160 mg. **Solution for injection:** 15 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor ECG prior to and periodically during therapy. May cause life threatening ventricular tachycardia associated with QT interval prolongation. Do not initiate sotalol therapy if baseline QTc is longer than 450 ms. If QT interval becomes ≥500 ms, reduce dose, prolong duration of infusion, or discontinue therapy.
- Monitor blood pressure and pulse frequently during dose adjustment period and periodically throughout therapy. Assess for orthostatic hypotension when assisting patient up from supine position.
- Monitor intake and output ratios and daily weight. Assess patient routinely for evidence of fluid overload (peripheral edema, dyspnea, rales/crackles, fatigue, weight gain, jugular venous distention).
- ***Lab Test Considerations:*** May cause increased BUN, serum lipoprotein, potassium, triglyceride, and uric acid levels.
- May cause increased ANA titers.
- May cause increase in blood glucose levels.
- ***Toxicity and Overdose:*** Monitor patients receiving beta blockers for signs of overdose (bradycardia, severe dizziness or fainting, severe drowsiness, dyspnea, bluish fingernails or palms, seizures). Notify health care professional immediately if these signs occur.
- Glucagon has been used to treat bradycardia and hypotension.

### Potential Nursing Diagnoses

Decreased cardiac output (Side Effects)
Noncompliance (Patient/Family Teaching)

### Implementation

- Patients should be hospitalized and monitored for arrhythmias during initiation of therapy and dose increases.
- Do not substitute Betapace for Betapace AF. Make sure patients transferred from Betapace to Betapace AF have enough Betapace AF upon leaving the hospital to allow for uninterrupted

therapy until Betapace AF prescription can be filled.
- **PO:** Take apical pulse prior to administering. If <50 bpm or if arrhythmia occurs, withhold medication and notify health care professional.
- Administer on an empty stomach, 1 hr before or 2 hr after meals. Administration with food, especially milk or milk products, reduces absorption by approximately 20%.
- Avoid administering antacids containing aluminum or magnesium within 2 hr before administration of sotalol.
- **IV:** IV formulation should only be used in patients who are NPO.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute with 100–250 mL of 0.9% NaCl, D5W, or LR. *For 75 mg dose*, dilute with 114 mL or 294 mL for 100 mL or 250 mL volume, respectively. *For 112.5 mg dose*, dilute with 111 mL or 291 mL for 100 mL or 250 mL volume, respectively. *For 150 mg dose*, dilute with 108 mL or 288 mL for 100 mL or 250 mL volume, respectively. ***Rate:*** Infuse over 5 hr using a volumetric infusion pump to infuse intravenous at a constant rate.

## Patient/Family Teaching

- Instruct patient to take medication as directed, at the same time each day, even if feeling well; do not skip or double up on missed doses. Take missed doses as soon as possible up to 8 hr before next dose. Abrupt withdrawal may precipitate life-threatening arrhythmias, hypertension, or myocardial ischemia.
- Advise patient to make sure enough medication is available for weekends, holidays, and vacations. A written prescription may be kept in wallet in case of emergency.
- Teach patient and family how to check pulse and blood pressure. Instruct them to check pulse daily and blood pressure biweekly. Advise patient to hold dose and contact physician or other health care professional if pulse is <50 bpm or if blood pressure changes significantly.
- May cause drowsiness or dizziness. Caution patients to avoid driving or other activities that require alertness until response to the drug is known.
- Advise patients to change positions slowly to minimize orthostatic hypotension, especially during initiation of therapy or when dose is increased.
- Caution patient that this medication may increase sensitivity to cold.
- Instruct patient to consult health care professional before taking any other Rx, OTC, or herbal products, especially cold preparations, concurrently with this medication.
- Diabetic patients should closely monitor blood glucose, especially if weakness, malaise, irritability, or fatigue occurs. Medication may mask tachycardia and increased blood pressure as signs of hypoglycemia, but dizziness and sweating may still occur.
- Advise patient to notify health care professional if fainting, slow pulse, difficulty breathing, wheezing, cold hands and feet, dizziness, confusion, depression, rash, fever, sore throat, unusual bleeding, bruising, or if pain or swelling at the infusion site occurs.
- Instruct patient to inform health care professional of medication regimen prior to treatment or surgery.
- Advise patient to carry identification describing disease process and medication regimen at all times.

## Evaluation/Desired Outcomes

- Control of arrhythmias without appearance of detrimental side effects.

S

**spironolactone, See DIURETICS (POTASSIUM-SPARING).**

**streptokinase, See THROMBOLYTIC AGENTS.**

**streptomycin, See AMINOGLYCOSIDES.**

**strong iodine solution, See IODINE, IODIDE.**

# sucralfate (soo-kral-fate)

Carafate, Sulcrate

***Classification***

Therapeutic: antiulcer agents
Pharmacologic: GI protectants

**Pregnancy Category B**

## Indications
Short-term management of duodenal ulcers. Maintenance (preventive) therapy of duodenal ulcers. **Unlabeled Use:** Management of gastric ulcer or gastroesophageal reflux. Prevention of gastric mucosal injury caused by high-dose aspirin or other NSAIDs in patients with rheumatoid arthritis or in high-stress situations (e.g., intensive care unit). **Suspension:** Mucositis/stomatitis/rectal or oral ulcerations from various etiologies.

## Action
Aluminum salt of sulfated sucrose reacts with gastric acid to form a thick paste, which selectively adheres to the ulcer surface. **Therapeutic Effects:** Protection of ulcers, with subsequent healing.

## Pharmacokinetics
**Absorption:** Systemic absorption is minimal (<5%).
**Distribution:** Unknown.
**Metabolism and Excretion:** >90% is eliminated in the feces.
**Half-life:** 6–20 hr.

TIME/ACTION PROFILE (mucosal protectant effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1–2 hr | unknown | 6 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Renal failure (accumulation of aluminum can occur).

## Adverse Reactions/Side Effects
**CNS:** dizziness, drowsiness. **GI:** constipation, diarrhea, dry mouth, gastric discomfort, indigestion, nausea. **Derm:** pruritus, rashes.

## Interactions
**Drug-Drug:** May decrease the absorption of **phenytoin**, **fat-soluble vitamins**, or **tetracycline**. Concurrent **antacids**, **cimetidine**, or **ranitidine** decrease the effectiveness of sucralfate. Decreases absorption of **fluoroquinolones** (separate administration by 2 hours).

## Route/Dosage

### Treatment of Ulcers
**PO (Adults):** 1 g qid, 1 hr before meals and at bedtime; or 2 g twice daily, on waking and at bedtime.

### Prevention of Ulcers
**PO (Adults):** 1 g twice daily, 1 hr before a meal.

### Gastroesophageal Reflux
**PO (Adults):** 1 g qid, 1 hr before meals and at bedtime (unlabeled).
**PO (Children):** 40–80 mg/kg/day divided q 6 hr, 1 hr before meals and at bedtime (unlabeled).

### Stomatitis
**PO (Adults and Children):** 5–10 mL of suspension swish and spit or swish and swallow 4 times/day.

### Proctitis
**Rect (Adults):** 2 g of suspension given as an enema once or twice daily.

## Availability (generic available)
**Tablets:** 1 g. **Oral suspension:** 500 mg/5 mL.

# NURSING IMPLICATIONS

## Assessment
- Assess patient routinely for abdominal pain and frank or occult blood in the stool.

## Potential Nursing Diagnoses
Acute pain (Indications)
Constipation (Side Effects)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

## Implementation
- Do not confuse Carafate (sucralfate) with Cafergot (ergotamine/caffeine).
- **PO:** Administer on an empty stomach, 1 hr before meals and at bedtime. Tablet may be broken or dissolved in water before ingestion. Shake suspension well before administration.
- If nasogastric administration is required, consult pharmacist; protein-binding properties of sucralfate have resulted in formation of a bezoar when administered with enteral feedings and other medications.
- If antacids are also required for pain, administer 30 min before or after sucralfate dosage.

## Patient/Family Teaching
- Advise patient to continue with course of therapy for 4–8 wk, even if feeling better, to ensure ulcer healing. If a dose is missed, take as soon as remembered unless almost time for next dose; do not double doses.
- Advise patient that increase in fluid intake, dietary bulk, and exercise may prevent drug-induced constipation.
- Emphasize the importance of routine examinations to monitor progress.

## Evaluation/Desired Outcomes
- Decrease in abdominal pain.
- Prevention and healing of duodenal ulcers, seen by x-ray examination and endoscopy.

**sulconazole, See ANTIFUNGALS (TOPICAL).**

## sulfasalazine

(sul-fa-**sal**-a-zeen)

Azulfidine, Azulfidine EN-tabs, PMS-Sulfasalazine , Salazopyrin, S.A.S

***Classification***

Therapeutic: antirheumatics (DMARD), gastrointestinal anti-inflammatories

**Pregnancy Category B**

### Indications

Inflammatory bowel diseases including: Ulcerative colitis, Proctitis, Proctosigmoiditis. Rheumatoid arthritis unresponsive or intolerant tosalicylates and/or NSAIDs.

### Action

Locally acting anti-inflammatory action in the colon, where activity is probably a result of inhibition of prostaglandin synthesis. **Therapeutic Effects:** Reduction in the symptoms of inflammatory bowel disease.

### Pharmacokinetics

**Absorption:** 10–15% absorbed after oral administration.
**Distribution:** Widely distributed; crosses the placenta and enters breast milk.
**Protein Binding:** 99%.
**Metabolism and Excretion:** Split by intestinal bacteria into sulfapyridine and 5-aminosalicylic acid. Some absorbed sulfasalazine is excreted by bile back into intestines; 15% excreted unchanged by the kidneys. Sulfapyridine also excreted mostly by the kidneys.
**Half-life:** 6 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1 hr | 1.5–6 hr | 6–12 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity reactions to sulfonamides, salicylates, or sulfasalazine; Cross-sensitivity with furosemide, sulfonylurea hypoglycemic agents, or carbonic anhydrase inhibitors may exist; Glucose-6–phosphate dehydrogenase (G6PD) deficiency; Hypersensitivity to bisulfites (mesalamine enema only); Urinary tract or intestinal obstruction; Porphyria; Pedi: Children <2 yr (safety not established).
**Use Cautiously in:** Severe hepatic or renal impairment; History of porphyria; OB: Has been used safely; Lactation: Safety not established; may compete with bilirubin for binding sites on plasma proteins in the newborn and cause kernicterus.

### Adverse Reactions/Side Effects

**CNS:** headache. **Resp:** pneumonitis. **GI:** anorexia, diarrhea, nausea, vomiting, drug-induced hepatitis. **GU:** crystalluria, oligospermia, orange-yellow discoloration of urine. **Derm:** rashes, exfoliative dermatitis, photosensitivity, yellow discoloration. **Hemat:** AGRANULOCYTOSIS, APLASTIC ANEMIA, blood dyscrasias, eosinophilia, megaloblastic anemia, thrombocytopenia. **Neuro:** peripheral neuropathy. **Misc:** *hypersensitivity reactions including*—SERUM SICKNESS and STEVENS-JOHNSON SYNDROME, fever.

### Interactions

**Drug-Drug:** May ↑ action/risk of toxicity from **oral hypoglycemic agents**, **phenytoin**, **methotrexate**, **zidovudine**, or **warfarin**. ↑ risk of drug-induced hepatitis with other **hepatotoxic agents**. ↑ risk of crystalluria with **methenamine**. May ↓ metabolism and increase effects/toxicity of **mercaptopurine** or **thioguanine**.
**Drug-Food:** May ↓ **iron** and **folic acid** absorption.

### Route/Dosage

#### Inflammatory bowel disease

**PO (Adults):** *Inflammatory bowel disease*—1 g q 6–8 hr (may start with 500 mg q 6–12 hr), followed by maintenance dose of 500 mg q 6 hr.
**PO (Children >2 yr):** *Initial*—6.7–10 mg/kg q 4 hr *or* 10–15 mg/kg q 6 hr *or* 13.3–20 mg/kg q 8 hr. *Maintenance*—7.5 mg/kg q 6 hr (not to exceed 2 g/day).

#### Rheumatoid arthritis

**PO (Adults):** 500 mg–1 g/day (as delayed-release tablets) for 1 wk, then ↑ by 500 mg/day q wk up to 2 g/day in 2 divided doses; if no benefit seen after 12 wk, increase to 3 g/day in 2 divided doses.
**PO (Children ≥6 yr):** 30–50 mg/kg/day in 2 divided doses (as delayed-release tablets); initiate therapy at ¼–⅓ of planned maintenance dose and increase q 7 days until maintenance dose is reached (not to exceed 2 g/day).

### Availability (generic available)

**Tablets:** 500 mg. **Delayed-release (enteric-coated) tablets (Azulfidine EN-tabs):** 500 mg. **Oral suspension:** 250 mg/5 mL. **Rectal suspension:** 3 g.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for allergy to sulfonamides and salicylates. Therapy should be discontinued if rash or fever occurs.
- Monitor intake and output ratios. Fluid intake should be sufficient to maintain a urine output of at least 1200–1500 mL daily to prevent crystalluria and stone formation.
- **Inflammatory Bowel Disease:** Assess abdominal pain and frequency, quantity, and consistency of stools at the beginning of and during therapy.
- **Rheumatoid Arthritis:** Assess range of motion and degree of swelling and pain in affected joints before and periodically during therapy.
- ***Lab Test Considerations:*** Monitor urinalysis, BUN, and serum creatinine before and periodically during therapy. May cause crystalluria and urinary cell calculi formation.
- ***Lab Test Considerations:*** Monitor CBC before and every 3–6 mo during prolonged therapy. Discontinue sulfasalazine if blood dyscrasias occur.

### Potential Nursing Diagnoses

Acute pain (Indications)
Diarrhea (Indications)

### Implementation

- Do not confuse sulfasalazine with sulfisoxazole.
- Varying dosing regimens of sulfasalazine may be used to minimize GI side effects.
- **PO:** Administer after meals or with food to minimize GI irritation, with a full glass of water. Do not crush or chew enteric-coated tablets. Shake oral suspension well before administration. Use a calibrated measuring device to measure liquid preparations.
- **Rect:** Patient should empty bowel before administration of rectal dose forms.
- Administer 60-mL retention enema once daily at bedtime. Solution should be retained for approximately 8 hr. Before administration of *rectal suspension,* shake bottle well and remove the protective cap. Have patient lie on left side with the lower leg extended and the upper leg flexed for support or place the patient in knee-chest position. Gently insert the applicator tip into the rectum, pointing toward the umbilicus. Squeeze the bottle steadily to discharge most of the preparation.

### Patient/Family Teaching

- Instruct patient on the correct method of administration. Advise patient to take medication as directed, even if feeling better. Take missed doses as soon as remembered unless almost time for next dose.
- May cause dizziness. Caution patient to avoid driving or other activities that require alertness until response to medication is known.
- Advise patient to notify health care professional if skin rash, sore throat, fever, mouth sores, unusual bleeding or bruising, wheezing, fever, or hives occur.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Inform patient that this medication may cause orange-yellow discoloration of urine and skin, which is not significant. May permanently stain contact lenses yellow.
- Instruct patient to notify health care professional if symptoms worsen or do not improve. If symptoms of acute intolerance (cramping, acute abdominal pain, bloody diarrhea, fever, headache, rash) occur, discontinue therapy and notify health care professional immediately.
- Inform patient that proctoscopy and sigmoidoscopy may be required periodically during treatment to determine response.
- Instruct patient to notify health care professional if symptoms do not improve after 1–2 mo of therapy.
- **Rect:** Instruct patient to use *rectal suspension* at bedtime and retain suspension all night for best results.

### Evaluation/Desired Outcomes

- Decrease in diarrhea and abdominal pain.
- Return to normal bowel pattern in patients with inflammatory bowel disease. Effects may be seen within 3–21 days. The usual course of therapy is 3–6 wk.
- Maintenance of remission in patients with inflammatory bowel disease.
- Decrease in pain and inflammation, and increase in mobility in patients with rheumatoid arthritis.

HIGH ALERT

## SULFONYLUREAS

**glimepiride** (glye-**me**-pye-ride)
Amaryl, Apo-Glimepiride, Co-Glimepiride

**glipiZIDE** (**glip**-i-zide)
Glucotrol, Glucotrol XL

**glyBURIDE** (**glye**-byoo-ride)
Apo-Glyburide, DiaBeta, Dom-Glyburide, Euglucon, Gen-Glybe, Glynase PresTab

***Classification***
Therapeutic: antidiabetics
Pharmacologic: sulfonylureas

**Pregnancy Category B (glyburide [Glynase PresTab]), C (glimepiride, glipizide, and glyburide [Diabeta])**

## Indications
Control of blood glucose in type 2 diabetes mellitus when diet therapy fails. Require some pancreatic function.

## Action
Lower blood glucose by stimulating the release of insulin from the pancreas and increasing the sensitivity to insulin at receptor sites. May also decrease hepatic glucose production. **Therapeutic Effects:** Lowering of blood glucose in diabetic patients.

## Pharmacokinetics
**Absorption:** All agents are well absorbed after oral administration.
**Distribution:** *Glyburide*—reaches high concentrations in bile and crosses the placenta.
**Protein Binding:** *Glimepiride*—99.5%, *glipizide*—99%, *glyburide*—99%.
**Metabolism and Excretion:** All agents are mostly metabolized by the liver. *Glimepiride*—converted to a metabolite with some hypoglycemic activity.
**Half-life:** *Glimepiride*—5–9.2; *glipizide*—2.1–2.6 hr; *glyburide*—10 hr.

TIME/ACTION PROFILE (hypoglycemic activity)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Glimepiride | unknown | 2–3 hr | 24 hr |
| Glipizide | 15–30 min | 1–2 hr | up to 24 hr |
| Glyburide | 45–60 min | 1.5–3 hr | 24 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Hypersensitivity with sulfonamides (cross-sensitivity may occur); Type 1 diabetes; Diabetic coma or ketoacidosis; Concurrent use of bosentan (glyburide only).

**Use Cautiously in:** Geri: ↑ sensitivity; dosage reduction may be required; Glucose 6-phosphate dehydrogenase deficiency (↑ risk of hemolytic anemia); Renal or hepatic dysfunction (↑ risk of hypoglycemia); Infection, trauma, or surgery (may alter requirements for control of blood glucose); Impaired pituitary, or adrenal function; Prolonged nausea or vomiting; Debilitated or malnourished patients (↑ risk of hypoglycemia); OB, Lactation: Safety not established; insulin recommended during pregnancy; Pedi: Safety and effectiveness not established.

## Adverse Reactions/Side Effects
**CNS:** dizziness, drowsiness, headache, weakness. **GI:** constipation, cramps, diarrhea, drug-induced hepatitis, heartburn, ↑ appetite, nausea, vomiting. **Derm:** photosensitivity, rashes. **Endo:** hypoglycemia. **F and E:** hyponatremia. **Hemat:** APLASTIC ANEMIA, agranulocytosis, hemolytic anemia, leukopenia, pancytopenia, thrombocytopenia.

## Interactions
**Drug-Drug:** ↑ risk of elevated liver enzymes when **bosentan** used with glyburide (avoid concurrent use). Effectiveness may be ↓ by concurrent use of **diuretics**, **corticosteroids**, **phenothiazines**, **oral contraceptives**, **estrogens**, **thyroid preparations**, **phenytoin**, **niacin**, **sympathomimetics**, and **isoniazid**. **Alcohol**, **androgens (testosterone)**, **chloramphenicol**, **clarithromycin**, **fluoroquinolones**, **MAO inhibitors**, **NSAIDs**, **salicylates**, **sulfonamides**, and **warfarin** may ↑ risk of hypoglycemia. Concurrent use with **warfarin** may alter the response to both agents (↑ effects of both initially, then ↓ activity); close monitoring recommended during any changes in dosage. **Beta blockers** may mask the signs and symptoms of hypoglycemia. May ↑ **cyclosporine** levels.

## Route/Dosage

### Glimepiride
**PO (Adults):** 1–2 mg once daily initially; may ↑ q 1–2 wk up to 8 mg/day (usual range 1–4 mg/day).
**PO (Geriatric Patients):** 1 mg/day initially.

### Glipizide
**PO (Adults):** 5 mg/day initially, may be ↑ by 2.5–5 mg/day at weekly intervals as needed (maximum dose = 40 mg/day immediate-release), 20 mg/day (XL); XL dosage form is given once daily. Doses >15 mg/day should be given as

2 divided doses of immediate-release tablets (not XL).
**PO (Geriatric Patients):** 2.5 mg/day initially.

### Glyburide

#### The nonmicronized formulation (Diabeta) cannot be used interchangeably with the micronized formulation (Glynase PresTab)

**PO (Adults):** *DiaBeta (nonmicronized)* — 2.5–5 mg once daily initially; may be ↑ by 2.5–5 mg/day at weekly intervals (range 1.25–20 mg/day). *Glynase PresTab (micronized)* — 1.5–3 mg/day initially; may be ↑ by 1.5 mg/day at weekly intervals (range 0.75–12 mg/day; doses >6 mg/day should be given as divided doses).
**PO (Geriatric Patients):** *DiaBeta (nonmicronized)* — 1.25 mg/day initially; may be ↑ by 2.5 mg/day at weekly intervals. *Glynase PresTab (micronized)* — 0.75 mg/day; may be ↑ by 1.5 mg/day at weekly intervals.

### Availability

#### Glimepiride (generic available)

**Tablets:** 1 mg, 2 mg, 4 mg. ***In combination with:*** pioglitazone (Duetact); rosiglitazone (Avandaryl); see Appendix B.

#### Glipizide (generic available)

**Tablets:** 5 mg, 10 mg. **Cost:** *Generic* — 5 mg $16.65/100, 10 mg $12.22/100. **Extended-release tablets:** 2.5 mg, 5 mg, 10 mg. **Cost:** *Generic* — 2.5 mg $32.97/90, 5 mg $32.97/90, 10 mg $59.97/90. ***In combination with:*** Metformin (Metaglip); see Appendix B.

#### Glyburide (generic available)

**Tablets:** 1.25 mg, 2.5 mg, 5 mg. **Micronized tablets:** 1.5 mg, 3 mg, 6 mg. ***In combination with:*** metformin (Glucovance); see Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Observe for signs and symptoms of hypoglycemic reactions (sweating, hunger, weakness, dizziness, tremor, tachycardia, anxiety).
- Assess patient for allergy to sulfonamides.
- Patients on concurrent beta-blocker therapy may have very subtle signs of hypoglycemia.
- ***Lab Test Considerations:*** Monitor serum glucose and glycosylated hemoglobin periodically during therapy to evaluate effectiveness of treatment.
- Monitor CBC periodically during therapy. Report ↓ in blood counts promptly.
- May cause an ↑ in AST, LDH, BUN, and serum creatinine.
- ***Toxicity and Overdose:*** Overdose is manifested by symptoms of hypoglycemia. Mild hypoglycemia may be treated with administration of oral glucose. Severe hypoglycemia should be treated with IV D50W followed by continuous IV infusion of more dilute dextrose solution at a rate sufficient to keep serum glucose at approximately 100 mg/dL.

### Potential Nursing Diagnoses

Imbalanced nutrition: more than body requirements (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation

- ***High Alert:*** Accidental administration of oral hypoglycemic agents to non-diabetic adults and children has resulted in serious harm or death. Before administering, confirm that patient has type 2 diabetes.
- ***High Alert:*** Several oral hypoglycemic agents are subject to sound-alike or look-alike confusion: Do not confuse glipizide with glyburide. Do not confuse Glucotrol with Glucotrol XL. Do not confuse micronase (glyburide) with Micro-K (potassium).
- Patients stabilized on a diabetic regimen who are exposed to stress, fever, trauma, infection, or surgery may require administration of insulin.
- To convert from other oral hypoglycemic agents, gradual conversion is not required. For insulin dosage of less than 20 units/day, change to oral hypoglycemic agents can be made without gradual dose adjustment. Patients taking 20 or more units/day should convert gradually by receiving oral agent and a 25–30% reduction in insulin dose every day or every 2nd day with gradual insulin dose reduction as tolerated. Monitor serum or urine glucose and ketones at least 3 times/day during conversion.
- **PO:** May be administered once in the morning with breakfast or divided into 2 doses.
- Administer *glipizide* 30 min before a meal.
- Do not administer *nonmicronized glyburide* with a meal high in fat. *Micronized glyburide* cannot be substituted for *nonmicronized glyburide*. These preparations are not equivalent.

### Patient/Family Teaching

- Instruct patient to take medication at same time each day. Take missed doses as soon as remembered unless almost time for next dose. Do not take if unable to eat.
- Explain to patient that this medication controls hyperglycemia but does not cure diabetes. Therapy is long term.

- Review signs of hypoglycemia and hyperglycemia with patient. If hypoglycemia occurs, advise patient to take a glass of orange juice or 2–3 tsp of sugar, honey, or corn syrup dissolved in water or an appropriate number of glucose tablets and notify health care professional.
- Encourage patient to follow prescribed diet, medication, and exercise regimen to prevent hypoglycemic or hyperglycemic episodes.
- Instruct patient in proper testing of serum glucose and ketones. These tests should be closely monitored during periods of stress or illness and health care professional notified if significant changes occur.
- Concurrent use of alcohol may cause a disulfiram-like reaction (abdominal cramps, nausea, flushing, headaches, and hypoglycemia).
- May occasionally cause dizziness or drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Caution patient to avoid other medications, especially alcohol, while on this therapy without consulting health care professional.
- Insulin is the recommended method of controlling blood glucose during pregnancy. Counsel female patients to use a form of contraception other than oral contraceptives and to notify health care professional promptly if pregnancy is planned or suspected.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to inform health care professional of medication regimen before treatment or surgery.
- Advise patient to carry a form of sugar (sugar packets, candy) and identification describing disease process and medication regimen at all times.
- Advise patient to notify health care professional promptly if unusual weight gain, swelling of ankles, drowsiness, shortness of breath, muscle cramps, weakness, sore throat, rash, or unusual bleeding or bruising occurs.
- Emphasize the importance of routine follow-up exams.

## Evaluation/Desired Outcomes

- Control of blood glucose levels without the appearance of hypoglycemic or hyperglycemic episodes.

# sulindac (soo-lin-dak)

Apo-Sulin, Clinoril, Novo-Sundac

***Classification***

Therapeutic: antirheumatics, nonsteroidal anti-inflammatory agents

**Pregnancy Category C**

## Indications

Management of inflammatory disorders, including: Rheumatoid arthritis, Osteoarthritis, Acute gouty arthritis, Bursitis.

## Action

Inhibits prostaglandin synthesis. **Therapeutic Effects:** Suppression of pain and inflammation.

## Pharmacokinetics

**Absorption:** Well absorbed from the GI tract after oral administration.
**Distribution:** Unknown. Enters breast milk in small amounts.
**Metabolism and Excretion:** Converted by the liver to active drug. Minimal amounts excreted unchanged by the kidneys.
**Half-life:** 7.8 hr (16.4 hr for active metabolite).

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO (analgesic) | 1–2 days | unknown | 12 hr |
| PO (anti-inflammatory) | few days–1 wk | 2 wk or more | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity may occur with other NSAIDs, including aspirin; Active GI bleeding or ulcer disease; Peri-operative pain from coronary artery bypass graft (CABG) surgery; OB: May cause premature closure of ductus arteriosus in third trimester.
**Use Cautiously in:** Cardiovascular disease or risk factors for cardiovascular disease (may ↑ risk of serious cardiovascular thrombotic events, myocardial infarction, and stroke, especially with prolonged use); Severe renal, or hepatic disease (dosage modification recommended); History of ulcer disease; OB: Use in first and second trimester only if maternal benefit exceeds potential risks to fetus; Lactation, Pedi: Safety not established; Geri: May ↑ risk of GI bleeding.

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache, drowsiness. **EENT:** blurred vision, tinnitus. **CV:** edema. **GI:** GI BLEEDING, DRUG-INDUCED HEPATITIS, constipation, diarrhea, discomfort, dyspepsia, nausea, vomiting, anorexia, flatulence, pancreatitis. **GU:** renal failure. **Derm:** EXFOLIATIVE DERMATITIS, STEVENS-JOHNSON SYNDROME, TOXIC EPIDERMAL NECROLYSIS, rashes, photosensitivity. **Hemat:** blood dyscrasias, prolonged bleeding time. **Misc:** allergic reactions including ANAPHYLAXIS and HYPERSENSITIVITY SYNDROME.

### Interactions

**Drug-Drug:** Concurrent use of **aspirin** may ↓ effectiveness. ↑ risk of bleeding with **anticoagulants**, **thrombolytic agents**, **tirofiban**, **eptifibatide**, **clopidogrel**, **ticlopidine**, **cefoperazone**, **cefotetan**, or **valproic acid**. ↑ adverse GI side effects with **aspirin**, **corticosteroids**, and other **NSAIDs**. May ↓ response to **antihypertensives** or **diuretics**. May ↑ levels and risk of toxicity from **lithium**. May ↑ risk of hematologic toxicity from **antineoplastics** or **radiation therapy**. ↑ risk of adverse renal effects with **gold compounds**, **cyclosporine**, or chronic use of **acetaminophen**. **Antacids** ↓ levels and decrease effectiveness of sulindac. ↑ risk of photosensitivity reactions with other **photosensitizing medications**. ↑ risk of hypoglycemia with **insulins** or **oral hypoglycemic agents**. Should not be used concurrently with **dimethyl sulfoxide** because of ↑ risk of peripheral neuropathy and ↓ levels of sulindac and its metabolite.

### Route/Dosage

**PO (Adults):** 150–200 mg twice daily (not to exceed 400 mg/day).

### Availability (generic available)

**Tablets:** 150 mg, 200 mg.

## NURSING IMPLICATIONS

### Assessment

- Patients who have asthma, aspirin-induced allergy, and nasal polyps are at increased risk for developing hypersensitivity reactions. Monitor for rhinitis, asthma, and urticaria.
- Assess pain and range of movement before and after 1–2 wk of therapy.
- ***Lab Test Considerations:*** Evaluate BUN, serum creatinine, CBC, and liver function periodically in patients receiving prolonged therapy.
- Serum potassium, glucose, alkaline phosphatase, AST, and ALT may show ↑ levels.
- Bleeding time may be prolonged for 1 day after discontinuation of therapy.

### Potential Nursing Diagnoses

Acute pain (Indications)
Impaired physical mobility (Indications)

### Implementation

- Do not confuse Clinoril (sulindac) with Clozaril (clozapine).
- Administration in higher than recommended doses does not provide increased effectiveness but may cause increased side effects. Use lowest effective dose for shortest period of time.
- **PO:** May be administered with food, milk, or antacids to decrease GI irritation. Food slows but does not reduce the extent of absorption. Tablets may be crushed and mixed with fluids or food.

### Patient/Family Teaching

- Advise patient to take this medication with a full glass of water and to remain in an upright position for 15–30 min after administration.
- Instruct patient to take medication as directed. Take missed doses as soon as remembered but not if almost time for the next dose. Do not double doses.
- May cause dizziness. Advise patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Caution patient to avoid the concurrent use of alcohol, aspirin, NSAIDs, acetaminophen, or other OTC medications without consulting health care professional.
- Advise patient to inform health care professional of medication regimen before treatment or surgery.
- Advise patient to inform health care professional if pregnancy is planned or suspected.
- Advise patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to consult health care professional if rash, itching, visual disturbances, tinnitus, weight gain, edema, black stools, persistent headache, or influenza-like syndrome (chills, fever, muscle aches, pain) occurs.

### Evaluation/Desired Outcomes

- Decreased pain and improved joint mobility. Partial arthritic relief may be seen within 7 days, but maximum effectiveness may require 2–3 wk of continuous therapy. Patients who do not respond to one NSAID may respond to another.

## sumatriptan (soo-ma-trip-tan)

Imitrex, Imitrex STATdose, Sumavel DosePro

***Classification***

Therapeutic: vascular headache suppressants

Pharmacologic: 5-$HT_1$ agonists

**Pregnancy Category C**

### Indications

Acute treatment of migraine attacks. **Subcut:** Acute treatment of cluster headache episodes.

### Action

Acts as a selective agonist of 5-$HT_1$ at specific vascular serotonin receptor sites, causing vasoconstriction in large intracranial arteries. **Therapeutic Effects:** Relief of acute attacks of migraine.

### Pharmacokinetics

**Absorption:** Well absorbed (97%) after subcut administration. Absorption after oral administration is incomplete and significant amounts undergo substantial hepatic metabolism, resulting in poor bioavailability (14%). Well absorbed after intranasal administration.

**Distribution:** Does not cross the blood-brain barrier. Remainder of distribution not known.

**Metabolism and Excretion:** Mostly metabolized (80%) by the liver.

**Half-life:** 2 hr.

TIME/ACTION PROFILE (relief of migraine)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 30 min | 2–4 hr | up to 24 hr |
| Subcut | 30 min | up to 2 hr | up to 24 hr |
| Nasal | within 60 min | 2 hr | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Patients with ischemic heart disease or signs and symptoms of ischemic heart disease, Prinzmetal angina, or uncontrolled hypertension; Stroke or transient ischemic attack; Peripheral vascular disease (including, but not limited to, ischemic bowel disease); Concurrent MAO inhibitor therapy; Geri: Excessive risk of cardiovascular complications.

**Use Cautiously in:** Patients with childbearing potential; OB, Lactation: Pedi: Safety not established.

**Exercise Extreme Caution in:** Cardiovascular risk factors (hypertension, hypercholesterolemia, smoking, obesity, diabetes, family history, menopausal women or men >40 yr); use only if cardiovascular status has been evaluated and determined to be safe and 1st dose is administered under supervision.

### Adverse Reactions/Side Effects

All adverse reactions are less common after oral administration.

**CNS:** dizziness, vertigo, anxiety, drowsiness, fatigue, feeling of heaviness, feeling of tightness, headache, malaise, strange feeling, tight feeling in head, weakness. **EENT:** alterations in vision, nasal sinus discomfort, throat discomfort. **CV:** MI, angina, chest pressure, chest tightness, coronary vasospasm, ECG changes, transient hypertension. **GI:** abdominal discomfort, dysphagia. **Derm:** tingling, warm sensation, burning sensation, cool sensation, flushing. **Local:** injection site reaction. **MS:** jaw discomfort, muscle cramps, myalgia, neck pain, neck stiffness. **Neuro:** numbness.

### Interactions

**Drug-Drug:** The risk of vasospastic reactions may be ↑ by concurrent use of **ergotamine** or **dihydroergotamine** (avoid within 24 hr of each other). Concurrent use with **lithium**, **MAO inhibitors** (do not use within 2 wk of discontinuing MAO inhibitor), or **SSRI antidepressants** (may cause weakness, hyperreflexia, and incoordination). ↑ serotonin levels and serotonin syndrome may occur when used concurrently with **SSRI and SNRI antidepressants**.

**Drug-Natural Products:** ↑ risk of serotinergic side effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage

**PO (Adults):** 25 mg initially; if response is inadequate at 2 hr, up to 100 mg may be given (initial doses of 25–50 mg may be more effective than 25 mg). If headache recurs, doses may be repeated q 2 hr (not to exceed 300 mg/day). If PO therapy is to follow subcut injection, additional PO sumatriptan may be taken q 2 hr (not to exceed 200 mg/day).

**Subcut (Adults):** 6 mg; may repeat after 1 hr (not to exceed 12 mg in 24 hr).

**Intranasal (Adults):** Single dose of 5, 10, or 20 mg in one nostril; may be repeated in 2 hr, not to exceed 40 mg/24 hr or treatment of >5 episodes/mo.

#### Hepatic Impairment

**PO (Adults):** 25 mg initially; if response is inadequate at 2 hr, up to 50 mg may be given (initial

doses of 25–50 mg may be more effective than 25 mg). If headache recurs, doses may be repeated q 2 hr (not to exceed 300 mg/day). If PO therapy is to follow subcut injection, additional PO sumatriptan may be taken q 2 hr (not to exceed 200 mg/day); no single oral dose should exceed 50 mg.

### Availability (generic available)

**Tablets:** 25 mg, 50 mg, 100 mg. **Cost:** 25 mg $202.97/9, 50 mg $188.98/9, 100 mg $188.98/9. **Injection:** 4 mg/0.5-mL prefilled syringes (for use in STAT dose system), 6 mg/0.5-mL prefilled syringes (for use in STAT dose system), vials, or needle-free delivery system. **Cost:** 6 mg $117.15/2 prefilled syringes. **Nasal spray:** 5 mg/nasal spray device (delivers 5 mg/spray) (box of 6), 20 mg/nasal spray device (delivers 20 mg/spray) (box of 6). **Cost:** 5 mg $188.73/box, 20 mg $191.55/box. ***In combination with:*** naproxen (Treximet); see Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Assess pain location, intensity, duration, and associated symptoms (photophobia, phonophobia, nausea, vomiting) during migraine attack.
- Give initial subcut dose under observation to patients with potential for coronary artery disease including postmenopausal women, men >40 yr, patients with risk factors for coronary artery disease such as hypertension, hypercholesterolemia, obesity, diabetes, smoking, or family history. Monitor blood pressure before and for 1 hr after initial injection. If angina occurs, monitor ECG for ischemic changes.
- Monitor for serotonin syndrome in patients taking SSRIs or SNRIs concurrently with sumatriptan.

### Potential Nursing Diagnoses

Acute pain (Indications)

### Implementation

- Do not confuse sumatriptan with zolmitriptan.
- **PO:** Tablets should be swallowed whole; do not crush, break, or chew. Tablets are film-coated to prevent contact with tablet contents, which have an unpleasant taste and may cause nausea and vomiting.
- **Subcut:** Administer as a single injection just below the skin. Solution is clear and colorless or pale yellow; do not use dark-colored or cloudy or if beyond expiration date.
- *Sumavel DosePro*: The snap-off tip should sit firmly on the end of the clear medication chamber; do not use if tip tilted or broken off upon removal from packaging. Administer only in abdomen or thigh.
- **Intranasal:** 10-mg dose may be administered as 2 sprays of 5 mg in one nostril or 1 spray in each nostril.

### Patient/Family Teaching

- Inform patient that sumatriptan should be used only *during* a migraine attack. It is meant to be used for relief of migraine attacks but not to prevent or reduce the number of attacks.
- Instruct patient to administer sumatriptan as soon as symptoms of a migraine attack appear, but it may be administered at any time during an attack. If migraine symptoms return, a second injection may be used. Allow at least 1 hr between doses, and do not use more than two injections in any 24-hr period. Additional sumatriptan doses are not likely to be effective, and alternative medications may be used. If no relief from 1st dose, unlikely 2nd dose will provide relief. Advise patient to read *Patient Information* prior to using and with each Rx refill; new information may be available.
- Advise patient that lying down in a darkened room after sumatriptan administration may further help relieve headache.
- Caution patient not to use sumatriptan if pregnant, suspects pregnancy, or plans to become pregnant. Adequate contraception should be used during therapy.
- Advise patient to notify health care professional before next dose of sumatriptan if pain or tightness in chest occurs during use. If pain is severe or does not subside, notify health care professional immediately. If wheezing; heart throbbing; swelling of eyelids, face, or lips; skin rash; skin lumps; or hives occur, notify health care professional immediately, and do not take more sumatriptan without approval of health care professional. If usual dose fails to relieve three consecutive headaches, or if frequency and/or severity increases, notify health care professional. If feelings of tingling, heat, flushing, heaviness, pressure, drowsiness, dizziness, tiredness, or sickness develop, discuss with health care professional at next visit.
- Sumatriptan may cause dizziness or drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to avoid alcohol, which aggravates headaches, during sumatriptan use.
- Advise patient to consult health care professional before taking other Rx, OTC, or herbal

products concurrently with sumatriptan. Patients concurrently taking SSRI or SNRI antidepressants should notify health care professional promptly if signs of serotonin syndrome (mental status changes: agitation, hallucinations, coma; autonomic instability: tachycardia, labile blood pressure, hyperthermia; neuromuscular aberrations: hyper-reflexia, incoordination; and/or gastrointestinal symptoms: nausea, vomiting, diarrhea) occur.

- **Subcut:** Instruct patient on the proper technique for loading, administering, and discarding the autoinjector or for using *Sumavel DosePro*. Patient information pamphlet is provided. Instructional video is available from the manufacturer.
- Inform patient that pain or redness at the injection site usually lasts less than 1 hr.
- **Intranasal:** Instruct patient in proper technique for intranasal administration. Usual dose is a single spray in one nostril. If headache returns, a 2nd dose may be administered in ≥2 hr. Do not administer 2nd dose if no relief was provided by 1st dose without consulting health care professional.

### Evaluation/Desired Outcomes

- Relief of migraine attack.

## sunitinib (su-**ni**-ti-nib)

Sutent

***Classification***

Therapeutic: antineoplastics
Pharmacologic: kinase inhibitors

**Pregnancy Category D**

### Indications

Gastrointestinal stromal tumor that has progressed or intolerance to imatinib. Advanced renal cell carcinoma.

### Action

Inhibits multiple receptor tyrosine kinases, which are enzymes implicated in tumor growth, abnormal vascular growth, and tumor metastases.
**Therapeutic Effects:** Decreased tumor spread.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration.
**Distribution:** Unknown.
**Protein Binding:** *Sunitinib*—95%; *primary active metabolite*—90%.
**Metabolism and Excretion:** Metabolized by the CYP3A4 enzyme system to its primary active metabolite. This metabolite is further metabolized by CYP3A4. Excretion is primarily fecal.
**Half-life:** *Sunitinib*—40–60 hr; *primary active metabolite*—80–110 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 6–12 hr | 24 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; OB, Lactation: Pregnancy, lactation; Concurrent use of ketoconazole or St. John's wort.
**Use Cautiously in:** Hepatic/renal impairment; OB: Childbearing potential; Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** fatigue, dizziness, headache. **CV:** CHF, hypertension, peripheral edema, QT interval prolongation, thromboembolic events. **GI:** diarrhea, dyspepsia, nausea, stomatitis, vomiting, altered taste, anorexia, constipation, ↑ lipase/amylase, ↑ liver enzymes, oral pain. **Derm:** alopecia, hand-foot syndrome, hair color change, rash, skin discoloration. **Endo:** adrenal insufficiency, hypothyroidism. **F and E:** dehydration, hypophosphatemia. **Hemat:** HEMORRHAGE, anemia, lymphopenia, neutropenia, thrombocytopenia. **Metab:** hyperuricemia. **MS:** arthralgia, back pain, limb pain, myalgia. **Misc:** fever.

### Interactions

**Drug-Drug: Ketoconazole** and other **inhibitors of the CYP3A4 enzyme system** may ↑ levels and the risk of toxicity; dosage may need to be decreased (avoid ketoconazole). **Rifampin** and other **inducers of the CYP3A4 enzyme system** may ↓ levels and effectiveness; dose may need to be increased. ↑ risk of microangiopathic hemolytic anemia when used with bevacizumab (concurrent use not recommended).
**Drug-Natural Products: St. John's wort** may ↓ levels and effectiveness; avoid concurrent use.
**Drug-Food:** Blood levels and effects are ↑ by **grapefruit juice**; concurrent use should be avoided.

### Route/Dosage

**PO (Adults):** 50 mg once daily for 4 wk, followed by 2-wk rest; alteration of dose is based on safety/tolerability and is made in 12.5-mg increments/decrements.

### Availability

**Capsules:** 12.5 mg, 25 mg, 37.5 mg, 50 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor for signs of CHF (dyspnea, edema, jugular venous distention) during therapy. Assess left ventricular ejection fraction (LVEF) at baseline and periodically during therapy in patients with cardiac events in the previous 12 mo and a baseline ejection fraction in patients without cardiovascular risk factors. Discontinue sunitinib if signs of CHF occur.
- Monitor for hypertension and treat with standard antihypertensive therapy. If severe hypertension occurs, may discontinue sunitinib until controlled.
- Monitor ECG and electrolytes periodically during therapy; may cause QT prolongation and torsades de pointes.
- ***Lab Test Considerations:*** Monitor CBC with platelet count and serum chemistries including phosphate at the beginning of each treatment cycle. May cause neutropenia, lymphopenia, anemia, and thrombocytopenia. May cause ↑ creatinine, hypokalemia, hyperuricemia, and ↑ uric acid.
- May cause ↑ AST, ALT, alkaline phosphatase, total and indirect bilirubin, amylase and lipase.
- Monitor thyroid function in patients with symptoms of hypothyroidism. May be treated with standard medical practice.

### Potential Nursing Diagnoses

Diarrhea (Adverse Reactions)
Nausea (Adverse Reactions)

### Implementation

- **PO:** Administer once daily with or without food for 4 wk, then 2 wk off therapy.

### Patient/Family Teaching

- Instruct patient to take sunitinib as directed for 4 wk, followed by 2 wk off. Take missed doses as soon as remembered, but not just before next dose. Take next dose at regular time. Do not take more than 1 dose at a time. Tell your health care professional about the missed dose.
- Advise patient to avoid grapefruit juice or grapefruit products during therapy.
- Advise patient that GI disorders (diarrhea, nausea, stomatitis, dyspepsia, vomiting) are common and may require antiemetic and antidiarrheal medications.
- Inform patient that sunitinib may cause discoloration (yellow) of skin and depigmentation of hair or skin.
- Advise women of childbearing potential to avoid becoming pregnant while receiving sunitinib.
- Advise patient to consult health care professional before taking other Rx, OTC, or herbal products during sunitinib therapy.
- Advise patient to notify health care professional if bleeding or swelling occur.

### Evaluation/Desired Outcomes

- Decrease in tumor spread.

## tacrine (tak-rin)

Cognex

***Classification***

Therapeutic: anti-Alzheimer's agents
Pharmacologic: cholinergics (cholinesterase inhibitors)

**Pregnancy Category C**

### Indications

Mild to moderate dementia associated with Alzheimer's disease.

### Action

Increases levels of acetylcholine in the CNS by inhibiting its breakdown. **Therapeutic Effects:** Improved cognitive function in patients with mild to moderate Alzheimer's disease. Does not cure the disease.

### Pharmacokinetics

**Absorption:** Rapidly absorbed following oral administration, although bioavailability is low (17%).
**Distribution:** Unknown.
**Metabolism and Excretion:** Highly metabolized by the liver (mostly by the P450 enzyme system).
**Half-life:** 2–4 hr.

TIME/ACTION PROFILE (improvement in cognitive function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 6 wk | 18–24 wk | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to tacrine or other acridines; Jaundice associated with previous courses of tacrine therapy.
**Use Cautiously in:** Patients with a history or risk of GI bleeding, including current therapy with NSAIDs.

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **CV:** bradycardia. **GI:** GI BLEEDING, anorexia, diarrhea, drug-induced hepatitis, dyspepsia, nausea, vomiting.

### Interactions

**Drug-Drug:** Metabolized by the cytochrome P450 enzyme system; levels and effects may be altered by other drugs which increase/inhibit this system or drugs that may compete for this metabolic pathway. Increases **theophylline** levels and risk of toxicity (blood level monitoring recommended; dosage reduction may be required). Potentiates the effects of **succinylcholine** (increases neuromuscular blockade) during anesthesia; also potentiates the effects of other **cholinesterase inhibitors**. May potentiate the action of **cholinergics** (**bethanechol**). **Fluvoxamine** significantly increases blood levels and the risk of adverse reactions. **Cigarette smoking** decreases blood levels of tacrine. **Cimetidine** increases tacrine levels. May interfere with the action of **anticholinergics**. Concurrent use of **NSAIDs** may increase the risk of GI bleeding.
**Drug-Food: Food** decreases absorption of tacrine by 30–40%.

### Route/Dosage

**PO (Adults):** 10 mg 4 times daily for 4 wk. If ALT remains unchanged, increase dose to 20 mg 4 times daily. Further increments may be made at 4-wk intervals as tolerated, up to 160 mg/day.

### Availability

**Capsules:** 10 mg, 20 mg, 30 mg, 40 mg. **Cost:** 10 mg $147.01/120, 20 mg $147.01/120, 30 mg $147.01/120, 40 mg $147.01/120

## NURSING IMPLICATIONS

### Assessment

- Assess cognitive function (memory, attention, reasoning, language, ability to perform simple tasks) periodically throughout therapy.
- Monitor heart rate periodically during therapy. May cause bradycardia.
- ***Lab Test Considerations:*** May cause ALT elevations; monitor levels every other wk for the first 16 wk of therapy, monthly for 2 mo, and then every 3 mo throughout therapy. Biweekly monitoring should be resumed for at least 6 wk after any dose increase. If ALT levels are <3 times the upper limit of normal, continue dose titration; if levels are >3 to <5 times the upper limit of normal, decrease the dose of tacrine by 40 mg/day and resume dose titration when ALT returns to normal. Tacrine should be discontinued if ALT levels are >5 times the upper limit of normal. Levels usually return to normal 4–6 wk after discontinuation of therapy.
- Tacrine should be permanently discontinued and a new trial should not be attempted in patients with clinical jaundice and a total bilirubin >3 mg/dL.

### Potential Nursing Diagnoses

Disturbed thought process (Indications)
Risk for injury (Indications)
Impaired environmental interpretation syndrome (Indications)

### Implementation

- **PO:** Administer at regular intervals between meals on an empty stomach. If GI upset occurs, may be administered with meals; however, plasma levels may be reduced by 30–40%.
- Tacrine capsules may be dissolved in any aqueous solution for patients with difficulty swallowing (orange juice best masks the bitter taste). Place intact capsule in liquid to avoid loss of medication by spillage.

### Patient/Family Teaching

- Emphasize the importance of taking tacrine at regular intervals as directed. If a dose is missed, take as soon as possible unless within 2 hr of next dose; do not double doses or discontinue without consulting health care professional. Abrupt discontinuation of doses >80 mg/day may cause a decline in cognitive function and behavioral disturbances.
- Caution patient and caregiver that tacrine may cause dizziness, unsteadiness, and clumsiness.
- Advise patient and caregiver to notify health care professional if nausea, vomiting, diarrhea, rash, jaundice, or changes in the color of the stool occur or if new symptoms occur or previously noted symptoms increase in severity.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery.

### Evaluation/Desired Outcomes

- Improvement in cognitive function (memory, attention, reasoning, language, ability to perform simple tasks) in patients with Alzheimer's disease.

## TACROLIMUS

**tacrolimus (oral, IV)**
(ta-**kroe**-li-mus)
Prograf

**tacrolimus (topical)**
Protopic

***Classification***
Therapeutic: immunosuppressants

**Pregnancy Category C**

### Indications

**PO, IV:** Prevention of organ rejection in patients who have undergone allogenic liver, kidney, or heart transplantation (used concurrently with corticosteroids) (used concurrently with azathioprine or mycophenolate mofetil in kidney or heart transplants). **Topical:** Moderate to severe atopic dermatitis in patients who do not respond to or cannot tolerate alternative, conventional therapies.

### Action

Inhibit T-lymphocyte activation. **Therapeutic Effects:** Prevention of transplanted organ rejection. Improvement in signs/symptoms of atopic dermatitis.

### Pharmacokinetics

**Absorption:** Absorption following oral administration is erratic and incomplete (bioavailability ranges 5–67%); minimal amounts absorbed following topical use.
**Distribution:** Cross the placenta and enter breast milk.
**Protein Binding:** 99%.
**Metabolism and Excretion:** 99% metabolized by the liver; <1% excreted unchanged in the urine.
**Half-life:** *Liver transplant patients*—11.7 hr; *healthy volunteers*—21.2 hr.

TIME/ACTION PROFILE (immunosuppression)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 1.3–3.2 hr* | 12 hr |
| IV | rapid | unknown | 8–12 hr |
| topical† | unknown | 1–2 wk | unknown |

*Blood level
†Improvement in atopic dermatitis

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to tacrolimus or to castor oil (a component in the injection); Concurrent use with cyclosporine or sirolimus should be avoided; Lactation: Breastfeeding should be avoided; **Topical:** Weakened/compromised immune system; Malignant or premalignant skin condition; Pedi: Children <2 yr (safety not established).
**Use Cautiously in:** Renal or hepatic impairment (dose reduction may be required; if oliguria occurs, wait 48 hr before initiating tacrolimus); Exposure to sunlight/UV light (may ↑ risk of malignant skin changes); OB: Hyperkalemia and renal impairment may occur in the newborn; use only if benefit to mother justifies risk to the fetus; Pedi: Higher end of dosing range required to maintain adequate blood levels; **Topical:** Superficial skin infections.

## Adverse Reactions/Side Effects

Noted primarily for PO and IV use.

**CNS:** SEIZURES, dizziness, headache, insomnia, tremor, abnormal dreams, agitation, anxiety, confusion, depression, emotional lability, hallucinations, posterior reversible encephalopathy syndrome, psychoses, somnolence. **EENT:** abnormal vision, amblyopia, sinusitis, tinnitus. **Resp:** cough, pleural effusion, asthma, bronchitis, pharyngitis, pneumonia, pulmonary edema. **CV:** hypertension, peripheral edema, QTc prolongation. **GI:** GI BLEEDING, abdominal pain, anorexia, ascites, constipation, diarrhea, dyspepsia, ↑ liver function tests, nausea, vomiting, cholangitis, cholestatic jaundice, dysphagia, flatulence, ↑ appetite, oral thrush, peritonitis. **GU:** nephrotoxicity, urinary tract infection. **Derm:** pruritus, rash, alopecia, herpes simplex, hirsutism, photosensitivity, sweating. **Endo:** hyperglycemia, hyperlipidemia. **F and E:** hyperkalemia, hypomagnesemia, hyperphosphatemia, hypocalcemia, hyponatremia, hypophosphatemia, metabolic acidosis, metabolic alkalosis. **Hemat:** anemia, leukocytosis, leukopenia, thrombocytopenia, coagulation defects. **Local:** *topical*—burning, stinging. **MS:** arthralgia, hypertonia, leg cramps, muscle spasm, myalgia, myasthenia, osteoporosis. **Neuro:** paresthesia, neuropathy. **Misc:** allergic reactions including ANAPHYLAXIS, generalized pain, abnormal healing, chills, fever, infection (including activation of latent viral infections such as BK virus-associated nephropathy), ↑ risk of lymphoma/skin cancer (topical).

## Interactions

Noted primarily for PO and IV use, but should be considered for topical use.

**Drug-Drug:** Risk of nephrotoxicity is ↑ by concurrent use of **aminoglycosides**, **amphotericin B**, **cisplatin**, or **cyclosporine** (allow 24 hr to pass after stopping cyclosporine before starting tacrolimus). Concurrent use of **potassium-sparing diuretics**, **ACE inhibitors**, or **angiotensin II receptor blockers** ↑ risk of hyperkalemia. The following drugs ↑ tacrolimus blood levels: **azole antifungals**, **bromocriptine**, **calcium channel blockers**, **chloramphenicol**, **cimetidine**, **lansoprazole**, **clarithromycin**, **cyclosporine**, **danazol**, **erythromycin**, **magnesium/aluminum hydroxide methylprednisolone**, **omeprazole**, **nefazodone**, and **metoclopramide**, **protease inhibitors**, and **voriconazole**. **Phenobarbital**, **phenytoin**, **caspofungin**, **sirolimus carbamazepine**, and **rifamycins** may ↓ tacrolimus blood levels. **Vaccinations** may be less effective if given concurrently with tacrolimus (avoid use of live-virus vaccines). May ↑ levels of **mycophenolate mofetil** or **mycophenolic acid**.

**Drug-Natural Products:** Concomitant use with **astragalus**, **echinacea**, and **melatonin** may interfere with immunosuppression. **St John's wort** may ↓ tacrolimus blood levels.

**Drug-Food: Food** ↓ the rate and extent of GI absorption. **Grapefruit juice** ↑ absorption.

## Route/Dosage

Because of the potential risk for anaphylaxis, the IV route of administration should be reserved for those patients unable to take the drug orally.

### Kidney Transplantation

**PO (Adults):** *Initial dose (with azathioprine)*—0.2 mg/kg/day in 2 divided doses; titrate to achieve recommended whole blood trough concentration; *Initial dose (with mycophenolate mofetil and IL-2 antagonist)*—0.1 mg/kg/day in 2 divided doses; titrate to achieve recommended whole blood trough concentration.

**PO (Children):** 0.15–0.4 mg/kg/day in 2 divided doses; titrate to achieve recommended whole blood trough concentration.

**IV (Adults):** *Initial dose*—0.03–0.1 mg/kg/day as a continuous infusion; titrate dose to achieve recommended whole blood trough concentration.

**IV (Children):** 0.03–0.15 mg/kg/day.

### Liver Transplantation

**PO (Adults):** *Initial dose*—0.1–0.15 mg/kg/day in two divided doses; titrate to achieve recommended whole blood trough concentration.

**PO (Children):** *Initial dose*—0.15–0.2 mg/kg/day in 2 divided doses; titrate to achieve recommended whole blood trough concentration.

**IV (Adults and Children):** Same as for kidney transplant.

### Heart Transplantation

**PO (Adults):** *Initial dose*—0.075 mg/kg/day in two divided doses; titrate to achieve recommended whole blood trough concentration.

**IV (Adults):** *Initial dose*—0.01 mg/kg/day as a continuous infusion; titrate dose to achieve recommended whole blood trough concentration.

### Atopic Dermatitis

**Topical (Adults):** Apply 0.03% or 0.1% ointment twice daily. Discontinue when signs/symptoms of atopic dermatitis resolve.

T

**Topical (Children ≥2–15 yr):** Apply 0.03% ointment twice daily. Discontinue when signs/symptoms of atopic dermatitis resolve.

### Availability (generic available)

**Capsules:** 0.5 mg, 1 mg, 5 mg. **Cost:** 0.5 mg $359.96/180, 1 mg $694.46/180, 5 mg $3,645.61/180. **Injection:** 5 mg/mL. **Ointment:** 0.03%, 0.1%.

## NURSING IMPLICATIONS

### Assessment

- Assess for symptoms of posterior reversible encephalopathy syndrome [PRES] (headache, altered mental status, seizures, visual disturbances, hypertension) periodically during therapy. Confirm diagnosis by radiologic procedure. If PRES is suspected or diagnosed, maintain blood pressure control and immediately reduce immunosuppression. Symptoms are usually reversed on reduction or discontinuation of immunosuppression.
- **Prevention of Organ Rejection:** Monitor blood pressure closely during therapy. Hypertension is a common complication of tacrolimus therapy and should be treated.
- Observe patients receiving IV tacrolimus for the development of anaphylaxis (rash, pruritus, laryngeal edema, wheezing) for at least 30 min and frequently thereafter. If signs develop, stop infusion and initiate treatment.
- **Atopic Dermatitis:** Assess skin lesions prior to and periodically during therapy.
- Use only for short time, not continuously, and in the minimum dose possible to decrease risk of developing skin cancer.
- ***Lab Test Considerations:*** Tacrolimus blood level monitoring may be helpful in the evaluation of rejection and toxicity, dose adjustments, and assessment of compliance. For liver transplantation, most patients are stable when tacrolimus trough whole blood concentrations are maintained between 5–20 ng/mL. For kidney transplantation, during the first 3 mo, most patients maintained tacrolimus whole blood concentrations between 7–20 ng/mL and then between 5–15 ng/mL through 1 yr. For heart transplantation, from wk 1 to 3 mo, most patients maintained tacrolimus trough whole blood concentrations between 8–20 ng/mL and then between 6–18 ng/mL from 3–18 mo post-transplant.
- Monitor serum creatinine, potassium, and glucose closely. ↑ serum creatinine and ↓ urine output may indicate nephrotoxicity. May also cause insulin-dependent post-transplant diabetes mellitus (▩ incidence is higher in African American and Hispanic patients).
- May also cause hyperuricemia, hypokalemia, hyperkalemia, hypomagnesemia, metabolic acidosis, metabolic alkalosis, hyperlipidemia, hyperphosphatemia, hypophosphatemia, hypocalcemia, and hyponatremia.
- Monitor CBC. May cause anemia, leukocytosis, and thrombocytopenia.

### Potential Nursing Diagnoses

Risk for infection (Adverse Reactions)

### Implementation

- Therapy with tacrolimus should be started no sooner than 6 hr post-transplantation. Concurrent therapy with corticosteroids is recommended in the early postoperative period.
- Tacrolimus should not be used concomitantly with cyclosporine. Tacrolimus or cyclosporine should be discontinued at least 24 hr before starting the other.
- Oral therapy is preferred because of the risk of anaphylactic reactions with IV tacrolimus. IV therapy should be replaced with oral therapy as soon as possible.
- Adults should be started at the lower end of the dose range; children require a higher doses to maintain blood trough concentrations similar to adults.
- **PO:** Oral doses can be initiated 8–12 hr after discontinuation of IV doses.
- **Topical:** Do not use continuously for a long time.

#### IV Administration

- **Continuous Infusion:** ***Diluent:*** Dilute in 0.9% NaCl or D5W. ***Concentration:*** 0.004–0.02 mg/mL . May be stored in polyethylene or glass containers for 24 hr following dilution. Do not store in PVC containers. ***Rate:*** Administer daily dose as a continuous infusion over 24 hr.
- **Y-Site Compatibility:** alfentanil, amifostine, amikacin, aminophylline, amiodarone, amphotericin B colloidal, amphotericin B liposome, anidulafungin, atracurium, aztreonam, benztropine, bivalirudin, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium acetate, calcium chloride, calcium gluconate, carboplatin, carmustine, caspofungin, cefazolin, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, chlorpromazine, cimetidine, ciprofloxacin, cisatracurium, cisplatin, clindamycin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, dapto-

mycin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dolasetron, dopamine, doripenem, doxacurium, doxorubicin hydrochloride, doxycycline, droperidol, enalaprilat, ephedrine, epinephrine, epirubicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, foscarnet, fosphenytoin, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hetastarch, hydralazine, hydrocortisone , hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, inamrinone, insulin, isoproterenol, ketorolac, labetalol, leucovorin, levofloxacin, levorphanol, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, meropenem, mesna, metaraminol, methotrexate, methyldopate, methylprednisolone, metoclopramide, metoprolol, metronidazole, micafungin, midazolam, milrinone, mitomycin, mitoxantrone, mivacurium, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nesiritide, nicardipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, paclitaxel, palonosetron, pancuronium, pemetrexed, penmicillin G, pentamidine, pentazocine, perphenazine, phentolamine, phenylephrine, piperacillin/tazobactam, potassium chloride, potassium phosphates, procainamide, prochlorperazine, promethazine, propranolol, quinapristin/dalfopristin, ranitidine, remifentanil, rocuronium, sodium acetate, sodium bicarbonate, sodium phosphates, streptozocin, succinylcholine, sufentanil, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tigecycline, tirofiban, tobramycin, tolazoline, trimethobenzamide, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, voriconazole, zidovudine.

- **Y-Site Incompatibility:** acyclovir, allopurinol, azathioprine, cefepime, dantrolene, diazepam, diazoxide, esomeprazole, folic acid, ganciclovir, iron sucrose, levothyroxine, omeprazole, phenytoin, thiopental.

## Patient/Family Teaching

- Instruct patient to take tacrolimus at the same time each day, as directed. Do not skip or double up on missed doses. Do not discontinue medication without advice of health care professional.
- Advise patient to avoid grapefruit and grapefruit juice during therapy.
- Reinforce the need for lifelong therapy to prevent transplant rejection. Review symptoms of rejection for transplanted organ and stress need to notify health care professional immediately if they occur.
- Emphasize the importance of repeated lab tests during tacrolimus therapy.
- Advise patient to avoid eating raw oysters or other shellfish; make sure they are fully cooked before eating.
- Instruct patient to notify health care professional if signs of diabetes mellitus (frequent urination, increased thirst or hunger) or PRES occur.
- Advise patient to wear protective clothing and sunscreen to avoid photosensitivity reactions.
- Instruct patient to avoid exposure to chicken pox, measles, mumps, and rubella. If exposed, see health care professional for prophylactic therapy.
- Advise patient of the risk of taking tacrolimus during pregnancy.
- Inform patient of the risk of lymphoma or skin cancer with tacrolimus therapy.
- **Topical:** Advise patients to contact health care professional if their symptoms do not improve after 6 wk of therapy, if their symptoms worsen, or they develop a skin infection.
- Instruct patient to use ointment only on areas of skin with atopic dermatitis.
- Advise patient to stop using the ointment when the signs/symptoms of atopic dermatitis go away.
- Advise patient to limit sun exposure during treatment.

## Evaluation/Desired Outcomes

- Prevention of transplanted organ rejection.
- Management of atopic dermatitis.

## tadalafil (ta-**da**-la-fil)

Adcirca, Cialis

***Classification***

Therapeutic: erectile dysfunction agents, vasodilators

Pharmacologic: phosphodiesterase type 5 inhibitors

**Pregnancy Category B**

## Indications
*Cialis:* Erectile dysfunction. *Adcirca:* Pulmonary arterial hypertension.

## Action
Increases cyclic guanosine monophosphate (cGMP) levels by inhibiting phosphodiesterase type 5 (PDE5) an enzyme responsible for the breakdown of cGMP. cGMP produces smooth muscle relaxation of the corpus cavernosum, which in turn promotes increased blood flow and subsequent erection. cGMP also leads to vasodilation of the pulmonary vasculature. **Therapeutic Effects:** *Cialis:* Enhanced blood flow to the corpus cavernosum and erection sufficient to allow sexual intercourse. Requires sexual stimulation. *Adcirca:* Improved exercise tolerance.

## Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Extensive tissue distribution; penetrates semen.
**Protein Binding:** 94%.
**Metabolism and Excretion:** Mostly metabolized by the liver (mainly CYP3A4 enzyme system); metabolites are excreted in feces (61%) and urine (36%).
**Half-life:** 17.5 hr.

TIME/ACTION PROFILE (vasodilation, improved erectile function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 0.5–6 hr | 36 |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent use of nitrates; Unstable angina, recent history of stroke, life-threatening heart failure within 6 months, uncontrolled hypertension, arrhythmias, stroke within 6 months or MI within 90 days; Any other cardiovascular pathology precluding sexual activity; Known hereditary degenerative retinal disorders; Severe hepatic impairment; Severe renal impairment (Adcirca only); Congenital or acquired QT prolongation or concurrent use of Class IA or III antiarrhythmics; Concurrent use of ketoconazole, itraconazole, or rifampin (Adcirca only); Pedi: Women, children or newborns.
**Use Cautiously in:** Left ventricular outflow obstruction; Penile deformity; Renal impairment; Underlying conditions predisposing to priapism including sickle cell anemia, multiple myeloma or leukemia; Bleeding disorders or active peptic ulcer disease; Strong inhibitors of the CYP3A4 enzyme system; Alpha adrenergic blockers (patients should be on stable dose of alpha blockers before starting tadalafil); History of sudden severe vision loss or non arteritic ischemic optic neuropathy (NAION); may ↑ risk of recurrence; Geri: May experience more side effects.

## Adverse Reactions/Side Effects
**CNS:** headache. **EENT:** HEARING LOSS, VISION LOSS, nasal congestion. **CV:** hypotension. **GI:** dyspepsia. **GU:** priapism. **Derm:** flushing. **MS:** back pain, limb pain, myalgia.

## Interactions
**Drug-Drug:** Concurrent use of **nitrates** may cause serious, life threatening hypotension and is contraindicated. ↑ risk of hypotension with **alpha adrenergic blockers** and acute ingestion of **alcohol**. Strong inhibitors of CYP3A4 including **ritonavir**, **ketoconazole**, **itraconazole** ↑ effects and the risk of adverse reactions (dosage adjustments recommended; ketoconazole and itraconazole contraindicated with Adcirca). Similar effects may be expected of other **inhibitors of CY3A4**. **CYP3A4 inducers** may ↓ effects (**rifampin** contraindicated with Adcirca).

## Route/Dosage

### Cialis (for erectile dysfunction)
**PO (Adults):** 10 mg prior to sexual activity (range 5–20 mg; not to exceed one dose/24 hr) *or* 2.5 mg once daily (max: 5 mg/day); *Concurrent use of CYP3A4 inhibitors including itraconazole, ketoconazole and ritonavir*—single dose should not exceed 10 mg in any 72 hour period; for once daily dose regimen, daily dose should not exceed 2.5 mg.

#### Renal Impairment
**PO (Adults):** *CCr 31–50 mL/min*—Initial dose should not exceed 5 mg/day; maximum dose should not exceed 10 mg in 48 hr (no adjustment required for once daily use); *CCr <30 mL/min*—maximum dose 5 mg (once daily dose regimen not recommended).

#### Hepatic Impairment
**PO (Adults):** *Mild or moderate hepatic impairment (Child–Pugh class A or B)*—Daily dose should not exceed 10 mg (once daily dose regimen not recommended).

### Adcirca (for pulmonary arterial hypertension)
**PO (Adults):** 40 mg once daily; *If receiving ritonavir for ≥1 wk*—start 20 mg once daily; may then ↑ to 40 mg once daily based on tolerability; *If initiating ritonavir while on Adcirca*—stop Adcirca ≥24 hr before starting ritonavir; may reinitiate Adcirca at 20 mg once daily after ≥1 wk

of therapy with ritonavir; may then ↑ to 40 mg once daily based on tolerability .

### Renal Impairment

(Adults): *CCr 31–80 mL/min*—Start 20 mg once daily; may then ↑ to 40 mg once daily based on tolerability.

### Hepatic Impairment

**PO (Adults):** *Mild or moderate hepatic impairment (Child–Pugh class A or B)*—Start with 20 mg once daily.

### Availability

**Tablets (Cialis):** 2.5 mg, 5 mg, 10 mg, 20 mg. **Cost:** 5 mg $357.97/30, 10 mg $356.97/30, 20 mg $365.97/30. **Tablets (Adcirca):** 20 mg.

## NURSING IMPLICATIONS

### Assessment

- *Cialis:* Determine erectile dysfunction before administration. Tadalafil has no effect in the absence of sexual stimulation.
- *Adcirca:* Monitor hemodynamic parameters and exercise tolerance prior to and periodically during therapy.

### Potential Nursing Diagnoses

Sexual dysfunction (Indications)
Risk for activity intolerance (Indications)

### Implementation

- **PO:** Administer dose for *erectile dysfunction* at least 30 min prior to sexual activity; effectiveness may continue for 36 hr.
- Administer dose for *pulmonary hypertension* once daily.
- May be administered without regard to food.

### Patient/Family Teaching

- Instruct patient to take tadalafil at least 30 min before sexual activity and not more than once per day. Inform patient that sexual stimulation is required for an erection to occur after taking tadalafil.
- Advise patient that tadalafil is not indicated for use in women.
- Caution patient not to take tadalafil concurrently with alpha adrenergic blockers (unless on a stable dose) or nitrates. If chest pain occurs after taking tadalafil, instruct patient to seek immediate medical attention.
- Advise patient to avoid excess alcohol intake (≥5 units) in combination with tadalafil; may increase risk of orthostatic hypotension, increased heart rate, decreased standing blood pressure, dizziness, headache.
- Instruct patient to notify health care professional promptly if erection lasts longer than 4 hr, if they are not satisfied with their sexual performance or develop unwanted side effects or if they experience sudden or decreased vision loss in one or both eyes or loss or decrease in hearing, ringing in the ears, or dizziness.
- Advise patient to consult health care professional before taking other Rx or OTC medications or herbal supplements that may interact with tadalafil.
- Inform patient that tadalafil offers no protection against sexually transmitted diseases. Counsel patient that protection against sexually transmitted diseases and HIV infection should be considered.

### Evaluation/Desired Outcomes

- Male erection sufficient to allow intercourse.
- Increased exercise tolerance.

## tamoxifen (ta-**mox**-i-fen)

Alpha-Tamoxifen, Med Tamoxifen, Nolvadex-D, Novo-Tamoxifen, Tamofen, Tamone, Tamoplex

***Classification***
Therapeutic: antineoplastics
Pharmacologic: antiestrogens

**Pregnancy Category D**

T

### Indications

Adjuvant therapy of breast cancer after surgery and radiation (delays recurrence). Palliative or adjunctive treatment of advanced breast cancer. Prevention of breast cancer in high-risk patients. Treatment of ductal carcinoma *in situ* following breast surgery and radiation.

### Action

Competes with estrogen for binding sites in breast and other tissues. Reduces DNA synthesis and estrogen response. **Therapeutic Effects:** Suppression of tumor growth. Reduced incidence of breast cancer in high-risk patients.

### Pharmacokinetics

**Absorption:** Absorbed after oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Mostly metabolized by the liver. Slowly eliminated in the feces. Minimal amounts excreted in the urine.

**Half-life:** 7 days.

TIME/ACTION PROFILE (tumor response)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 4–10 wk | several mo | several wk |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent warfarin therapy with history of deep vein thrombosis (patients at high risk for breast cancer only); OB, Lactation: Pregnancy or lactation. **Use Cautiously in:** ↓ bone marrow reserve; Women with childbearing potential.

### Adverse Reactions/Side Effects

**CNS:** confusion, depression, headache, weakness. **EENT:** blurred vision. **CV:** PULMONARY EMBOLISM, STROKE, edema. **GI:** nausea, vomiting. **GU:** UTERINE MALIGNANCIES, vaginal bleeding. **F and E:** hypercalcemia. **Hemat:** leukopenia, thrombocytopenia. **Metab:** hot flashes. **MS:** bone pain. **Misc:** tumor flare.

### Interactions

**Drug-Drug: Estrogens** and **aminoglutethimide** may ↓ effectiveness of concurrently administered tamoxifen. Blood levels are ↑ by **bromocriptine**. May ↑ the anticoagulant effect of **warfarin**. Risk of thromboembolic events is ↑ by concurrent use of other **antineoplastics**.

### Route/Dosage

### Treatment of Breast Cancer

**PO (Adults):** 10–20 mg twice daily; doses of 20 mg/day may be taken as a single dose.

### Prevention of Breast Cancer/Ductal Carcinoma *in situ*

**PO (Adults):** 20 mg once daily for 5 yr.

### Availability (generic available)

**Tablets:** 10 mg, 20 mg. **Cost:** *Generic*—10 mg $39.97/90, 20 mg $49.97/90. **Enteric-coated tablets:** 🍁 20 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess for an increase in bone or tumor pain. Confer with health care professional regarding analgesics. This transient pain usually resolves despite continued therapy.
- ***Lab Test Considerations:*** Monitor CBC, platelets, and calcium levels before and during therapy. May cause transient hypercalcemia in patients with metastases to the bone. An estrogen receptor assay should be assessed before initiation of therapy.
- Monitor serum cholesterol and triglyceride concentrations in patients with pre-existing hyperlipidemia. May cause ↑ concentrations.
- Monitor hepatic function tests and thyroxine ($T_4$) periodically during therapy. May cause ↑ serum hepatic enzyme and thyroxine concentrations.
- Gynecologic examinations should be performed regularly; may cause variations in Papanicolaou and vaginal smears.

### Potential Nursing Diagnoses

Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- **PO:** Administer with food or fluids if GI irritation becomes a problem. Consult health care professional if patient vomits shortly after administration of medication to determine need for repeat dose.
- Do not crush, break, chew, or administer an antacid within 1–2 hr of enteric-coated tablet.

### Patient/Family Teaching

- Instruct patient to take medication as directed. If a dose is missed, it should be omitted.
- If skin lesions are present, inform patient that lesions may temporarily increase in size and number and may have increased erythema.
- Advise patient to report bone pain to health care professional promptly. This pain may be severe. Inform patient that this may be an indication of the drug's effectiveness and will resolve over time. Analgesics should be ordered to control pain.
- Instruct patient to monitor weight weekly. Weight gain or peripheral edema should be reported to health care professional.
- This medication may induce ovulation and may have teratogenic properties. Advise patient to use a nonhormonal method of contraception during and for 1 mo after the therapy.
- Advise patient that medication may cause hot flashes. Notify health care professional if these become bothersome.
- Instruct patient to notify health care professional promptly if pain or swelling of legs, shortness of breath, weakness, sleepiness, confusion, nausea, vomiting, weight gain, dizziness, headache, loss of appetite, or blurred vision occurs. Patient should also report menstrual irregularities, vaginal bleeding, pelvic pain or pressure.

### Evaluation/Desired Outcomes

- Decrease in the size or spread of breast cancer. Observable effects of therapy may not be seen for 4–10 wk after initiation.

## tamsulosin (tam-soo-loe-sin)

Flomax

***Classification***

Therapeutic: none assigned
Pharmacologic: peripherally acting antiadrenergics

**Pregnancy Category B**

### Indications

Management of outflow obstruction in male patients with prostatic hyperplasia.

### Action

Decreases contractions in smooth muscle of the prostatic capsule by preferentially binding to alpha$_1$-adrenergic receptors. **Therapeutic Effects:** Decreased symptoms of prostatic hyperplasia (urinary urgency, hesitancy, nocturia).

### Pharmacokinetics

**Absorption:** Slowly absorbed after oral administration.
**Distribution:** Widely distributed.
**Protein Binding:** 94–99%.
**Metabolism and Excretion:** Extensively metabolized by the liver; <10% excreted unchanged in urine.
**Half-life:** 14 hr.

TIME/ACTION PROFILE (↑ in urine flow)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 wk | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Patients at risk for prostate carcinoma (symptoms may be similar).

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache. **EENT:** rhinitis. **CV:** orthostatic hypotension. **GU:** retrograde/diminished ejaculation.

### Interactions

**Drug-Drug: Cimetidine** may ↑ blood levels and the risk of toxicity. ↑ risk of hypotension with other peripherally acting anti-adrenergics (**doxazosin**, **prazosin**, **terazosin**); concurrent use should be avoided.

### Route/Dosage

**PO (Adults):** 0.4 mg once daily after a meal; may be ↑ after 2–4 wk to 0.8 mg/day.

### Availability

**Capsules:** 0.4 mg. **Cost:** $233.98/90.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for symptoms of prostatic hyperplasia (urinary hesitancy, feeling of incomplete bladder emptying, interruption of urinary stream, impairment of size and force of urinary stream, terminal urinary dribbling, straining to start flow, dysuria, urgency) before and periodically during therapy.
- Assess patient for first-dose orthostatic hypotension and syncope. Incidence may be dose related. Observe patient closely during this period and take precautions to prevent injury.
- Monitor intake and output ratios and daily weight, and assess for edema daily, especially at beginning of therapy. Report weight gain or edema.
- Rectal exams prior to and periodically throughout therapy to assess prostate size are recommended.

### Potential Nursing Diagnoses

Risk for injury (Side Effects)
Impaired urinary elimination (Indications)

### Implementation

- Do not confuse Flomax (tamsulosin) with Fosamax (alendronate) or Volmax (albuterol).
- **PO:** Administer daily dose 30 min after the same meal each day. Swallow capsules whole; do not open, crush, or chew.
- If dose is interrupted for several days at either the 0.4-mg or 0.8-mg dose, restart therapy with the 0.4-mg/day dose.

### Patient/Family Teaching

- Emphasize the importance of continuing to take this medication, even if feeling well. Instruct patient to take medication at the same time each day. If a dose is missed, take as soon as remembered unless almost time for next dose. Do not double doses.
- May cause dizziness. Advise patient to avoid driving or other activities requiring alertness until response to medication is known.
- Caution patient to change positions slowly to minimize orthostatic hypotension.

T

- Advise patient to consult health care professional before taking other Rx, OTC, or herbal products, especially cough, cold, or allergy remedies.
- Emphasize the importance of follow-up visits to determine effectiveness of therapy.

### Evaluation/Desired Outcomes

- Decrease in urinary symptoms of benign prostatic hyperplasia.

## tapentadol (ta-pen-ta-dol)

Nucynta

***Classification***

Therapeutic: analgesics (centrally acting), opioid analgesics
Pharmacologic: opioid agonists

**Schedule II**

**Pregnancy Category C**

### Indications

Management of moderate to severe acute pain in patients ≥18 yr.

### Action

Acts as $\mu$-opioid receptor agonist. Also inhibits the reuptake of norepinephrine. **Therapeutic Effects:** Decrease in pain severity.

### Pharmacokinetics

**Absorption:** 32% absorbed following oral administration.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** Undergoes extensive first-pass hepatic metabolism (97%); metabolites have no analgesic activity; metabolized drug is 99% renally excreted.
**Half-life:** 4 hr.

TIME/ACTION PROFILE (analgesic effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1 hr | 4–6 hr |

### Contraindications/Precautions

**Contraindicated in:** Significant respiratory depression in unmonitored settings or where resuscitative equipment is not readily available; Paralytic ileus; Severe hepatic impairment; Concurrent MAO inhibitors or use of MAO inhibitors in the preceding 2 wk; Lactation: Lactation; Pedi: Safe use in children <18 yr not established; not recommended.
**Use Cautiously in:** Conditions associated with hypoxia, hypercapnea, or decreased respiratory reserve including asthma, chronic obstructive pulmonary disease, cor pulmonale, extreme obesity, sleep apnea syndrome, myxedema, kyphoscoliosis, CNS depression, use of other CNS depressants or coma ( ↑ risk of further respiratory depression); use smallest effective dose; Geri: Elderly or debilitated patients ( ↑ risk of respiratory depression); consider age-related decrease in hepatic, renal, and cardiovascular function, concurrent disease states and drug therapy (initial dose should be lower); History of substance abuse or addiction disorder; History or ↑ risk of seizures; OB: Use in pregnancy only if potential benefit justifies potential risk to the fetus.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, dizziness, headache, somnolence. **Resp:** RESPIRATORY DEPRESSION. **GI:** nausea, vomiting.

### Interactions

**Drug-Drug:** Concurrent **MAO inhibitors** or use of MAO inhibitors in the preceding 2 wk can result in potentially life-threatening adverse cardiovascular reactions due to additive effects on norepinephrine levels. Concurrent use of other **CNS depressants** including **sedative/hypnotics**, **alcohol**, **antihistamines**, **antidepressants**, **phenothiazines**, and other **opioids** ↑ risk of further CNS depression; consider dose ↓ of one or both agents. ↑ risk of serotonin syndrome with **SNRIs**, **SSRIs**, **triptans**, **tricyclic antidepressants**, and **MAO inihibitors**.

### Route/Dosage

**PO (Adults):** 50, 75, or 100 mg initially, then every 4–6 hr as needed and tolerated. If pain control is not achieved within first hour of first dose, additional dose may be given. Doses should not exceed 700 mg on the first day or 600 mg/day thereafter.

#### Hepatic Impairment

**PO (Adults):** *Moderate hepatic impaitment*— 50 mg every 8 hr initially, then titrate to maintain analgesia without intolerable side effects.

### Availability

**Immediate-release tablets:** 50 mg, 75 mg, 100 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess type, location, and intensity of pain before and 1 hr (peak) after administration.
- Assess blood pressure and respiratory rate before and periodically during administration. Monitor for respiratory depression especially during initial dosing and with patients at increased risk.

- Assess bowel function routinely. Prevention of constipation should be instituted with increased intake of fluids and bulk and with laxatives to minimize constipating effects. Administer stimulant laxatives routinely if opioid use exceeds 2–3 days, unless contraindicated.
- Prolonged use may lead to physical and psychological dependence and tolerance, although these may be milder than with opioids. This should not prevent patient from receiving adequate analgesia. Most patients who receive tapentadol for pain do not develop psychological dependence.
- Monitor patient for seizures. May occur within recommended dose range. Risk is increased in patients with a history of seizures and in patients taking antidepressants (SSRIs, SNRIs, tricyclics) or other drugs that decrease the seizure threshold.
- Monitor for serotonin syndrome (mental-status changes [agitation, hallucinations, coma], autonomic instability [tachycardia, labile blood pressure, hyperthermia], neuromuscular aberrations [hyperreflexia, incoordination] and/or gastrointestinal symptoms [nausea, vomiting, diarrhea] in patients taking SSRIs, SNRIs, triptans, tricyclic antidepressants, or MAO inhibitors concurrently with tapentadol.
- ***Toxicity and Overdose:*** Overdose may cause respiratory depression. Naloxone (Narcan) may reverse some, but not all, of the symptoms of overdose. Treatment should be symptomatic and supportive. Maintain adequate respiratory exchange.

## Potential Nursing Diagnoses

Acute pain (Indications)

## Implementation

- Initial dose of 50 mg, 75 mg, or 100 mg is individualized based on pain severity, previous experience with similar drugs, and ability to monitor patient. Second dose may be administered as soon as 1 hr after first dose if adequate pain relief is not obtained with first dose.
- **PO:** Tapentadol may be administered without regard to meals.

## Patient/Family Teaching

- Instruct patient on how and when to ask for and take pain medication and to take tapentadol as directed; do not adjust dose without consulting health care professional. Report breakthrough pain and adverse reactions to health care professional. Do not take tapentadol if pain is mild or can be controlled with other pain medications such as NSAIDs or acetaminophen. Do not stop abruptly; may cause withdrawal symptoms (anxiety, sweating, insomina, rigors, pain, nausea, tremors, diarrhea, upper respiratory symptoms, hallucinations). Decrease dose gradually. Advise patient to read the *Medication Guide* prior to taking tapentadol and with each Rx refill, in case of new information.
- Do not share tapentadol with others, even it they have the same symptoms; may be dangerous.
- May cause dizziness and drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that tapentadol may cause seizures. Stop taking tapentadol and notify health care professional immediately if seizures occur.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants with this medication.
- Advise patient to consult health care professional before taking other RX, OTC, or herbal products concurrently.
- Advise patient to notify health care professional if signs or serotonin syndrome occur.
- Advise female patients to notify health care professional if pregnancy is planned or suspected, or if breastfeeding.
- Encourage patient to turn, cough, and breathe deeply every 2 hr to prevent atelectasis.

## Evaluation/Desired Outcomes

- Decrease in severity of pain without a significant alteration in level of consciousness or respiratory status.

**telmisartan, See ANGIOTENSIN II RECEPTOR ANTAGONISTS.**

## temazepam (tem-az-a-pam)

Restoril

***Classification***

Therapeutic: sedative/hypnotics
Pharmacologic: benzodiazepines

**Schedule IV**

**Pregnancy Category X**

### Indications

Short-term management of insomnia (<4 weeks).

### Action

Acts at many levels in the CNS, producing generalized depression. Effects may be mediated by GABA, an inhibitory neurotransmitter. **Therapeutic Effects:** Relief of insomnia.

### Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Widely distributed; crosses blood-brain barrier. Probably crosses the placenta and enters breast milk. Accumulation of drug occurs with chronic dosing.
**Protein Binding:** 96%.
**Metabolism and Excretion:** Metabolized by the liver.
**Half-life:** 10–20 hr.

TIME/ACTION PROFILE (sedation)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30 min | 2–3 hr | 6–8 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity with other benzodiazepines may exist; Pre-existing CNS depression; Severe uncontrolled pain; Angle-closure glaucoma; Impaired respiratory function; Sleep apnea; OB: Neonates born to mothers taking temazepam may experience withdrawal effects; Lactation: Infants may become sedated. Discontinue drug or bottle feed.
**Use Cautiously in:** Pre-existing hepatic dysfunction; History of suicide attempt or drug addiction; Geri: Elderly patients have increased sensitivity to benzodiazepines. Appears on Beers list and is associated with increased risk of falls (↓ dose required).

### Adverse Reactions/Side Effects

**CNS:** abnormal thinking, behavior changes, hangover, dizziness, drowsiness, hallucinations, lethargy, paradoxic excitation, sleep—driving. **EENT:** blurred vision. **GI:** constipation, diarrhea, nausea, vomiting. **Derm:** rashes. **Misc:** physical dependence, psychological dependence, tolerance.

### Interactions

**Drug-Drug:** ↑ CNS depression with **alcohol**, **antidepressants**, **antihistamines**, **opioid analgesics**, and other **sedative/hypnotics**. May ↓ efficacy of **levodopa**. **Rifampin** or **smoking** ↑ metabolism and may ↓ effectiveness of temazepam. **Probenecid** may prolong effects of temazepam. Sedative effects may be ↓ by **theophylline**.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, **skullcap**, **chamomile**, or **hops** can ↑ CNS depression.

### Route/Dosage

**PO (Adults):** 15–30 mg at bedtime initially if needed; some patients may require only 7.5 mg.
**PO (Geriatric Patients or Debilitated Patients):** 7.5 mg at bedtime.

### Availability (generic available)

**Capsules:** 7.5 mg, 15 mg, 22.5 mg, 30 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess mental status (orientation, mood, behavior) and potential for abuse prior to administering medication.
- Assess sleep patterns before and periodically throughout therapy.
- Prolonged high-dose therapy may lead to psychological or physical dependence. Restrict amount of drug available to patient, especially if patient is depressed or suicidal or has a history of addiction.
- Geri: Assess CNS effects and risk of falls. Institute falls prevention strategies.

### Potential Nursing Diagnoses

Insomnia (Indications)
Risk for falls (Side Effects)

### Implementation

- Do not confuse temazepam with flurazepam.
- Supervise ambulation and transfer of patients after administration. Remove cigarettes. Side rails should be raised and call bell within reach at all times.
- **PO:** Administer with food if GI irritation becomes a problem.

### Patient/Family Teaching

- Instruct patient to take temazepam as directed. Teach sleep hygiene techniques (dark room, quiet, bedtime ritual, limit daytime napping, avoidance of nicotine and caffeine). If less ef-

fective after a few weeks, consult health care professional; do not increase dose.
- May cause daytime drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Geri: Instruct patient and family how to reduce falls risk at home.
- Advise patient to avoid the use of alcohol and other CNS depressants and to consult health care professional before using OTC preparations that contain antihistamines or alcohol.
- Advise patient to inform health care professional if pregnancy is planned or suspected.
- Emphasize the importance of follow-up appointments to monitor progress.
- Refer for psychotherapy if ineffective coping is basis for sleep pattern disturbance.
- Advise patient to take temazepam only if able to devote 8 hr to sleep.

### Evaluation/Desired Outcomes
- Improvement in sleep pattern with decreased number of nighttime awakenings, improved sleep onset, and increased total sleep time, which may not be noticeable until the 3rd day of therapy.

**tenecteplase, See THROMBOLYTIC AGENTS.**

## tenofovir (te-noe-fo-veer)
Viread

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: nucleoside reverse transcriptase inhibitors

**Pregnancy Category B**

### Indications
HIV infection (with other antiretrovirals). Chronic hepatitis B.

### Action
Active drug (tenofovir) is phosphorylated intracellularly; tenofovir diphosphate inhibits HIV reverse transcriptase resulting in disruption of DNA synthesis. **Therapeutic Effects:** Slowed progression of HIV infection and decreased occurrence of sequelae. Increased CD4 cell count and decreased viral load. Decreased progression/sequelae of chronic hepatitis B infection.

### Pharmacokinetics
**Absorption:** Tenofovir disoproxil fumarate is a prodrug, which is split into tenofovir, the active component.
**Distribution:** Absorption is enhanced by food.
**Metabolism and Excretion:** 70–80% excreted unchanged in urine by glomerular filtration and active tubular secretion.
**Half-life:** Unknown.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 hr* | 24 hr |

*When taken with food

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Lactation: HIV-infected women should not breast-feed.
**Use Cautiously in:** Co-infection with HIV and chronic hepatitis B; Obesity, women, prolonged nucleoside exposure (may be risk factors for lactic acidosis/hepatomegaly); Renal impairment (use cautiously if CCr <60 mL/min); History of pathologic bone fractures or at risk for osteopenia; OB: Has been used safely; Pedi: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** depression, headache, weakness. **GI:** HEPATOMEGALY, (with steatosis), diarrhea, nausea, abdominal pain, anorexia, vomiting, flatulence. **GU:** renal impairment. **F and E:** LACTIC ACIDOSIS, hypophosphatemia. **Derm:** rash. **MS:** ↓ bone mineral density.

### Interactions
**Drug-Drug:** Concurrent use with **didanosine** results in ↑ blood levels of didanosine (tenofovir should be given 2 hours before or 1 hour after didanosine). Blood levels may be ↑ by **cidofovir**, **acyclovir**, **ganciclovir**, or **valganciclovir**. Risk of renal toxicity ↑ by other **nephrotoxic agents**. Combination therapy with **atazanavir** may lead to ↓ virologic response and possible resistance to atazanavir (small amounts of **ritonavir** may be added to boost blood levels); may also ↑ tenofovir levels. **Lopinavir/ritonavir** may ↑ levels. Concurrent use with **adefovir** for chronic hepatitis B infection should be avoided.

### Route/Dosage
**PO (Adults):** 300 mg once daily.

#### Renal Impairment
**PO (Adults ):** *CCr 30–49 mL/min*—300 mg every 48 hr; *CCr 10–29 mL/min*—300 mg every

T

72–96 hr; *Hemodialysis patients*— 300 mg every 7 days following dialysis.

### Availability

**Tablets:** 300 mg. ***In combination with:*** emtricitabine (Truvada); efavirenz and emtricitabine (Atripla). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Monitor for change in severity of HIV symptoms and for symptoms of opportunistic infection before and during therapy.
- Monitor bone mineral density in patients who have a history of pathologic bone fracture or are at risk for osteopenia.
- ***Lab Test Considerations:*** Monitor viral load and CD4 count before and routinely during therapy to determine response.
- Monitor liver function tests and hepatitis B virus levels throughout and following therapy. If therapy is discontinued, may cause severe exacerbation of hepatitis B. May cause ↑ AST, ALT, alkaline phosphatase, creatine kinase, amylase, and triglyceride concentrations. Lactic acidosis may occur with hepatic toxicity causing hepatic steatosis; may be fatal, especially in women.
- May cause hypophosphatemia in patients with renal impairment.
- May cause hyperglycemia and glucosuria.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Risk for injury (Side Effects)

### Implementation

- When tenofovir is administered concomitantly with didanosine, administer tenofovir 2 hr before or 1 hr after didanosine.
- **PO:** Administer once daily with a meal.

### Patient/Family Teaching

- Instruct patient on the importance of taking tenofovir as directed, even if feeling better. Do not take more than prescribed amount and do not stop taking without consulting health care professional. Discontinuing therapy may lead to severe exacerbations. Take missed doses as soon as remembered; do not double doses. Caution patient not to share or trade this medication with others.
- Inform patient that tenofovir may cause hyperglycemia. Advise patient to notify health care professional if increased thirst or hunger; unexplained weight loss; increased urination; fatigue; or dry, itchy skin occurs.
- Advise patient to avoid taking other Rx, OTC, or herbal products, without consulting health care professional.
- Caution patient to avoid crowds and persons with known infections.
- Inform patient that tenofovir does not cure AIDS and does not reduce the risk of transmission of HIV to others through sexual contact or blood contamination. Caution patient to use a condom and avoid sharing needles or donating blood to prevent spreading HIV to others.
- Advise patient to notify health care professional immediately if symptoms of lactic acidosis (nausea, vomiting, unusual or unexpected stomach discomfort, and weakness) occur.
- Inform patient that changes in body fat distribution (increased fat in upper back and neck, breast, and trunk, and loss of fat from legs, arms, and face) may occur, but may not be related to drug therapy.
- Emphasize the importance of regular exams to monitor for side effects.

### Evaluation/Desired Outcomes

- Decreased incidence of opportunistic infection and slowed progression of HIV infection.

## terazosin (ter-**ay**-zoe-sin)

Hytrin

***Classification***

Therapeutic: antihypertensives
Pharmacologic: peripherally acting antiadrenergics

**Pregnancy Category C**

### Indications

Mild to moderate hypertension (alone or with other agents). Urinary outflow obstruction in patients with prostatic hyperplasia.

### Action

Dilates both arteries and veins by blocking postsynaptic alpha$_1$-adrenergic receptors. Decreases contractions in smooth muscle of the prostatic capsule. **Therapeutic Effects:** Lowering of blood pressure. Decreased symptoms of prostatic hyperplasia (urinary urgency, hesitancy, nocturia).

### Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** 50% metabolized by the liver. 10% excreted unchanged by the kid-

neys. 20% excreted unchanged in feces. 40% eliminated in bile.
**Half-life:** 12 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET† | PEAK‡ | DURATION† |
|---|---|---|---|
| PO-hypertension | 15 min | 6–8 wk | 24 hr |
| PO-prostatic hyperplasia | 2–6 wk | unknown | unknown |

†After single dose
‡After multiple oral dosing

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Deyhdration, volume or sodium depletion (↑ risk of hypotension); OB, Lactation: Pedi: Safety not established; Patients undergoing cataract surgery (↑ risk of intraoperative floppy iris syndrome).

## Adverse Reactions/Side Effects

**CNS:** dizziness, headache, weakness, drowsiness, nervousness. **EENT:** nasal congestion, blurred vision, conjunctivitis, intraoperative floppy iris syndrome, sinusitis. **Resp:** dyspnea. **CV:** first-dose orthostatic hypotension, arrhythmias, chest pain, palpitations, peripheral edema, tachycardia. **GI:** nausea, abdominal pain, diarrhea, dry mouth, vomiting. **GU:** erectile dysfunction, urinary frequency. **Derm:** pruritus. **Metab:** weight gain. **MS:** arthralgia, back pain, extremity pain. **Neuro:** paresthesia. **Misc:** fever.

## Interactions

**Drug-Drug:** ↑ risk of hypotension with **sildenafil**, **tadalafil**, **vardenafil**, other **antihypertensives**, **nitrates**, or acute ingestion of **alcohol**. **NSAIDs**, **sympathomimetics**, or **estrogens** may ↓ effects of antihypertensive therapy.

## Route/Dosage

The first dose should be taken at bedtime.

### Hypertension

**PO (Adults):** 1 mg initially, then slowly ↑ up to 5 mg/day (usual range 1–5 mg/day); may be given as single dose or in 2 divided doses (not to exceed 20 mg/day).

### Benign Prostatic Hyperplasia

**PO (Adults):** 1 mg at bedtime; gradually may be ↑ up to 5–10 mg/day.

## Availability (generic available)

**Tablets:** 1 mg, 2 mg, 5 mg, 10 mg. **Cost:** *Generic*— 1 mg $33.98/90, 2 mg $33.99/90, 5 mg $33.99/90, 10 mg $33.99/90.

# NURSING IMPLICATIONS

## Assessment

- Assess for first-dose orthostatic reaction (dizziness, weakness) and syncope. May occur 30 min–2 hr after initial dose and occasionally thereafter. Incidence may be dose related. Volume-depleted or sodium-restricted patients may be more sensitive. Observe patient closely during this period; take precautions to prevent injury. First dose may be given at bedtime to minimize this reaction.
- Monitor intake and output ratios and daily weight; assess for edema daily, especially at beginning of therapy.
- **Hypertension:** Monitor blood pressure and pulse frequently during initial dosage adjustment and periodically throughout therapy. Report significant changes.
- Monitor frequency of prescription refills to determine adherence.
- **Benign Prostatic Hyperplasia:** Assess patient for symptoms of prostatic hyperplasia (urinary hesitancy, feeling of incomplete bladder emptying, interruption of urinary stream, impairment of size and force of urinary stream, terminal urinary dribbling, straining to start flow, dysuria, urgency) before and periodically during therapy.
- Rule out prostatic carcinoma before therapy; symptoms are similar.

## Potential Nursing Diagnoses

Risk for injury (Side Effects)
Noncompliance (Patient/Family Teaching)

## Implementation

- May be used in combination with diuretics or beta blockers to minimize sodium and water retention. If these are added to terazosin therapy, reduce dose of terazosin initially and titrate to effect.
- **PO:** Administer daily dose at bedtime. If necessary, dose may be increased to twice daily.

## Patient/Family Teaching

- Instruct patient to take medication at the same time each day. Take missed doses as soon as remembered. If not remembered until next day, omit; do not double doses.

T

- Advise patient to weigh self twice weekly and assess feet and ankles for fluid retention.
- May cause dizziness or drowsiness. Advise patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Caution patient to avoid sudden changes in position to decrease orthostatic hypotension. Alcohol, CNS depressants, standing for long periods, hot showers, and exercising in hot weather should be avoided because of enhanced orthostatic effects.
- Advise patient to consult health care professional before taking any cough, cold, or allergy remedies.
- Instruct patient to notify health care professional of medication regimen before any surgery.
- Advise patient to notify health care professional if frequent dizziness, fainting, or swelling of feet or lower legs occurs.
- Emphasize the importance of follow-up exams to evaluate effectiveness of medication.
- **Hypertension:** Emphasize the importance of continuing to take this medication as directed, even if feeling well. Medication controls but does not cure hypertension.
- Encourage patient to comply with additional interventions for hypertension (weight reduction, low-sodium diet, smoking cessation, moderation of alcohol consumption, regular exercise, and stress management).
- Instruct patient and family on proper technique for blood pressure monitoring. Advise them to check blood pressure at least weekly and to report significant changes.

### Evaluation/Desired Outcomes

- Decrease in blood pressure without appearance of side effects.
- Decreased symptoms of prostatic hyperplasia. May require 2–6 wk of therapy before effects are noticeable.

## terbinafine (ter-**bi**-na-feen)

Lamisil

***Classification***

Therapeutic: antifungals (systemic)

**Pregnancy Category B**

For topical use, refer to Antifungals, Topical monograph

### Indications

Onychomycosis (fungal nail infection). Tinea capitis.

### Action

Interferes with fungal cell wall synthesis (ergosterol biosynthesis) by inhibiting the enzyme squalene epoxidase. **Therapeutic Effects:** Fungal cell death. **Spectrum:** Active against dermatophytes and other fungi.

### Pharmacokinetics

**Absorption:** 70–80% absorbed after oral administration.
**Distribution:** Extensively distributed; penetrates dermis and epidermis; concentrates in stratum corneum, hair, scalp, and nails. Enters breast milk.
**Protein Binding:** 99%.
**Metabolism and Excretion:** Extensively metabolized by the liver.
**Half-life:** *Plasma*—22 days; longer from skin and nails.

TIME/ACTION PROFILE (antifungal tissue levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | several days | days–wk | several wk |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Chronic or active liver disease; CHF or left ventricular dysfunction.
**Use Cautiously in:** History of alcoholism; Renal impairment (dose ↓ recommended for CCr <50 mL/min); OB: Lactation: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** headache. **Resp:** cough, nasopharyngitis. **CV:** CHF. **GI:** HEPATOTOXICITY, anorexia, diarrhea, nausea, stomach pain, vomiting, altered taste, drug-induced hepatitis, taste disturbance. **Derm:** TOXIC EPIDERMAL NECROLYSIS, itching, rash. **Hemat:** neutropenia, pancytopenia. **Misc:** STEVENS-JOHNSON SYNDROME, pyrexia.

### Interactions

**Drug-Drug: Alcohol** or other **hepatotoxic agents** may ↑ risk of hepatotoxicity. **Rifampin** and other **drugs that induce hepatic drug-metabolizing enzymes** may ↓ effectiveness. **Cimetidine** and other **drugs that inhibit hepatic drug-metabolizing enzymes** may ↑ effectiveness.
**Drug-Natural Products:** ↑ **caffeine** levels and side effects with caffeine-containing herbs (**cola nut**, **guarana**, **mate**, **tea**, **coffee**).

### Route/Dosage

**PO (Adults):** 250 mg once daily for 6 wk for fingernail infection or 12 wk for toenail infection.

**PO (Children ≥4 yr—≥35 kg):** 250 mg/day for 6 wk.
**PO (Children ≥4 yr—25–35 kg):** 187.5 mg/day for 6 wk.
**PO (Children ≥4 yr—<25 kg):** 125 mg/day for 6 wk.

### Availability (generic available)
**Tablets:** 250 mg. **Cost:** *Generic*—$140.99/90.
**Oral granules:** 125 mg packets, 187.5 mg packets.

## NURSING IMPLICATIONS

### Assessment
- Assess for signs and symptoms of infection (nail beds, scalp) before and periodically throughout therapy.
- Specimens for culture should be taken before instituting therapy. Therapy may be started before results are obtained.
- Monitor for skin rash. If progressive skin rash occurs, discontinue terbinafine.
- ***Lab Test Considerations:*** CBC should be monitored in patients receiving therapy for >6 wk. Discontinue if abnormal values occur.
- Monitor AST and ALT prior to, and periodically throughout, therapy. Terbinafine should be discontinued if symptomatic elevations occur.
- If signs of secondary infection occur, monitor neutrophil count. If <1000/mm$^3$, discontinue treatment.
- May cause ↓ absolute lymphocyte count.
- Monitor serum potassium. May cause hypokalemia.

### Potential Nursing Diagnoses
Risk for infection (Indications)
Noncompliance (Patient/Family Teaching)

### Implementation
- Do not confuse with lamotrigine (Lamictal).
- **PO:** May be administered without regard to food.
- *Oral granules* should be taken with food and may be sprinkled on a spoonful of pudding or other soft, nonacidic food, such as mashed potatoes and swallowed in entirety. Applesauce or fruit-based foods should not be used.

### Patient/Family Teaching
- Instruct patient to take medication as directed, for the full course of therapy, even if feeling better. Doses should be taken at the same time each day.
- Instruct patient to notify health care professional immediately if signs and symptoms of liver dysfunction (unusual fatigue, anorexia, nausea, vomiting, upper right abdominal pain, jaundice, dark urine, or pale stools) or rash occur. Terbinafine should be discontinued.
- Advise patient to consult health care professional before taking any Rx or OTC medications concurrently with terbinafine.

### Evaluation/Desired Outcomes
- Resolution of clinical and laboratory indications of fungal nail infections. Inadequate period of treatment may lead to recurrence of active infection.
- Resolution of tinea capitis infection.

**terbinafine, See ANTIFUNGALS (TOPICAL).**

## terbutaline (ter-**byoo**-ta-leen)

***Classification***
Therapeutic: bronchodilators
Pharmacologic: adrenergics

**Pregnancy Category B**

T

### Indications
Management of reversible airway disease due to asthma or COPD; inhalation and subcut used for short-term control and oral agent as long-term control. **Unlabeled Use:** Management of preterm labor (tocolytic).

### Action
Results in the accumulation of cyclic adenosine monophosphate (cAMP) at beta-adrenergic receptors. Produces bronchodilation. Inhibits the release of mediators of immediate hypersensitivity reactions from mast cells. Relatively selective for beta$_2$(pulmonary)-adrenergic receptor sites, with less effect on beta$_1$(cardiac)-adrenergic receptors. **Therapeutic Effects:** Bronchodilation.

### Pharmacokinetics
**Absorption:** 35–50% absorbed following oral administration but rapidly undergoes first-pass metabolism. Well absorbed following subcut administration.
**Distribution:** Enters breast milk.
**Metabolism and Excretion:** Partially metabolized by the liver; 60% excreted unchanged by the kidneys following subcut administration.

**Half-life:** Unknown.

TIME/ACTION PROFILE (bronchodilation)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 60–120 min | within 2–3 hr | 4–8 hr |
| Subcut | within 15 min | within 0.5–1 hr | 1.5–4 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to adrenergic amines.

**Use Cautiously in:** Cardiac disease; Hypertension; Hyperthyroidism; Diabetes; Glaucoma; Geri: More susceptible to adverse reactions; may require dose ↓; Excessive use may lead to tolerance and paradoxical bronchospasm (inhaler); OB, Lactation: Pregnancy (near term) and lactation.

## Adverse Reactions/Side Effects

**CNS:** nervousness, restlessness, tremor, headache, insomnia. **CV:** angina, arrhythmias, hypertension, tachycardia. **GI:** nausea, vomiting. **Endo:** hyperglycemia.

## Interactions

**Drug-Drug:** Concurrent use with other **adrenergics** (sympathomimetic) will have additive adrenergic side effects. Use with **MAO inhibitors** may lead to hypertensive crisis. **Beta blockers** may negate therapeutic effect.

**Drug-Natural Products:** Use with caffeine-containing herbs (**cola nut**, **guarana**, **mate**, **tea**, **coffee**) ↑ stimulant effect.

## Route/Dosage

**PO (Adults and Children >15 yr):** *Bronchodilation*—2.5–5 mg 3 times daily, given q 6 hr (not to exceed 15 mg/24 hr). *Tocolysis*—2.5–10 mg q 4–6 hr until delivery (unlabeled).

**PO (Children 12–15 yr):** *Bronchodilation*–2.5 mg 3 times daily (given q 6 hr) (not to exceed 7.5 mg/24 hr).

**PO (Children <12 yr):** *Bronchodilation*—0.05 mg/kg 3 times daily; may ↑ gradually (not to exceed 0.15 mg/kg 3–4 times daily or 5 mg/24 hr.

**Subcut (Adults and Children ≥12 yr):** *Bronchodilation*—250 mcg; may repeat in 15–30 min (not to exceed 500 mcg/4 hr).

**Subcut (Children <12 yr):** *Bronchodilation*—0.005–0.01 mg/kg; may repeat in 15–20 min.

**IV (Adults):** *Tocolysis*—2.5–10 mcg/min infusion; ↑ by 5 mcg/min q 10 min until contractions stop (not to exceed 30 mcg/min). After contractions have stopped for 30 min, ↓ infusion rate to lowest effective amount and maintain for 4–8 hr (unlabeled).

## Availability (generic available)

**Tablets:** 2.5 mg, 5 mg. **Injection:** 1 mg/mL.

# NURSING IMPLICATIONS

## Assessment

- **Bronchodilator:** Assess lung sounds, respiratory pattern, pulse, and blood pressure before administration and during peak of medication. Note amount, color, and character of sputum produced, and notify health care professional of abnormal findings.
- Monitor pulmonary function tests before initiating therapy and periodically throughout therapy to determine effectiveness of medication.
- **Preterm Labor:** Monitor maternal pulse and blood pressure, frequency and duration of contractions, and fetal heart rate. Notify health care professional if contractions persist or increase in frequency or duration or if symptoms of maternal or fetal distress occur. Maternal side effects include tachycardia, palpitations, tremor, anxiety, and headache.
- Assess maternal respiratory status for symptoms of pulmonary edema (increased rate, dyspnea, rales/crackles, frothy sputum).
- Monitor mother and neonate for symptoms of hypoglycemia (anxiety; chills; cold sweats; confusion; cool, pale skin; difficulty in concentration; drowsiness; excessive hunger; headache; irritability; nausea; nervousness; rapid pulse; shakiness; unusual tiredness; or weakness) and mother for hypokalemia (weakness, fatigue, U wave on ECG, arrhythmias).
- ***Lab Test Considerations:*** May cause transient ↓ in serum potassium concentrations with higher than recommended doses.
- Monitor maternal serum glucose and electrolytes. May cause hypokalemia and hypoglycemia. Monitor neonate's serum glucose, because hypoglycemia may also occur in neonates.
- ***Toxicity and Overdose:*** Symptoms of overdose include persistent agitation, chest pain or discomfort, decreased blood pressure, dizziness, hyperglycemia, hypokalemia, seizures, tachyarrhythmias, persistent trembling, and vomiting.
- Treatment includes discontinuing beta-adrenergic agonists and symptomatic, supportive therapy. Cardioselective beta blockers are used cautiously, because they may induce bronchospasm.

### Potential Nursing Diagnoses
Ineffective airway clearance (Indications)

### Implementation
- **PO:** Administer with meals to minimize gastric irritation.
- Tablet may be crushed and mixed with food or fluids for patients with difficulty swallowing.
- **Subcut:** Administer subcut injections in lateral deltoid area. Do not use solution if discolored.

#### IV Administration
- **Continuous Infusion:** ***Diluent:*** May be diluted in D5W, 0.9% NaCl, or 0.45% NaCl. ***Concentration:*** 1 mg/mL (undiluted). ***Rate:*** Use infusion pump to ensure accurate dose. Begin infusion at 10 mcg/min. Increase dosage by 5 mcg every 10 min until contractions cease. Maximum dose is 80 mcg/min. Begin to taper dose in 5-mcg decrements after a 30–60 min contraction-free period is attained. Switch to oral dose form after patient is contraction-free 4–8 hr on the lowest effective dose.
- **Y-Site Compatibility:** insulin.

### Patient/Family Teaching
- Instruct patient to take medication as directed. If on a scheduled dosing regimen, take a missed dose as soon as possible; space remaining doses at regular intervals. Do not double doses. Caution patient not to exceed recommended dose; may cause adverse effects, paradoxical bronchospasm, or loss of effectiveness of medication.
- Instruct patient to contact health care professional immediately if shortness of breath is not relieved by medication or is accompanied by diaphoresis, dizziness, palpitations, or chest pain.
- Advise patient to consult health care professional before taking any OTC medications or alcoholic beverages concurrently with this therapy. Caution patient also to avoid smoking and other respiratory irritants.
- **Preterm Labor:** Notify health care professional immediately if labor resumes or if significant side effects occur.

### Evaluation/Desired Outcomes
- Prevention or relief of bronchospasm.
- Increase in ease of breathing.
- Control of preterm labor in a fetus of 20–36 wk gestational age.

## terconazole, See ANTIFUNGALS (VAGINAL).

## teriparatide (ter-i-**par**-a-tide)
Forteo

***Classification***
Therapeutic: hormones
Pharmacologic: parathyroid hormones (rDNA origin)

**Pregnancy Category C**

### Indications
Treatment of osteoporosis in postmenopausal women at high risk for fractures. To increase bone mass in men with primary or hypogonadal osteoporosis at high risk for fractures. Treatment of osteoporosis in men and women with glucocorticoid-induced osteoporosis at high risk for fractures. Most useful for those have failed or are intolerant to other osteoporosis therapies.

### Action
Regulates calcium and phosphate metabolism in bone and kidney by binding to specific cell receptors; stimulates osteoblastic activity. Increases serum calcium and decreases serum phosphorus.
**Therapeutic Effects:** Increased bone mineral density with reduced risk of fractures.

### Pharmacokinetics
**Absorption:** Extensively absorbed after subcut administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Metabolized by the liver; metabolites renally excreted.
**Half-life:** 1 hr (after subcut use).

TIME/ACTION PROFILE (effects on serum calcium)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Subcut | 2 hr | 4–6 hr | 16–24 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Paget's disease of the bone or other metabolic bone disease; Unexplained ↑ alkaline phosphatase; Pedi: Safety and efficacy not established; Previous radiation therapy, history of bone metastases, or skeletal malignancy; Pre-existing hypercalcemia; OB: Lactation: Pregnancy or lactation.
**Use Cautiously in:** Active or recent urolithiasis.

### Adverse Reactions/Side Effects
**CV:** orthostatic hypotension. **MS:** muscle spasms.

### Interactions
**Drug-Drug:** Transient hypercalcemia may ↑ the risk of **digoxin** toxicity.

### Route/Dosage
**Subcut (Adults):** 20 mcg once daily.

### Availability
**Pre-filled pen delivery device (FORTEO pen):** delivers 20 mcg/day.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for bone mineral density before and periodically during therapy.
- ***Lab Test Considerations:*** Effects increase serum calcium and decrease serum phosphorus. Maximum effect is within 4–6 hr. By 16–hr post-dose, serum calcium has returned to near baseline. If hypercalcemia persists, discontinue teriperatide and evaluate cause of hypercalcemia.
- May asymptomatically increase serum uric acid concentrations.

### Potential Nursing Diagnoses
Risk for injury (Indications)

### Implementation
- Use of teriparatide should not continue more than 2 yr.
- **Subcut:** Administer subcut into thigh or abdominal wall once daily. May be administered at any time of day without regard to food. Solution should be clear and colorless. Do not use if solid particles appear, or if solution is cloudy or colored. Store pen in the refrigerator; do not freeze or use if it has been frozen. Minimize time out of refrigerator; use immediately and return to refrigerator. *Forteo* pen can be used for up to 28 days after the first injection. After the 28-day use period, discard the *Forteo* pen, even if it still contains some unused solution.

### Patient/Family Teaching
- Advise patient to administer medication at same time each day. Administer missed doses as soon as remembered that day. Do not take more than one injection/day.
- Instruct patient on proper administration technique and disposal of needles. Patient should read *Medication Guide* and *User Manual* before starting therapy and re-read them each time prescription is refilled. User manual can be found at www.forteo.com/control/pen_user_manual. Caution patient to throw pen away after 28-day use period and not to share their pen with other patients.
- Discuss the importance of other treatments for osteoporosis (supplemental calcium and/or vitamin D, weight-bearing exercise, modification of behavioral factors such as smoking and/or alcohol consumption).
- May cause orthostatic hypotension during first several doses. Caution patient to administer medication in a lying or sitting position. If lightheadedness or palpitations occur, lie down until symptoms resolve. Notify health care professional if symptoms persist or worsen.
- Instruct patient to notify health care professional if persistent symptoms of hypercalcemia (nausea, vomiting, constipation, lethargy, muscle weakness) occur.
- Emphasize the importance of follow-up tests for bone mineral density.

### Evaluation/Desired Outcomes
- Increased bone mineral density with reduced risk of fractures.

## TESTOSTERONE
(tess-**toss**-te-rone)

**testosterone buccal system, mucoadhesive**
Striant

**testosterone cypionate**
Depo-Testosterone

**testosterone enanthate**
Delatestryl

**testosterone pellets**
Testopel

**testosterone transdermal**
Androderm

***Classification***
Therapeutic: hormones
Pharmacologic: androgens

**Schedule III**

**Pregnancy Category X**

### Indications
Hypogonadism in androgen-deficient men. Delayed puberty in men (enanthate and pellets). Androgen-responsive breast cancer in post-menopausal women (palliative) (enanthate).

### Action
Responsible for the normal growth and development of male sex organs. Maintenance of male

secondary sex characteristics: Growth and maturation of the prostate, seminal vesicles, penis, scrotum, Development of male hair distribution, Vocal cord thickening, Alterations in body musculature and fat distribution. **Therapeutic Effects:** Correction of hormone deficiency in male hypogonadism: Initiation of male puberty. Suppression of tumor growth in some forms of breast cancer.

## Pharmacokinetics

**Absorption:** Well absorbed from IM sites, through buccal mucosa, or through skin. Cypionate and enanthate salts are absorbed slowly.
**Distribution:** Cross the placenta.
**Protein Binding:** 98%.
**Metabolism and Excretion:** Metabolized by the liver. Absorption from buccal mucosa bypasses initial liver metabolism. 90% eliminated in urine as metabolites.
**Half-life:** *Buccal, enanthate, pellets*—10–100 min; *transdermal*—70 min; *cypionate*—8 days.

TIME/ACTION PROFILE (androgenic effects†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IM—cypionate, enanthate | unknown | unknown | 2–4 wk |
| IM—propionate | unknown | unknown | 1–3 days |
| Buccal | unknown | 10–12 hr | 12 hr |
| Pellets | unknown | unknown | 3–6 mo |
| Transdermal | unknown | 6–8 hr‡ | 24 hr§ |

†Response is highly variable among individuals; may take months
‡Plasma testosterone levels following applications of patch
§Following patch removal

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Male patients with breast or prostate cancer; Severe liver, renal, or cardiac disease (propionate); Some products contain benzyl alcohol and should be avoided in patients with known hypersensitivity; Women (buccal, pellets, patch); OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Diabetes mellitus; Coronary artery disease (enanthate); Pre-existing cardiac, renal, or liver disease; Benign prostatic hyperplasia (cypionate, pellets); Hypercalcemia (cypionate, enanthate, pellets); Sleep apnea (buccal); Obesity (buccal); Chronic lung disease (buccal); Pedi: Prepubertal males exposed to testosterone may experience premature development of secondary sexual characteristics, aggression, and other side effects; Geri: ↑ risk of prostatic hyperplasia/carcinoma.

## Adverse Reactions/Side Effects

**CNS:** anxiety, confusion, depression, fatigue, headache, vertigo. **EENT:** deepening of voice. **CV:** edema. **GI:** abdominal cramps, changes in appetite, drug-induced hepatitis, nausea, vomiting; *buccal-*, bitter taste, ginigivitis, gum edema, gum tenderness. **GU:** menstrual irregularities, prostatic enlargement. **Endo:** *women*—change in libido, clitoral enlargement, ↓ breast size; *men*, acne, facial hair, gynecomastia, erectile dysfunction, oligospermia, priapism. **F and E:** hypercalcemia, hyperkalemia, hyperphosphatemia. **Derm:** male pattern baldness. **Local:** chronic skin irritation (transdermal), pain at injection/implantation site.

## Interactions

**Drug-Drug:** May ↑ action of **warfarin**, **oral hypoglycemic agents**, and **insulin**. Concurrent use with **corticosteroids** may ↑ risk of edema formation.

## Route/Dosage

### Replacement Therapy

**IM (Adults):** 50–400 mg q 2–4 wk (enanthate or cypionate).
**Transdermal (Adults):** 5 mg applied q 24 hr (preferably in the evening); dosing range = 2.5–7.5 mg/day.
**Buccal (Adults):** 30 mg (one system) applied to gum region twice daily (in the morning and evening, spaced 12 hr apart).
**Subcut (for subcutaneous implantation) (pellets)** (Adults): 150–450 mg q 3–6 mo.

### Delayed Male Puberty

**IM (Children):** 50–200 mg q 2–4 wk for up to 6 mo (enanthate).
**Subcut (for subcutaneous implantation) (pellets) (Children):** 150–450 mg q 3–6 mo.

### Palliative Management of Breast Cancer

**IM (Adults):** 200–400 mg q 2–4 wk (enanthate).

## Availability (generic available)

**Testosterone cypionate injection (in oil):** 100 mg/mL, 200 mg/mL. **Testosterone enanthate injection (in oil):** 200 mg/mL. **Testosterone transdermal patches:** 2.5 mg/day in packages of 60, 5 mg/day in packages of 60. **Testosterone buccal, mucoadhesive:** 30 mg/sys-

T

tem in blister packs of 10 systems/pack. **Testosterone pellets:** 75 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor intake and output ratios, weigh patient twice weekly, and assess patient for edema. Report significant changes indicative of fluid retention.
- **Men:** Monitor for precocious puberty in boys (acne, darkening of skin, development of male secondary sex characteristics—increase in penis size, frequent erections, growth of body hair). Bone age determinations should be measured every 6 months to determine rate of bone maturation and effects on epiphyseal closure.
- Monitor for breast enlargement, persistent erections, and increased urge to urinate in men. Monitor for difficulty urinating in elderly men, because prostate enlargement may occur.
- **Women:** Assess for virilism (deepening of voice, unusual hair growth or loss, clitoral enlargement, acne, menstrual irregularity).
- In women with metastatic breast cancer, monitor for symptoms of hypercalcemia (nausea, vomiting, constipation, lethargy, loss of muscle tone, thirst, polyuria).
- ***Lab Test Considerations:*** Monitor hemoglobin and hematocrit periodically during therapy; may cause polycythemia.
- Monitor hepatic function tests, prostate specific antigen and serum cholesterol levels periodically during therapy. May cause ↑ serum AST, ALT, and bilirubin, ↑ cholesterol levels, and suppress clotting factors II, V, VII, and X.
- Monitor serum and urine calcium levels and serum alkaline phosphatase concentrations in women with metastatic breast cancer.
- Monitor serum sodium, chloride, potassium, and phosphate concentrations (may be ↑).
- Monitor blood glucose closely in patients with diabetes who are receiving oral hypoglycemic agents or insulin.
- *Transdermal:* Monitor serum testosterone concentrations 3–4 wk after starting therapy; these concentrations should be obtained in the morning (following application of patch during previous evening).
- *Buccal:* Monitor serum testosterone concentrations 4–12 wk after starting therapy.

### Potential Nursing Diagnoses

Sexual dysfunction (Indications, Side Effects)

### Implementation

- Do not confuse Virilon (testosterone) with Verelan (verapamil).
- Range-of-motion exercises should be done with all bedridden patients to prevent mobilization of calcium from the bone.
- **IM:** Administer IM deep into gluteal muscle. Crystals may form when vials are stored at low temperatures; warming and shaking vial will redissolve crystals. Use of a wet syringe or needle may cause solution to become cloudy but will not affect its potency.
- **Subcut:** Pellets are to be implanted subcutaneously by a health care professional.
- **Transdermal:** Apply patch to clean, dry, hairless skin on the back, abdomen, upper arms, or thighs. Do not apply to the scrotum. Also avoid application over bony prominences or a part of the body that may be subject to prolonged pressure during sleep or sitting. The patch does not need to be removed while swimming or taking a shower or bath.
- The sites of application should be rotated; once a patch is removed, the same site should not be used again for at least 1 wk.
- If skin irritation occurs, apply a small amount of OTC topical hydrocortisone cream after system removal or a small amount of 0.1% triamcinolone cream may be applied to the skin under the central drug reservoir of the Androderm system without affecting the absorption of testosterone. Ointment formulations should not be used for pretreatment because they may significantly reduce testosterone absorption.
- Patch should be removed if undergoing a magnetic resonance imaging (MRI) scan. The system contains aluminum and may predispose the patient to skin burns during the test.
- **Buccal:** Apply to gum region twice daily (about 12 hr apart), rotating sides with each dose.

### Patient/Family Teaching

- Advise patient to report the following signs and symptoms promptly: in male patients, priapism (sustained and often painful erections) difficulty urinating, or gynecomastia; in female patients, virilism (which may be reversible if medication is stopped as soon as changes are noticed), or hypercalcemia (nausea, vomiting, constipation, and weakness); in male or female patients, edema (unexpected weight gain, swelling of feet), hepatitis (yellowing of skin or eyes and abdominal pain), or unusual bleeding or bruising.
- Explain rationale for prohibiting use of testosterone for increasing athletic performance. Testosterone is neither safe nor effective for

this use and has a potential risk of serious side effects.
- Instruct females to notify health care professional immediately if pregnancy is planned or suspected.
- Advise diabetic patients to monitor blood closely for alterations in blood glucose concentrations.
- Emphasize the importance of regular follow-up physical exams, lab tests, and x-ray exams to monitor progress.
- Radiologic bone age determinations should be evaluated every 6 mo in prepubertal children to determine rate of bone maturation and effects on epiphyseal centers.
- **Transdermal:** Advise patient to notify health care professional if their female sexual partner develops signs/symptoms of virilization (e.g. change in body hair distribution, significant increase in acne, deepening of voice, menstrual irregularities).
- Instruct patient that the protective plastic liner must be removed before applying the patch.
- Instruct patient to apply patch to a clean, dry area of skin on back, abdomen, upper arms, or thighs. The patch should not be applied to their genitals or over bony areas (e.g., upper shoulders or upper hip).
- Instruct patient to rotate the sites of application. Once a patch is removed, the site should not be used again for at least 1 week.
- Advise patient that the patch does not need to be removed while showering, bathing, or swimming.
- Advise patient that the patch should be removed prior to undergoing an MRI scan.
- If a patch falls off before noon, advise patient to replace it with a fresh patch which should be worn until a new patch is applied in the evening. If a patch falls off after noon, advise patient that it does not need to be replaced until a fresh patch is applied in the evening.
- **Buccal:** Instruct patient to place the rounded side surface of the buccal system in a comfortable position against the gum just above incisor tooth. Hold the system firmly in place with a finger over the lip and against the product for 30 seconds to ensure adhesion. Buccal system is designed to stay in position until removed; if it fails to adhere to the gum or falls off within the first 8 hr after application, remove original system and apply a new one (this counts as replacing the first dose; apply the next system ~12 hr after the original system was applied). If the buccal system falls off after 8 hr but before 12 hr, replace the original system (this replacement can serve as the second dose for that day).
- Advise patient to avoid dislodging buccal system and to check on placement after toothbrushing, use of mouthwash, eating or drinking. Do not chew or swallow buccal system. To remove, slide system downwards from gum toward tooth to avoid scratching the gum.

### Evaluation/Desired Outcomes
- Resolution of the signs of androgen deficiency without side effects. Therapy is usually limited to 3–6 months followed by bone growth or maturation determinations.
- Decrease in the size and spread of breast malignancy in postmenopausal women. In antineoplastic therapy, response may require 3 months of therapy; if signs of disease progression appear, therapy should be discontinued.

**tetracycline, See TETRACYCLINES.**

## TETRACYCLINES

**doxycycline** (dox-i-**sye**-kleen)
Adoxa, Apo-Doxy, Doryx, Doxy, Doxycin, Doxytab, Monodox, Novodoxylin, Nu-Doxycycline, Oracea, Periostat, PHL-Doxycycline, PMS-Doxycycline, Ratio-Doxycycline, Vibramycin, Vibra-Tabs

**minocycline** (min-oh-**sye**-kleen)
Apo-Minocycline, DOM-Minocycline, Dynacin, Enca, Gen-Minocycline, Minocin, Novo-Minocycline, PMS-Minocycline, Ratio-Minocycline, Riva-Minocycline, Solodyn

**tetracycline** (te-tra-**sye**-kleen)
Sumycin

***Classification***
Therapeutic: anti-infectives
Pharmacologic: tetracyclines

**Pregnancy Category D**

## Indications

Treatment of various infections caused by unusual organisms, including: *Mycoplasma*, *Chlamydia*, *Rickettsia*, *Borellia burgdorferi*. Treatment of gonorrhea and syphilis in penicillin-allergic patients. Prevention of exacerbations of chronic bronchitis. Treatment of inhalational anthrax (postexposure) and cutaneous anthrax (doxycycline only). Treatment of acne.

## Action

Inhibits bacterial protein synthesis at the level of the 30S bacterial ribosome. **Therapeutic Effects:** Bacteriostatic action against susceptible bacteria. **Spectrum:** Includes activity against some gram-positive pathogens: *Bacillus anthracis*, *Clostridium perfringens*, *Clostridium tetani*, *Listeria monocytogenes*, *Nocardia*, *Propionibacterium acnes*, *Actinomyces israelii*. Active against some gram-negative pathogens: *Haemophilus influenzae*, *Legionella pneumophila*, *Yersinia enterocolitica*, *Yersinia pestis*, *Neisseria gonorrhoeae*, *Neisseria meningitidis*. Also active against several other pathogens, including: *Mycoplasma*, *Treponema pallidum*, *Chlamydia*, *Rickettsia*, *B. burgdorferi*.

## Pharmacokinetics

**Absorption:** *Tetracycline*—60–80% absorbed following oral administration. *Doxycycline, minocycline*—well absorbed from the GI tract.
**Distribution:** Widely distributed, some penetration into CSF; cross the placenta and enter breast milk.
**Metabolism and Excretion:** *Doxycycline*—20–40% excreted unchanged by the urine; some inactivation in the intestine and some enterohepatic circulation with excretion in bile and feces. *Minocycline*—5–20% excreted unchanged by the urine; some metabolism by the liver with enterohepatic circulation and excretion in bile and feces. *Tetracycline*—Excreted mostly unchanged by the kidneys.
**Half-life:** *Doxycycline*—14–17 hr (↑ in severe renal impairment). *Minocycline*—11–26 hr. *Tetracycline*—6–12 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Doxycycline-PO | 1–2 hr | 1.5–4 hr | 12 hr |
| Doxycycline-IV | rapid | end of infusion | 12 hr |
| Minocycline-PO | rapid | 2–3 hr | 6–12 hr |
| Minocycline-PO extended-release | unknown | 3.5–4 hr | 24 hr |
| Tetracycline-PO | 1–2 hr | 2–4 hr | 6–12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Some products contain alcohol or bisulfites; avoid in patients with known hypersensitivity or intolerance; OB: Risk of permanent staining of teeth in infant if used during last half of pregnancy; Lactation: Lactation; Pedi: Children <8 yr (permanent staining of teeth); OB, Lactation: Pedi: Can be used in children and pregnant and lactating women for the treatment of anthrax (doxycycline only); Some products contain alcohol or bisulfites; avoid in patients with known hypersensitivity or intolerance; OB: Risk of permanent staining of teeth in infant if used during last half of pregnancy; Lactation: Lactation; Pedi: Children <8 yr (permanent staining of teeth); OB, Lactation: Pedi: Can be used in children and pregnant and lactating women for the treatment of anthrax (doxycycline only).
**Use Cautiously in:** Cachectic or debilitated patients; Renal disease; Hepatic impairment (doxycycline, minocycline); Nephrogenic diabetes insipidus.

## Adverse Reactions/Side Effects

**CNS:** benign intracranial hypertension (higher in children); *minocycline*, dizziness. **EENT:** *minocycline*, vestibular reactions. **GI:** PSEUDOMEMBRANOUS COLITIS, diarrhea, nausea, vomiting, esophagitis, hepatotoxicity, pancreatitis. **Derm:** photosensitivity, rashes; *minocycline*, pigmentation of skin and mucous membranes. **Hemat:** blood dyscrasias. **Endo:** *minocycline*—thyroid disorders. **MS:** *minocycline*—lupus-like syndrome. **Local:** *doxycycline, minocycline*—phlebitis at IV site. **Misc:** hypersensitivity reactions, superinfection.

## Interactions

**Drug-Drug:** May ↑ effect of **warfarin**. May ↓ effectiveness of **estrogen-containing hormonal contraceptives**. **Antacids**, **calcium**, **iron**, **zinc**, **aluminum**, and **magnesium** form insoluble compounds (chelates) and ↓ absorption of tetracyclines. **Sucralfate** may bind to tetracycline and ↓ its absorption from the GI tract. **Cholestyramine** or **colestipol** ↓ oral absorption of tetracyclines. **Adsorbent antidiarrheals** may ↓ absorption of tetracyclines. **Barbiturates**, **carbamazepine**, or **phenytoin** may ↓ activity of doxycycline.

**Drug-Food: Calcium** in foods or **dairy products** ↓ absorption by forming insoluble compounds (chelates).

## Route/Dosage

### Doxycycline

**PO (Adults and Children >8 yr and >45 kg):** *Most infections*—100 mg q 12 hr on the 1st day, then 100–200 mg once daily or 50–100 mg q 12 hr. *Gonorrhea*—100 mg q 12 hr for 7 days or 300 mg followed 1 hr later by another 300-mg dose. *Malaria prophylaxis*—100 mg once daily. *Lyme disease*—100 mg twice daily. *Periodontitis*—20 mg twice daily. *Anthrax*—100 mg twice daily for 60 days.
**PO (Children >8 yr and ≤45 kg):** *Most infections*—2–5 mg/kg/day in 1–2 divided doses (not to exceed 200 mg/day).
**IV (Adults and Children >8 yr and >45 kg):** 200 mg once daily or 100 mg q 12 hr on the 1st day, then 100–200 mg once daily or 50–100 mg q 12 hr. *Anthrax*—100 mg q 12 hr change to oral when appropriate, for 60 days.
**IV (Children >8 yr and ≤45 kg or ≤8 yr):** 4.4 mg/kg once daily or 2.2 mg/kg q 12 hr on the 1st day, then 2.2–4.4 mg/kg/day given once daily or 1.1–2.2 mg/kg q 12 hr. *Anthrax*—2.2 mg/kg q 12 hr, change to oral when appropriate, for 60 days.

### Minocycline

#### Immediate-Release

**PO (Adults):** 100–200 mg initially, then 100 mg q 12 hr or 50 mg q 6 hr.
**PO (Children ≥8 yr):** 4 mg/kg initially, then 2 mg/kg q 12 hr.

#### Extended-Release

**PO (Adults and Children ≥12 yr):** *91–136 kg*—135 mg once daily for 12 wk. *60–90 kg*-90 mg once daily for 12 wk. *45–59 kg*-45 mg once daily for 12 wk.

### Tetracycline

**PO (Adults):** 250–500 mg q 6 hr or 500 mg–1 g q 12 hr. *Chronic treatment of acne*—500 mg–2 g/day for 3 wk, then ↓ to 125 mg–1 g/day.
**PO (Children ≥8 yr):** 6.25–12.5 mg/kg q 6 hr or 12.5–25 mg/kg q 12 hr.

## Availability

### Doxycycline (generic available)

**Tablets:** 20 mg, 50 mg, 75 mg, 100 mg, 150 mg. **Delayed-release tablets:** 75 mg, 100 mg. **Capsules:** 50 mg, 100 mg. **Delayed-release capsules:** 40 mg. **Oral suspension (raspberry flavor):** 25 mg/5 mL in 60 mL bottles. **Syrup (apple-raspberry flavor):** 50 mg/5 mL in 473-mL bottles. **Powder for injection:** 100 mg/vial, 200 mg/vial.

### Minocycline (generic available)

**Capsules:** 50 mg, 100 mg. **Tablets:** 50 mg, 75 mg, 100 mg. **Extended-release tablets:** 45 mg, 90 mg, 135 mg. **Oral suspension (custard flavor):** 50 mg/5 mL.

### Tetracycline (generic available)

**Capsules:** 250 mg, 500 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and throughout therapy.
- Obtain specimens for culture and sensitivity before initiating therapy. First dose may be given before receiving results.
- Monitor bowel function. Diarrhea, abdominal cramping, fever, and bloody stools should be reported to health care professional promptly as a sign of pseudomembranous colitis. May begin up to several weeks following cessation of therapy.
- **IV:** Assess IV site frequently; may cause thrombophlebitis.
- ***Lab Test Considerations:*** Monitor renal and hepatic function and CBC periodically during long-term therapy.
- May cause ↑ AST, ALT, serum alkaline phosphatase, bilirubin, and amylase concentrations. Tetracyclines, except doxycycline, may cause ↑ serum BUN.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Noncompliance (Patient/Family Teaching)

### Implementation

- Do not confuse doxycycline with doxepin.
- May cause yellow-brown discoloration and softening of teeth and bones if administered prenatally or during early childhood. Not recommended for children under 8 yr of age or

T

during pregnancy or lactation unless used for the treatment of anthrax.

- **PO:** Administer around the clock. Administer at least 1 hr before or 2 hr after meals. *Doxycycline and minocycline* may be taken with food or milk if GI irritation occurs. Administer with a full glass of liquid and at least 1 hr before going to bed to avoid esophageal ulceration. Use calibrated measuring device for liquid preparations. Shake liquid preparations well. Do not administer within 1–3 hr of other medications.
- Avoid administration of calcium, zinc, antacids, magnesium- or aluminum-containing medications, sodium bicarbonate, or iron supplements within 1–3 hr of oral tetracyclines.

## Doxycycline

- The *Oracea* product is only indicated for rosacea, not for infections.
- **PO:** To prepare doses for infants and children exposed to anthrax, place one 100 mg tablet in a small bowl and crush to a fine powder with a metal spoon, leaving no large pieces. Add 4 level teaspoons of lowfat milk, lowfat chocolate milk, regular chocolate milk, chocolate pudding, or apple juice. Mix food or drink and doxycycline powder until powder dissolves. Mixture is stable in a covered container for 24 hr if refrigerated (if made with milk or pudding) or at room temperature (if made with juice). Number of teaspoons to administer/dose is based on child's weight (0–12.5 lb—½ tsp; 12.5–25 lb—1 tsp; 25–37.5 lb—1½ tsp; 37.5–50 lb—2 tsp; 50–62.5 lb—2½ tsp; 62.5–75 lb—3 tsp; 75–87.5 lb—3½ tsp; 87.5–100 lb—4 tsp).
- Capsules may also be administered by carefully opening and sprinkling capsule contents on a spoonful of applesauce. The applesauce should be swallowed immediately without chewing and followed with a cool 8-ounce glass of water to ensure complete swallowing of the capsule contents. The applesauce should not be hot, and it should be soft enough to be swallowed without chewing. If mixture cannot be taken immediately, discard; do not store for later use.
- Do not open, break, crush or chew extended release capsules and tablets.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute each 100 mg with 10 mL of sterile water or 0.9% NaCl for injection. Dilute further in 100–1000 mL of 0.9% NaCl, D5W, D5/LR, Ringer's, or lactated Ringer's solution. Solution is stable for 12 hr at room temperature and 72 hr if refrigerated. If diluted with D5/LR or lactated Ringer's solution, administer within 6 hr. Protect solution from direct sunlight. ***Concentration:*** Concentrations of less than 1 mcg/mL or greater than 1 mg/mL are not recommended. ***Rate:*** Administer over a minimum of 1–4 hr. Avoid rapid administration. Avoid extravasation.
- **Y-Site Compatibility:** acyclovir, alfentanyl, amifostine, amikacin, aminophylline, amiodarone, anidulafungin, ascorbic acid, atracurium, atropine, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gulconate, carboplatin, caspofungin, cefonocid, cefotaxime, ceftriaxone, chlorpromazine, ciometidine, cisatracurium, cisplatin, clindamycin, codeine, cyanocobalamin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium, doxarubicin, enalapril, ephedrine, epinephrine, epirubicin, epoetin alfa, eftifibitide, ertapenem, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, filgrastim, fluconazole, fludarabine, gemcitabine, gentamicin, glycopyrrolate, granisetron, hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, insulin, isoproterenol, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, metronidazole, miconazole, midazolam, milrinone, mitoxantrone, morphine, multivitamins, nalbuphine, naloxone, nesiritide, netilmicin, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, paclitaxel, pancuronium, pantoprazole, papaverine, pentamidine, pentazocine, perphenazine, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propofol, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, ranitidine, remifentanil, ritodrine, rituximab, rocuronium, sargramostim, sodium acetate, streptokinase, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, tirofiban, tobramycin, tolazoline, trastuzumab, trimetaphan, urokinase, vancomycin, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, voriconazole.

- **Y-Site Incompatibility:** allopurinol, amphotericin B colloidal, amphotericin B liposome , ampicillin, ampicillin/sulbactam, azathioprine, cefazolin, cefoperazone, cefotetan, cefoxitin, ceftizoxime, cefuroxime, chloramphenicol, dantrolene, dexamethasone, diazepam, diazoxide, erythromycin, fluorouracil, folic acid, furosemide, ganciclovir, heparin, hydrocortisone, inamrinone, indomethacin, ketorolac, methotrexate, methylprednisolone, nafcillin, oxacillin, palonosetron, pemetrexed, penicillin G, pentobarbital, phenobarbital, phenytoin, piperacillin/tazobactam, sodium bicarbonate, trimethoprim/sulfamethoxazole.

## Patient/Family Teaching

- Instruct patient to take medication around the clock and to finish the drug completely as directed, even if feeling better. Take missed doses as soon as possible unless it is almost time for next dose; do not double doses. Advise patient that sharing of this medication may be dangerous.
- Advise patient to avoid taking milk or other dairy products concurrently with oral tetracyclines. Also avoid taking antacids, zinc, calcium, magnesium- or aluminum-containing medications, sodium bicarbonate, and iron supplements within 1–3 hr of oral tetracyclines.
- Instruct patient to notify health care professional immediately if diarrhea, abdominal cramping, fever, or bloody stools occur and not to treat with antidiarrheals without consulting health care professionals.
- Advise female patient to use a nonhormonal method of contraception while taking tetracyclines and until next menstrual period.
- *Minocycline* commonly causes dizziness or unsteadiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Notify health care professional if these symptoms occur.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to report the signs of superinfection (black, furry overgrowth on the tongue; vaginal itching or discharge; loose or foul-smelling stools). Skin rash, pruritus, and urticaria should also be reported.
- Instruct patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional if symptoms do not improve within a few days for systemic preparations.
- Caution patient to discard outdated or decomposed tetracyclines; they may be toxic.
- **Malaria Prophylaxis:** Advise patient to avoid being bitten by mosquitoes by using protective measures, especially from dusk to dawn (e.g., staying in wellscreened areas, using mosquito nets, covering the body with clothing, and using an effective insect repellant). Doxycycline prophylaxis should begin 1-2 days before travel to the malarious area, continued daily while in the malarious area and after leaving the malarious area, should be continued for 4 more weeks to avoid development of malaria. Do not exceed 4 months.

## Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of infection. Length of time for complete resolution depends on the organism and site of infection.
- Decrease in acne lesions.
- Treatment of inhalation anthrax (post exposure) or treatment of cutaneous anthrax (doxycycline).
- Prevention of malaria.
- Reduction in inflammatory lesions associated with rosacea.

T

# **thalidomide** (tha-**lid**-oh-mide)

Thalomid

***Classification***

Therapeutic: immunosuppressants

**Pregnancy Category X**

## Indications

Cutaneous manifestations of moderate to severe erythema nodosum leprosum (ENL). Prevention (maintenance) and suppression of recurrent ENL. Newly diagnosed multiple myeloma (with dexamethasone). **Unlabeled Use:** Bechet's syndrome. HIV-associated wasting syndrome. Aphthous stomatitis (including HIV associated). Crohn's disease.

## Action

May suppress excess levels of tumor necrosis factor-alpha (TNF-alpha) in patients with ENL and alter leukocyte migration by altering characteristics of cell surfaces. **Therapeutic Effects:** Decreased skin lesions in ENL and prevention of recurrence.

### Pharmacokinetics

**Absorption:** 67–93% absorbed following oral administration.
**Distribution:** Crosses the placenta; highly protein bound.
**Protein Binding:** Highly bound.
**Metabolism and Excretion:** Hydrolyzed in plasma to multiple metabolites.
**Half-life:** 5–7 hr.

TIME/ACTION PROFILE (dermatologic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 48 hr | 1–2 mo | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; OB: Women with childbearing potential (unless specific conditions are met); Sexually mature men (unless specific conditions are met); Lactation: Potential for serious adverse reactions in the infant.
**Use Cautiously in:** Pedi: Children <12 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, drowsiness. **CV:** bradycardia, edema, orthostatic hypotension, thromboembolic events (↑ risk with dexamethasone in multiple myeloma). **GI:** constipation. **Derm:** rash, photosensitivity. **Hemat:** neutropenia. **Neuro:** peripheral neuropathy. **Misc:** SEVERE BIRTH DEFECTS, hypersensitivity reactions, ↑ HIV viral load.

### Interactions

**Drug-Drug:** ↑ CNS depression with concurrent use of **barbiturates**, **sedative/hypnotics**, **alcohol**, **chlorpromazine**, **reserpine**, or other **CNS depressants**. Concurrent use of **agents that may cause peripheral neuropathy** ↑ risk of peripheral neuropathy.
**Drug-Natural Products:** Concommitant use with **echinacea**, and **melatonin** may interfere with immunosuppression.

### Route/Dosage

### ENL

**PO (Adults ≥50 kg):** 100–300 mg/day initially; up to 400 mg/day has been used, depending on previous response. Every 3–6 mo, attempts should be made to taper and discontinue in decrements of 50 mg q 2–4 wk.
**PO (Adults <50 kg):** 100 mg/day initially; up to 400 mg/day has been used, depending on previous response. Every 3–6 mo, attempts should be made to taper and discontinue in decrements of 50 mg q 2–4 wk.

### Multiple Myeloma

**PO (Adults):** 200 mg daily in 28-day treatment cycles. Dexamethasone 40 mg is administered on Days 1–4, 9–12, 17–20.

### Availability

**Capsules:** 50 mg, 100 mg, 150 mg, 200 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess patient monthly for initial 3 months and periodically during therapy to detect early signs of peripheral neuropathy (numbness, tingling, or pain in hands and feet). Commonly occurs with prolonged therapy, but has occurred following short-term use or following completion of therapy. May be severe and irreversible. Electrophysiologic testing may be done at baseline and every 6 mo to detect asymptomatic peripheral neuropathy. If symptoms occur, discontinue thalidomide immediately to limit further damage. Reinstate therapy only if neuropathy returns to baseline.
- Monitor for signs of hypersensitivity reaction (erythematous macular rash, fever, tachycardia, hypotension). May require discontinuation of therapy if severe. If reaction recurs when dosing is resumed, discontinue thalidomide.
- **Multiple Myeloma:** Assess for venous thromboembolism (dyspnea, chest pain, arm or leg swelling) periodically during therapy, especially in patients concurrently taking dexamethasone.
- Monitor for side effects (constipation, oversedation, peripheral neuropathy); may require discontinuation or dose reduction until side effects resolve.
- ***Lab Test Considerations:*** Monitor WBC with differential during therapy. May cause ↓ WBC. Do not initiate therapy with an ANC ≤750/mm³. If ANC ↓ to ≤750/mm³ during therapy, re-evaluate medication regimen; if neutropenia persists, consider discontinuing therapy.
- May cause ↑ viral load levels in patients with HIV.

### Potential Nursing Diagnoses

Impaired skin integrity (Indications)
Risk for injury (Adverse Reactions)

### Implementation

- Due to teratogenic effects, thalidomide may be prescribed only by prescribers registered in the System for Thalidomide Education and Prescribing Safety (STEPS) program. Thalidomide is started within 24 hr of a negative pregnancy

test with a sensitivity of at least 50 mIU/mL. Pregnancy testing must occur weekly during first month of therapy, then monthly thereafter in women with a regular menstrual cycle. For women with irregular menses, pregnancy testing should occur every 2 wk. If pregnancy occurs, thalidomide should be discontinued immediately. Any suspected fetal exposure must be reported to the FDA and the manufacturer, and patient should be referred to an obstetrician/gynecologist experienced in reproductive toxicity.

- If health care professionals or other caregivers are exposed to body fluids from patients receiving thalidomide, use appropriate precautions, such as wearing gloves to prevent the potential cutaneous exposure to thalidomide or washing the exposed area with soap and water.
- Corticosteroids may be used concurrently with thalidomide for patients with moderate to severe neuritis associated with a severe ENL reaction. Use of corticosteroids can be tapered and discontinued when neuritis resolves.
- **PO:** Administer once daily with water, preferably at bedtime and at least 1 hr after the evening meal. If divided doses are used, administer at least 1 hr after meals.

### Patient/Family Teaching

- Instruct patient to take thalidomide as directed. Do not discontinue without notifying health care professional; dose should be tapered gradually.
- Advise patient that thalidomide should not be shared with others.
- Caution patient on the extreme importance of maintaining contraception for 1 month prior to, during, and for 1 mo following discontinuation of therapy. *For women of childbearing yr,* two methods of reliable contraception must be used unless complete abstinence is used. *For men,* a latex condom must be used, even if a successful vasectomy has been performed. Patients must meet *ALL* of the STEPS conditions: Understands and can follow instructions and is capable of complying with contraceptive measures, pregnancy testing, patient registration, and patient survey. Patients must receive verbal and written warnings of the potential teratogenicity of thalidomide and must acknowledge in writing their understanding and acceptance of these conditions.
- Advise patient to consult health care professional before using other RX, OTC, or herbal products. Concomitant use of HIV-protease inhibitors, modafinil, penicillins, rifampin, rifabutin, phenytoin, carbamazepine, or certain herbal supplements such as St. John's Wort with hormonal contraceptive agents may reduce the effectiveness of contraception during and for up to one month after discontinuation of these concomitant therapies. Therefore, women requiring treatment with one or more of these drugs must use two other effective or highly effective methods of contraception or abstain from heterosexual sexual contact while taking thalidomide.
- Frequently causes drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Instruct patient not to donate blood and male patients not to donate sperm while taking thalidomide.
- Advise patient to notify health care professional immediately if pain, numbness, tingling, or burning in hands or feet or shortness of breath, chest pain, swelling of arms or legs occur.

### Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of active ENL reaction. Usually requires at least 2 wk of therapy; then taper medication in 50 mg decrements every 2–4 wk.
- Prevention of recurrent ENL. Tapering off medication should be attempted every 3–6 mo in decrements of 50 mg every 2–4 wk.
- Decrease in serum and urine paraprotein measurements in patients with multiple myeloma.

T

**theophylline, See BRONCHODILATORS (XANTHINES).**

## thiamine (thye-a-min)

Betaxin, Bewon, Biamine, vitamin B1

***Classification***

Therapeutic: vitamins
Pharmacologic: water soluble vitamins

**Pregnancy Category A**

### Indications
Treatment of thiamine deficiencies (beriberi). Prevention of Wernicke's encephalopathy. Dietary supplement in patients with GI disease, alcoholism, or cirrhosis.

### Action
Required for carbohydrate metabolism. **Therapeutic Effects:** Replacement in deficiency states.

### Pharmacokinetics
**Absorption:** Well absorbed from the GI tract by an active process. Excessive amounts are not absorbed completely. Also well absorbed from IM sites.
**Distribution:** Widely distributed. Enters breast milk.
**Metabolism and Excretion:** Metabolized by the liver. Excess amounts are excreted unchanged by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE (time for symptoms of deficiency—edema and heart failure—to resolve†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, IM, IV | hr | days | days–wk |

†Confusion and psychosis take longer to respond

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Known alcohol intolerance or bisulfite hypersensitivity (elixir only).
**Use Cautiously in:** Wernicke's encephalopathy (condition may be worsened unless thiamine is administered before glucose).

### Adverse Reactions/Side Effects
Adverse reactions and side effects are extremely rare and are usually associated with IV administration or extremely large doses.
**CNS:** restlessness, weakness. **EENT:** tightness of the throat. **Resp:** pulmonary edema, respiratory distress. **CV:** VASCULAR COLLAPSE, hypotension, vasodilation. **GI:** GI bleeding, nausea. **Derm:** cyanosis, pruritus, sweating, tingling, urticaria, warmth. **Misc:** ANGIOEDEMA.

### Interactions
**Drug-Drug:** None significant.

### Route/Dosage

### Thiamine Deficiency (Beriberi)
**PO (Adults):** 5–10 mg 3 times daily.
**PO (Children):** 10–50 mg/day in divided doses.
**IM, IV (Adults):** 5–100 mg 3 times daily.
**IM, IV (Children):** 10–25 mg/day.

### Dietary Supplement
**PO (Adults):** 1–1.6 mg/day.
**PO (Children 4–10 yr):** 0.9–1 mg/day.
**PO (Children birth–3 yr):** 0.3–0.7 mg/day.

### Availability (generic available)
**Tablets:** 5 mg[OTC], 10 mg[OTC], 25 mg[OTC], 50 mg[OTC], 100 mg[OTC], 250 mg[OTC], 500 mg[OTC]. **Elixir:** 250 mcg/5 mL[OTC]. **Injection:** 100 mg/mL in 1-mL ampules and prefilled syringes and 1-, 2-, 10-, and 30-mL vials. ***In combination with:*** other vitamins, minerals, and trace elements in multi-vitamin preparations[OTC].

## NURSING IMPLICATIONS

### Assessment
- Assess for signs and symptoms of thiamine deficiency (anorexia, GI distress, irritability, palpitations, tachycardia, edema, paresthesia, muscle weakness and pain, depression, memory loss, confusion, psychosis, visual disturbances, elevated serum pyruvic acid levels).
- Assess patient's nutritional status (diet, weight) prior to and throughout therapy.
- Monitor patients receiving IV thiamine for anaphylaxis (wheezing, urticaria, edema).
- ***Lab Test Considerations:*** May interfere with certain methods of testing serum theophylline, uric acid, and urobilinogen concentrations.

### Potential Nursing Diagnoses
Imbalanced nutrition: less than body requirements (Indications)

### Implementation
- Because of infrequency of single B-vitamin deficiencies, combinations are commonly administered.
- **IM, IV:** Parenteral administration is reserved for patients in whom oral administration is not feasible.
- **IM:** Administration may cause tenderness and induration at injection site. Cool compresses may decrease discomfort.

#### IV Administration
- **IV:** Sensitivity reactions and death have occurred from IV administration. An intradermal test dose is recommended in patients with suspected sensitivity. Monitor site for erythema and induration.
- **Direct IV:** ***Concentration:*** Administer undiluted at 100 mg/mL. ***Rate:*** Administer at a rate of 100 mg over 5 min.
- **Continuous Infusion:** ***Diluent:*** May be diluted in dextrose/Ringer's or LR combinations,

dextrose/saline combinations, D5W, D10W, Ringer's and LR injection, 0.9% NaCl, or 0.45% NaCl. Usually administered with other vitamins.

- **Y-Site Compatibility:** alfentanil, amikacin, ascorbic acid, atracurium, atropine, aztreonam, benztropine, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, cefazolin, cefonocid, cefotaxime, cefotetan, cefoxitin, ceftriaxone, cefuroxime, chlorpromazine, cimetidine, clindamycin, cyanocobalamin, cyclosporine, dexamethasone, digoxin, diphenhydramine, dobutamine, dopamine, doxycycline, enalaprilat, ephedrine, epinephrine, erythromycin, esmolol, famotidine, fentanyl, gentamicin, glycopyrrolate, heparin, insulin, isoproterenol, labetalol, lidocaine, magnesium sulfate, mannitol, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, oxacillin, oxytocin, papaverine, penicillin G, pentamidine, pentazocine, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxime, ranitidine, streptokinase, succinylcholine, sufentnail, theophylline, ticarcillin/clavulanate, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, vasopressin, verapamil.
- **Y-Site Incompatibility:** aminophylline, amphotericin B colloidal, azathioprine, cefoperazone, ceftazidime, ceftizoxime, chloramphenicol, dantrolene, diazepam, diazoxide, folic acid, furosemide, ganciclovir, hydrocortisone, imipemen/cilastatin, inamrinone, indomethacin, methylprednisolole, pentobarbital, phenobarbital, phenytoin, sodium bicarbonate, trimethoprim/sulfamethoxazole.
- **Additive Incompatibility:** Solutions with neutral or alkaline pH, such as carbonates, bicarbonates, citrates, and acetates.

## Patient/Family Teaching

- Encourage patient to comply with dietary recommendations of health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the four basic food groups.
- Teach patient that foods high in thiamine include cereals (whole grain and enriched), meats (especially pork), and fresh vegetables; loss is variable during cooking.
- Caution patients self-medicating with vitamin supplements not to exceed RDA. The effectiveness of megadoses of vitamins for treatment of various medical conditions is unproved and may cause side effects.

## Evaluation/Desired Outcomes

- Prevention of or decrease in the signs and symptoms of vitamin B deficiency.
- Decrease in the symptoms of neuritis, ocular signs, ataxia, edema, and heart failure may be seen within hours of administration and may disappear within a few days.
- Confusion and psychosis may take longer to respond and may persist if nerve damage has occurred.

# thioridazine

(thye-oh-**rid**-a-zeen)

***Classification***

Therapeutic: antipsychotics
Pharmacologic: phenothiazines

**Pregnancy Category C**

## Indications

Treatment of refractory schizophrenia. Considered second line treatment after failure with atypical antipsychotics.

## Action

Alters the effects of dopamine in the CNS. Possesses significant anticholinergic and alpha-adrenergic blocking activity. **Therapeutic Effects:** Diminished signs and symptoms of psychoses.

## Pharmacokinetics

**Absorption:** Absorption from tablets is variable; may be better with oral liquid formulations.
**Distribution:** Widely distributed, high concentrations in the CNS. Crosses the placenta and enters breast milk.
**Protein Binding:** ≥90%.
**Metabolism and Excretion:** Highly metabolized by the liver (primarily by CYP2D6 isoenzyme) and GI mucosa; the CYP2D6 enzyme system exhibits genetic polymorphism (~7% of population may be poor metabolizers and may have significantly ↑ thioridazine concentrations and an ↑ risk of adverse effects).
**Half-life:** 21–24 hr.

TIME/ACTION PROFILE (antipsychotic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | 8–12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity with other phenothiazines may exist; Angle-closure glaucoma; Bone marrow depression; Severe liver or cardiovascular disease; Known alcohol intolerance (concentrate only); Concurrent fluvoxamine, propranolol, pindolol, fluoxetine, other agents known to inhibit the CYP2D6 enzyme, or agents known to prolong the QTc interval (risk of life-threatening arrrhythmias); Hypokalemia (correct prior to use); QTc interval >450 msec.

**Use Cautiously in:** Debilitated patients; Glaucoma; Urinary retention; Diabetes mellitus; Patients with risk factors for electrolyte imbalance (dehydration, diuretic therapy); Respiratory disease; Prostatic hyperplasia; CNS tumors; Epilepsy; Intestinal obstruction; OB, Lactation: Safety not established. Recommend discontinue drug or bottle feed; Geri: May be at ↑ risk for extrapyramidal and CNS adverse effects; appears on Beers list; ↑ risk of mortality in elderly patients treated for dementia-related psychosis.

## Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, sedation, extrapyramidal reactions, tardive dyskinesia. **EENT:** blurred vision, dry eyes, lens opacities, pigmentary retinopathy (high doses). **CV:** ARRHYTHMIAS, QTC PROLONGATION, hypotension, tachycardia. **GI:** constipation, dry mouth, anorexia, drug-induced hepatitis, ileus, weight gain. **GU:** urinary retention, priapism. **Derm:** photosensitivity, pigment changes, rashes. **Endo:** galactorrhea, amenorrhea. **Hemat:** AGRANULOCYTOSIS, leukopenia. **Metab:** hyperthermia. **Misc:** allergic reactions.

## Interactions

**Drug-Drug:** Concurrent **fluvoxamine**, **propranolol**, **pindolol**, **fluoxetine**, other **agents known to inhibit the CYP450 2D6 enzyme**, or **agents known to prolong the QTc interval** ↑ risk of life-threatening arrhythmias. **Diuretics** ↑ the risk of electrolyte imbalance and arrhythmias. Additive hypotension with other **antihypertensives**, **nitrates**, and acute ingestion of **alcohol**. Additive CNS depression with other **CNS depressants**, including **alcohol**, **antihistamines**, **opioid analgesics**, **sedative/hypnotics**, and **general anesthetics**. Additive anticholinergic effects with other **drugs possessing anticholinergic properties**, including **antihistamines**, **antidepressants**, **atropine**, **haloperidol**, other **phenothiazines**, and **disopyramide**. **Lithium** ↓ blood levels of thioridazine. Thioridazine may mask early signs of **lithium** toxicity and ↑ the risk of extrapyramidal reactions. ↑ risk of agranulocytosis with **antithyroid agents**. Concurrent use with **epinephrine** may result in severe hypotension and tachycardia. May ↓ the effectiveness of **levodopa**.

## Route/Dosage

**PO (Adults and Children >12 yr):** 50–100 mg 3 times daily initially; may be gradually ↑ to a maintenance dose of up to 800 mg/day.

**PO (Children):** 0.5 mg/kg/day in divided doses initially; may be gradually ↑ to a maintenance dose of up to 3 mg/kg/day.

## Availability (generic available)

**Tablets:** 10 mg, 25 mg, 50 mg, 100 mg. **Concentrated oral solution:** 100 mg/mL.

# NURSING IMPLICATIONS

## Assessment

- Assess mental status (orientation, mood, behavior) before and periodically during therapy.
- Assess positive (delusions, hallucinations, agitation) and negative (social withdrawal) symptoms of schizophrenia.
- Assess weight and BMI initially and throughout theerapy.
- Monitor blood pressure (sitting, standing, lying), ECG, pulse, and respiratory rate before and frequently during the period of dose adjustment. May cause Q-wave and T-wave changes in ECG.
- Observe patient carefully when administering medication to ensure that medication is actually taken and not hoarded or cheeked.
- Assess patient for level of sedation after administration. Geri: Geriatric patients are more likely to become oversedated.
- Monitor intake and output ratios and daily weight. Report significant discrepancies.
- Monitor patient for onset of akathisia (restlessness or desire to keep moving) and extrapyramidal side effects (*parkinsonian*—difficulty speaking or swallowing, loss of balance control, pill rolling of hands, mask-like face, shuffling gait, rigidity, tremors; and *dystonic*—muscle spasms, twisting motions, twitching, inability to move eyes, weakness of arms or legs) every 2 mo during therapy and 8–12 wk after therapy has been discontinued. Report these symptoms; reduction in dosage or

discontinuation of medication may be necessary. Trihexyphenidyl, diphenhydramine, or benztropine may be used to control these symptoms. Benzodiazpines may alleviate akathisia.
- Monitor for tardive dyskinesia (uncontrolled rhythmic movement of mouth, face, and extremities; lip smacking or puckering; puffing of cheeks; uncontrolled chewing; rapid or wormlike movements of tongue, excessive eye blinking). Report immediately; may be irreversible.
- Monitor for development of neuroleptic malignant syndrome (fever, respiratory distress, tachycardia, seizures, diaphoresis, hypertension or hypotension, pallor, tiredness, severe muscle stiffness, loss of bladder control). Notify health care professional immediately if these symptoms occur.
- ***Lab Test Considerations:*** CBC, liver function tests, and ocular examinations should be evaluated periodically during therapy. May cause ↓ hematocrit, hemoglobin, leukocytes, granulocytes, platelets. May cause ↑ bilirubin, AST, ALT, and alkaline phosphatase. Agranulocytosis occurs between 4–10 wk of therapy with recovery 1–2 wk after discontinuation. May recur if medication is restarted. Liver function abnormalities may require discontinuation of therapy.
- May cause false-positive or false-negative pregnancy test results and false-positive urine bilirubin test results.
- May cause ↑ serum prolactin levels.

## Potential Nursing Diagnoses

Disturbed thought process (Indications)
Sexual dysfunction (Side Effects)

## Implementation

- To prevent contact dermatitis, avoid getting liquid preparations on hands, and wash hands thoroughly if spillage occurs.
- **PO:** Administer with food, milk, or full glass of water to minimize gastric irritation.
- Dilute concentrate in 120 mL of distilled or acidified tap water or fruit juice just before administration.

## Patient/Family Teaching

- Advise patient to take medication as directed and not to skip doses or double up on missed doses. Take missed doses as soon as remembered unless almost time for the next dose. If more than 2 doses a day are ordered, the missed dose should be taken within 1 hr of the scheduled time or omitted. Abrupt withdrawal may lead to gastritis, nausea, vomiting, dizziness, headache, tachycardia, and insomnia.
- Inform patient of possibility of extrapyramidal symptoms and tardive dyskinesia. Instruct patient to report these symptoms immediately to health care professional.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to use sunscreen and protective clothing when exposed to the sun. Exposed surfaces may develop a blue-gray pigmentation, which may fade after discontinuation of the medication. Extremes in temperature should also be avoided, as this drug impairs body temperature regulation.
- Instruct patient to use frequent mouth rinses, good oral hygiene, and sugarless gum or candy to minimize dry mouth. Consult health care professional if dry mouth continues for >2 wk.
- Advise patient that increasing activity and bulk and fluids in the diet helps minimize the constipating effects of this medication.
- Caution patient to avoid taking alcohol or other CNS depressants concurrently with this medication.
- Advise patient not to take thioridazine within 2 hr of antacids or antidiarrheal medication.
- Inform patient that this medication may turn urine pink to reddish brown.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional promptly if sore throat, fever, unusual bleeding or bruising, rash, weakness, tremors, visual disturbances, dark-colored urine, or clay-colored stools occur.
- Emphasize the importance of routine follow-up exams to monitor response to medication and to detect side effects. Periodic ocular exams are indicated. Encourage continued participation in psychotherapy.

## Evaluation/Desired Outcomes

- Decrease in positive symptoms (hallucinations, delusions, agitation) of schizophrenia.

HIGH ALERT

# THROMBOLYTIC AGENTS

**alteplase** (**al**-te-plase)
Activase, Activase rt-PA, Cathflo Activase, tissue plasminogen activator, t-PA

**reteplase** (**re**-te-plase)
Retavase

**streptokinase**
(strep-toe-**kye**-nase)
Streptase

**tenecteplase** (te-**nek**-te-plase)
TNKase

**urokinase** (yoor-oh-**kye**-nase)
Kinlytic

***Classification***
Therapeutic: thrombolytics
Pharmacologic: plasminogen activators

**Pregnancy Category B (urokinase), C (alteplase, reteplase, streptokinase, tenecteplase)**

## Indications

**Alteplase, reteplase, streptokinase, tenecteplase:** Acute myocardial infarction (MI). **Alteplase, streptokinase, urokinase:** Acute massive pulmonary emboli. **Alteplase:** Acute ischemic stroke. **Streptokinase:** Acute deep vein thrombosis. **Streptokinase:** Acute arterial thrombi. **Streptokinase:** Occluded arteriovenous cannulae. **Alteplase:** Occluded central venous access devices.

## Action

Convert plasminogen to plasmin, which is then able to degrade fibrin present in clots. Alteplase, reteplase, tenecteplase, and urokinase directly activate plasminogen. Streptokinase combines with plasminogen to form activator complexes, which then converts plasminogen to plasmin. **Therapeutic Effects:** Lysis of thrombi in coronary arteries, with preservation of ventricular function or improvement of ventricular function (and ↓ risk of CHF or death). Lysis of pulmonary emboli or deep vein thrombosis. Lysis of thrombi causing ischemic stroke, reducing risk of neurologic sequelae. Restoration of cannula or catheter patency and function.

## Pharmacokinetics

**Absorption:** Complete after IV administration. Intracoronary administration or administration into occluded catheters or cannulae has a more localized effect.
**Distribution:** Streptokinase appears to cross the placenta minimally, if at all. Remainder of distribution for streptokinase or other agents is not known.
**Metabolism and Excretion:** *Alteplase, tenecteplase, urokinase*—Rapidly metabolized by the liver. *Reteplase*—Cleared primarily by the liver and kidneys. *Streptokinase*—Rapidly cleared from circulation by antibodies and other unknown mechanism.
**Half-life:** *Alteplase*—35 min; *reteplase*—13–16 min; *streptokinase*—initially 18 min (due to clearance by antibodies), then 83 min; *Tenecteplase*—20–24 min (initial phase), 90–130 min (terminal phase); *urokinase*—up to 20 min.

TIME/ACTION PROFILE (fibrinolysis)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Alteplase IV | 30 min | 60 min | unknown |
| Reteplase IV | 30 min | 30–90 min | 48 hr |
| Streptokinase IV | immediate | rapid | 4 hr (up to 12 hr) |
| Tenecteplase IV | rapid | unknown | unknown |
| Urokinase IV | immediate | rapid | up to 12 hr |

## Contraindications/Precautions

**Contraindicated in:** Active internal bleeding; History of cerebrovascular accident; Recent (within 2 mo) intracranial or intraspinal injury or trauma; Intracranial neoplasm, AV malformation, or aneurysm; Severe uncontrolled hypertension; Known bleeding tendencies; Hypersensitivity; cross-sensitivity with other thrombolytics may occur.
**Use Cautiously in:** Recent (within 10 days) major surgery, trauma, GI or GU bleeding; Left heart thrombus; Severe hepatic or renal disease; Hemorrhagic ophthalmic conditions; Septic phlebitis; Previous puncture of a noncompressible vessel; Subacute bacterial endocarditis or acute pericarditis; Recent streptococcal infection or previous therapy with streptokinase (from 5 days–6 mo); may produce resistance because of antibody formation; ↑ dosage requirements may be encountered (streptokinase only); Geri: >75 yr; ↑ risk of intracranial bleeding; OB, Lactation: Pedi: Safety not established.
**Exercise Extreme Caution in:** Patients receiving concurrent anticoagulant therapy (↑ risk of intracranial bleeding).

## Adverse Reactions/Side Effects

**CNS:** INTRACRANIAL HEMORRHAGE. **EENT:** epistaxis, gingival bleeding. **Resp:** bronchospasm,

hemoptysis. **CV:** hypotension, reperfusion arrhythmias. **GI:** GI BLEEDING, RETROPERITONEAL BLEEDING, nausea, vomiting. **GU:** GU TRACT BLEEDING. **Derm:** ecchymoses, flushing, urticaria. **Hemat:** BLEEDING. **Local:** hemorrhage at injection sites, phlebitis at IV site. **MS:** musculoskeletal pain. **Misc:** allergic reactions including ANAPHYLAXIS, fever.

## Interactions

**Drug-Drug:** Concurrent use of **aspirin**, other **NSAIDs**, **warfarin**, **heparin low-molecular-weight heparins**, **direct thrombin inhibitors**, **abciximab**, **eptifibatide**, **tirofiban**, **clopidogrel**, **ticlopidine**, or **dipyridamole** may ↑ risk of bleeding, although these agents are frequently used together or in sequence. Effects may be ↓ by **antifibrinolytic agents**, including **aminocaproic acid** or **tranexamic acid**.
**Drug-Natural Products:** ↑ anticoagulant effect and bleeding risk with **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **garlic**, **ginger**, **ginkgo**, **Panax ginseng**, **licorice**, and others.

## Route/Dosage

### Alteplase

#### Myocardial Infarction (Accelerated or Front-Loading Infusion)

**IV (Adults):** 15 mg bolus, then 0.75 mg/kg (up to 50 mg) over 30 min, then 0.5 mg/kg (up to 35 mg) over next 60 min; usually accompanied by heparin therapy.

#### Myocardial Infarction (3-Hour Infusion)

**IV (Adults >65 kg):** 60 mg over 1st hr (6–10 mg given as a bolus over first 1–2 min), 20 mg over the 2nd hr, and 20 mg over the 3rd hr for a total dose of 100 mg.
**IV (Adults <65 kg):** 0.75 mg/kg over 1st hr (0.075–0.125 mg/kg given as a bolus over first 1–2 min), 0.25 mg/kg over the 2nd hr, and 0.25 mg/kg over the 3rd hr for a total dose of 1.25 mg/kg (not to exceed 100 mg total).

#### Pulmonary Embolism

**IV (Adults):** 100 mg over 2 hr; follow with heparin.

#### Acute Ischemic Stroke

**IV (Adults):** 0.9 mg/kg (not to exceed 90 mg), given as an infusion over 1 hr, with 10% of the dose given as a bolus over the 1st min.

#### Occluded Venous Access Devices

**IV (Adults and Children >30 kg):** 2 mg/2 mL instilled into occluded catheter; if unsuccessful, may repeat once after 2 hr.
**IV (Adults and Children <30 kg):** 110% of the lumen volume (not to exceed 2 mg in 2 mL) instilled into occluded catheter; if unsuccessful, may repeat once after 2 hr.

### Reteplase

**IV (Adults):** 10 units, followed 30 min later by an additional 10 units.

### Streptokinase

#### Myocardial Infarction

**IV (Adults):** 1.5 million units given as a continuous infusion over up to 60 min.
**Intracoronary** (Adults): 20,000 unit bolus followed by 2000–4000 units/min infusion for 30–90 min.

#### Deep Vein Thrombosis, Pulmonary Emboli, Arterial Emboli, or Arterial Thromboses

**IV (Adults):** 250,000 unit loading dose over 30 min, followed by 100,000 unit/hr for 24 hr for pulmonary emboli or arterial thrombosis/embolism, 72 hr for deep vein thrombosis.

### Tenecteplase

**IV (Adults <60 kg):** 30 mg.
**IV (Adults ≥60 kg and <70 kg):** 35 mg.
**IV (Adults ≥70 kg and <80 kg):** 40 mg.
**IV (Adults ≥80 kg and <90 kg):** 45 mg.
**IV (Adults ≥90 kg ):** 50 mg.

### Urokinase

#### Pulmonary Emboli

**IV (Adults):** 4400 unit/kg loading dose, followed by 4400 unit/kg/hr for 12 hr.

## Availability

### Alteplase

**Powder for injection:** 2 mg/vial, 50 mg/vial, 100 mg/vial.

### Reteplase

**Powder for injection:** 10.8 units/vial.

### Streptokinase

**Powder for injection:** 250,000 units/vial, 750,000 units/vial, 1,500,000 units/vial.

### Tenecteplase

**Powder for injection:** 50 mg/vial.

### Urokinase

**Powder for injection:** 250,000 units/vial.

## NURSING IMPLICATIONS

### Assessment

- Begin therapy as soon as possible after the onset of symptoms.
- Monitor vital signs, including temperature, continuously for coronary thrombosis and at least every 4 hr during therapy for other indications. Do not use lower extremities to monitor blood pressure. Notify health care professional if systolic BP >180 mm Hg or diastolic BP >110 mm Hg. Should not be given if hypertension is uncontrolled. Inform health care professional if hypotension occurs. Hypotension may result from the drug, hemorrhage, or cardiogenic shock.
- Assess patient carefully for bleeding every 15 min during the 1st hr of therapy, every 15–30 min during the next 8 hr, and at least every 4 hr for the duration of therapy. Frank bleeding may occur from sites of invasive procedures or from body orifices. Internal bleeding may also occur (decreased neurologic status; abdominal pain with coffee-grounds emesis or black, tarry stools; hematuria; joint pain). If uncontrolled bleeding occurs, stop medication and notify health care professional immediately.
- Inquire about previous reaction to streptokinase therapy. Assess patient for hypersensitivity reaction (rash, dyspnea, fever, changes in facial color, swelling around the eyes, wheezing). If these occur, inform health care professional promptly. Keep epinephrine, an antihistamine, and resuscitation equipment close by in the event of an anaphylactic reaction.
- Inquire about recent streptococcal infection. *Streptokinase* may be less effective if administered between 5 days and 6 mo of a streptococcal infection.
- Assess neurologic status throughout therapy. Altered sensorium or neurologic changes may be indicative of intracranial bleeding.
- **Myocardial Infarction:** Monitor ECG continuously. Notify health care professional if significant arrhythmias occur. Monitor cardiac enzymes. Radionuclide myocardial scanning and/or coronary angiography may be ordered 7–10 days after therapy to monitor effectiveness of therapy.
- Assess intensity, character, location, and radiation of chest pain. Note presence of associated symptoms (nausea, vomiting, diaphoresis). Notify health care professional if chest pain is unrelieved or recurs.
- Monitor heart sounds and breath sounds frequently. Inform health care professional if signs of CHF occur (rales/crackles, dyspnea, $S_3$ heart sound, jugular venous distention).
- **Acute Ischemic Stroke:** Assess neurologic status. Determine time of onset of stroke symptoms. Alteplase must be administered within 3–4.5 hr of onset (within 3 hr in patients older than 80 yr, those taking oral anticoagulants, those with a baseline National Institutes of Health Stroke Scale score 25, or those with both a history of stroke and diabetes).
- **Pulmonary Embolism:** Monitor pulse, blood pressure, hemodynamics, and respiratory status (rate, degree of dyspnea, ABGs).
- **Deep Vein Thrombosis/Acute Arterial Thrombosis:** Observe extremities and palpate pulses of affected extremities every hour. Notify health care professional immediately if circulatory impairment occurs. Computerized tomography, impedance plethysmography, quantitative Doppler effect determination, and/or angiography or venography may be used to determine restoration of blood flow and duration of therapy; however, repeated venograms are not recommended.
- **Cannula/Catheter Occlusion:** Monitor ability to aspirate blood as indicator of patency. Ensure that patient exhales and holds breath when connecting and disconnecting IV syringe to prevent air embolism.
- ***Lab Test Considerations:*** Hematocrit, hemoglobin, platelet count, fibrin/fibrin degradation product (FDP) titer, fibrinogen concentration, prothrombin time, thrombin time, and activated partial thromboplastin time (aPTT) may be evaluated before and frequently during therapy. Bleeding time may be assessed before therapy if patient has received platelet inhibitors.
- Obtain type and crossmatch and have blood available at all times in case of hemorrhage.
- Stools should be tested for occult blood loss and urine for hematuria periodically during therapy.
- ***Toxicity and Overdose: High Alert:*** If local bleeding occurs, apply pressure to site. If severe or internal bleeding occurs, discontinue infusion. Clotting factors and/or blood volume may be restored through infusions of whole blood, packed RBCs, fresh frozen plasma, or cryoprecipitate. Do not administer dextran; it has antiplatelet activity. Aminocaproic acid (Amicar) may be used as an antidote.

## Potential Nursing Diagnoses

Ineffective tissue perfusion (Indications)
Risk for injury (Side Effects)

## Implementation

- ***High Alert:*** Overdosage and underdosage of thrombolytic medications have resulted in patient harm or death. Have second practitioner independently check original order, dosage calculations, and infusion pump settings. Do not confuse the abbreviation *t-PA* for alteplase (Activase) with the abbreviation *TNK t-PA* for tenecteplase (TNKase) and *r-PA* for reteplase (Retavase). Clarify orders that contain either of these abbreviations.
- Thrombolytic agents should be used only in settings in which hematologic function and clinical response can be adequately monitored.
- Starting two IV lines before therapy is recommended: one for the thrombolytic agent, the other for any additional infusions.
- Avoid invasive procedures, such as IM injections or arterial punctures, with this therapy. If such procedures must be performed, apply pressure to all arterial and venous puncture sites for at least 30 min. Avoid venipunctures at noncompressible sites (jugular vein, subclavian site).
- Acetaminophen may be ordered to control fever.

## Alteplase

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Vials are packaged with sterile water for injection (without preservatives) to be used as diluent. Do not use bacteriostatic water for injection. Reconstitute 20-mg vials with 20-mL and 50-mg vials with 50 mL using an 18-gauge needle. Avoid excess agitation during dilution; swirl or invert gently to mix. Solution may foam upon reconstitution. Bubbles will resolve upon standing a few min. Solution will be clear to pale yellow. Stable for 8 hr at room temperature. ***Concentration:*** May be administered as reconstituted (1 mg/mL) or may be further diluted immediately before use in an equal amount of 0.9% NaCl or D5W. ***Rate:*** Flush line with 20–30 mL of saline at completion of infusion to ensure entire dose is received. See Route and Dosage section for specific rates.
- **Y-Site Compatibility:** eptifibatide, lidocaine, metoprolol, propranolol.
- **Y-Site Incompatibility:** bivalirudin, dobutamine, dopamine, heparin, nitroglycerin.
- **Cathflo Activase:** Reconstitute by withdrawing 2.2 mL of sterile water (provided) and injecting into Cathflo Activase vial, directing diluent into powder for a concentration of 1 mg/mL. Allow slight foaming to dissipate by letting vial stand undisturbed. Do not use bacteriostatic water. Mix by gently swirling to dissolve; complete dissolution should occur within 3 min. Do not shake. Solution should be colorless to pale yellow. Use solution within 8 hr.
- Withdraw 2.0 mL of reconstituted solution and instill into occluded catheter. After 30 min dwell time, attempt to aspirate blood. If catheter remains occluded, allow 120 min dwell time. If catheter function is not restored after one dose, second dose may be instilled. If catheter function is restored, aspirate 4–5 mL of blood to remove Cathflo Activase and residual clot. Gently irrigate catheter with 0.9% NaCl.

## Reteplase

### IV Administration

- **Direct IV:** ***Diluent:*** Reconstitute using diluent, needle, syringe, and dispensing pin provided. Reconstitute only with sterile water for injection without preservatives. Solution is colorless. Do not administer solutions that are discolored or contain a precipitate. Slight foaming may occur; allow vial to stand undisturbed for several min to dissipate bubbles. Reconstitute immediately before use. Stable for 4 hr at room temperature. ***Concentration:*** Administer undiluted. ***Rate:*** Administer each bolus over 2 min into an IV line containing D5W; flush line before and after bolus.
- **Y-Site Incompatibility:** bivalirudin, heparin, No other medication should be infused or injected into line used for reteplase.

## Streptokinase

### IV Administration

- **Intracoronary:** Dilute 250,000 IU vial to a total volume of 125 mL with 0.9% NaCl or D5W. Administer 20,000 IU (10 mL) via bolus injection.
- ***Rate:*** Intracoronary bolus is administered over 15 sec–2 min.
- **Intermittent Infusion:** ***Diluent:*** Reconstitute with 5 mL of 0.9% NaCl or D5W (direct to sides of vial) and swirl gently; do not shake. Di-

lute further with 0.9% NaCl for a total volume of 45–500 mL (45 mL for MI, 90 mL for deep vein thrombosis or pulmonary embolism). Solution is slightly yellow in color. Administer through 0.8-micron pore–size filter. Use reconstituted solution within 24 hr. ***Rate:*** Administer dose for MI within 60 min.

- Intracoronary bolus should be followed by an intracoronary maintenance infusion of 2000 IU/min for 60 min.
- Loading dose for *deep vein thrombosis* or *pulmonary embolism* is administered over 30 min, followed by an infusion of 100,000 IU/hr.
- Use infusion pump to ensure accurate dose.
- **Y-Site Compatibility:** alfentanil, amikacin, aminophylline, ascorbic acid, atracurium, atropine, aztreonam, benztropine, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, cefazolin, cefonocid, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, cimetidine, clindamycin, cyanocobalamin, cyclosporine, dexamethasone, digoxin, diphenhydramine, dobutamine, dopamine, doxycycline, enalaprilat, ephedrine, epinephrine, epoetin alfa, erythromycin, esmolol, famotidine, fentanyl, fluconazole, folic acid, furosemide, gentamicin, glycopyrrolate, heparin, hydrocortisone, imipenem/cilastatin, indomethacin, insulin, 'isoproterenol, ketorolac, labetalol, lidocaine, magnesium sulfate, mannitol, meperidine, methoxamine, methyldopate, methylprednisolone, metoclopramide, metoprolol, midazolam, morphine, multivitamins, nafcillin, naloxone, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, oxytocin, penicillin G, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide, propranolol, pyridoxime, ranitidine, sodium bicarbonate, succinylcholine, sufentanil, theophylline, thiamine, ticarcillin/clavulanate, tobramycin, trimetaphan, urokinase, verapamil.
- **Y-Site Incompatibility:** azathioprine, bivalirudin, chlorpromazine, dantrolene, diazepam, diazoxide, ganciclovir, hydroxyzine, nalbuphine, pentamidine, phenytoin, prochlorperazine, promethazine, trimethoprim/sulfamethoxazole, vancomycin.
- **Additive Incompatibility:** Do not admix with any other medication.
- **Cannula/Catheter Clearance:** Dilute 250,000 IU in 2 mL of 0.9% NaCl or D5W.
- ***Rate:*** Administer slowly, over 25–35 min, into each occluded limb of cannula, and then clamp for at least 2 hr. Aspirate contents carefully and flush lines with 0.9% NaCl.

## Tenecteplase

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Vials are packaged with sterile water for injection (without preservatives) to be used as diluent. Do not use bacteriostatic water for injection. Do not discard shield assembly. To reconstitute aseptically withdraw 10 mL of diluent and inject into the tenectplase vial, directing the stream into the powder. Slight foaming may occur; large bubbles will dissipate if left standing undisturbed for several minutes. Swirl gently until contents are completely dissolved; do not shake. ***Concentration:*** Solution containing 5 mg/mL is clear and colorless to pale yellow. Withdraw dose from reconstituted vial with the syringe and discard unused portion. Once dose is in syringe, stand the shield vertically on a flat surface (with green side down) and passively recap the red hub cannula. Remove the entire shield assembly, including the red hub cannula, by twisting counter clockwise. Shield assembly also contains the clear-ended blunt plastic cannula; retain for split septum IV access. Reconstitute immediately before use. May be refrigerated and administered within 8 hr. ***Rate:*** Administer as a single IV bolus over 5 seconds.
- **Y-Site Incompatibility:** Precipate forms in line when administered with dextrose-containing solutions. Flush line with saline-containing solution prior to and following administration of tenecteplase.
- **Additive Incompatibility:** Do not admix.

## Urokinase

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Reconstitute each 250,000 IU vial with 5 mL of sterile water for injection without preservatives (direct to sides of vial) and swirl gently; do not shake. Solution is light straw colored. Do not administer solutions that are discolored or contain a precipitate. Use reconstituted solution immediately after preparation. Infuse through a 0.45-micron filter.
- For *pulmonary embolism,* dilute the reconstituted solution further with 190 mL of 0.9% NaCl or D5W. ***Rate:*** For *pulmonary embolism,* administer loading dose over 10 min and follow with infusion of 4400 IU/kg/hr for 12 hr.
- Administer via infusion pump to ensure accurate dose.

- **Y-Site Compatibility:** alfentanil, amikacin, aminophylline, ascorbic acid, atracurium, atropine, aztreonam, benztropine, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, cefazolin, cefoperazone, cefotaxime, cefotetan, cefoxitin, ceftazidime, cefuroxime, chloramphenicol, cimetidine, clindamycin, cyanocobalamin, cyclosporine, dexamethasone, digoxin, diphenhydramine, dobutamine, dopamine, doxycycline, enalaprilat, ephedrine, epinephrine, epoetin, erythromycin, esmolol, famotidine, fentanyl, fluconazole, folic acid, furosemide, gentamicin, glycopyrrolate, heparin, hydrocortisone, imipenem/cilastatin, insulin, isoproterenol, ketorolac, labetalol, lidocaine, magnesium sulfate, mannitol, meperidine, metaraminol, methoxamine, methyldopate, metoclopramide, metoprolol, midazolam, morphine, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxytocin, papaverine, penicillin G, pentamidine, pentazocine, pentobarbital, phenobarbital, phenylephine, phytonadione, potassium chloride, procainamide, propranolol, protamine, pyridoxime, ranitidine, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, theophylline, thiamine, ticarcillin/clavulanate, tobramycin, tolazoline, trimetaphan, vasopressin, verapamil.
- **Y-Site Incompatibility:** amphotericin B colloidal, dantrolene, diazepam, diazoxide, hydralazine, inamrinone, phenytoin, prochlorperazine, promethazine, trimethoprim/sulfamethoxazole, vasopressin.

## Patient/Family Teaching

- Explain purpose of medication and the need for close monitoring to patient and family. Instruct patient to report hypersensitivity reactions (rash, dyspnea) and bleeding or bruising.
- Explain need for bedrest and minimal handling during therapy to avoid injury. Avoid all unnecessary procedures such as shaving and vigorous tooth brushing.

## Evaluation/Desired Outcomes

- Lysis of thrombi and restoration of blood flow.
- Prevention of neurologic sequelae in acute ischemic stroke.
- Cannula or catheter patency.

**thyroid, See THYROID PREPARATIONS.**

# THYROID PREPARATIONS

**levothyroxine**
(lee-voe-thye-**rox**-een)
Eltroxin, Euthyrox, Levo-T, Levothroid, Levoxyl, Synthroid, $T_4$, Unithroid

**liothyronine**
(lye-oh-**thye**-roe-neen)
Cytomel, l-triiodothyronine, $T_3$, Triostat

**liotrix** (**lye**-oh-trix)
$T_3/T_4$, Thyrolar

**thyroid** (**thye**-royd)
Armour thyroid, Westhroid

***Classification***
Therapeutic: hormones
Pharmacologic: thyroid preparations

**Pregnancy Category A**

## Indications

Thyroid supplementation in hypothyroidism. Treatment or suppression of euthyroid goiters and thyroid cancer.

## Action

Replacement of or supplementation to endogenous thyroid hormones. Principal effect is increasing metabolic rate of body tissues: Promote gluconeogenesis, Increase utilization and mobilization of glycogen stores, Stimulate protein synthesis, Promote cell growth and differentiation, Aid in the development of the brain and CNS. Contain $T_3$ (triiodothyronine) and $T_4$ (thyroxine) activity. **Therapeutic Effects:** Replacement in hypothyroidism to restore normal hormonal balance. Suppression of thyroid cancers.

## Pharmacokinetics

**Absorption:** Levothyroxine is variably (40–80%) absorbed from the GI tract. Liothyronine and thyroid hormone are well absorbed.
**Distribution:** Distributed into most body tissues. Thyroid hormones do not readily cross the placenta; minimal amounts enter breast milk.
**Metabolism and Excretion:** Metabolized by the liver and other tissues. Thyroid hormone under-

goes enterohepatic recirculation and is excreted in the feces via the bile.
**Half-life:** $T_3$ *(liothyronine)* — 1–2 days; $T_4$ *(thyroxine)* — 6–7 days.

TIME/ACTION PROFILE (effects on thyroid function tests)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Levothyroxine PO | unknown | 1–3 wk | 1–3 wk |
| Levothyroxine IV | 6–8 hr | 24 hr | unknown |
| Liothyronine PO | unknown | 24–72 hr | 72 hr |
| Liothyronine IV | unknown | unknown | unknown |
| Thyroid PO | days–wk | 1–3 wk | days–wk |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Recent MI; Hyperthyroidism.
**Use Cautiously in:** Cardiovascular disease (initiate therapy with lower doses); Severe renal insufficiency; Uncorrected adrenocortical disorders; Geri: Extremely sensitive to thyroid hormones; initial dose should be ↓; Pedi: Monitor neonates and infants for cardiac overload, arrhythmias, and aspiriation during first 2 wk of therapy (levothyroxine).

## Adverse Reactions/Side Effects

Usually only seen when excessive doses cause iatrogenic hyperthyroidism.
**CNS:** nervousness, headache, insomnia, irritability. **CV:** angina pectoris, arrhythmias, hypotension, tachycardia. **GI:** cramps, diarrhea, vomiting; *levothyroxine tablets*, choking, gagging, dysphagia. **Derm:** hair loss (in children), sweating. **Endo:** hyperthyroidism, menstrual irregularities. **Metab:** heat intolerance, weight loss. **MS:** accelerated bone maturation in children.

## Interactions

**Drug-Drug: Bile acid sequestrants** and **orlistat** ↓ absorption of orally administered thyroid preparations. May ↑ effects of **warfarin**. May ↑ requirement for **insulin** or **oral hypoglycemic agents** in diabetics. Concurrent **estrogen** therapy may ↑ thyroid replacement requirements. ↑ cardiovascular effects with **adrenergics** (sympathomimetics).
**Drug-Food:** Foods or supplements containing calcium, iron, magnesium, or zinc may bind levothyroxine and prevent complete absorption.

## Route/Dosage

### Levothyroxine

**PO (Adults):** *Hypothyroidism* — 50 mcg as a single dose initially; may be ↑ q 2–3 wk; usual maintenance dose is 75–125 mcg/day (1.5 mcg/kg/day).
**PO (Geriatric Patients and Patients with Increased Sensitivity to Thyroid Hormones):** 12.5–25 mcg as a single dose initially; may be ↑ q 6–8 wk; usual maintenance dose is 75 mcg/day.
**PO (Children ≥12 yr):** 2–3 mcg/kg/day (up to 150–200 mcg/day).
**PO (Children 6–12 yr):** 4–5 mcg/kg/day (100–125 mcg/day).
**PO (Children 1–5 yr):** 5–6 mcg/kg/day (75–100 mcg/day).
**PO (Children 6–12 mo):** 6–8 mcg/kg/day (50–75 mcg/day).
**PO (Infants 3–6 mo):** 8–10 mcg/kg/day (25–50 mcg/day).
**PO (Infants 0–3 mo or Infants at Risk for Cardiac Failure):** 10–15 mcg/kg/day or 25 mcg/day; may be ↑ after 4–6 wk to 50 mcg.
**IM, IV (Adults):** *Hypothyroidism* — 50–100 mcg/day as a single dose. *Myxedema coma/stupor* — 200–500 mcg IV; additional 100–300 mcg may be given on 2nd day, followed by daily administration of smaller doses.
**IM, IV (Children):** *Hypothyroidism* — ~50–80% of the oral dose.

### Liothyronine

**PO (Adults):** *Mild hypothyroidism* — 25 mcg once daily; may ↑ by 12.5–25 mcg/day q 1–2 wk intervals; usual maintenance dose is 25–50 mcg/day. *Myxedema* — 2.5–5 mcg once daily initially; ↑ by 5–10 mcg/day q 1–2 wk up to 25 mcg/day, then ↑ by 12.5–25 mcg/day; usual maintenance dose is 25–50 mcg/day. *Simple goiter* — 5 mcg once daily initially; ↑ by 5–10 mcg/day q 1–2 wk up to 25 mcg/day, then ↑ by 12.5–25 mcg/day q wk until desired effect is obtained; usual maintenance dose is 50–100 mcg/day. $T_3$ *suppression test* — 75–100 mcg daily for 7 days. Radioactive $^{131}I$ is administered before and after 7-day course.
**PO (Geriatric Patients or Patients with Cardiovascular Disease):** 5 mcg/day initially; ↑ by no more than 5 mcg/day q 2 wk.
**IV (Adults):** *Myxedema coma* — 25–50 mcg initially (if cardiovascular disease is present, initial dose should be 10–20 mcg). Additional doses may be given, to a total of at least 65 mcg/

day (not to exceed 100 mcg/day). Doses should be at least 4 hr but not more than 12 hr apart.

### Liotrix

Contains $T_4$ and $T_3$ in a ratio of 4:1.

**PO (Adults):** *Hypothyroidism*—Start with 50 mcg levothyroxine/12.5 mcg liothyronine; ↑ by 50 mcg levothyroxine/12.5 mcg liothyronine q 2–4 wk until desired effect is obtained; usual maintenance dose is 50–100 mcg levothyroxine/12.5–25 mcg liothyronine daily. *Myxedema/hypothyroidism with cardiovascular disease*—12.5 mcg levothyroxine/3.1 mcg liothyronine/day; ↑ by 12.5 mcg levothyroxine/3.1 mcg liothyronine q 2–4 wk until desired effect is obtained.

**PO (Geriatric Patients):** 12.5–25 mcg levothyroxine/3.1–6.2 mcg liothyronine/day; ↑ by 12.5–25 mcg levothyroxine/3.1–6.2 mcg liothyronine q 6–8 wk until desired effect is obtained.

### Thyroid

Each 1 gr = 60 mg and is equivalent to 100 mcg or less of levothyroxine ($T_4$) or 25 mcg of liothyronine ($T_3$).

**PO (Adults and Children):** *Hypothyroidism*—60 mg/day; ↑ q 4 wk by 30 mg; usual maintenance dose is 60–120 mg/day. *Myxedema/hypothyroidism with cardiovascular disease*—15 mg/day initially; ↑ by 30 mg/day q 2 wk, then may ↑ by 30–60 mg q 2 wk; usual maintenance dose is 60–120 mg/day.

**PO (Geriatric Patients):** 7.5–15 mg/day initially; may double dose q 6–8 wk until desired effect is obtained.

### Availability

### Levothyroxine (generic available)

**Tablets:** 25 mcg, 50 mcg, 75 mcg, 88 mcg, 100 mcg, 112 mcg, 125 mcg, 137 mcg, 150 mcg, 175 mcg, 200 mcg, 300 mcg. **Cost:** *Levothroid*—50 mcg $22.95/90, 100 mcg $22.97/90; *Levoxyl*—50 mcg $31.97/90, 100 mcg $34.97/90; *Synthroid*—50 mcg $42.97/90, 100 mcg $46.97/90; *Unithroid*—50 mcg $31.97/90, 100 mcg $35.97/90; *Generic*—50 mcg $19.97/90, 100 mcg $25.97/90. **Powder for injection:** 200 mcg/vial, 500 mcg/vial.

### Liothyronine (generic available)

**Tablets:** 5 mcg, 25 mcg, 50 mcg. **Solution for injection:** 10 mcg/mL.

### Liotrix

**Tablets:** 12.5 mcg levothyroxine/3.1 mcg liothyronine, 25 mcg levothyroxine/6.25 mcg liothyronine, 50 mcg levothyroxine/12.5 mcg liothyronine, 100 mcg levothyroxine/25 mcg liothyronine, 150 mcg levothyroxine/37.5 mcg liothyronine.

### Thyroid (generic available)

**Tablets:** 15 mg, 30 mg, 60 mg, 90 mg, 120 mg, 180 mg, 240 mg, 300 mg. **Cost:** 15 mg $15.97/90, 30 mg $22.97/90, 60 mg $22.97/90, 90 mg $28.97/90, 120 mg $34.97/90, 180 mg $49.97/90, 240 mg $65.97/90, 300 mg $75.92/90.

## NURSING IMPLICATIONS

### Assessment

- Assess apical pulse and blood pressure prior to and periodically during therapy. Assess for tachyarrhythmias and chest pain.
- **Children:** Monitor height, weight, and psychomotor development.
- ***Lab Test Considerations:*** Monitor thyroid function studies prior to and during therapy.
- Monitor TSH concentrations in adults 8–12 wk after changing from one brand to another.
- Monitor blood and urine glucose in diabetic patients. Insulin or oral hypoglycemic dose may need to be ↑.
- ***Toxicity and Overdose:*** Overdose is manifested as hyperthyroidism (tachycardia, chest pain, nervousness, insomnia, diaphoresis, tremors, weight loss). Usual treatment is to withhold dose for 2–6 days. Acute overdose is treated by induction of emesis or gastric lavage, followed by activated charcoal. Sympathetic overstimulation may be controlled by antiadrenergic drugs (beta blockers), such as propranolol. Oxygen and supportive measures to control symptoms such as fever are also used.

### Potential Nursing Diagnoses

Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Administer as a single dose, preferably before breakfast to prevent insomnia.
- Initial dose is low, especially in geriatric and cardiac patients. Dose is ↑ gradually, based on thyroid function tests. Side effects occur more rapidly with liothyronine because of its rapid onset of effect.
- For patients with difficulty swallowing, levothyroxine tablets can be crushed and placed in 5–10 mL of water and administered immediately via dropper or spoon; do not store suspension.

## Levothyroxine

### IV Administration

- **Direct IV:** ***Diluent:*** Reconstitute the 200-mcg and 500-mcg vials with 2 or 5 mL, respectively, of 0.9% NaCl without preservatives (diluent usually provided). Shake well to dissolve completely. Administer solution immediately after preparation; discard unused portion. ***Concentration:*** 100 mcg/mL. ***Rate:*** Administer at a rate of 100 mcg over 1 min. Do not add to IV infusions; may be administered through Y-tubing.
- **Y-Site Incompatibility:** Do not admix with other IV solutions or medications.

## Liothyronine

### IV Administration

- **IV:** Liothyronine injection is for IV use only. Do not give IM or subcut. Administer doses at least 4 hr and not more than 12 hr apart. Base doses on continuous monitoring of patient and response to therapy.
- Resume PO therapy as soon as patient is stable and able to take PO medication. When switching to PO therapy, discontinue IV liothyronine and initiate PO at low dose, increasing gradually according to patient's response.
- **Direct IV:** May be administered undiluted at 10 mcg/mL. ***Rate:*** Administer as a bolus.

## Patient/Family Teaching

- Instruct patient to take medication as directed at the same time each day. Take missed doses as soon as remembered unless almost time for next dose. If more than 2–3 doses are missed, notify health care professional. Do not discontinue without consulting health care professional.
- Explain to patient that medication does not cure hypothyroidism; it provides a thyroid hormone. Therapy is lifelong.
- Caution patient not to change brands of thyroid preparations, as this may affect drug bioavailability.
- Advise patient to notify health care professional if headache, nervousness, diarrhea, excessive sweating, heat intolerance, chest pain, increased pulse rate, palpitations, weight loss >2 lb/wk, or any unusual symptoms occur.
- Caution patient to avoid taking other medications concurrently with thyroid preparations unless instructed by health care professional.
- Instruct patient to inform health care professional of thyroid therapy.
- Emphasize importance of follow-up exams to monitor effectiveness of therapy. Thyroid function tests are performed at least yearly.
- **Levothyroxine:** Advise patients to take Levoxyl tablets with water. Levoxyl tablets may rapidly swell and disintegrate resulting in choking, gagging, the tablet getting stuck in the throat, and difficulty swallowing. Taking with water usually prevents this.
- Pedi: Discuss with parents the need for routine follow-up studies to ensure correct development. Inform patient that partial hair loss may be experienced by children on thyroid therapy. This is usually temporary.

## Evaluation/Desired Outcomes

- Resolution of symptoms of hypothyroidism and normalization of thyroid hormone levels.

# tiagabine (tye-**a**-ga-been)

Gabitril

***Classification***

Therapeutic: anticonvulsants

**Pregnancy Category C**

## Indications

Adjunctive treatment of partial seizures.

## Action

Enhances the activity of gamma-aminobutyric acid, an inhibitory neurotransmitter. **Therapeutic Effects:** Decreased frequency of seizures.

## Pharmacokinetics

**Absorption:** 90% absorbed following oral administration.
**Distribution:** Unknown.
**Protein Binding:** 96%.
**Metabolism and Excretion:** Mostly metabolized by the liver; 2% excreted unchanged in urine.
**Half-life:** *Without enzyme-inducing antiepileptic drugs*—7–9 hr; *with enzyme-inducing antiepileptic drugs*—4–7 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 45 min | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Hepatic impairment (↓ dose/increased interval may be necessary); Patients receiving concurrent non–enzyme-inducing antiepileptic drug therapy such as valpro-

ates (may require lower doses and/or slower titration); Using tiagabine for off-label uses or other conditions leading to ↑ levels (may ↑ risk of new onset seizures); OB, Lactation: Pedi: Pregnancy, lactation, or children <12 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** SUICIDAL THOUGHTS, dizziness, drowsiness, nervousness, weakness, cognitive impairment, confusion, difficulty concentrating, hallucinations, headache, mental depression, personality disorder. **EENT:** abnormal vision, ear pain, tinnitus. **Resp:** dyspnea, epistaxis. **CV:** chest pain, edema, hypertension, palpitations, syncope, tachycardia. **GI:** abdominal pain, gingivitis, nausea, stomatitis. **GU:** dysmenorrhea, dysuria, metrorrhagia, urinary incontinence. **Derm:** alopecia, dry skin, rash, sweating. **Metab:** weight gain, weight loss. **MS:** arthralgia, neck pain. **Neuro:** ataxia, tremors. **Misc:** allergic reactions, chills, lymphadenopathy.

### Interactions

**Drug-Drug: Carbamazepine**, **phenytoin**, **primidone**, and **phenobarbital** induce metabolism and ↓ blood levels; although concurrent therapy is usually necessary, adjustments may be required when altering regimens.

### Route/Dosage

**PO (Adults >18 yr):** 4 mg once daily initially for 1 wk; may ↑ by 4–8 mg/day at weekly intervals, up to 56 mg/day in 2–4 divided doses.

**PO (Children 12–18 yr):** 4 mg once daily initially for 1 wk; may ↑ by 4 mg/day after 1 wk, then may ↑ by 4–8 mg/day at weekly intervals, up to 32 mg/day in 2–4 divided doses.

### Availability

**Tablets:** 2 mg, 4 mg, 12 mg, 16 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess location, duration, and characteristics of seizure activity.
- Assess mental status. May cause impaired concentration, speech or language problems, confusion, fatigue, and drowsiness. Symptoms may decrease with dose reduction or discontinuation.
- Monitor closely for notable changes in behavior that could indicate the emergence or worsening of suicidal thoughts or behavior or depression.
- ***Toxicity and Overdose:*** Therapeutic serum levels have not been determined. However, levels may be monitored prior to and following changes in the therapeutic regimen.

### Potential Nursing Diagnoses

Risk for injury (Side Effects)

### Implementation

- Do not confuse tiagabine with tizanidine.
- **PO:** Administer with food.
- Discontinue tiagabine gradually. Abrupt discontinuation may cause increase in seizure frequency.

### Patient/Family Teaching

- Instruct patient to take medication as directed. Take missed doses as soon as possible unless almost time for next dose. Do not double doses. Do not discontinue abruptly; may cause increase in frequency of seizures. Instruct patient to read the *Medication Guide* before starting and with each Rx refill, changes may occur.
- Advise patient to notify health care professional immediately if frequency of seizures increases.
- May cause dizziness. Caution patient to avoid driving or activities requiring alertness until response to medication is known. Do not resume driving until physician gives clearance based on control of seizure disorder.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- Instruct patient to notify health care professional of medication regimen prior to treatment or surgery.
- Advise patient to carry identification describing disease process and medication regimen at all times.

### Evaluation/Desired Outcomes

- Decrease in the frequency or cessation of seizures.

## ticarcillin/clavulanate

(tye-kar-**sil**-in/klav-yoo-**la**-nate)
Timentin

***Classification***
Therapeutic: anti-infectives
Pharmacologic: extended spectrum penicillins

**Pregnancy Category B**

### Indications
Treatment of: Skin and skin structure infections, Bone and joint infections, Septicemia, Lower respiratory tract infections, Intra-abdominal, gynecologic, and urinary tract infections.

### Action
Binds to bacterial cell wall membrane, causing cell death. Addition of clavulanate enhances resistance to beta-lactamase, an enzyme that can inactivate penicillins. **Therapeutic Effects:** Bactericidal action. **Spectrum:** Similar to penicillin but extended to include several gram-negative aerobic pathogens, notably: *Pseudomonas aeruginosa*, *Escherichia coli*, *Citrobacter*, *Enterobacter*, *Haemophilus influenzae*, *Klebsiella*, *Serratia marcescens*. Active against some anaerobic bacteria, including bacteroides.

### Pharmacokinetics
**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Widely distributed. Enters CSF well when meninges are inflamed. Crosses the placenta; enters breast milk in low concentrations.
**Metabolism and Excretion:** 10% of ticarcillin is metabolized by the liver; 90% excreted unchanged by the kidneys. Clavulanate is metabolized by the liver.
**Half-life:** *Ticarcillin*—1.1 hr (↑ in renal impairment); *clavulanate*—1.1 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | end of infusion | 4–6 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to penicillins (cross-sensitivity with cephalosporins may occur).
**Use Cautiously in:** Renal impairment (dose ↓ and/or ↑ interval required if CCr <60 mL/min); Congestive heart failure (due to high sodium content); OB, Lactation: Safety not established; Pedi: Children <3 mo (safety not established).

### Adverse Reactions/Side Effects
**CNS:** SEIZURES (high doses), confusion, lethargy. **CV:** CHF, arrhythmias. **GI:** PSEUDOMEMBRANOUS COLITIS, diarrhea, nausea. **GU:** hematuria (children only). **Derm:** rashes, urticaria. **F and E:** hypokalemia, hypernatremia. **Hemat:** bleeding, blood dyscrasias, ↑ bleeding time. **Local:** phlebitis. **Metab:** metabolic alkalosis. **Misc:** hypersensitivity reactions including ANAPHYLAXIS, superinfection.

### Interactions
**Drug-Drug: Probenecid** ↓ renal excretion and ↑ blood levels.

### Route/Dosage
Ticarcillin/clavulanate contains 4.51–6 mEq sodium/g and 0.15 mEq potassium/g of ticarcillin/clavulanate. 3 g ticarcillin plus 100 mg clavulanate labeled as 3.1 g combined potency. Dosing is based on ticarcillin component..
**IV (Adults and Children >16 yr):** 3 g ticarcillin q 4–6 hr.
**IV (Children 3 mo–16 yr):** *<60 kg*—Mild to moderate infection: 50 mg ticarcillin/kg q 6 hr; severe infection: 50 mg ticarcillin/kg q 4 hr. *≥60 kg*—Mild to moderate infection: 3 g ticarcillin q 6 hr; severe infection: 3 g ticarcillin q 4 hr.

#### Renal Impairment
**IV (Adults):** Give loading dose of 3 g ticarcillin × 1 dose, followed by maintenance dose based on CCr. *CCr 30–60 mL/min*—2 g ticarcillin q 4 hr; *10–30 mL/min*—2 g ticarcillin q 8 hr; *CCr <10 mL/min*—2 g ticarcillin q 12 hr; *CCr <10 mL/min with hepatic dysfunction*—2 g ticarcillin q 24 hr; *Peritoneal dialysis*—3 g ticarcillin q 12 hr; *Hemodialysis*—2 g ticarcillin q 12 hr supplemented with 3 g ticarcillin after each dialysis session.

### Availability
**Powder for injection:** 3.1 g/vial, 31 g/vial. **Premixed infusion:** 3.1 g/100 mL.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and throughout therapy.
- Obtain a history before initiating therapy to determine use of and reactions to penicillins or cephalosporins. Persons with a negative history of penicillin sensitivity may still have an allergic response.
- Obtain specimens for culture and sensitivity before initiating therapy. First dose may be given before receiving results.

- Observe patient for signs and symptoms of anaphylaxis (rash, pruritus, laryngeal edema, wheezing). Discontinue drug and notify physician immediately if these problems occur. Keep epinephrine, an antihistamine, and resuscitation equipment close by in case of anaphylactic reaction.
- ***Lab Test Considerations:*** Evaluate renal and hepatic function, CBC, serum potassium, and bleeding times prior to and routinely throughout therapy.
- May cause false-positive urine protein testing and increased BUN, creatinine, AST, ALT, serum bilirubin, alkaline phosphatase, LDH, and uric acid levels. May also cause ↑ bleeding time.
- May cause hypernatremia and hypokalemia with high doses.

## Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)

## Implementation

### IV Administration

- **IV:** Change IV sites every 48 hr to prevent phlebitis.
- **Intermittent Infusion:** ***Diluent:*** Add 13 mL of sterile water for injection or 0.9% NaCl for injection to each 3.1-g vial, to provide a concentration of ticarcillin 200 mg/mL and clavulanic acid 6.7 mg/mL. Further dilute in 0.9% NaCl, D5W, or LR to achieve a concentration of 10–100 mg/mL. Reconstituted vials stable for 24 hr at room temperature or 72 hr if refrigerated. Infusion is stable for 24 hr at room temperature. If refrigerated, infusion is stable for 3 days (diluted in D5W) or 7 days (if diluted in 0.9% NaCl or LR). ***Concentration:*** 10–100 mg/mL. ***Rate:*** Infuse over 30 min.
- **Y-Site Compatibility:** allopurinol, amifostine, amikacin, anidulafungin, atropine, aztreonam, bivalirudin, bumetanide, cefazolin, cefepime, cefotaxime, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol , cimetidine, clindamycin, cyclophosphamide, cyclosporine, dexamethasone sodium phosphate, dexmedetomidine, digoxin, diltiazem, diphenhydramine, docetaxel, dopamine, doxorubicin liposome, doxycycline, enalaprilat, epinephrine, esmolol, etoposide phosphate, famotidine, fenoldopam, filgrastim, fluconazole, furosemide, gemcitabine, gentamicin, granisetron, heparin, hydrocortisone sodium succinate, hydromorphone, imipenem/cilastatin, insulin, isoproterenol, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, melphalan, meperidine, methylprednisolone sodium succinate, metoclopramide, metoprolol, metronidazole, milrinone, morphine, nitroglycerin, nitroprusside, norepinephrine, ondansetron, palonosetron, pantoprazole, pemetrexed, penicillin G potassium, perphenazine, phenylephrine, procainamide, propofol, propranolol, ranitidine, remifentanil, sargramostim, sodium bicarbonate, tacrolimus, teniposide, theophylline, thiotepa, tirofiban, tobramycin, vasopressin, verapamil, vinorelbine, voriconazole.
- **Y-Site Incompatibility:** acyclovir, amphotericin B cholesteryl sulfate, azithromycin, caspofungin, diazepam, dobutamine, drotrecogin, erythromycin, ganciclovir, haloperidol, hydroxyzine, lansoprazole, phenytoin, promethazine, protamine, quinupristin/dalfopristin, trimethoprim/sulfamethoxazole. If aminoglycosides and penicillins must be administered concurrently, administer in separate sites at least 1 hr apart .

## Patient/Family Teaching

- Advise patient to report signs of superinfection (black, furry overgrowth on the tongue; vaginal itching or discharge; loose or foul-smelling stools) and allergy.
- Caution patient to notify health care professional if fever and diarrhea occur, especially if stool contains blood, pus, or mucus. Advise patient not to treat diarrhea without consulting health care professional. May occur up to several weeks after discontinuation of medication.

## Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of infection. Length of time for complete resolution depends on the organism and site of infection.

# ticlopidine (tye-cloe-pi-deen)

***Classification***

Therapeutic: antiplatelet agents
Pharmacologic: platelet aggregation inhibitors

**Pregnancy Category B**

## Indications

Prevention of stroke in patients who have had a completed thrombotic stroke or precursors to

stroke and are unable to tolerate aspirin. **Unlabeled Use:** Prevention of subacute stent thrombosis in patients receiving intracoronary stents (given with aspirin).

### Action
Inhibits platelet aggregation by altering the function of platelet membranes. Prolongs bleeding time. **Therapeutic Effects:** Decreased incidence of stroke in high-risk patients. Decreased incidence of subacute stent thrombosis.

### Pharmacokinetics
**Absorption:** >80% absorbed after oral administration.
**Distribution:** Unknown.
**Protein Binding:** 98%.
**Metabolism and Excretion:** Extensively metabolized by the liver; minimal excretion of unchanged drug by the kidneys.
**Half-life:** *Single dose*—12.6 hr; *multiple dosing*—4–5 days.

TIME/ACTION PROFILE (effect on platelet function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 4 days | 8–11 days | 2 wk |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Bleeding disorders; Active bleeding; Severe liver disease.
**Use Cautiously in:** Risk of bleeding (trauma, surgery, history of ulcer disease); Renal or hepatic impairment (dosage adjustments may be necessary); OB, Lactation: Pedi: Safety not established; Geri: Appears on Beers list. Geriatric patients have ↑ sensitivity.

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache, weakness. **EENT:** epistaxis, tinnitus. **GI:** diarrhea, abnormal liver function tests, anorexia, GI fullness, GI pain, nausea, vomiting. **GU:** hematuria. **Derm:** rashes, ecchymoses, pruritus, urticaria. **Hemat:** AGRANULOCYTOSIS, APLASTIC ANEMIA, INTRACEREBRAL BLEEDING, NEUTROPENIA, bleeding, thrombocytopenia. **Metab:** hypercholesterolemia, hypertriglyceridemia.

### Interactions
**Drug-Drug: Aspirin** potentiates the effect of ticlopidine on platelets (concurrent use not recommended). ↑ risk of bleeding with **heparins**, **warfarin**, **tirofiban**, **eptifibatide**, or **thrombolytic agents**. **Cimetidine** ↓ metabolism of ticlopidine and may ↑ the risk of toxicity. Ticlopidine ↓ metabolism and ↑ the risk of toxicity of **theophylline**.
**Drug-Food:** Absorption ↑ by taking with **food**.

### Route/Dosage
**PO (Adults):** 250 mg twice daily with food.

### Availability (generic available)
**Tablets:** 250 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for symptoms of stroke periodically throughout therapy.
- ***Lab Test Considerations:*** Monitor bleeding time throughout therapy. Prolonged bleeding time (2–5 times the normal limit), which is time- and dose-dependent, is expected.
- Monitor CBC with differential and platelet count every 2 wk from the 2nd wk to the end of the 3rd mo of therapy; more frequently if absolute neutrophil count (ANC) is declining or <30% of baseline. If neutropenia occurs, ticlopidine should be discontinued. Neutrophil counts usually return to normal within 1–3 wk of discontinuation of therapy. After the first 3 mo of therapy, CBCs need to be obtained only for patients with signs and symptoms of infection.
- May cause thrombocytopenia, usually within 3–12 wk of initiation of therapy. If platelet count is <80,000/mm$^3$, discontinue ticlopidine.
- May cause ↑ serum total cholesterol and triglyceride levels. Levels usually increase 8–10% within the first mo and persist at that level.
- May cause ↑ alkaline phosphatase, bilirubin, AST, and ALT levels during the first 4 mo of therapy.
- ***Toxicity and Overdose:*** Prolonged bleeding time is normalized within 2 hr after administration of IV methylprednisolone. May also use platelet transfusions to reverse effects of ticlopidine on bleeding time.

### Potential Nursing Diagnoses
Risk for injury (Indications, Side Effects)

### Implementation
- **PO:** Administer with food or immediately after eating to minimize GI discomfort and increase absorption.

### Patient/Family Teaching
- Instruct patient to take medication as directed. Missed doses should be taken as soon as possible unless almost time for next dose; do not double doses.
- Advise patient to notify health care professional promptly if fever, chills, sore throat, unusual bleeding or bruising, severe or persistent diarrhea, skin rash, jaundice, dark-colored urine, or light-colored stools occur.

- Advise patient to notify health care professional of medication regimen before treatment or surgery. Medication may need to be discontinued 10–14 days before surgery.
- Emphasize the importance of routine lab tests during the first 3 mo of therapy to monitor for side effects.

### Evaluation/Desired Outcomes

- Prevention of stroke.

## tigecycline (tye-gi-sye-kleen)
Tygacil

***Classification***
Therapeutic: anti-infectives
Pharmacologic: glycylcyclines

**Pregnancy Category D**

### Indications

Complicated skin/skin structure infections, complicated intra-abdominal infections, or community-acquired bacterial pneumonia caused by susceptible bacteria.

### Action

Inhibits bacterial protein synthesis by binding to the 30S ribosomal subunit. **Therapeutic Effects:** Resolution of infection. **Spectrum:** Active against the following Gram-positive bacteria: *Enterococcus faecalis* (vancomycin-susceptible strains only), *Staphylococcus aureus* (methicillin-sensitive and methicillin-resistant strains), *Streptococcus agalactiae*, *Streptococcus anginosus, Streptococcus pneumoniae*, and *Streptococcus pyogenes*. Also active against these Gram-positive organisms: *Citrobacter freundii*, *Enterobacter cloacae*, *Escherichia coli*, *Haemophilus influenzae* (beta-lactamase negative strains only), *Legionella pneumophila*, *Klebsiella oxytoca*, and *Klebsiella pneumoniae*. Additionally active against the following anaerobes: *Bacteroides fragilis*, *Bacteroides thetaiotaomicron*, *Bacteroides uniformis*, *Bacteroides vulgatus*, *Clostridium perfringens*, and *Peptostreptococcus micros*.

### Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Widely distributed with good penetration into gall bladder, lung, and colon; crosses the placenta.
**Metabolism and Excretion:** Minimal metabolism; primary route of elimination is biliary/fecal excretion of unchanged drug and metabolites (59%), 33% renal (22% unchanged).
**Half-life:** 27.1 hr (after 1 dose); 42.4 hr after multiple doses.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | end of infusion | 12 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pedi: Children.
**Use Cautiously in:** Complicated intra-abdominal infections due to perforation; Severe hepatic impairment (↓ maintenance dose recommended); Geri: Older patients may be more sensitive to adverse effects; OB, Lactation: Use in pregnancy only when potential maternal benefit outweighs fetal risk; use cautiously during lactation.

### Adverse Reactions/Side Effects

**CNS:** somnolence. **CV:** changes in heart rate, vasodilation. **GI:** PSEUDOMEMBRANOUS COLITIS, nausea, vomiting, altered taste, anorexia, dry mouth, hepatotoxicity, jaundice. **GU:** ↑ serum creatinine. **Endo:** hyperglycemia. **F and E:** hypocalcemia, hyponatremia. **Local:** injection site reactions. **Misc:** allergic reactions.

### Interactions

**Drug-Drug:** May ↓ the effectiveness of **hormonal contraceptives**. Effects on **warfarin** are unknown (monitoring recommended).

### Route/Dosage

**IV (Adults >18 yr):** 100 mg initially, then 50 mg every 12 hr for 5–14 days (skin/skin structure infections and intra-abdominal infections) or 7–14 days (pneumonia).

#### Hepatic Impairment

**IV (Adults >18 yr):** *Child-Pugh C*—100 mg initially, then 25 mg every 12 hr.

### Availability

**Lyophilized powder for reconstitution:** 50 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and throughout therapy.

- Obtain specimens for culture and sensitivity before initiating therapy. 1st dose may be given before receiving results.
- Before initiating therapy, obtain a history of tetracycline hypersensitivity; may also have an allergic response to tigecycline.
- Monitor bowel function. Diarrhea, abdominal cramping, fever, and bloody stools should be reported to health care professional promptly as a sign of pseudomembranous colitis. May begin up to several weeks following cessation of therapy.
- ***Lab Test Considerations:*** May cause anemia, leukocytosis, and thrombocythemia.
- May cause ↑ serum alkaline phosphatase, amylase, bilirubin, LDH, AST, and ALT.
- May cause hyperglycemia, hypokalemia, hypoproteinemia, hypocalcemia, hyponatremia, and ↑ BUN level.

## Potential Nursing Diagnoses

Risk for infection (Indications)

## Implementation

- May cause yellow-brown discoloration and softening of teeth and bones if administered prenatally or during early childhood. Not recommended for children under 8 yr of age or during pregnancy or lactation unless used for the treatment of anthrax.

### IV Administration

- **Intermittent Infusion:** Reconstitute each vial with 5.3 mL of 0.9% NaCl or D5W to achieve a concentration of 10 mg/mL. ***Diluent:*** Dilute further in 100 mL of D5W, LR, or 0.9% NaCl. Reconstituted solution should be yellow to orange in color. Do not administer solutions that are discolored or contain particulate matter. Infusion is stable for up to 24 hr at room temperature or for up to 48 hr if refrigerated. ***Concentration:*** Final concentration of infusion should be ≤1 mg/mL. ***Rate:*** Infuse over 30–60 min. Flush line before and after infusion with 0.9% NaCl or D5W.
- **Y-Site Compatibility:** acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amphotericin B liposome, ampicillin, ampicillin/sulbactam, argatroban, azithromycin, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, carboplatin, carmustine, caspofungin, cefazolin, cefepime, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, cimetidine, ciprofloxacin, cisatracurium, cisplatin, clindamycin, cyclophosphamide, cyclosporine, cytarabine, dacarbazine, dactinomycin, daptomycin, daunorubicin hydrochloride, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dolasetron, dopamine, doripenem, doxorubicin hydrochloride, doxorubicin liposome, droperidol, enalaprilat, epinephrine, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydrocortisone, hydromorphone, ifosfamide, imipenem/cilastatin, insulin, irinotecan, isoproterenol, ketorolac, labetalol, lansoprazole, lepirudin, leucovorin, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methohexital, methotrexate, methyldopa, metoclopramide, metoprolol, metronidazole, midazolam, milrinone, mitomycin, mitoxantrone, morphine, moxifloxacin, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, paclitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, pemetrexed, pemtamidine, pentazocin, pentobarbital, phenobarbital, phenylephrine, piperacillin/tazobactam, potassium acetate, potassium chloride, potassium phosphate, procainamide, prochlorperazine, promethazine, propranolol, propofol, ranitidine, remifentanil, rocuronium, sodium acetate, sodium bicarbonate, sodium phosphate, streptozocin, succinylcholine, sufentanil, tacrolimus, tenioposide, theophylline, thiopental, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, topotecan, trimethoprim/sulfamethoxazole, vancomycin, vasopressin, vecuronium, vinblastine, vincristine, vinorelbine, zidovudine, zoledronic acid.
- **Y-Site Incompatibility:** amiodarone, amphotericin B colloidal, bleomycin, chloramphenicol, chlorpromazine, dantrolene, daunorubicin liposome, diazepam, epirubicin, hydralazine, idarubicin, nicardipine, phenytoin, quinapristin/dalfopristin, verapamil.

## Patient/Family Teaching

- Advise patient that full course of therapy should be completed, even if feeling better. Skipping doses or not completing full course of therapy may result in decreased effectiveness and increased risk of bacterial resistance.

- Advise female patient to use a nonhormonal method of contraception while taking tigecycline and until next menstrual period.
- Instruct patient to notify health care professional if fever and diarrhea develop, especially if stool contains blood, pus, or mucus. Advise patient not to treat diarrhea without consulting health care professional.
- Advise patient to report the signs of superinfection (black, furry overgrowth on the tongue, vaginal itching or discharge, loose or foul-smelling stools). Skin rash, pruritus, and urticaria should also be reported.

## Evaluation/Desired Outcomes

- Resolution of signs and symptoms of infection.

## timolol† (tim-oh-lole)

Apo-Timol, Novo-Timol

***Classification***

Therapeutic: antihypertensives, vascular headache suppressants
Pharmacologic: beta blockers

**Pregnancy Category C**

†For ophthalmic use, see Appendix C

## Indications

Hypertension (alone or with other agents). Prevention of MI. Prevention of migraine headaches. **Unlabeled Use:** Ventricular arrhythmias. Essential tremor. Anxiety.

## Action

Blocks stimulation of $beta_1$(myocardial)- and $beta_2$(pulmonary, vascular, and uterine)-adrenergic receptor sites. **Therapeutic Effects:** Decreased heart rate and blood pressure. Prevention of MI. Decreased frequency of migraine headache.

## Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Enters breast milk.
**Metabolism and Excretion:** Extensively metabolized by the liver.
**Half-life:** 3–4 hr.

TIME/ACTION PROFILE (cardiovascular effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1–2 hr* | 12–24 hr |

*After single dose, full effect is not seen until several weeks of therapy

## Contraindications/Precautions

**Contraindicated in:** Uncompensated CHF; Pulmonary edema; Cardiogenic shock; Bradycardia or heart block.
**Use Cautiously in:** Renal impairment; Hepatic impairment; Geri: May have ↑ sensitivity to beta blockers; initial dosage reduction recommended); Pulmonary disease (including asthma); Diabetes mellitus (may mask signs of hypoglycemia); Thyrotoxicosis (may mask symptoms); Patients with a history of severe allergic reactions (intensity of reactions may be increased); OB, Lactation: Pedi: Safety not established; may cause fetal/neonatal bradycardia, hypotension, hypoglycemia, or respiratory depression.

## Adverse Reactions/Side Effects

**CNS:** fatigue, weakness, anxiety, depression, dizziness, drowsiness, insomnia, memory loss, mental status changes, nervousness, nightmares. **EENT:** blurred vision, dry eyes, nasal stuffiness. **Resp:** bronchospasm, wheezing. **CV:** ARRHYTHMIAS, BRADYCARDIA, CHF, PULMONARY EDEMA, orthostatic hypotension, peripheral vasoconstriction. **GI:** constipation, diarrhea, nausea. **GU:** erectile dysfunction, ↓ libido. **Derm:** itching, rashes. **Endo:** hyperglycemia, hypoglycemia. **MS:** arthralgia, back pain, muscle cramps. **Neuro:** paresthesia. **Misc:** ANAPHYLAXIS (rare).

## Interactions

**Drug-Drug: General anesthesia**, **IV phenytoin**, and **verapamil** may ↑ myocardial depression. ↑ bradycardia may occur with **digoxin**. ↑ hypotension may occur with other **antihypertensives**, acute ingestion of **alcohol**, or **nitrates**. Concurrent use with **amphetamines**, **cocaine**, **ephedrine**, **epinephrine**, **norepinephrine**, **phenylephrine**, or **pseudoephedrine** may result in unopposed alpha-adrenergic stimulation (excessive hypertension, bradycardia). Concurrent **thyroid** administration may ↓ effectiveness. May alter the effectiveness of **insulins** or **oral antidiabetics** (dosage adjustments may be necessary). May ↓ effectiveness of **bronchodilators** and **theophylline**.
May ↓ beneficial cardiovascular effects of **dopamine** or **dobutamine**. Use cautiously within 14 days of **MAO inhibitor** therapy (may result in hypertension). **Cimetidine** may ↑ toxicity. Concurrent **NSAIDs** may ↓ antihypertensive action.

## Route/Dosage

**PO (Adults):** *Antihypertensive*— 10 mg twice daily initially; may be ↑ q 7 days as needed

(usual maintenance dose is 10–20 mg twice daily; up to 60 mg/day). *Prevention of MI*—10 mg twice daily, starting 1–4 wk after MI. *Prevention of vascular headache*—10 mg twice daily initially, may be given as a single daily dose; may be ↑ up to 10 mg in the morning and 20 mg in the evening.

### Availability (generic available)

**Tablets:** 5 mg, 10 mg, 20 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure and pulse frequently during dose adjustment period and periodically during therapy. Assess for orthostatic hypotension when assisting patient up from supine position.
- Monitor intake and output ratios and daily weight. Assess patient routinely for evidence of fluid overload (peripheral edema, dyspnea, rales/crackles, fatigue, weight gain, jugular venous distention).
- **Hypertension:** Monitor frequency of prescription refills to determine adherence.
- **Vascular Headache Prophylaxis:** Assess frequency, severity, characteristics, and location of vascular headaches periodically during therapy.
- ***Lab Test Considerations:*** May cause ↑ BUN, serum lipoprotein, potassium, triglyceride, and uric acid levels.
- May cause ↑ ANA titers.
- May cause ↑ in blood glucose levels.
- ***Toxicity and Overdose:*** Monitor patients receiving beta blockers for signs of overdose (bradycardia, severe dizziness or fainting, severe drowsiness, dyspnea, bluish fingernails or palms, seizures). Notify health care provider immediately if these signs occur.
- Glucagon has been used to treat bradycardia and hypotension.

### Potential Nursing Diagnoses

Decreased cardiac output (Side Effects)
Noncompliance (Patient/Family Teaching)

### Implementation

- **PO:** Take apical pulse before administering. If <50 bpm or if arrhythmia occurs, withhold medication and notify health care professional.
- May be administered with food or on an empty stomach.
- Tablets may be crushed and mixed with food.

### Patient/Family Teaching

- Instruct patient to take medication as directed, at the same time each day, even if feeling well; do not skip or double up on missed doses. Take missed doses as soon as possible up to 4 hr before next dose. Abrupt withdrawal may precipitate life-threatening arrhythmias, hypertension, or myocardial ischemia.
- Advise patient to make sure that enough medication is available for weekends, holidays, and vacations. A written prescription may be kept in wallet in case of emergency.
- Teach patient and family how to check pulse daily and blood pressure biweekly. Advise patient to hold dose and contact health care professional if pulse is <50 bpm or blood pressure changes significantly.
- May cause drowsiness or dizziness. Caution patients to avoid driving or other activities that require alertness until response to the drug is known.
- Advise patients to change positions slowly to minimize orthostatic hypotension, especially during initiation of therapy or when dose is increased.
- Caution patient that this medication may increase sensitivity to cold.
- Instruct patient to consult health care professional before taking other Rx, OTC, or herbal products, especially cold preparations, concurrently with this medication.
- Patients with diabetes should closely monitor blood glucose, especially if weakness, malaise, irritability, or fatigue occurs. Medication may mask tachycardia and increased blood pressure as signs of hypoglycemia, but dizziness and sweating may still occur.
- Advise patient to notify health care professional if slow pulse, difficulty breathing, wheezing, cold hands and feet, dizziness, confusion, depression, rash, fever, sore throat, unusual bleeding, or bruising occurs.
- Instruct patient to inform health care professional of medication regimen before treatment or surgery.
- Advise patient to carry identification describing disease process and medication regimen at all times.
- **Hypertension:** Reinforce the need to continue additional therapies for hypertension (weight loss, sodium restriction, stress reduction, regular exercise, moderation of alcohol consumption, and smoking cessation). Medication controls but does not cure hypertension.
- **Vascular Headache Prophylaxis:** Caution patient that sharing this medication may be dangerous.

### Evaluation/Desired Outcomes
- Decrease in blood pressure.
- Prevention of MI.
- Prevention of vascular headaches.

## **tinidazole** (ti-**nid**-a-zole)
Tindamax

***Classification***
Therapeutic: antiprotozoals
Pharmacologic: imidazoles

**Pregnancy Category C**

### Indications
Bacterial vaginosis. Trichomoniasis. Giardiasis. Amebiasis.

### Action
Interaction with protozoa results in release of a free nitro radical that has antiprotozoal activity. **Therapeutic Effects:** Resolution of protozoal infections. **Spectrum:** Active against *Trichamonas vaginalis*, *Giardia duodenalis* (also known as *Giardia lamblia*), and *Entamoeba histolytica*.

### Pharmacokinetics
**Absorption:** Rapidly and completely absorbed following oral administration.
**Distribution:** Extensively distributed; crosses placenta and blood-brain barrier, enters breast milk.
**Metabolism and Excretion:** Mostly metabolized (CYP3A4 enzyme system); 20–25% excreted unchanged in urine, 12% excreted in feces.
**Half-life:** 12–14 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 2 hr | 24 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; cross sensitivity with other imidazoles may occur; OB: First trimester of pregnancy; Lactation: Lactation.
**Use Cautiously in:** CNS pathology; History of blood dyscrasia; Hemodialysis (removes significant amount of tinidazole; supplement post-dialysis with additional 50% of dose); Hepatic impairment; Unrecognized candidiasis (requires concurrent antifungal therapy); Pedi: Children <3 yr (safety not established).

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache, malaise. **GI:** constipation, dyspepsia, metallic/bitter taste, vomiting. **Hemat:** transient leukopenia/neutropenia.

### Interactions
**Drug-Drug:** ↑ risk of bleeding with **warfarin**. Disulfiram-like reaction may occur with **alcohol** or **propylene glycol**; **disulfiram** should be avoided for at least 2 weeks before tinidazole. May ↑ levels of **lithium**, **cyclosporine**, **tacrolimus**, **fluorouracil**, and **fosphenytoin** (observe/monitor for toxicity if administered concurrently). **Drugs that induce the CYP450 liver enzyme system (phenobarbital**, **rifampin**, **phenytoin** or **fosphenytoin**) may ↓ levels and effectiveness. **Drugs that inhibit the CYP450 liver enzyme system (cimetidine** or **ketoconazole**) may ↑ levels. Absorption is ↓ by **cholestyramine**; separate dosing.

### Route/Dosage
**PO (Adults):** *Bacterial vaginosis*—1 g for 5 days; *Trichomoniasis and Giardiasis*—2 g single dose; *Intestinal amebiasis*—2 g/day for 3 days; *Amebic liver abscess*—2 g/day for 3–5 days.
**PO (Children older than 3 yr):** *Giardiasis*—50 mg/kg (up to 2 g) single dose; *Intestinal amebiasis*—50 mg/kg/day for 3 days; *Amebic liver abscess*—50 mg/kg/day for 3–5 days.

### Availability
**Tablets:** 250 mg, 500 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for symptoms of infection (discharge, itching) prior to and during therapy.
- Monitor neurologic status during and after IV infusions. Inform health care professional if numbness, paresthesia, weakness, ataxia, or convulsions occur.
- **Giardiasis:** Monitor three stool samples taken several days apart, beginning 3–4 wk after treatment.
- ***Lab Test Considerations:*** May cause transient leukopenia and neutropenia. Monitor total and differential leukocyte counts if retreatment is necessary.
- May interfere with certain tests of serum chemistry values such as AST, ALT, LDH, triglycerides, and glucose hexokinase.

### Potential Nursing Diagnoses
Risk for infection (Indications)
Diarrhea (Indications)

### Implementation
- Symptoms of known or previously unrecognized candidiasis may become worse during therapy and require treatment with an antifungal agent.
- **PO:** Administer with food to decrease GI upset. May be crushed and prepared as a suspension in cherry syrup by pharmacist for patients unable to swallow tablets. Shake well before administering.

### Patient/Family Teaching
- Instruct patient to take medication as directed, even if feeling better. Do not skip doses or double up on missed doses. If a dose is missed, take as soon as remembered if not almost time for next dose.
- Advise patients treated for trichomoniasis that sexual partners may be asymptomatic sources of reinfection and should be treated concurrently. Patient should also refrain from intercourse or use a condom to prevent reinfection.
- Caution patient to avoid intake of alcoholic beverages or preparations containing alcohol during and for at least 3 days after treatment with tinidazole. May cause a disulfiram-like reaction (flushing, nausea, vomiting, headache, abdominal cramps).
- May cause dizziness or drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that medication may cause an unpleasant metallic taste.
- Advise patient not to take Rx, OTC, or herbal products without consulting health care professional.
- Advise patient to inform health care professional if pregnancy is suspected before taking this medication.

### Evaluation/Desired Outcomes
- Resolution of signs and symptoms of infection.

**tinzaparin, See HEPARINS (LOW MOLECULAR WEIGHT).**

**tioconazole, See ANTIFUNGALS (VAGINAL).**

## tiotropium (tye-o-trope-ee-yum)
Spiriva

***Classification***
Therapeutic: bronchodilators
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications
Long-term maintenance treatment of bronchospasm due to COPD.

### Action
Acts as anticholinergic by selectively and reversibly inhibiting $M_3$ receptors in smooth muscle of airways. **Therapeutic Effects:** Decreased incidence and severity of bronchospasm.

### Pharmacokinetics
**Absorption:** 19.5% absorbed following inhalation.
**Distribution:** Extensive tissue distribution; due to route of administration ↑ concentrations occur in lung.
**Metabolism and Excretion:** 74% excreted unchanged in urine; 25% of absorbed drug is metabolized.
**Half-life:** 5–6 days.

TIME/ACTION PROFILE (bronchodilation)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| inhaln | rapid | 5 min | 24 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to tiotropium, atropine of their derivatives; Concurrent ipratropium.
**Use Cautiously in:** Angle-closure glaucoma, prostatic hyperplasia, bladder neck obstruction (may worsen condition); CCr ≤50 mL/min (monitor closely); OB: Lactation: Pedi: Pregnancy, lactation, or children (safety not established).

### Adverse Reactions/Side Effects
**EENT:** glaucoma. **Resp:** paradoxical bronchospasm. **CV:** tachycardia. **GI:** dry mouth, constipation. **GU:** urinary difficulty, urinary retention. **Misc:** hypersensitivity reactions including ANGIOEDEMA.

### Interactions
**Drug-Drug:** Should not be used concurrently with **ipratropium** due to risk of additive anticholinergic effects.

### Route/Dosage
**Inhaln (Adults):** 18 mcg once daily.

### Availability
**Dry powder capsules for inhalation:** 18 mcg.
**Cost:** $134.99/30 capsules.

## NURSING IMPLICATIONS

### Assessment
- **Inhaln:** Assess respiratory status (rate, breath sounds, degree of dyspnea, pulse) before administration and at peak of medication. Consult physician or other health care professional about alternative medication if severe bronchospasm is present; onset of action is too slow for patients in acute distress. If paradoxical bronchospasm (wheezing) occurs, withhold medication and notify physician or other health care professional immediately.

### Potential Nursing Diagnoses
Ineffective airway clearance (Indications)
Risk for activity intolerance (Indications)

### Implementation
- **Inhaln:** See Appendix D for administration of inhalation medications.

### Patient/Family Teaching
- Instruct patient to take medication as directed. Capsules are for inhalation only and must not be swallowed. Take missed doses as soon as remembered unless almost time for the next dose; space remaining doses evenly during day. Do not double doses.
- Advise patient that tiotropium is not to be used for acute bronchospasm attacks, but may be continued during an acute exacerbation.
- Instruct patient in proper use and cleaning of the Handihaler inhaler. Review the *Patient's Instructions for Use* guide with patient. Capsules should be stored in sealed blisters; remove immediately before use or effectiveness of capsules is reduced. Tear blister strip carefully to expose only one capsule at a time. Discard capsules that are inadvertently exposed to air. *Spiriva* should be administered only via the Handihaler and the Handihaler should not be used with other medications. When disposing of capsule, tiny amount of powder left in capsule is normal.
- Advise patient that rinsing mouth after using inhaler, good oral hygiene, and sugarless gum or candy may minimize dry mouth; usually resolves with continued treatment.
- Advise patient to notify health care professional immediately if signs of glaucoma (eye pain or discomfort, blurred vision, visual halos or colored images in association with red eyes from conjunctival congestion and corneal edema) occur.
- Caution patient to avoid spraying medication in eyes; may cause blurring of vision and pupil dilation.
- Advise patient to inform health care professional if pregnancy is planned or suspected or if breastfeeding.
- Advise patient to consult health care professional before taking any Rx/OTC/herbal products, including eye drops.

### Evaluation/Desired Outcomes
- Decreased dyspnea.
- Improved breath sounds.

HIGH ALERT

## tirofiban (tye-roe-**fye**-ban)
Aggrastat

***Classification***
Therapeutic: antiplatelet agents
Pharmacologic: glycoprotein IIb/IIIa inhibitors

**Pregnancy Category B**

T

### Indications
Treatment of acute coronary syndrome (unstable angina/non–Q-wave MI), including patients who will be managed medically and those who will undergo percutaneous transluminal angioplasty (PCTA) or atherectomy. Used concurrently with aspirin and heparin.

### Action
Decreases platelet aggregation by reversibly antagonizing the binding of fibrinogen to the glycoprotein IIb/IIIa binding site on platelet surfaces.
**Therapeutic Effects:** Inhibition of platelet aggregation resulting in decreased incidence of new MI, death, or refractory ischemia with the need for repeat cardiac procedures.

### Pharmacokinetics
**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Unknown.
**Metabolism and Excretion:** Excreted mostly unchanged by the kidneys (65%); 25% excreted unchanged in feces.
**Half-life:** 2 hr.

TIME/ACTION PROFILE (effects on platelet function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | 30 min† | brief‡ |

†>90% inhibition of platelet aggregation at end of initial 30-min infusion

‡Inhibition is reversible following cessation of infusion

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Active internal bleeding or history of bleeding within previous 30 days; History of intracranial hemorrhage, intracranial neoplasm, arteriovenous malformation or aneurysm; History of thrombocytopenia during previous tirofiban therapy; History of hemorrhagic stroke or other stroke within 30 days; Major surgical procedure or severe physical trauma within 30 days; History, symptoms, or other findings associated with aortic aneurysm; Severe hypertension (systolic BP >180 mm Hg and/or diastolic BP >110 mm Hg); Concurrent use of other glycoprotein IIb/IIIa receptor antagonists; Acute pericarditis; Lactation: Lactation.

**Use Cautiously in:** Platelet count <150,000/mm$^3$; Hemorrhagic retinopathy; Female patients (↑ risk of bleeding); Severe renal insufficiency (↓ rate of infusion by 50% if CCr <30 mL/min); OB, Pedi: Safety not established; use in pregnancy only if clearly needed; Geri: ↑ risk of bleeding.

## Adverse Reactions/Side Effects

Noted for patients receiving heparin and aspirin in addition to tirofiban.

**CNS:** dizziness, headache. **CV:** bradycardia, coronary dissection, edema, vasovagal reaction. **GI:** nausea. **Derm:** hives, rash. **Hemat:** bleeding, thrombocytopenia. **MS:** leg pain. **Misc:** fever, hypersensitivity reactions, pelvic pain, sweating.

## Interactions

**Drug-Drug:** Concurrent use of **aspirin**, **NSAIDs**, **warfarin**, **heparin**, **heparin-like agents**, **abciximab**, **eptifibatide**, **clopidogrel**, **ticlopidine**, or **dipyridamole** may ↑ risk of bleeding, although these agents are frequently used together or in sequence. Risk of bleeding may be ↑ by concurrent use of **cefotetan**, **cefoperazone**, or **valproic acid**.

**Drug-Natural Products:** ↑ anticoagulant effect and bleeding risk with **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **garlic**, **ginger**, **ginkgo**, **Panax ginseng**, **licorice**, and others.

## Route/Dosage

**IV (Adults):** 0.4 mcg/kg/min for 30 min, then 0.1 mcg/kg/min, continued throughout angiography and for 12–24 hr after angioplasty or atherectomy.

### Renal Impairment

**IV (Adults):** *CCr <30 mL/min*—0.2 mcg/kg/min for 30 min, then 0.05 mcg/kg/min, continued throughout angiography and for 12–24 hr after angioplasty or atherectomy.

## Availability

**Premixed solution for infusion:** 5 mg/100 mL (50 mcg/mL) in 100-mL single-dose containers, 12.5 mg/250 mL (50 mcg/mL) in 250-mL single-dose containers.

# NURSING IMPLICATIONS

## Assessment

- Assess patient for bleeding. Most common is oozing from the arterial access site for cardiac catheterization. Arterial and venous punctures, IM injections, and use of urinary catheters, nasotracheal intubation, and nasogastric tubes should be minimized. Noncompressible sites for IV access should be avoided. If bleeding cannot be controlled with pressure, discontinue tirofiban and heparin immediately.
- During vascular access, avoid puncturing posterior wall of femoral artery. Maintain bedrest with head of bed elevated 30° and affected limb restrained in a straight position while the vascular sheath is in place. Heparin should be discontinued for 3–4 hr and activated clotting time (ACT) <180 sec or activated partial thromboplastin time (aPTT) <45 sec prior to pulling the sheath. Use compressive techniques to obtain hemostasis and monitor closely. Sheath hemostasis should be maintained for >4 hr before discharge from the hospital.
- Monitor for signs of thrombocytopenia (chills, low-grade fever) during therapy.
- ***Lab Test Considerations:*** Assess hemoglobin, hematocrit, and platelet count prior to tirofiban therapy, within 6 hr following loading infusion, and at least daily during therapy (more frequently if evidence of significant decline). May cause ↓ hemoglobin and hematocrit.
- If platelet count ↓ to <90,000/mm$^3$, perform additional platelet counts to rule out pseudothrombocytopenia. If thrombocytopenia is confirmed, tirofiban and heparin should be discontinued and condition monitored and treated.
- To monitor unfractionated heparin, assess aPTT 6 hr after the start of heparin infusion. Adjust heparin to maintain aPTT at approximately 2 times control.

- May cause presence of urine and fecal occult blood.

### Potential Nursing Diagnoses

Ineffective tissue perfusion (Indications)

### Implementation

- ***High Alert:*** Use of antiplatelet medications has resulted in patient harm and/or death from internal hemorrhage or intracranial bleeding. Have second practitioner independently check original order, dosage calculations, and infusion pump settings.
- Most patients receive heparin and aspirin concurrently with tirofiban.
- Do not administer solutions that are discolored or contain particulate matter. Discard unused portion.

#### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Tirofiban injection premix is ready for administration and dose not require any further dilution. ***Concentration:*** 50 mcg/mL. ***Rate:*** Based on patient's weight (see Route/Dosage section).
- **Y-Site Compatibility:** acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, ampicillin, ampicillin/sulbactam, anidulafungin, argatroban, arsenic trioxide, atracurium, atropine, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, capreomycin, carboplatin, carmustine, caspofungin, cefazolin, cefepime, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, chloramphenicol, chlorpromazine, cimetidine, ciprofloxacin, cisatracurium, cisplatin, clindamycin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dolasetron, dopamine, doxacurium, doxorubicin, doxorubicin liposome, doxycycline, droperidol, enalaprilat, ephedrine, epinephrine, epirubicin, eptifibatide, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydralazine, hydrocortisone, hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, insulin, irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, methylhexital, methotrexate, methyldopate, methylprednisolone, metoclopramide, metoprolol, metronidazole, midazolam, milrinone, mitoxantrone, morphine, mycophenolate, nafcillin, nalbuphine, naloxone, nesiritide, nicardipine, nitroglycerin, nitroprusside, norepinephrine, octreotideondansetron, oxaliplatin, oxytocin, paclitaxel, palonosetron, pamidronate, pancuronium, pantoprazole, pemetrexed, pentobarbital, phenobarbital, phentolamine, phenylephrine, piperacillin/tazobactam, potassium acetate, potassium chloride, potassium phosphates, procainamide, prochlorperazine, promethazine, propranolol, quinupristin/dalfopristin, ranitidine, remifentanil, rocuronium, sodium acetate, sodium bicarbonate, streptozocin, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiopental, thiotepa, ticarcillin/clavulanate, tigecycline, tobramycin, topotecan, vancomycin, vasopressin, vecuronium, verapanil, vinblastine, vincristine, vinorelbine, voriconazole, zidovudine, zolendronic acid.
- **Y-Site Incompatibility:** amphotericin B colloidal, amphotericin B liposome, dantrolene, diazepam, phenytoin.

### Patient/Family Teaching

- Inform patient of the purpose of tirofiban.
- Instruct patient to notify health care professional immediately if any bleeding is noted.

### Evaluation/Desired Outcomes

- Inhibition of platelet aggregation resulting in decreased incidence of new MI, death, or refractory ischemia with the need for repeat cardiac procedures.

## tizanidine (tye-zan-i-deen)

Zanaflex

***Classification***

Therapeutic: antispasticity agents (centrally acting)
Pharmacologic: adrenergics

**Pregnancy Category C**

### Indications

Increased muscle tone associated with spasticity due to multiple sclerosis or spinal cord injury.

### Action
Acts as an agonist at central alpha-adrenergic receptor sites. Reduces spasticity by increasing presynaptic inhibition of motor neurons. **Therapeutic Effects:** Decreased spasticity, allowing better function.

### Pharmacokinetics
**Absorption:** Completely absorbed after oral administration but rapidly metabolized, resulting in 40% bioavailability.
**Distribution:** Widely distributed.
**Metabolism and Excretion:** 95% metabolized by the liver.
**Half-life:** 2.5 hr.

TIME/ACTION PROFILE (reduced muscle tone)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1–2 hr | 3–6 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Renal impairment; Concurrent antihypertensive therapy; OB, Lactation: Pedi: Safety not established; Geri: Dose ↓ may be necessary due to ↓ clearance.
**Exercise Extreme Caution in:** Impaired hepatic function.

### Adverse Reactions/Side Effects
**CNS:** anxiety, depression, dizziness, sedation, weakness, dyskinesia, hallucinations, nervousness. **EENT:** blurred vision, pharyngitis, rhinitis. **CV:** hypotension, bradycardia. **GI:** abdominal pain, diarrhea, dry mouth, dyspepsia, constipation, hepatocellular injury, ↑ liver enzymes, vomiting. **GU:** urinary frequency. **Derm:** rash, skin ulcers, sweating. **MS:** back pain, myasthenia, paresthesia. **Misc:** fever, speech disorder.

### Interactions
**Drug-Drug:** Levels and effects ↑ by concurrent use of **hormonal contraceptives** or **alcohol**. ↑ risk of hypotension with **alpha$_2$-adrenergic agonist antihypertensives** (avoid concurrent use). ↑ CNS depression may occur with **alcohol** or other **CNS depressants** including some **antidepressants**, **sedative/hypnotics**, **antihistamines**, and **opioid analgesics**. Concurrent CYP1A2 inhbitors (**ciprofloxacin**, **fluvoxamine** and others) may ↑ levels and risk of hypotension and excessive sedation.

### Route/Dosage
**PO (Adults):** 4 mg q 6–8 hr initially (no more than 3 doses/24 hr); ↑ by 2–4 mg/dose up to 8 mg/dose or 24 mg/day (not to exceed 36 mg/day). Some patients may tolerate twice-daily dosing.

### Availability (generic available)
**Tablets:** 2 mg, 4 mg. **Cost:** *Generic*— 2 mg $19.99/90, 4 mg $81.99/90. **Capsules:** 2 mg, 4 mg, 6 mg. **Cost:** 2 mg $159.70/90, 4 mg $216.37/90, 6 mg $300.35/90.

## NURSING IMPLICATIONS

### Assessment
- Assess muscle spasticity before and periodically during therapy.
- Monitor blood pressure and pulse, especially during dose titration. May cause orthostatic hypotension, bradycardia, dizziness, and, rarely, syncope. Effects are usually dose related.
- Observe patient for drowsiness, dizziness, and asthenia. A change in dose may alleviate these problems.
- ***Lab Test Considerations:*** Monitor liver function tests before and at 1, 3, and 6 mo of therapy. May cause ↑ in serum glucose, alkaline phosphatase, AST, and ALT levels.

### Potential Nursing Diagnoses
Impaired physical mobility (Indications)
Risk for injury (Adverse Reactions)

### Implementation
- Do not confuse tizanidine with tiagibine.
- Doses should be titrated carefully to prevent side effects.
- **PO:** May be taken without regard to meals.

### Patient/Family Teaching
- Instruct patient to take tizanidine as directed. Tizanidine may need to be discontinued gradually.
- May cause dizziness and drowsiness. Advise patient to avoid driving or other activities requiring alertness until response to drug is known.
- Instruct patient to change positions slowly to minimize orthostatic hypotension.
- Advise patient to avoid concurrent use of alcohol or other CNS depressants while taking this medication.

### Evaluation/Desired Outcomes
- Decrease in muscle spasticity with an increased ability to perform activities of daily living.

**tobramycin, See AMINOGLYCOSIDES.**

**tolcapone** (**tole**-ka-pone)
Tasmar

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: catechol-*O*-methyltransferase inhibitors

**Pregnancy Category C**

## Indications
Management of Parkinson's disease with carbidopa/levodopa in patients without severe movement abnormalities who do not respond to other treatment.

## Action
Acts as a selective and reversible inhibitor of the enzyme catechol-*O*-methyltransferase. Inhibition of this enzyme prevents the breakdown of levodopa, greatly increasing its availability to the CNS.
**Therapeutic Effects:** Prolongs duration of response to levodopa without end-of-dose motor fluctuations. Decreased signs and symptoms of Parkinson's disease.

## Pharmacokinetics
**Absorption:** Rapidly absorbed following oral administration with 65% bioavailability.
**Distribution:** Unknown.
**Protein Binding:** >99% bound to plasma proteins.
**Metabolism and Excretion:** Mostly metabolized by the liver; <0.5% excreted unchanged in urine.
**Half-life:** 2–3 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1.7 hr | 8 hr |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent MAO inhibitor therapy; Clinical evidence of liver disease.
**Use Cautiously in:** Severe renal impairment (safety not established if CCr <25 mL/min); OB: Lactation: Safety not established.

## Adverse Reactions/Side Effects
**CNS:** headache, sleep disorder, hallucinations, syncope, urges (gambling, sexual). **CV:** orthostatic hypotension. **GI:** HEPATOTOXICITY, HEPATIC FAILURE, constipation, diarrhea, anorexia, elevated liver enzymes, nausea, vomiting. **GU:** hematuria, yellow discoloration of urine. **Derm:** ↑ sweating, melanoma. **Neuro:** dyskinesia, dystonia.

## Interactions
**Drug-Drug:** Concurrent use with **MAO inhibitors** is not recommended; both agents inhibit the metabolic pathways of catecholamines. May ↑ the effects of **methyldopa**, **apomorphine**, **dobutamine**, or **isoproterenol**; dose reduction may be necessary. ↑ the bioavailability of **levodopa** by two-fold; this is a desired effect.

## Route/Dosage
**PO (Adults):** 100 mg 3 times daily; may be cautiously increased to 200 mg 3 times daily if benefit is justified.

## Availability
**Tablets:** 100 mg, 200 mg.

# NURSING IMPLICATIONS

## Assessment
- Assess patient for signs and symptoms of Parkinson's disease (tremor, muscle weakness and rigidity, ataxic gait) prior to and throughout therapy.
- Assess blood pressure periodically during therapy.
- Monitor for signs and symptoms of liver dysfunction (persistent nausea, fatigue, lethargy, anorexia, jaundice, dark urine, pruritus, right upper quadrant tenderness) periodically during therapy.
- ***Lab Test Considerations:*** Monitor liver function tests before every 2–4 wk for the first 6 mo following initiation or dose increase and periodically thereafter. Discontinue tolcapone if liver function tests reach two times the upper limit of normal or if jaundice occurs; do not reinstate.

## Potential Nursing Diagnoses
Impaired physical mobility (Indications)
Risk for injury (Indications, Side Effects)

## Implementation
- **PO:** Administer 1st dose of the day of tolcapone together with carbidopa/levodopa. Administer subsequent doses 6 and 12 hr later.
- May be administered without regard to food.

## Patient/Family Teaching
- Instruct patient to take medication as directed. Caution patient not to discontinue medication without consulting health care professional. Abrupt discontinuation or rapid dose reduction may result in neuroleptic malignant syndrome (elevated temperature, muscular rigidity, altered consciousness).

T

- Caution patient to make position changes slowly to minimize orthostatic hypotension, especially at the beginning of therapy.
- May affect mental and/or motor performance. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to avoid taking alcohol or other CNS depressants concurrently with tolcapone.
- Inform patient and caregiver that hallucinations, nausea, dyskinesia, or dystonia may occur during tolcapone therapy.
- Advise patient to notify health care professional if symptoms of liver failure (clay-colored stools, jaundice, fatigue, loss of appetite, lethargy), suspicious or unusual skin changes, hallucinations, or new or increased gambling, sexual, or other intense urges occur.
- Advise patient to notify health care professional if pregnancy is planned or suspected.
- Instruct patient to notify health care professional if persistent diarrhea occurs.
- Emphasize the importance of routine follow-up exams.

### Evaluation/Desired Outcomes

- Decrease in signs and symptoms of Parkinson's disease.

## tolnaftate, See ANTIFUNGALS (TOPICAL).

## tolterodine (tol-**ter**-oh-deen)

Detrol, Detrol LA

***Classification***

Therapeutic: urinary tract antispasmodics
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications

Treatment of overactive bladder function that results in urinary frequency, urgency, or urge incontinence.

### Action

Acts as a competitive muscarinic receptor antagonist resulting in inhibition of cholinergically mediated bladder contraction. **Therapeutic Effects:** Decreased urinary frequency, urgency, and urge incontinence.

### Pharmacokinetics

**Absorption:** Well absorbed (77%) following oral administration.
**Distribution:** Unknown.
**Protein Binding:** 96.3%.
**Metabolism and Excretion:** Extensively metabolized by the liver (primarily by CYP2D6 isoenzyme) (the CYP2D6 enzyme system exhibits genetic polymorphism; ~7% of population may be poor metabolizers and may have significantly ↑ tolterodine concentrations and an ↑ risk of adverse effects); one metabolite (5-hydroxymethyltolterodine) is active; other metabolites are excreted in urine.
**Half-life:** *Tolterodine*—1.9–3.7 hr; *5-hydroxymethyltolterodine*—2.9–3.1 hr.

TIME/ACTION PROFILE (effects on bladder function)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | 12 hr |

### Contraindications/Precautions

**Contraindicated in:** Urinary retention; Gastric retention; Uncontrolled angle-closure glaucoma; Lactation: Lactation.
**Use Cautiously in:** GI obstructive disorders, including pyloric stenosis (↑ risk of gastric retention); Significant bladder outflow obstruction (↑ risk of urinary retention); Controlled angle-closure glaucoma; Myasthenia gravis; Significant hepatic impairment (lower doses recommended); Impaired renal function; OB: Safety not established; use only if potential maternal benefit justifies potential risk to fetus; Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** headache, dizziness. **EENT:** blurred vision, dry eyes. **GI:** dry mouth, constipation, dyspepsia.

### Interactions

**Drug-Drug: Erythromycin**, **clarithromycin**, **ketoconazole**, **itraconazole**, and **miconazole** may inhibit metabolism and ↑ effects.

### Route/Dosage

**PO (Adults):** 2 mg twice daily as tablets; may be lowered depending on response *or* 2–4 mg once daily as extended-release capsules.
**PO (Adults with impaired hepatic function or concurrent enzyme inhibitors):** 1 mg twice daily .

### Availability

**Tablets:** 1 mg, 2 mg. **Cost:** 1 mg $359.59/180, 2 mg $359.96/180. **Extended-release capsules:** 2 mg, 4 mg. **Cost:** 2 mg $299.96/90, 4 mg $325.97/90.

## NURSING IMPLICATIONS

### Assessment
- Assess patient for urinary urgency, frequency, and urge incontinence periodically during therapy.

### Potential Nursing Diagnoses
Impaired urinary elimination (Indications)
Urinary retention (Indications)

### Implementation
- **PO:** Administer without regard to food.
- Extended-release capsules should be swallowed whole; do not open or chew.

### Patient/Family Teaching
- Instruct patient to take tolterodine as directed.
- May cause dizziness and blurred vision. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.

### Evaluation/Desired Outcomes
- Decreased urinary frequency, urgency, and urge incontinence.

## **tolvaptan** (tol-**vap**-tan)
Samsca

***Classification***
Therapeutic: electrolyte modifiers
Pharmacologic: vasopressin antagonists

**Pregnancy Category C**

### Indications
Treatment of significant hypervolemic and euvolemic hyponatremia (serum sodium <125 mEq/L or less marked symptomatic hyponatremia that has resisted correction by fluid restriction), including patients with heart failure, cirrhosis, and Syndrome of Inappropriate Antidiuretic Hormone (SIADH).

### Action
Acts as a selective vasopressin V2-receptor antagonist, resulting in increased renal water excretion and increased serum sodium. **Therapeutic Effects:** Correction of hyponatremia.

### Pharmacokinetics
**Absorption:** 40% absorbed following oral administration.
**Distribution:** >99%.
**Metabolism and Excretion:** Extensively metabolized primarily by the CYP3A4 enzyme system; no renal elimination.
**Half-life:** 12 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 8 hr | 2–4 hr† | 7 days |

† Blood level

### Contraindications/Precautions
**Contraindicated in:** Urgent need to acutely raise serum sodium; Patients who cannot appropriately sense/respond to thirst; Hypovolemic hyponatremia; Concurrent use of strong CYP 3A inhibitors or moderate CYP 3A inhibitors; Anuria; Lactation: Avoid use during lactation.
**Use Cautiously in:** Severe malnutrition, alcoholism or advanced liver disease ( ↑ risk of osmotic demyelination; correct electrolyte abnormalities at a slower rates ); Cirrhosis ( ↑ risk of GI bleeding, use only when the need to treat outweighs risk); Geri: May have increased sensitivity to effects; OB: Use during pregnancy only if the potential benefit justifies the potential risk to the fetus; Pedi: Safety and effectiveness in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** weakness. **GI:** constipation, dry mouth. **GU:** polyuria. **F and E:** thirst. **Metab:** hyperglycemia. **Neuro:** osmotic demyelination.

### Interactions
**Drug-Drug: Strong inhibitors of the CYP3A enzyme system** including **ketoconazole**, **clarithromycin**, **itraconazole**, **telithromycin**, **saquinavir**, **nelfinavir**, **ritonavir**, and **nefazodone** ↑ levels and may ↑ effects and risk of toxicity; concurrent use should be avoided. **Moderate CYP 3A inhibitors** including **erythromycin**, **fluconazole**, **aprepitant**, **diltiazem**, and **verapamil** may have a similar effect and should also be avoided. **Inducers of the CYP3A enzyme system** including **rifampin** can ↓ blood levels and effectiveness; dosage adjustments may be necessary. Levels and risk of toxicity are also ↑ **P-gp inhibitors** including **cyclosporine**; dosage adjustments may be necessary. May ↑ **digoxin** levels; monitor carefully.
**Drug-Food: Grapefruit juice** ↑ levels and the risk of toxicity; avoid concurrent use. May ↑ risk of hyperkalemia with **angiotensin receptor blockers**, **ACE inhibitors**, and **potassium-sparing diuretics**.

### Route/Dosage

**PO (Adults):** 15 mg once daily initially; may be increased at intervals of at least one day to 30 mg once daily, up to a maximum of 60 mg once daily.

### Availability

**Tablets:** 15 mg, 30 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor neurologic status and assess for signs and symptoms of osmotic demyelination syndrome (trouble speaking, dysphagia, drowsiness, confusion, mood changes, involuntary movements, weakness, seizures), especially during initiation and after titration. If a rapid ↑ in sodium or symptoms occur, discontinue tolvaptan and consider administration of hypotonic fluid.
- Monitor fluid balance. If hypovolemia occurs interrupt or discontinue tolvaptan and provide supportive care (monitor vital signs, balance fluid and electrolytes).
- ***Lab Test Considerations:*** Monitor serum sodium levels frequently during initiation and dose titration and periodically during therapy. Too rapid correction of hyponatremia (>12 mEq/L/24 hr) can cause osmotic demyelination syndrome.
- Monitor serum potassium in patients with serum potassium >5 mEq/L or taking medication known to ↑ potassium.

### Potential Nursing Diagnoses

Risk for imbalanced fluid volume (Indications)

### Implementation

- Initiate and re-initiate therapy in a hospital.
- Avoid fluid restriction during first 24 hr of therapy.
- **PO:** Administer once daily without regard to meals.

### Patient/Family Teaching

- Instruct patient to take tolvaptan as direct. Avoid drinking grapefruit juice during therapy; may cause ↑ levels. Take missed doses as soon as remembered, but not if just before next dose; do not double doses. Do not stop and restart therapy. Restarting therapy may require hospitalization.
- Inform patients they can continue fluid ingestion in response to thirst during therapy and should have water available to drink at all times during therapy. Following discontinuation of therapy, resume fluid restriction.
- Advise patient to notify health care professional before taking any other Rx, OTC, or herbal products.
- Advise patient to notify health care professional if signs of dehydration (vomiting, diarrhea, inability to drink normally, dizziness, feeling faint) or bleeding (vomiting bright red blood, dark blood clots, or coffee-ground-like material; black, tarry stools; bloody stools).
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes

- Normalization of serum sodium levels.

## topiramate (toe-peer-i-mate)

Topamax

***Classification***

Therapeutic: anticonvulsants, mood stabilizers

**Pregnancy Category C**

### Indications

Seizures including: partial-onset, primary generalized tonic-clonic, seizures due to Lennox-Gastaut syndrome. Prevention of migraine headache in adults. **Unlabeled Use:** Adjunct in treatment of bipolar disorder. Infantile spasms.

### Action

Action may be due to: Blockade of sodium channels in neurons, Enhancement of gamma-aminobutyrate (GABA), an inhibitory neurotransmitter, Prevention of activation of excitatory receptors. **Therapeutic Effects:** Decreased incidence of seizures. Decreased incidence/severity of migraine headache.

### Pharmacokinetics

**Absorption:** Well absorbed (80%) after oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** 70% excreted unchanged in urine.
**Half-life:** 21 hr.

TIME/ACTION PROFILE (blood levels†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 hr | 12 hr |

†After single dose

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Lactation.

**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Renal impairment (dose reduction recommended if CCr <70 mL/min/1.73 m²); Hepatic impairment; Dehydration; Patients predisposed to metabolic acidosis; Patients allergic to sulfa; OB: Use only if maternal benefit outweighs fetal risk; Pedi: Children are more prone to oligohydrosis and hyperthermia; safety in children <2 yr not established; Geri: Consider age-related ↓ in renal/hepatic impairment, concurrent disease states and drug therapy.

## Adverse Reactions/Side Effects

**CNS:** INCREASED SEIZURES, SUICIDAL THOUGHTS, dizziness, drowsiness, fatigue, impaired concentration/memory, nervousness, psychomotor slowing, speech problems, sedation, aggressive reaction, agitation, anxiety, cognitive disorders, confusion, depression, malaise, mood problems. **EENT:** abnormal vision, diplopia, nystagmus, acute myopia/secondary angle closure glaucoma. **GI:** nausea, abdominal pain, anorexia, constipation, dry mouth. **GU:** kidney stones. **Derm:** oligohydrosis (↑ in children). **F and E:** hyperchloremic metabolic acidosis. **Hemat:** leukopenia. **Metab:** weight loss, hyperthermia (↑ in children). **Neuro:** ataxia, paresthesia, tremor. **Misc:** fever.

## Interactions

**Drug-Drug:** Blood levels and effects may be ↓ by **phenytoin**, **carbamazepine**, or **valproic acid**. May ↑ blood levels and effects of **phenytoin** or **amitriptyline**. May ↓ blood levels and effects of **hormonal contraceptives**, **risperidone**, **lithium** or **valproic acid**. ↑ risk of CNS depression with **alcohol** or other **CNS depressants**. **Carbonic anhydrase inhibitors (acetazolamide)** may ↑ risk of kidney stones. Concurrent use with **valproic acid** may ↑ risk of hyperammonemia/encephalopathy.

## Route/Dosage

### Epilepsy (monotherapy)

**PO (Adults and children ≥10 yr):** *Seizures/migraine prevention*—50 mg/day initially, gradually ↑ over 6 wk to 400 mg/day in 2 divided doses.

### Epilepsy (adjunctive therapy)

**PO (Adults and Children ≥17 yr):** 25–50 mg/day ↑ by 25–50 mg/day at weekly intervals up to 200–400 mg/day in 2 divided doses (200–400 mg/day in 2 divided doses for partial seizures and 400 mg/day in 2 divided doses for primary generalized tonic-clonic seizures); maximum dose: 1600 mg/day.

### Renal Impairment

**PO (Adults):** *CCr<70 mL/min*—50% of the usual dose.

**PO (Children 2–16 yr):** *Partial onset seizures or Lennox–Gastaut syndrome*—Initial 1–3 mg/kg/day (maximum: 25 mg) nightly for 1 week then ↑ at 1–2 wk intervals up to 5–9 mg/kg/day in 2 divided doses. *Primary generalized tonic-clonic seizures*—Initial dose as above then gradually increase to 6 mg/kg/day over 8 wk.

### Migraine prevention

**PO (Adults):** 25 mg at night initially, ↑ by 25 mg/day at weekly intervals up to target dose of 100 mg/day in 2 divided doses.

## Availability (generic available)

**Sprinkle capsules:** 15 mg, 25 mg. **Cost:** 15 mg $114.19/60, 25 mg $139.96/60. **Tablets:** 25 mg, 50 mg, 100 mg, 200 mg. **Cost:** 25 mg $369.90/180, 50 mg $703.96/180, 100 mg $1,023.97/180, 200 mg $1,162.91/180.

# NURSING IMPLICATIONS

## Assessment

- Monitor closely for notable changes in behavior that could indicate the emergence or worsening of suicidal thoughts or behavior or depression.
- **Seizures:** Assess location, duration, and characteristics of seizure activity.
- **Migraines:** Assess pain location, intensity, duration, and associated symptoms (photophobia, phonophobia, nausea, vomiting) during migraine attack. Monitor frequency and intensity of pain on pain scale.
- **Bipolar Disorder:** Assess mental status (mood, orientation, behavior) and cognitive abilities before and periodically during therapy.
- ***Lab Test Considerations:*** Monitor CBC with differential and platelet count before therapy to determine baseline levels and periodically during therapy. Frequently causes anemia.
- Hepatic function should be monitored periodically throughout therapy. May cause ↑ AST and ALT levels.
- Evaluate serum bicarbonate prior to and periodically during therapy. If metabolic acidosis occurs, dosing taper or discontinuation may be necessary.

T

### Potential Nursing Diagnoses
Risk for injury (Indications, Side Effects)
Disturbed thought process (Indications)

### Implementation
- Implement seizure precautions.
- Do not confuse Topamax (topiramate) with Toprol (metoprolol).
- **PO:** May be administered without regard to meals.
- Do not break/crush tablets because of bitter taste.
- Contents of the sprinkle capsules can be sprinkled on a small amount (teaspoon) of soft food, such as applesauce, custard, ice cream, oatmeal, pudding, or yogurt. To open, hold the capsule upright so that you can read the word "TOP." Carefully twist off the clear portion of the capsule. It may be best to do this over the small portion of the food onto which you will be pouring the sprinkles. Sprinkle the entire contents of the capsule onto the food. Be sure the patient swallows the entire spoonful of the sprinkle/food mixture immediately without chewing. Follow with fluids immediately to make sure all of the mixture is swallowed. Never store a sprinkle/food mixture for use at another time.
- A 6 mg/mL oral suspension may be compounded by pharmacy for pediatric patients.

### Patient/Family Teaching
- Instruct patient to take topiramate exactly as directed. Take missed doses as soon as possible but not just before next dose; do not double doses. Notify health care professional if more than 1 dose is missed. Medication should be gradually discontinued to prevent seizures and status epilepticus. Instruct patient to read the *Medication Guide* before starting and with each Rx refill, changes may occur.
- May cause decreased sweating and increased body temperature. Advise patients, especially parents of pediatric patients, to provide adequate hydration and monitoring, especially during hot weather.
- May cause dizziness, drowsiness, confusion, and difficulty concentrating. Caution patients to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to maintain a fluid intake of 2000–3000 mL of fluid/day to prevent the formation of kidney stones.
- Instruct patient to notify health care professional immediately if periorbital pain or blurred vision occur. Medication should be discontinued if ocular symptoms occur. May lead to permanent loss of vision.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Caution patient to make position changes slowly to minimize orthostatic hypotension.
- Advise patient not to take alcohol or other CNS depressants concurrently with this medication.
- Advise patient to use a nonhormonal form of contraception while taking topiramate.
- Instruct patient to notify health care professional of medication regimen before treatment or surgery.
- Advise patient to use sunscreen and wear protective clothing to prevent photosensitivity reactions.
- Advise patient to carry identification describing disease and medication regimen at all times.

### Evaluation/Desired Outcomes
- Absence or reduction of seizure activity.
- Decrease in incidence and severity of migraine headaches.
- Remission of manic symptoms.

HIGH ALERT

## topotecan (toe-poe-**tee**-kan)
Hycamtin

***Classification***
Therapeutic: antineoplastics
Pharmacologic: enzyme inhibitors

**Pregnancy Category D**

### Indications
**IV:** Metastatic ovarian cancer that has not responded to previous chemotherapy. Small cell lung cancer unresponsive to first line therapy.
**PO:** Relapsed small cell lung cancer in patients with a complete or partial prior response and who are at least 45 days from the end of first-line chemotherapy. Stage IV-B persistent or recurrent cervical cancer not amenable to treatment with surgery or radiation (with cisplatin).

### Action
Interferes with DNA synthesis by inhibiting the enzyme topoisomerase. **Therapeutic Effects:**

Death of rapidly replicating cells, particularly malignant ones.

### Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Unknown.
**Metabolism and Excretion:** 30% excreted in urine; small amounts metabolized by the liver.
**Half-life:** *PO*—3–6 hr; *IV*—2–3 hr.

TIME/ACTION PROFILE (effects on WBCs)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1–2 hr | 24 hr |
| IV | within days | 11 days | 7 days |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pre-existing severe myelosuppression; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Impaired renal function (↓ dose if CCr <40 mL/min); Platelet count <25,000 cells/mm³ (↓ dose); Geri: May require dose ↓ due to age-related ↓ in renal function.

### Adverse Reactions/Side Effects

**CNS:** headache, fatigue, weakness. **Resp:** dyspnea. **GI:** abdominal pain, diarrhea, nausea, vomiting, anorexia, constipation, ↑ liver enzymes, stomatitis. **Derm:** alopecia. **Hemat:** anemia, leukopenia, thrombocytopenia. **MS:** arthralgia.

### Interactions

**Drug-Drug:** Neutropenia is prolonged by concurrent use of **filgrastim** (do not use until day 6; 24 hr following completion of topotecan). ↑ myelosuppression with other **antineoplastics** (especially **cisplatin**) or **radiation therapy**. May ↓ antibody response to and ↑ risk of adverse reactions from **live virus vaccines**.

### Route/Dosage

**PO (Adults):** 2.3 mg/m²/day for 5 days repeated every 21 days (round calculated oral dose to nearest 0.25 mg and prescribe the minimum number of 1 mg and 0.25 mg capsules with the same number of capsules prescribed for each of the 5 days).
**IV (Adults):** *Ovarian and Small Cell Lung Cancer*—1.5 mg/m²/day for 5 days starting on day 1 of a 21-day course; *Cervical Cancer*—75 mg/m² on Days 1, 2, and 3 followed by cisplatin on Day 1 and repeated every 21 days.

### Renal Impairment

**PO (Adults):** *Ovarian and Small Cell Lung Cancer—CCr 30–49 mL/min*—1.8 mg/m²/day starting on day 1 of a 21-day course.
**IV (Adults):** *CCr 20–39 mL/min*—0.75mg/m²/day for 5 days starting on day 1 of a 21-day course. *Cervical Cancer*—Administer at standard doses only if serum creatinine is ≤1.5 mg/dL. Do not administer if serum creatinine >1.5 mg/dL.

### Availability

**Capsules:** 0.25 mg, 1 mg. **Powder for injection:** 4 mg/vial.

## NURSING IMPLICATIONS

### Assessment

- Monitor vital signs frequently during administration.
- Monitor for bone marrow depression. Assess for bleeding (bleeding gums, bruising, petechiae; guaiac stools, urine, and emesis) and avoid IM injections and taking rectal temperatures if platelet count is low. Apply pressure to venipuncture sites for 10 min. Assess for signs of infection during neutropenia. Anemia may occur. Monitor for increased fatigue, dyspnea, and orthostatic hypotension.
- Nausea and vomiting are common. Pretreatment with antiemetics should be considered.
- Assess IV site frequently for extravasation, which causes mild local erythema and bruising.
- ***Lab Test Considerations:*** Monitor CBC with differential and platelet count prior to administration and frequently during therapy. Baseline neutrophil count of ≥1500 cells/mm³ and platelet count of ≥100,000 cells/mm³ are required before first dose. The nadir of neutropenia occurs in 11 days, with a duration of 7 days. The nadir of thrombocytopenia occurs in 15 days, with a duration of 5 days. The nadir of anemia occurs in 15 days. Subsequent doses should not be administered until neutrophils recover to >1000 cells/mm³, platelets recover to >100,000 cells/mm³, and hemoglobin levels recover to 9.0 mg/dL. If severe neutropenia occurs during any course, subsequent doses should be reduced by 0.25 mg/m² or filgrastim may be administered following the subsequent course of therapy starting on day 6, 24 hr after the completion of topotecan.
- Monitor liver function. May cause transient ↑ in AST, ALT, and bilirubin concentrations.

## Potential Nursing Diagnoses

Risk for infection (Adverse Reactions)

## Implementation

- ***High Alert:*** Fatalities have occurred with chemotherapeutic agents. Before administering, clarify all ambiguous orders; double check single, daily, and course-of-therapy dose limits; have second practitioner independently double check original order, dose calculations and infusion pump settings.
- **PO:** May be taken without regard to food. Capsules must be swallowed whole; do not open, crush, or chew. If patient vomits after taking dose, do not replace dose.
- Solution should be prepared in a biologic cabinet. Wear gloves, gown, and mask while handling IV medication. Discard IV equipment in specially designated containers.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Reconstitute each vial with 4 mL of sterile water for injection. Dilute further in D5W or 0.9% NaCl. Infusion is stable for 24 hr at room temperature or up to 7 days if refrigerated. Solution is yellow to yellow-green. ***Concentration:*** 10–50 mcg/mL. ***Rate:*** Infuse over 30 min.
- **Y-Site Compatibility:** carboplatin, caspofungin, cimetidine, cisplatin, cyclophosphamide, dactinomycin, daptomycin, doxorubicin, ertapenem, etoposide, fenoldopam, gemcitabine, granisetron, ifosfamide, levofloxacin, methylprednisolone, metoclopramide, ondansetron, oxaliplatin, paclitaxel, palonosetron, prochlorperazine, teniposide, thiotepa, vincristine, voriconazole.
- **Y-Site Incompatibility:** dexamethasone sodium phosphate, fluorouracil, mitomycin, pantoprazole, pemetrexed, rituximab, trastuzumab.

## Patient/Family Teaching

- Instruct patient to take as directed. If patient vomits after taking, do not replace dose; notify health care professional. Do not take missed doses; take next scheduled dose and notify health care professional. If any capsules are broken or leaking, do not touch with bare hands; dispose of capsules and wash hands with soap and water. Patient should be instructed to read the Patient Information guide prior to first dose and with each refill; new information may be available.
- May cause drowsiness or sleepiness during and for several days after therapy. Caution patient to avoid driving and other activities requiring alertness until response to medication is known.
- Instruct patient to notify health care professional if fever; chills; sore throat; signs of infection; bleeding gums; bruising; petechiae; blood in urine, stool, or emesis occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush and electric razor. Patient should be cautioned not to drink alcoholic beverages or take products containing aspirin or NSAIDs.
- May cause diarrhea. Advise patient to notify health care professional if diarrhea with fever or stomach pain or cramps or diarrhea that occurs more than 3 times/day.
- Advise patient to consult health care professional before taking other Rx, OTC, or herbal products with topotecan.
- Discuss with patient the possibility of hair loss. Explore methods of coping.
- Advise patient that this medication may have teratogenic effects. Contraception should be used during therapy.
- Instruct patient not to receive any vaccinations without advice of health care professional.
- Emphasize the need for periodic lab tests to monitor for side effects.

## Evaluation/Desired Outcomes

- Decrease in size and spread of malignancy.

# torsemide (tore-se-mide)

Demadex

***Classification***

Therapeutic: antihypertensives
Pharmacologic: loop diuretics

**Pregnancy Category B**

## Indications

Edema due to: CHF, Hepatic or renal disease. Hypertension.

## Action

Inhibits the reabsorption of sodium and chloride from the loop of Henle and distal renal tubule. Increases renal excretion of water, sodium, chloride, magnesium, hydrogen, and calcium. Effectiveness persists in impaired renal function.
**Therapeutic Effects:** Diuresis and subsequent mobilization of excess fluid (edema, pleural effusions). Decreased blood pressure.

## Pharmacokinetics

**Absorption:** 80% absorbed after oral administration.

**Distribution:** Widely distributed.
**Protein Binding:** ≥99%.
**Metabolism and Excretion:** 80% metabolized by liver, 20% excreted in urine.
**Half-life:** 3.5 hr.

TIME/ACTION PROFILE (diuretic effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 60 min | 60–120 min | 6–8 hr |
| IV | within 10 min | within 60 min | 6–8 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity with thiazides and sulfonamides may occur; Hepatic coma or anuria.
**Use Cautiously in:** Severe liver disease (may precipitate hepatic coma; concurrent use with potassium-sparing diuretics may be necessary); Electrolyte depletion; Diabetes mellitus; Increasing azotemia; OB, Lactation: Pedi: Safety not established; Geri: May have ↑ risk of side effects, especially hypotension and electrolyte imbalance, at usual doses.

## Adverse Reactions/Side Effects

**CNS:** dizziness, headache, nervousness. **EENT:** hearing loss, tinnitus. **CV:** hypotension. **GI:** constipation, diarrhea, dry mouth, dyspepsia, nausea, vomiting. **GU:** excessive urination. **Derm:** photosensitivity, rash. **Endo:** hyperglycemia, hyperuricemia. **F and E:** dehydration, hypocalcemia, hypochloremia, hypokalemia, hypomagnesemia, hyponatremia, hypovolemia, metabolic alkalosis. **MS:** arthralgia, muscle cramps, myalgia. **Misc:** ↑ BUN.

## Interactions

**Drug-Drug:** ↑ hypotension with **antihypertensives**, **nitrates**, or acute ingestion of **alcohol**. ↑ risk of hypokalemia with other **diuretics**, **amphotericin B**, **stimulant laxatives**, and **corticosteroids**. Hypokalemia may ↑ risk of **digoxin** toxicity and ↑ risk of arrhythmia in patients taking drugs that prolong the QT interval. May ↑ risk of **lithium** toxicity. ↑ risk of ototoxicity with **aminoglycosides**. **NSAIDS** may ↓ effects. ↑ risk of **salicylate** toxicity (with use of high-dose **salicylate** therapy). **Cholestyramine** may ↓ absorption.

## Route/Dosage

### Congestive Heart Failure

**PO, IV (Adults):** 10–20 mg once daily; dose may be doubled until desired effect is obtained (maximum daily dose = 200 mg).

### Chronic Renal Failure

**PO, IV (Adults):** 20 mg once daily; dose may be doubled until desired effect is obtained (maximum daily dose = 200 mg).

### Hepatic Cirrhosis

**PO, IV (Adults):** 5–10 mg once daily (with aldosterone antagonist or potassium-sparing diuretic); dose may be doubled until desired effect is obtained (maximum daily dose = 40 mg).

### Hypertension

**PO, IV (Adults):** 2.5–5 mg once daily, may be ↑ to 10 mg once daily after 4–6 wk (if still not effective, add another agent).

## Availability (generic available)

**Tablets:** 5 mg, 10 mg, 20 mg, 100 mg. **Cost:** *Generic*—5 mg $50.00/90, 10 mg $50.97/90, 20 mg $59.97/90, 100 mg $213.98/90. **Solution for injection:** 10 mg/mL.

# NURSING IMPLICATIONS

## Assessment

- Assess fluid status during therapy. Monitor daily weight, intake and output ratios, amount and location of edema, lung sounds, skin turgor, and mucous membranes. Notify physician or other health care provider if thirst, dry mouth, lethargy, weakness, hypotension, or oliguria occurs.
- Monitor blood pressure and pulse before and during administration. Monitor frequency of prescription refills to determine adherence in patients treated for hypertension.
- Assess patients receiving digoxin for anorexia, nausea, vomiting, muscle cramps, paresthesia, and confusion. Patients taking digoxin are at increased risk of digoxin toxicity due to potassium-depleting effect of the diuretic. Potassium supplements or potassium-sparing diuretics may be used concurrently to prevent hypokalemia.
- Assess patient for tinnitus and hearing loss. Audiometry is recommended for patients receiving prolonged high-dose IV therapy. Hearing loss is most common following rapid or high-dose IV administration in patients with decreased renal function or those taking other ototoxic drugs.
- Assess for allergy to sulfonamides.
- Geri: Diuretic use is associated with increased risk for falls in older adults. Assess falls risk and implement fall prevention strategies.

T

- ***Lab Test Considerations:*** Monitor electrolytes, renal and hepatic function, serum glucose, and uric acid levels before and periodically during therapy. May cause ↓ serum sodium, potassium, calcium, and magnesium concentrations. May also cause ↑ BUN, serum glucose, creatinine, and uric acid levels.

### Potential Nursing Diagnoses
Excess fluid volume (Indications)
Risk for deficient fluid volume (Side Effects)

### Implementation
- Administer medication in the morning to prevent disruption of sleep cycle.
- IV is preferred over IM for parenteral administration.
- **PO:** May be taken with food or milk to minimize gastric irritation.

**IV Administration**
- **Direct IV:** ***Diluent:*** Administer undiluted. ***Concentration:*** 10 mg/mL. ***Rate:*** Administer slowly over 2 min.
- May also be administered as a continuous infusion.
- **Y-Site Compatibility:** milrinone, nesiritide.

### Patient/Family Teaching
- Instruct patient to take torsemide as directed. Take missed doses as soon as possible; do not double doses.
- Caution patient to change positions slowly to minimize orthostatic hypotension. Caution patient that the use of alcohol, exercise during hot weather, or standing for long periods during therapy may enhance orthostatic hypotension.
- Instruct patient to consult health care professional regarding a diet high in potassium (see Appendix M).
- Advise patient to contact health care professional if they gain more than 2–3 lb/day.
- Advise patient to consult health care professional before taking OTC medication or herbal products concurrently with this therapy.
- Instruct patient to notify health care professional of medication regimen prior to treatment or surgery.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Advise patient to contact health care professional immediately if muscle weakness, cramps, nausea, dizziness, numbness, or tingling of extremities occurs.
- Advise diabetic patients to monitor blood glucose closely; may cause increased blood glucose levels.
- Emphasize the importance of routine follow-up examinations.
- **Hypertension:** Advise patients on antihypertensive regimen to continue taking medication even if feeling better. Torsemide controls but does not cure hypertension.
- Reinforce the need to continue additional therapies for hypertension (weight loss, exercise, restricted sodium intake, stress reduction, regular exercise, moderation of alcohol consumption, cessation of smoking).

### Evaluation/Desired Outcomes
- Decrease in edema.
- Decrease in abdominal girth and weight.
- Increase in urinary output.
- Decrease in blood pressure.

## tramadol (**tra**-ma-dol)
Ralivia, Ryzolt, Ultram, Ultram ER

***Classification***
Therapeutic: analgesics (centrally acting)

**Pregnancy Category C**

### Indications
Moderate to moderately severe pain (extended-release formulations indicated for patients who require around-the-clock pain management).

### Action
Binds to mu-opioid receptors. Inhibits reuptake of serotonin and norepinephrine in the CNS.
**Therapeutic Effects:** Decreased pain.

### Pharmacokinetics
**Absorption:** *Immediate-release*—75% absorbed after oral administration; *Extended-release (Ultram)*—85–90% (compared with immediate-release); *Extended-release (Ryzolt)*—95% (compared with immediate-release).
**Distribution:** Crosses the placenta; enters breast milk.
**Metabolism and Excretion:** Mostly metabolized by the liver; one metabolite has analgesic activity; 30% is excreted unchanged in urine.
**Half-life:** *Tramadol*—6–8 hr, *ER*—7.9 hr; *active metabolite*—7–9 hr; both are ↑ in renal or hepatic impairment.

TIME/ACTION PROFILE (analgesia)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1 hr | 2–3 hr | 4–6 hr |
| ER | | 12 hr | 24 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Cross-sensitivity with opioids may occur; Patients who are

acutely intoxicated with alcohol, sedatives/hypnotics, centrally acting analgesics, opioid analgesics, or psychotropic agents; Patients who are physically dependent on opioid analgesics (may precipitate withdrawal); *Ryzolt only*—Acute or severe bronchial asthma or hypercapnia in unmonitored settings or in absence of resuscitative equipment; OB: Lactation: Pregnancy or lactation; *ER only*—CCr <30 mL/min or hepatic impairment.

**Use Cautiously in:** Geri: *Immediate-release*—Not to exceed 300 mg/day in patients >75 yr; *ER*—Use with extreme caution in patients >75 yr; Patients with a history of epilepsy or risk factors for seizures; Renal impairment (↑ dosing interval recommended if CCr <30 mL/min); Hepatic impairment (↑ dosing interval recommended in patients with cirrhosis); Patients receiving MAO inhibitors or CNS depressants; Patients who are suicidal; ↑ intracranial pressure or head trauma; Patients with a history of opioid dependence or who have recently received large doses of opioids; Pedi: Children <16 yr (safety not established).

## Adverse Reactions/Side Effects

**CNS:** SEIZURES, dizziness, headache, somnolence, anxiety, CNS stimulation, confusion, coordination disturbance, euphoria, malaise, nervousness, sleep disorder, weakness. **EENT:** visual disturbances. **CV:** vasodilation. **GI:** constipation, nausea, abdominal pain, anorexia, diarrhea, dry mouth, dyspepsia, flatulence, vomiting. **GU:** menopausal symptoms, urinary retention/frequency. **Derm:** pruritus, sweating. **Neuro:** hypertonia. **Misc:** physical dependence, psychological dependence, tolerance.

## Interactions

**Drug-Drug:** ↑ risk of CNS depression when used concurrently with other **CNS depressants**, including **alcohol**, **antihistamines**, **sedative/hypnotics**, **opioid analgesics**, **anesthetics**, or **psychotropic agents**. ↑ risk of seizures with high doses of **penicillins**, **cephalosporins**, **phenothiazines**, **opioid analgesics**, or **antidepressants**. **Carbamazepine** ↑ metabolism and ↓ effectiveness of tramadol (increased doses may be required). Use cautiously in patients who are receiving **MAO inhibitors** (↑ risk of adverse reactions). **Quinidine**, **fluoxetine**, **paroxetine**, **amitriptyline**, **ketoconazole**, and **erythromycin** may ↑ levels. ↑ risk of serotonin syndrome when used with **SSRI and SNRI antidepressants**, **TCAs**, **MAO inhibitors** and **5HT$_1$ agonists**.

**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, or **chamomile** can ↑ CNS depression. ↑ risk of serotonin syndrome when used with **St. Johns' wort**.

## Route/Dosage

### Immediate-release

**PO (Adults ≥18 yr):** *Rapid titration*—50–100 mg q 4–6 hr (not to exceed 400 mg/day or 300 mg in patients >75 yr). *Gradual titration*—25 mg/day initially, ↑ by 25 mg/day q 3 days to reach dose of 25 mg 4 times daily, then ↑ by 50 mg/day q 3 days to reach dose of 50 mg 4 times daily; may then use 50–100 mg q 4–6 hr (maximum dose = 400 mg/day).

### Renal Impairment

**PO (Adults):** *CCr <30 mL/min*—increase dosing interval to q 12 hr (not to exceed 200 mg/day).

### Hepatic Impairment

**PO (Adults):** 50 mg q 12 hr.

### Extended-release

**PO (Adults):** *Ultram ER (not currently receiving immediate-release)*—100 mg once daily initially, may then titrate q 5 days up to 300 mg/day; *Ultram ER (currently receiving immediate-release)*—calculate 24-hr total dose of immediate-release product and give same dose (rounded down to next lowest 100-mg increment) of ER once daily (maximum dose = 300 mg/day); *Ryzolt (not currently receiving immediate-release)*—100 mg once daily initially, may then titrate by 100 mg/day q 2–3 days up to 300 mg/day; *Ryzolt (currently receiving immediate-release)*—Calculate 24-hr total dose of immediate-release product and give same dose (rounded down to next lowest 100-mg increment) of Ryzolt once daily (maximum dose = 300 mg/day).

## Availability (generic available)

**Tablets:** 50 mg. **Cost:** *Generic*—$16.99/30$85.25/100. **Extended-release tablets:** 100 mg, 200 mg, 300 mg. **Cost:** 100 mg $89.99/30, 200 mg $158.98/30, 300 mg $195.99/30. ***In combination with:*** acetaminophen (Ultracet). See Appendix B.

## NURSING IMPLICATIONS

### Assessment

- Assess type, location, and intensity of pain before and 2–3 hr (peak) after administration.
- Assess blood pressure and respiratory rate before and periodically during administration. Respiratory depression has not occurred with recommended doses.
- Assess bowel function routinely. Prevention of constipation should be instituted with increased intake of fluids and bulk and with laxatives to minimize constipating effects.
- Assess previous analgesic history. Tramadol is not recommended for patients dependent on opioids or who have previously received opioids for more than 1 wk; may cause opioid withdrawal symptoms.
- Prolonged use may lead to physical and psychological dependence and tolerance, although these may be milder than with opioids. This should not prevent patient from receiving adequate analgesia. Most patients who receive tramadol for pain do not develop psychological dependence. If tolerance develops, changing to an opioid agonist may be required to relieve pain.
- Monitor patient for seizures. May occur within recommended dose range. Risk is increased with higher doses and in patients taking antidepressants (SSRIs, SNRIs, tricyclics, or MAO inhibitors), opioid analgesics, or other drugs that decrease the seizure threshold. Also monitor for serotonin syndrome (mental-status changes (e.g., agitation, hallucinations, coma), autonomic instability (e.g., tachycardia, labile blood pressure, hyperthermia), neuromuscular aberrations (e.g., hyperreflexia, incoordination) and/or gastrointestinal symptoms (e.g., nausea, vomiting, diarrhea) in patients taking these drugs concurrently.
- ***Lab Test Considerations:*** May cause ↑ serum creatinine, elevated liver enzymes, decreased hemoglobin, and proteinuria.
- ***Toxicity and Overdose:*** Overdose may cause respiratory depression and seizures. Naloxone (Narcan) may reverse some, but not all, of the symptoms of overdose. Treatment should be symptomatic and supportive. Maintain adequate respiratory exchange. Hemodialysis is not helpful because it removes only a small portion of administered dose. Seizures may be managed with barbiturates or benzodiazepines; naloxone increases risk of seizures.

### Potential Nursing Diagnoses

Acute pain (Indications)
Risk for injury (Side Effects)

### Implementation

- Do not confuse tramadol with Toradol (ketorolac).
- Tramadol is considered to provide more analgesia than codeine 60 mg but less than combined aspirin 650 mg/codeine 60 mg for acute postoperative pain.
- For chronic pain, daily doses of 250 mg of tramadol provide pain relief similar to that of 5 doses/day of acetaminophen 300 mg/codeine 30 mg, 5 doses/day of aspirin 325 mg/codeine 30 mg, or 2–3 doses/day of acetaminophen 500 mg/oxycodone 5 mg.
- Explain therapeutic value of medication before administration to enhance the analgesic effect.
- Regularly administered doses may be more effective than prn administration. Analgesic is more effective if given before pain becomes severe.
- Tramadol should be discontinued gradually after long-term use to prevent withdrawal symptoms.
- **PO:** Tramadol may be administered without regard to meals. Extended-release tablets should be swallowed whole; do not crush, break, or chew.

### Patient/Family Teaching

- Instruct patient on how and when to ask for pain medication.
- May cause dizziness and drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants with this medication. Advise patient to notify health care professional before taking other RX, OTC, or herbal products concurrently.
- Advise female patients to notify health care professional if pregnancy is planned or suspected, or if breastfeeding.
- Advise patient to notify health care professional if seizures or if symptoms of serotonin syndrome occur.
- Encourage patient to turn, cough, and breathe deeply every 2 hr to prevent atelectasis.

### Evaluation/Desired Outcomes

- Decrease in severity of pain without a significant alteration in level of consciousness or respiratory status.

**trandolapril, See ANGIOTENSIN-CONVERTING ENZYME (ACE) INHIBITORS.**

**tranylcypromine, See MONOAMINE OXIDASE (MAO) INHIBITORS.**

HIGH ALERT

## trastuzumab

(traz-**too**-zoo-mab)

Herceptin

***Classification***

Therapeutic: antineoplastics

Pharmacologic: monoclonal antibodies

**Pregnancy Category D**

### Indications

First-line treatment of metastatic breast cancer (with paclitaxel) that displays overexpression of the human epidermal growth factor receptor 2 (HER2) protein. Treatment of metastatic breast cancer (as monotherapy) that displays overexpression of the human epidermal growth factor receptor 2 (HER2) protein in patients who have already received other chemotherapy regimens. Adjuvant treatment of HER2 overexpressing node positive or node negative breast cancer (to be used with alone after multi-modality anthracycline-based therapy or as part of one of the following regimens: doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel; with docetaxel and carboplatin).

### Action

A monoclonal antibody that binds to HER2 sites in breast cancer tissue and inhibits proliferation of cells that overexpress HER2 protein. **Therapeutic Effects:** Regression of breast cancer and metastases.

### Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Binds to HER2 proteins.
**Metabolism and Excretion:** Unknown.
**Half-life:** 10-mg dose—1.7 days; 500-mg dose—12 days.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** None known.
**Use Cautiously in:** Pre-existing pulmonary conditions; Hypersensitivity to trastuzumab, Chinese hamster ovary cell proteins, or other components of the product; Hypersensitivity to benzyl alcohol (use sterile water for injection instead of bacteriostatic water, which accompanies the vial); Geri: May have ↑ risk of cardiac dysfunction; OB, Lactation: Use during pregnancy only if clearly needed; not recommended for use during lactation; Pedi: Safety not established.
**Exercise Extreme Caution in:** Patients with pre-existing cardiac dysfunction.

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache, insomnia, weakness, depression, . **Resp:** INTERSTITIAL PNEUMONITIS, PULMONARY EDEMA, PULMONARY FIBROSIS, dyspnea, increased cough, pharyngitis, rhinitis, sinusitis. **CV:** ARRHYTHMIAS, HF, hypertension, tachycardia. **GI:** abdominal pain, anorexia, diarrhea, nausea, vomiting. **Derm:** rash, acne, herpes simplex. **F and E:** edema. **Hemat:** anemia, leukopenia. **MS:** back pain, arthralgia, bone pain. **Neuro:** neuropathy, paresthesia, peripheral neuritis. **Misc:** HYPERSENSITIVITY REACTIONS, chills, fever, infection, pain, allergic reactions, flu-like syndrome.

### Interactions

**Drug-Drug:** Concurrent **anthracycline** (**daunorubicin**, **doxorubicin**, or **idarubicin**) therapy may ↑ risk of cardiotoxicity. Blood levels are ↑ by concurrent **paclitaxel**.

### Route/Dosage

#### Adjuvant Treatment of Breast Cancer

**IV (Adults):** *During and following paclitaxel, docetaxel, or docetaxel/carboplatin*—4 mg/kg initially, then 2 mg/kg weekly during chemotherapy for the first 12 wk (paclitaxel or docetaxel) or 18 wk (docetaxel/carboplatin); one wk after the last weekly dose, give 6 mg/kg q 3 wk; *As single agent within 3 wk following completion of multi-modality, anthracycline-based chemotherapy regimens*—8 mg/kg initially, then 6 mg/kg q 3 wk.

T

### Metastatic Breast Cancer

**IV (Adults):** 4 mg/kg initially, then 2 mg/kg weekly until disease progresses.

### Availability

**Lyophilized powder for injection:** 440 mg/vial with 20 mL bacteriostatic water for injection (contains benzyl alcohol).

## NURSING IMPLICATIONS

### Assessment

- Assess for infusion-related symptoms (chills, fever, nausea, vomiting, pain [in some cases at tumor sites], headache, dizziness, dyspnea, hypotension, rash, and asthenia) following initial infusion. Severe reactions (bronchospasm, anaphylaxis, angioedema, hypoxia, severe hypotension) may occur during or immediately following the initial infusion. May be treated with epinephrine, corticosteroids, diphenhydramine, bronchodilators, and oxygen. Discontinue if dyspnea or severe hypotension occurs and discontinue permanently if severe reaction occurs.
- Assess for signs and symptoms of HF (dyspnea, increased cough, paroxysmal nocturnal dyspnea, peripheral edema, $S_3$ gallop, reduced ejection fraction) prior to and frequently during therapy. Baseline cardiac assessment of history, physical exam, and left ventricular ejection fraction (LVEF) with ECG or multiple gated acquisition (MUGA) scan. Monitor LVEF every 3 mo and at completion of therapy, every 6 mo for 2 yr. Withhold trastuzumab for ≥16% absolute decrease in LVEF from pre-treatment values or an LVEF value below institutional limits of normal and ≥10% absolute decrease in LVEF from pretreatment values. Repeat LVEF measures every 4 wk if dose is withheld. CHF associated with trastuzumab may be severe, resulting in cardiac failure, death, and stroke. Trastuzumab should be discontinued upon the development of significant CHF.
- Monitor patient for signs of pulmonary hypersensitivity reactions (dyspnea, pulmonary infiltrates, pleural effusion, noncardiogenic pulmonary edema, pulmonary insufficiency, hypoxia, acute respiratory distress syndrome). Patients with symptomatic pulmonary disease or extensive lung tumor involvement are at increased risk. Infusion should be discontinued if severe symptoms occur.
- ***Lab Test Considerations:*** HER2 protein overexpression is used to determine whether treatment with trastuzumab is indicated. HER2 protein overexpression is detected by HercepTest™ (IHC assay) and PathVysion™ (FISH assay).
- May cause anemia and leukopenia.

### Potential Nursing Diagnoses

Diarrhea (Adverse Reactions)
Risk for infection (Adverse Reactions)

### Implementation

- ***High Alert:*** Fatalities have occurred with chemotherapeutic agents. Before administering, clarify all ambiguous orders; double check single, daily, and course-of-therapy dose limits; have second practitioner independently double check original order, dose calculations and infusion pump settings.
- May be administered in the outpatient setting.

#### IV Administration

- **Intermittent Infusion:** Reconstitute each vial with 20 mL of bacteriostatic water for injection, directing the stream of diluent into lyophilized cake of trastuzumab. ***Concentration:*** 21 mg/mL. Swirl the vial gently; do not shake. May foam slightly; allow the vial to stand undisturbed for 5 min. Solution should be clear to slightly opalescent and colorless to pale yellow, without particulate matter. Label vial immediately in the area marked "Do not use after" with the date 28 days from the date of reconstitution. Stable for 24 hr at room temperature or 28 days if refrigerated. If patient is allergic to benzyl alcohol, use sterile water for injection for reconstitution. Use immediately and discard any unused portion. ***Diluent:*** Calculate to volume required for the desired dose, withdraw, and add it to an infusion containing 250 mL of 0.9% NaCl. Invert bag gently to mix. ***Rate:*** Infuse the 4 mg/kg loading dose over 90 min and the weekly 2 mg/kg dose over 30 min or 6 mg/kg over 90 min every 3 wk if the loading dose was well tolerated. Do not administer as an IV push or bolus.
- **Y-Site Compatibility:** acyclovir, amifostine, aminophylline, ampicillin, ampicillin/sulbactam, bleomycin, bumetanide, buprenorphine, busulfan, butorphanol, calcium gluconate, carboplatin, carmustine, cefazolin, ceftazidime, ceftizoxime, ceftriaxone, cefuroxime, cimetidine, ciprofloxacin, cisplatin, cyclophosphamide, cytarabine, dactinomycin, daunorubicin, dexamethasone, digoxin, diphenhydramine, dobutamine, docetaxel, dopamine, doxorubi-

cin, doxorubicin liposome, doxycycline, droperidol, enalaprilat, etoposide phosphate, famotidine, fentnayl, filgrastim, floxuridine, fluconazole, fluorouracil, ganciclovir, gemcitabine, gentamicin, gransietron, haloperidol, heparin, hydrocortisone, hydromorphone, ifosfamide, imipenem/cilastatin, leucovorin, lorazepam, magnesium sulfate, mannitol, meperidine, mesna, methotrexate, methylprednisolone, metoclopramide, metronidazole, mitomycin, mitoxantrone, paclitaxel, pentamidine, plicamycin, potassium chloride, prochlorperazine, promethazine, ranitidine, remifentanil, sargramostim, sodium bicarbonate, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tobramycin, trimethobenzamide, trimethoprim/sulfamethoxazole, vancomycin, vinblastine, vincristine, vinorelbine, zidovudine.

- **Y-Site Incompatibility:** aldesleukin, amikacin, amphotericin B colloidal, aztreonam, cefoperazone, cefotaxime, cefotetan, cefoxitin, chlorpromazine, clindamycin, cyclosporine, fludarabine, furosemide, idarubicin, irinotecan, levofloxacin, levorphanol, morphine, nalbuphine, ondansetron, piperacillin/tazobactam, streptozocin, topotecan.
- **Additive Incompatibility:** Do not dilute trastuzumab with or add to solutions containing dextrose. Do not mix or dilute with other drugs.

## Patient/Family Teaching

- Instruct patient to notify health care professional promptly if new onset or worsening shortness of breath, cough, swelling of the ankles/legs, swelling of the face, palpitations, weight gain of more than 5 pounds in 24 hours, dizziness or loss of consciousness occur. Caution patient to avoid crowds and persons with known infections.
- May cause teratogenic effects. Caution patient to use contraception during and for at least 6 mo following completion of therapy.
- Advise patient not to receive any vaccinations without advice of health care professional.

## Evaluation/Desired Outcomes

- Regression of breast cancer and metastases.

# trazodone (traz-oh-done)

***Classification***
Therapeutic: antidepressants

**Pregnancy Category C**

## Indications

Major depression. **Unlabeled Use:** Insomnia, chronic pain syndromes, including diabetic neuropathy, and anxiety.

## Action

Alters the effects of serotonin in the CNS. **Therapeutic Effects:** Antidepressant action, which may develop only over several weeks.

## Pharmacokinetics

**Absorption:** Well absorbed after oral administration.
**Distribution:** Widely distributed.
**Protein Binding:** 89–95%.
**Metabolism and Excretion:** Extensively metabolized by the liver (CYP3A4 enzyme system); minimal excretion of unchanged drug by the kidneys.
**Half-life:** 5–9 hr.

TIME/ACTION PROFILE (antidepressant effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1–2 wk | 2–4 wk | wk |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Recovery period after MI; Concurrent electroconvulsive therapy.
**Use Cautiously in:** Cardiovascular disease; Suicidal behavior; May ↑ risk of suicide attempt/ideation especially during early treatment or dose adjustment; Severe hepatic or renal disease (dose reduction recommended); Lactation: Discontinue drug or bottle feed; Pedi: Suicide risk may be greater in children and adolescents; safe use not established; Geri: Initial dose reduction recommended.

## Adverse Reactions/Side Effects

**CNS:** SUICIDAL THOUGHTS, drowsiness, confusion, dizziness, fatigue, hallucinations, headache, insomnia, nightmares, slurred speech, syncope, weakness. **EENT:** blurred vision, tinnitus. **CV:** hypotension, arrhythmias, chest pain, hypertension, palpitations, QT interval prolongation, tachycar-

dia. **GI:** dry mouth, altered taste, constipation, diarrhea, excess salivation, flatulence, nausea, vomiting. **GU:** hematuria, erectile dysfunction, priapism, urinary frequency. **Derm:** rashes. **Hemat:** anemia, leukopenia. **MS:** myalgia. **Neuro:** tremor.

### Interactions

**Drug-Drug:** May ↑ **digoxin** or **phenytoin** serum levels. ↑ CNS depression with other **CNS depressants**, including **alcohol**, **opioid analgesics**, and **sedative/hypnotics**. ↑ hypotension with **antihypertensives**, acute ingestion of **alcohol**, or **nitrates**. Concurrent use with **fluoxetine** ↑ levels and risk of toxicity from trazodone. **Drugs that inhibit the CYP3A4 enzyme system**, including **ritonavirindinavir** and **ketoconazole** ↑ levels and the risk of toxicity. **Drugs that induce the CYP3A4 enzyme system**, including **carbamazepine** ↓ levels and may decrease effectiveness. Do note use within 14 days of **MAOI** therapy. May ↑ prothrombin time (PT) with **warfarin**.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, or **chamomile** can ↑ CNS depression. ↑ risk of serotinergic side effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage

**PO (Adults):** *Depression*—150 mg/day in 3 divided doses; ↑ by 50 mg/day q 3–4 days until desired response (not to exceed 400 mg/day in outpatients or 600 mg/day in hospitalized patients). *Insomnia*—25–100 mg at bedtime.
**PO (Geriatric Patients):** 75 mg/day in divided doses initially; may be ↑ q 3–4 days.

### Availability (generic available)

**Tablets:** 50 mg, 100 mg, 150 mg, 300 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure and pulse rate before and during initial therapy. Monitor ECGs in patients with pre-existing cardiac disease before and periodically during therapy to detect arrhythmias.
- Assess for possible sexual dysfunction.
- **Depression:** Assess mental status (orientation, mood, and behavior) frequently.
- Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient. Risk may be increased in children, adolescents, and adults ≤24 yr. After starting therapy, children, adolescents, and young adults should be seen by health care professional at least weekly for 4 wk, every 3 wk for next 4 wk, and on advice of health care professional thereafter.
- **Pain:** Assess location, duration, intensity, and characteristics of pain before and periodically during therapy. Use pain scale to assess effectiveness of medicine.
- ***Lab Test Considerations:*** Assess CBC and renal and hepatic function before and periodically during therapy. Slight, clinically insignificant ↓ in leukocyte and neutrophil counts may occur.

### Potential Nursing Diagnoses

Ineffective coping (Indications)
Sexual dysfunction (Side Effects)

### Implementation

- **PO:** Administer with or immediately after meals to minimize side effects (nausea, dizziness) and allow maximum absorption of trazodone. A larger portion of the total daily dose may be given at bedtime to decrease daytime drowsiness and dizziness.

### Patient/Family Teaching

- Instruct patient to take medication exactly as directed. If a dose is missed, take as soon as remembered. Do not take if within 4 hr of next scheduled dose; do not double doses. Consult health care professional before discontinuing medication; gradual dose reduction is necessary to prevent aggravation of condition.
- May cause drowsiness and blurred vision. Caution patient to avoid driving and other activities requiring alertness until response to drug is known.
- Caution patient to change positions slowly to minimize orthostatic hypotension.
- Advise patient to avoid concurrent use of alcohol or other CNS depressant drugs.
- Advise patient, family, and caregivers to look for suicidality, especially during early therapy or dose changes. Notify health care professional immediately if thoughts about suicide or dying, attempts to commit suicide, new or worse depression or anxiety, agitation or restlessness, panic attacks, insomnia, new or worse irritability, aggressiveness, acting on dangerous impulses, mania, or other changes in mood or behavior occur.
- Inform patient that frequent rinses, good oral hygiene, and sugarless candy or gum may diminish dry mouth. Health care professional should be notified if this persists >2 wk. An in-

crease in fluid intake, fiber, and exercise may prevent constipation.
- Advise patient to notify health care professional of medication regimen before treatment or surgery.
- Instruct patient to notify health care professional if priapism, irregular heartbeat, fainting, confusion, skin rash, or tremors occur or if dry mouth, nausea and vomiting, dizziness, headache, muscle aches, constipation, or diarrhea becomes pronounced.
- Emphasize the importance of follow-up exams to evaluate progress.

### Evaluation/Desired Outcomes
- Resolution of depression.
- Increased sense of well-being.
- Renewed interest in surroundings.
- Increased appetite.
- Improved energy level.
- Improved sleep.
- Decrease in severity of pain in chronic pain syndromes. Therapeutic effects are usually seen within 1 wk, although 4 wk may be required to obtain significant therapeutic results.

**triamcinolone, See CORTICOSTEROIDS (NASAL).**

**triamcinolone, See CORTICOSTEROIDS (SYSTEMIC).**

**triamcinolone, See CORTICOSTEROIDS (TOPICAL/LOCAL).**

**triamterene, See DIURETICS (POTASSIUM-SPARING).**

## triazolam (trye-az-oh-lam)
Apo-Triazo, Gen-Triazolam, Halcion, Novo-Triolam, Nu-Triazo

***Classification***
Therapeutic: sedative/hypnotics
Pharmacologic: benzodiazepines

**Schedule IV**

**Pregnancy Category X**

### Indications
Short-term management of insomnia.

### Action
Acts at many levels in the CNS, producing generalized depression. Effects may be mediated by GABA, an inhibitory neurotransmitter. **Therapeutic Effects:** Relief of insomnia.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Widely distributed, crosses blood-brain barrier. Probably crosses the placenta and enters breast milk.
**Protein Binding:** 89%.
**Metabolism and Excretion:** Metabolized by the liver.
**Half-life:** 1.6–5.4 hr.

TIME/ACTION PROFILE (sedation)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 15–30 min | 6–8 hr | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Cross-sensitivity with other benzodiazepines may occur; Pre-existing CNS depression; Uncontrolled severe pain; OB: Lactation: Pedi: Safety not established.
**Use Cautiously in:** Pre-existing hepatic dysfunction (dose ↓ recommended); History of suicide attempt or drug addiction; Geri: Appears on Beers list and is associated with ↑ risk of falls (↓ dose required); ↑ sensitivity to benzodiazepines.
.

### Adverse Reactions/Side Effects
**CNS:** abnormal thinking, behavior changes, dizziness, excessive sedation, hangover, headache, anterograde amnesia, confusion, hallucinations, sleep—driving, lethargy, mental depression, paradoxical excitation. **EENT:** blurred vision. **GI:** constipation, diarrhea, nausea, vomiting. **Derm:** rashes. **Misc:** physical dependence, psychological dependence, tolerance.

### Interactions
**Drug-Drug: Cimetidine, erythromycin, fluconazole, itraconazole, ketoconazole, indinavir, nelfinavir, ritonavir, or saquinavir** may ↓ metabolism and enhance actions of triazolam; combination should be avoided. Additive CNS depression with **alcohol**, **antidepressants**, **antihistamines**, and **opioid analgesics**. May ↓ effectiveness of **levodopa**. May ↑ toxicity of

**zidovudine**. **Isoniazid** may ↓ excretion and ↑ effects of triazolam. Sedative effects may be ↓ by **theophylline**.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, **chamomile**, or **hops** can ↑ CNS depression.
**Drug-Food: Grapefruit juice** significantly ↑ blood levels and effects.

### Route/Dosage

**PO (Adults):** 0.125–0.25 mg (up to 0.5 mg) at bedtime.
**PO (Geriatric Patients or Debilitated Patients):** 0.125 mg at bedtime initially; may be ↑ as needed.

### Availability (generic available)

**Tablets:** 0.125 mg, 0.25 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess sleep patterns prior to and periodically throughout therapy.
- Geri: Assess CNS effects and risk of falls. Institute falls prevention strategies.
- Prolonged high-dose therapy may lead to psychological or physical dependence. Restrict the amount of drug available to patient, especially if patient is depressed, suicidal, or has a history of addiction.

### Potential Nursing Diagnoses

Insomnia (Indications)
Risk for injury (Side Effects)

### Implementation

- Supervise ambulation and transfer of patients following administration. Remove cigarettes. Side rails should be raised and call bell within reach at all times.
- **PO:** Administer with food if GI irritation becomes a problem.

### Patient/Family Teaching

- Instruct patient to take triazolam exactly as directed. Discuss the importance of preparing environment for sleep (dark room, quiet, avoidance of nicotine and caffeine). If less effective after a few weeks, consult health care professional; do not increase dose.
- May cause daytime drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known. Geri: Instruct patient and family how to reduce falls risk at home.
- Advise patient to avoid the use of alcohol and other CNS depressants and to consult health care professional prior to using OTC preparations that contain antihistamines or alcohol.
- Advise patient to inform health care professional if pregnancy is planned or suspected or if confusion, depression, or persistent headaches occur. Instruct family or caregiver to notify health care professional if personality changes occur.
- Instruct patient to notify health care professional if an increase in daytime anxiety occurs. May occur after as few as 10 days of therapy. May require discontinuation of triazolam.
- Emphasize the importance of follow-up appointments to monitor progress.

### Evaluation/Desired Outcomes

- Improvement in sleep patterns, which may not be noticeable until the 3rd day of therapy.

**tricalcium phosphate (39% Ca or 19.5 mEq/g), See CALCIUM SALTS.**

**trikates (potassium acetate/potassium bicarbonate/potassium citrate), See POTASSIUM SUPPLEMENTS.**

## trimethoprim/sulfamethoxazole

(trye-**meth**-oh-prim/sul-fa-meth-**ox**-a-zole)

Apo-Sulfatrim, Apo-Sulfatrim DS, Bactrim, Bactrim DS, Novo-Trimel, Novo-Trimel DS, Nu-Cotrimox, Nu-Cotrimox DS, Roubac, Septra, Septra DS, SMZ/TMP, Sulfatrim, TMP/SMX, TMP/SMZ

***Classification***

Therapeutic: anti-infectives, antiprotozoals
Pharmacologic: folate antagonists, sulfonamides

**Pregnancy Category C**

### Indications

Treatment of: Bronchitis, *Shigella* enteritis, Otitis media, *Pneumocystis jirovecii* pneumonia (PCP), Urinary tract infections, Traveler's diarrhea. Prevention of PCP in HIV-positive patients.
**Unlabeled Use:** Biliary tract infections, osteomyelitis, burn and wound infections, chlamydial infections, endocarditis, gonorrhea, intra-abdominal infections, nocardiosis, rheumatic fever prophylaxis, sinusitis, eradication of meningococcal carriers, prophylaxis of urinary tract infec-

tions, and an alternative agent in the treatment of chancroid. Prevention of bacterial infections in immunosuppressed patients.

## Action

Combination inhibits the metabolism of folic acid in bacteria at two different points. **Therapeutic Effects:** Bactericidal action against susceptible bacteria. **Spectrum:** Active against many strains of gram-positive aerobic pathogens including: *Streptococcus pneumoniae*, *Staphylococcus aureus*, Group A beta-hemolytic streptococci, *Nocardia*, *Enterococcus*. Has activity against many aerobic gram-negative pathogens, such as: *Acinetobacter*, *Enterobacter*, *Klebsiella pneumoniae*, *Escherichia coli*, *Proteus mirabilis*, *Shigella*, *Haemophilus influenzae*, including ampicillin-resistant strains. *P. jirovecii*. Not active against *Pseudomonas aeruginosa*.

## Pharmacokinetics

**Absorption:** Well absorbed from the GI tract.
**Distribution:** Widely distributed. Crosses the blood-brain barrier and placenta and enters breast milk.
**Metabolism and Excretion:** Some metabolism by the liver (20%); remainder excreted unchanged by the kidneys.
**Half-life:** *Trimethoprim*—6–11 hr; *sulfamethoxazole*—9–12 hr, both prolonged in renal failure.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 2–4 hr | 6–12 hr |
| IV | rapid | end of infusion | 6–12 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to sulfonamides or trimethoprim; Megaloblastic anemia secondary to folate deficiency; Severe renal impairment; OB, Lactation: Pedi: Pregnancy, lactation, or children <2 mo (can cause kernicterus in neonates).
**Use Cautiously in:** Impaired hepatic or renal function (dosage ↓ required if CCr <30 mL/min); HIV-positive patients (↑ incidence of adverse reactions).

## Adverse Reactions/Side Effects

**CNS:** fatigue, hallucinations, headache, insomnia, mental depression. **GI:** PSEUDOMEMBRANOUS COLITIS, HEPATIC NECROSIS, nausea, vomiting, diarrhea, stomatitis, hepatitis, cholestatic jaundice. **GU:** crystalluria. **Derm:** TOXIC EPIDERMAL NECROLYSIS, rashes, photosensitivity. **Hemat:** AGRANULOCYTOSIS, APLASTIC ANEMIA, hemolytic anemia, leukopenia, megaloblastic anemia, thrombocytopenia. **Local:** phlebitis at IV site. **Misc:** allergic reactions including ERYTHEMA MULTIFORME, STEVENS-JOHNSON SYNDROME, fever.

## Interactions

**Drug-Drug:** May ↑ half-life, ↓ clearance, and exaggerate folic acid deficiency caused by **phenytoin**. May ↑ effects of **sulfonylurea oral antidiabetics, phenytoin, digoxin, thiopental** and **warfarin**. May ↑ toxicity of **methotrexate**. ↑ risk of thrombocytopenia from **thiazide diuretics** (↑ in geriatric patients). ↓ efficacy of **cyclosporine (decreases serum concentrations)** and ↑ risk of nephrotoxicity.

## Route/Dosage

(TMP = trimethoprim; SMX = sulfamethoxazole). Dosing based on TMP content..

### Bacterial Infections

**PO, IV (Adults and Children >2 mo):** *Mild-moderate infections*—6–12 mg TMP/kg/day divided q 12 hr; *Serious infection/Pneumocystis*—15–20 mg TMP/kg /day/divided q 6–8 hr .
**PO (Adults):** *Urinary tract infection/chronic bronchitis*—1 double strength tablet (160 mg TMP/800 mg SMX) q 12 hr for 10–14 days.

### Urinary Tract Infection Prophylaxis

**PO, IV (Adults and Children >2 mo):** 2 mg TMP/kg/dose daily or 5 mg TMP/kg/dose twice weekly.

### *P. jirovecii* Pneumonia (Prevention)

**PO (Adults):** 1 double strength tablet (160 mg TMP/800 mg SMX) daily (may also be given 3 times weekly).
**PO (Children >1 mo):** 150 mg TMP/$m^2$/day divided q 12 hr on 3 consecutive days/wk (not to exceed 320 mg TMP/1600 mg SMX per day).

## Availability (generic available)

**Tablets:** 20 mg TMP/100 mg SMX, 80 mg TMP/400 mg SMX, 160 mg TMP/800 mg SMX.
**Cost:** *Generic*—80 mg TMP/400 mg SMX $11.99/30, 160 mg TMP/800 mg SMX $12.99/30.
**Oral suspension (cherry, grape flavors):** 40 mg TMP/200 mg SMX per 5 mL. **Cost:** *Generic*—$11.99/200 mL. **Solution for injection:** 16 mg TMP/80 mg SMX per mL in 5-, 10-, and 30-mL vials.

## NURSING IMPLICATIONS

### Assessment

- Assess for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and during therapy.
- Obtain specimens for culture and sensitivity before initiating therapy. First dose may be given before receiving results.
- Inspect IV site frequently. Phlebitis is common.
- Assess patient for allergy to sulfonamides.
- Monitor intake and output ratios. Fluid intake should be sufficient to maintain a urine output of at least 1200–1500 mL daily to prevent crystalluria and stone formation.
- ***Lab Test Considerations:*** Monitor CBC and urinalysis periodically during therapy.
- May produce ↑ serum bilirubin, creatinine, and alkaline phosphatase.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)
Noncompliance (Patient/Family Teaching)

### Implementation

- Do not confuse DS (double-strength) formulations with single-strength formulations.
- Do not administer medication IM.
- **PO:** Administer around the clock with a full glass of water. Use calibrated measuring device for liquid preparations.

#### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Dilute each 5–mL of trimethoprim/sulfamethoxazole with 125 mL of D5W (stable for 24 hr at room temperature). May also dilute each 5-mL of drug with 75 mL of D5W if fluid restriction is required (stable for 6 hr at room temperature). Do not refrigerate. ***Concentration:*** Should not exceed 1.06 mg/mL. ***Rate:*** Infuse over 60–90 min.
- **Y-Site Compatibility:** acyclovir, aldesleukin, allopurinol, amifostine, amphotericin B cholesteryl, anidulafungin, atracurium, aztreonam, bivalirudin, cefepime, cisplatin, cyclophosphamide, cytarabine, daptomycin, dexmedetomidine, diltiazem, docetaxel, doxacurium, doxorubicin liposome, eptifibatide, ertapenem, etoposide, etoposide phosphate, fenoldopam, filgrastim, fludarabine, fluorouracil, gemcitabine, granisetron, hetastarch, hydromorphone, ifosfamide, levofloxacin, linezolid, lorazepam, magnesium sulfate, melphalan, methotrexate, metronidazole, milrinone, mitoxantrone, nicardipine, octreotide, oxaliplatin, paclitaxel, palonosetron, pancuronium, pantoprazole, pemetrexed, perphenazine, piperacillin/tazobactam, remifentanil, sargramostim, sodium acetate, teniposide, thiotepa, tigecycline, tirofiban, trastuzumab, vecuronium, vincristine, voriconazole, zidovudine.
- **Y-Site Incompatibility:** alfentanil, amikacin, aminophylline, amphotericin B colloidal, ampicillin, ampicillin/sulbactam, ascorbic acid, atropine, azathioprine, benztropine, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, caspofungin, cefazolin, cefotaxime, cefoxitin, ceftazidime, ceftriaxone, chloramphenicol, chlorpromazine, cimetidine, clindamycin, codeine, cyanocobalamin, cyclosporine, dantrolene, dexamethasone, diazepam, diazoxide, digoxin, diphenhydramine, dobutamine, dopamine, doxorubicin, doxycycline, ephedrine, epinephrine, epirubicin, epoetin alfa, erythromycin, famotidine, fentanyl, fluconazole, folic acid, furosemide, ganciclovir, gentamicin, glycopyrrolate, haloperidol, heparin, hydralazine, hydrocortisone, hydroxyzine, idarubicin, imipenem/cilastatin, inamrinone, indomethacin, insulin, isoproterenol, ketorolac, lidocaine, mannitol, mechlorethamine, metaraminol, methoxamine, methyldopate, methylprednisolone, metoclopramide, metoprolol, metronidazole, midazolam, multivitamins, nafcillin, nalbuphine, naloxone, nitroglycerin, nitroprusside, norepinephrine, ondansetron, oxacillin, oxytocin, papaverine, penicillin G, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, phenytoin, phytonadione, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, quinupristin/dalfopristin, ranitidine, sodium bicarbonate, streptokinase, succinylcholine, sufentanil, thiamine, ticarcillin/clavulanate, tobramycin, tolazoline, trimetaphan, urokinase, vancomycin, verapamil, vinorelbine.

### Patient/Family Teaching

- Instruct patient to take medication around the clock and to finish drug completely as directed, even if feeling well. Take missed doses as soon as remembered unless almost time for next dose. Advise patient that sharing of this medication may be dangerous.
- Instruct patient to notify health care professional if fever and diarrhea develop, especially if diarrhea contains blood, mucus, or pus. Advise patient not to treat diarrhea without consulting health care professional.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.

- Advise patient to notify health care professional if skin rash, sore throat, fever, mouth sores, or unusual bleeding or bruising occurs.
- Instruct patient to notify health care professional if symptoms do not improve within a few days.
- Emphasize importance of regular follow-up exams to monitor blood counts in patients on prolonged therapy.
- **Home Care Issues:** Instruct family or caregiver on dilution, rate, and administration of drug and proper care of IV equipment.

### Evaluation/Desired Outcomes

- Resolution of the signs and symptoms of infection. Length of time for complete resolution depends on organism and site of infection.
- Resolution of symptoms of traveler's diarrhea.
- Prevention of Pneumocystis jirovecii pneumonia in patients with HIV.

## trospium (tros-pee-yum)

Sanctura, Sanctura XR

***Classification***

Therapeutic: urinary tract antispasmodics
Pharmacologic: antimuscarinics

**Pregnancy Category C**

### Indications

Overactive bladder with symptoms of urge urinary incontinence, urgency and urinary frequency.

### Action

Antagonizes the effect of acetylcholine at muscarinic receptors in the bladder; this parasympatholytic action reduces bladder smooth muscle tone. **Therapeutic Effects:** Increased bladder capacity and decreased symptoms of overactive bladder.

### Pharmacokinetics

**Absorption:** Less than 10% absorbed following oral administration; food significantly ↓ absorption.
**Distribution:** Mostly distributed to plasma.
**Metabolism and Excretion:** Of the 10% absorbed, 40% is metabolized. Unabsorbed drug is mainly excreted in feces. Of absorbed drug, 60% is eliminated in urine as unchanged drug via active tubular secretion.
**Half-life:** 20 hr.

TIME/ACTION PROFILE (anticholinergic effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 5–6 hr | 24 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Gastric or urinary retention, uncontrolled angle-closure glaucoma or risk for these conditions.
**Use Cautiously in:** Bladder outflow obstruction; Gastrointestinal obstructive disorders (ulcerative colitis, intestinal atony, myasthenia gravis); Controlled angle-closure glaucoma (use only if necessary and with careful monitoring); CCr <30 mL/min (dose ↓ recommended); Moderate to severe hepatic impairment; OB: Lactation: Use only if benefit justifies risks to fetus/newborn; Pedi: Safety not established; Geri: May have ↑ sensitivity to anticholinergic effects; ↓ dose may be required.

### Adverse Reactions/Side Effects

**CNS:** headache, dizziness, drowsiness, fatigue. **EENT:** blurred vision. **GI:** constipation, dry mouth, dyspepsia. **GU:** urinary retention, urinary tract infection. **Misc:** fever, heat stroke.

### Interactions

**Drug-Drug:** May interact with other **drugs that compete for tubular secretion**. ↑ risk of anticholinergic effects with other **drugs having anticholinergic properties**.

### Route/Dosage

**PO (Adults):** 20 mg twice daily or 60 mg once daily (XR dose form).
**PO (Adults ≥75 yr):** Based on tolerability, dose may be ↓ to 20 mg once daily.

#### Renal Impairment

**PO (Adults):** *CCr <30 mL/min* — 20 mg once daily at bedtime.

### Availability

**Tablets:** 20 mg. **Extended release tablets:** 60 mg.

## NURSING IMPLICATIONS

### Assessment

- Monitor voiding pattern and intake and output ratios.

### Potential Nursing Diagnoses

Impaired urinary elimination (Indications)

### Implementation

- **PO:** Administer 1 hr prior to meals or on an empty stomach.

### Patient/Family Teaching

- Instruct patient to take as directed. If a dose is skipped, take next dose 1 hr prior to next meal.
- Caution patient that heat prostration (fever and heat stroke due to decreased sweating) may occur when trospium is taken in a hot environment.
- May cause drowsiness, dizziness, and blurred vision. Caution patient to avoid driving and other activities requiring alertness until response to medication is known. Advise patient to avoid alcohol; may increase drowsiness.

### Evaluation/Desired Outcomes

- Increased bladder capacity and decreased symptoms of overactive bladder.

**urokinase, See THROMBOLYTIC AGENTS.**

# valacyclovir
(val-ay-**sye**-kloe-veer)
Valtrex

***Classification***
Therapeutic: antivirals

**Pregnancy Category B**

## Indications
Treatment of herpes zoster (shingles). Treatment/suppression of genital herpes. Reduction of transmission of genital herpes. Treatment of chickenpox. Treatment of herpes labialis (cold sores).

## Action
Rapidly converted to acyclovir. Acyclovir interferes with viral DNA synthesis. **Therapeutic Effects:** Inhibited viral replication, decreased viral shedding, reduced time to healing of lesions. Reduced transmission of genital herpes.

## Pharmacokinetics
**Absorption:** 54% bioavailable as acyclovir after oral administration of valacyclovir.
**Distribution:** CSF concentrations of acyclovir are 50% of plasma concentrations. Acyclovir crosses placenta; enters breast milk.
**Metabolism and Excretion:** Rapidly converted to acyclovir via intestinal/hepatic metabolism.
**Half-life:** 2.5–3.3 hr; up to 14 hr in renal impairment (acyclovir).

TIME/ACTION PROFILE (blood levels†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1.5–2.5 hr | 8–24 hr |

†Acyclovir

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to valacyclovir or acyclovir.
**Use Cautiously in:** Renal impairment (dose ↓/↑ dosing interval recommended if CCr <50 mL/min); OB, Lactation: Pedi: Pregnancy, lactation, or children <2 yr (safety not established); Geri: Dose ↓ may be necessary due to ↑ risk of acute renal failure and CNS side effects.

## Adverse Reactions/Side Effects
**CNS:** headache, dizziness, weakness. **GI:** nausea, abdominal pain, anorexia, constipation, diarrhea. **GU:** RENAL FAILURE, crystalluria. **Hemat:** THROMBOTIC THROMBOCYTOPENIC PURPURA/HEMOLYTIC UREMIC SYNDROME (very high doses in immunosuppressed patients).

## Interactions
**Drug-Drug: Probenecid** and **cimetidine** ↑ blood levels; significant only in renal impairment. Concurrent use of other **nephrotoxic drugs** ↑ risk of adverse renal effects.

## Route/Dosage

### Herpes Zoster
**PO (Adults):** 1 g 3 times daily for 7 days.

### Genital Herpes
**PO (Adults):** *Initial treatment*—1 g twice daily for 10 days. *Recurrence*—500 mg twice daily for 3 days. *Suppression of recurrence*—1 g once daily or 500 mg once daily in patients experiencing <10 recurrences/yr. *Suppression of recurrence in HIV-infected patients*—500 mg q 12 hr. *Reduction of transmission*—500 mg once daily for source partner.

### Herpes Labialis
**PO (Adults and Children ≥12 yr):** 2 g then 2 g 12 hr later.

### Chickenpox
**PO (Children ≥2 yr):** 20 mg/kg 3 times daily for 5 days (not to exceed 1 g 3 times daily).

### Renal Impairment
**PO (Adults):** *CCr 30–49 mL/min*—1 g q 12 hr for herpes zoster treatment, no ↓ required for treatment of genital herpes; 1 g then 1 g 12 hr later for herpes labialis. *CCr 10–29 mL/min*—1 g q 24 hr for initial treatment of genital herpes, 500 mg q 24 hr for treatment of recurrent episodes of genital herpes, 500 mg q 48 hr for suppression of genital herpes in patients with 9 or fewer recurrences/yr, 500 mg q 24 hr for suppression of genital herpes in patients with ≥10 recurrences/yr or HIV-infected patients, 1 g q 24 hr for treatment of herpes zoster; 500 mg then 500 mg 12 hr later for herpes labialis. *CCr <10 mL/min*—500 mg q 24 hr for initial treatment of genital herpes, 500 mg q 24 hr for treatment of recurrent episodes of genital herpes, 500 mg q 48 hr for suppression of genital herpes in patients with 9 or fewer recurrences/yr, 500 mg q 24 hr for suppression of genital herpes in patients with ≥10 recurrences/yr or HIV-infected patients, 500 mg q 24 hr for treatment of herpes zoster; single 500 mg dose for herpes labialis.

## Availability
**Tablets:** 500 mg, 1 g. **Cost:** 500 mg $177.99/30, 1 g $315.98/30500 mg $151.86/42, 1 g $103.24/20.

## NURSING IMPLICATIONS

### Assessment

- Assess lesions before and daily during therapy.
- Monitor patient for signs of thrombotic thrombocytic purpura/hemolytic uremic syndrome (thrombocytopenia, microangiopathic hemolytic anemia, neurologic findings, renal dysfunction, fever). Requires prompt treatment; may be fatal.

### Potential Nursing Diagnoses

Risk for impaired skin integrity (Indications)
Risk for infection (Indications, Patient/Family Teaching)

### Implementation

- **PO:** May be administered without regard to meals.
- **Herpes Zoster:** Implement valacyclovir therapy as soon as possible after the onset of signs or symptoms of herpes zoster; most effective if started within 48 hr of the onset of zoster rash. Efficacy of treatment started >72 hr after rash onset is unknown.
- **Genital Herpes and Herpes Labialis:** Implement treatment for genital herpes as soon as possible after onset of symptoms.
- **Chicken Pox:** Initiate therapy at the earliest sign or symptom; preferably within 24 hr of onset of rash.

### Patient/Family Teaching

- Instruct patient to take valacyclovir exactly as directed for the full course of therapy. Take missed doses as soon as remembered if not just before next dose.
- Advise patient to maintain adequate hydration during therapy.
- **Herpes Zoster:** Inform patient that valacyclovir does not prevent the spread of infection to others. Precautions should be taken around others who have not had chickenpox or varicella vaccine, or are immunosuppressed, until all lesions have crusted.
- **Genital Herpes and Herpes Labialis:** Inform patient that valacyclovir does not prevent the spread of herpes labialis to others. Advise patient to avoid contact with lesions while lesions or symptoms are present. Valacyclovir reduces transmission of genital herpes to others. Advise patient to practice safe sex (avoid sexual intercourse when lesions are present and wear a condom made of latex or polyurethane during sexual contact).

### Evaluation/Desired Outcomes

- Decrease in time to full crusting, loss of vesicles, loss of ulcers, and development of crusts in patients with acute herpes zoster (shingles).
- Decrease in time to full crusting, loss of vesicles, loss of ulcers, and development of crusts in patients with genital herpes.
- Decrease in frequency of outbreaks in patients with genital herpes.
- Decrease in time to full crusting, loss of vesicles, loss of ulcers, and development of crusts in patients with herpes labialis. Decrease in transmission of genital herpes.
- Treatment of chicken pox.

## valganciclovir

(val-gan-**sye**-kloe-veer)
Valcyte

***Classification***
Therapeutic: antivirals

**Pregnancy Category C**

### Indications

Treatment of cytomegalovirus (CMV) retinitis in patients with AIDS. Prevention of CMV disease in kidney, kidney/pancreas and heart transplant patients at risk.

### Action

Valganciclovir is a prodrug which is rapidly converted to ganciclovir by intestinal and hepatic enzymes. CMV virus converts ganciclovir to its active form (ganciclovir phosphate) inside host cell, where it inhibits viral DNA polymerase. **Therapeutic Effects:** Antiviral effect directed preferentially against CMV-infected cells.

### Pharmacokinetics

**Absorption:** 59.4% absorbed following oral administration, rapidly converted to ganciclovir.
**Distribution:** Unknown.
**Metabolism and Excretion:** Rapidly converted to ganciclovir; ganciclovir is mostly excreted by the kidneys.
**Half-life:** 4.1 hr (intracellular half-life of ganciclovir phosphate is 18 hr).

TIME/ACTION PROFILE (ganciclovir blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 2 hr | 12–24 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to valganciclovir or ganciclovir; OB: Pregnancy or planned

pregnancy; Lactation: Lactation; Hemodialysis; Patients undergoing liver transplantation.
**Use Cautiously in:** Renal impairment (dosage reduction recommended if CCr <60 mL/min); Pre-existing bone marrow depression; Previous or concurrent myelosuppressive drug therapy or radiation therapy; Geri: Age-related ↓ in renal function requires dosage reduction; Pedi: Children <4 mo (safety not established).

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, headache, insomnia, agitation, confusion, dizziness, hallucinations, psychosis, sedation. **GI:** abdominal pain, diarrhea, nausea, vomiting. **GU:** renal impairment. **Hemat:** NEUTROPENIA, THROMBOCYTOPENIA, anemia, aplastic anemia, bone marrow depression, pancytopenia. **Neuro:** ataxia, paresthesia, peripheral neuropathy. **Misc:** fever, hypersensitivity reactions, infections.

### Interactions

**Drug-Drug:** ↑ risk of hematologic toxicity with **zidovudine**. Blood levels and effects may be ↑ by **probenecid**. Patients with renal impairment may experience accumulation of metabolites of **mycophenolate** and valganciclovir. ↑ blood levels and risk of toxicity from **didanosine**.
**Drug-Food:** Food ↑ absorption.

### Route/Dosage

### Treatment of CMV Disease

**PO (Adults):** *Induction*—900 mg twice daily for 21 days; *Maintenance treatment or patients with inactive CMV retinitis*—900 mg once daily.

#### Renal Impairment

**CCr 40–59 mL/min** (Adults): *Induction*—450 mg twice daily for 21 days; *Maintenance treatment or patients with inactive CMV retinitis*—450 mg once daily.

#### Renal Impairment

**CCr 25–39 mL/min** (Adults): *Induction*—450 mg once daily for 21 days; *Maintenance treatment or patients with inactive CMV retinitis*—450 mg every 2 days.

#### Renal Impairment

**CCr 10–24 mL/min** (Adults): *Induction*—450 mg every 2 days for 21 days; *Maintenance treatment or patients with inactive CMV retinitis*—450 mg twice weekly.

### Prevention of CMV Disease in Transplant Patients

**PO (Adults):** *Kidney, kidney/pancreas, or heart transplant*—900 mg once daily, starting 10 days prior to transplant and continued for 100 days after.

#### Renal Impairment

**PO (Adults):** *CCr 40–59 mL/min*—450 mg once daily; *CCr 25–39 mL/min*—450 mg every 2 days; *CCr 12–24 mL/min*—450 mg twice weekly.
**PO (Children 4 mo-16 yr):** *Kidney or heart transplant*—Dose is based on body surface area (BSA) and CCr. Dose = 7 × BSA × CCr (see prescribing information for equations used for BSA and CCr); all calculated doses should be rounded to nearest 25 mg (max = 900 mg) and administered as oral solution; should be started 10 days prior to transplant and continued for 100 days after.

#### Renal Impairment

**PO (Adults):** *CCr 40–59 mL/min*—450 mg once daily; *CCr 25–39 mL/min*—450 mg every 2 days; *CCr 12–24 mL/min*—450 mg twice weekly.

### Availability

**Tablets:** 450 mg. **Oral solution (tutti-frutti flavor):** 50 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Diagnosis of CMV retinitis should be determined by ophthalmoscopy prior to treatment with ganciclovir.
- Culture for CMV (urine, blood, throat) may be taken prior to administration. However, a negative CMV culture does not rule out CMV retinitis. If symptoms do not respond after several weeks, resistance to ganciclovir may have occurred. Ophthalmologic exams should be performed weekly during induction and every 2 wk during maintenance or more frequently if the macula or optic nerve is threatened. Progression of CMV retinitis may occur during or following ganciclovir treatment.
- Assess for signs of infection (fever, chills, cough, hoarseness, lower back or side pain, sore throat, difficult or painful urination). Notify health care professional if these symptoms occur.

- Assess for bleeding (bleeding gums, bruising, petechiae, or guaiac stools, urine, and emesis). Avoid IM injections and taking rectal temperatures. Apply pressure to venipuncture sites for 10 min.
- ***Lab Test Considerations:*** May cause granulocytopenia, anemia, and thrombocytopenia. Monitor neutrophil and platelet count closely throughout therapy. Do not administer if ANC $<500/mm^3$, platelet count $<25,000/mm^3$, or hemoglobin <8 g/dL. Recovery begins within 3–7 days of discontinuation of therapy.
- Monitor BUN and serum creatinine at least once every 2 wk throughout therapy. May cause ↑ in serum creatinine.

### Potential Nursing Diagnoses

Risk for infection (Indications, Patient/Family Teaching)

### Implementation

- Valganciclovir and ganciclovir are not interchangeable. Do not substitute.
- Valganciclovir tablets should be handled carefully. Do not break or crush. May be potentially teratogenic; avoid direct contact with broken or crushed tablets. If contact with the skin or mucous membranes occurs, wash thoroughly with soap and water and rinse eyes thoroughly with plain water.
- **PO:** Administer with food. Adults should take tablets, not oral solution.
- Valcyte for oral solution (50 mg/mL) must be prepared by the pharmacist prior to dispensing to the patient.

### Patient/Family Teaching

- Instruct patient to take valganciclovir with food, exactly as directed.
- Inform patient that valganciclovir is not a cure for CMV retinitis. Progression of retinitis may continue in immunocompromised patients during and following therapy. Advise patients to have regular ophthalmic exams at least every 4–6 wk. Duration of therapy for CMV prevention is based on the duration and degree of immunosuppression.
- May cause seizures, sedation, dizziness, ataxia, and/or confusion. Caution patient not to drive or do other activities requiring alertness until response to medication is known.
- Advise patient to notify health care professional if fever; chills; sore throat; other signs of infection; bleeding gums; bruising; petechiae; or blood in urine, stool, or emesis occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush and electric razor. Patient should be cautioned not to drink alcoholic beverages or take products containing aspirin or NSAIDs.
- Advise patient that valganciclovir may have teratogenic effects. Women should use a nonhormonal and men a barrier method of contraception during and for at least 90 days following therapy.
- Caution patient to use sunscreen and protective clothing to prevent photosensitivity reactions.
- Emphasize the importance of frequent follow-up exams to monitor blood counts.

### Evaluation/Desired Outcomes

- Management of the symptoms of CMV retinitis in patients with AIDS.

## VALPROATES

**divalproex sodium** (dye-val-**proe**-ex **soe**-dee-um)
Apo-Divalproex, Depakote, Depakote ER, DOM-Divalproex, Epival, Gen-Divalproex, Novo-Divalproex, Nu-Divalproex, PHL-Divalproex, PMS-Divalproex

**valproate sodium** (val-**proe**-ate **soe**-dee-um)
Depacon

**valproic acid** (val-**proe**-ik **as**-id)
Apo-Valproic, Depakene, DOM-Valproic Acid, PHL-Valproic Acid, PMS-Valproic Acid, Ratio-Valprox, Stavzor

***Classification***
Therapeutic: anticonvulsants, vascular headache suppressants

**Pregnancy Category D**

### Indications

Monotherapy and adjunctive therapy for simple and complex absence seizures. Monotherapy and adjunctive therapy for complex partial seizures. Adjunctive therapy for patients with multiple seizure types, including absence seizures. **Divalproex sodium only**. Manic episodes associated with bipolar disorder. Prevention of migraine headache.

### Action

Increase levels of GABA, an inhibitory neurotransmitter in the CNS. **Therapeutic Effects:** Suppression of seizure activity. Decreased manic epi-

sodes. Decreased frequency of migraine headaches.

## Pharmacokinetics

**Absorption:** Well absorbed following oral administration; divalproex is enteric-coated, and absorption is delayed. ER form produces lower blood levels. IV administration results in complete bioavailability.
**Distribution:** Rapidly distributed into plasma and extracellular water. Cross blood-brain barrier and placenta; enters breast milk.
**Protein Binding:** 80–90%, decreased in neonates, elderly, renal impairment, or chronic hepatic disease.
**Metabolism and Excretion:** Mostly metabolized by the liver; minimal amounts excreted unchanged in urine.
**Half-life:** Adults: 9–16 hr.

TIME/ACTION PROFILE (onset = anticonvulsant effect; peak = blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO—liquid | 2–4 days | 15–120 min | 6–24 hr |
| PO—capsules | 2–4 days | 1–4 hr | 6–24 hr |
| PO—delayed-release products | 2–4 days | 3–5 hr | 12–24 hr |
| PO—extended-release products | 2–4 days | 7–14 hr | 24 hr |
| IV | 2–4 days | end of infusion | 6–24 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hepatic impairment; Known/suspected urea cycle disorders (may result in fatal hyperammonemic encephalopathy).
**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Bleeding disorders; History of liver disease; Organic brain disease; Bone marrow depression; Renal impairment; Geri: ↑ risk of adverse effects; OB: Use during pregnancy is linked to congenital anomalies, neural tube defects, clotting abnormalities, and hepatic dysfunction in the neonate. Use with extreme caution. Lactation: Pass into breast milk. Consider discontinuing nursing when valproates are administered to the nursing mother; Pedi: Children, especially <2 yr (at ↑ risk for potentially fatal hepatotoxicity).

## Adverse Reactions/Side Effects

**CNS:** SUICIDAL THOUGHTS, agitation, dizziness, headache, insomnia, sedation, confusion, depression. **CV:** peripheral edema. **EENT:** visual disturbances. **GI:** HEPATOTOXICITY, PANCREATITIS, abdominal pain, anorexia, diarrhea, indigestion, nausea, vomiting, constipation, increased appetite. **Derm:** alopecia, rashes. **Endo:** weight gain. **Hemat:** leukopenia, thrombocytopenia. **Metab:** HYPERAMMONEMIA. **Neuro:** HYPOTHERMIA, tremor, ataxia.

## Interactions

**Drug-Drug:** ↑ risk of bleeding with **warfarin**. Blood levels and toxicity may be ↑ by **aspirin**, **carbamazepine**, **chlorpromazine**, **cimetidine**, **erythromycin**, or **felbamate**. ↑ CNS depression with other **CNS depressants**, including **alcohol**, **antihistamines**, **antidepressants**, **opioid analgesics**, **MAO inhibitors**, and **sedative/hypnotics**. **MAO inhibitors** and other **antidepressants** may ↓ seizure threshold and ↓ effectiveness of valproate. **Carbamazepine**, **meropenem**, **phenobarbital**, **phenytoin**, or **rifampin** may ↓ valproate blood levels. Valproate may ↑ toxicity of **carbamazepine**, **diazepam**, **amitriptyline,nortriptyline**, **ethosuximide**, **lamotrigine**, **phenobarbital**, **phenytoin**, **topiramate**, or **zidovudine**. Concurrent use with **topiramate** may ↑ risk of hypothermia. **Ertapenem**, **imipenem**, or **meropenem** may ↓ valproate blood levels.

## Route/Dosage

Regular-release and delayed-release formulations usually given in 2–4 divided doses daily; extended-release formulation (Depakote ER) usually given once daily.

## Anticonvulsant

**PO (Adults and Children >10 yr):** *Single-agent therapy (complex partial seizures)* — Initial dose of 10–15 mg/kg/day in 1–4 divided doses; ↑ by 5–10 mg/kg/day weekly until therapeutic response achieved (not to exceed 60 mg/kg/day); when daily dose exceeds 250 mg, give in divided doses. *Polytherapy (complex partial seizures)* — Initial dose of 10–15 mg/kg/day; ↑ by 5–10 mg/kg/day weekly until therapeutic response achieved (not to exceed 60 mg/kg/day); when daily dosage exceeds 250 mg, give in divided doses.
**PO (Adults and Children >2 yr [>10 yr for Depakote ER and Stavzor]):** *Simple and com-*

*plex absence seizures*—Initial dose of 15 mg/kg/day in 1–4 divided doses; ↑ by 5–10 mg/kg/day weekly until therapeutic response achieved (not to exceed 60 mg/kg/day); when daily dose exceeds 250 mg, give in divided doses.
**IV (Adults and Children):** Give same daily dose and at same frequency as was given orally; switch to oral formulation as soon as possible.
**Rect (Adults and Children):** Dilute syrup 1:1 with water for use as a retention enema. Give 17–20 mg/kg load, maintenance 10–15 mg/kg/dose q 8 hr.

### Mood Stabilizer

**PO (Adults):** *Depakote and Stavzor*—Initial dose of 750 mg/day in divided doses initially, titrated rapidly to desired clinical effect or trough plasma levels of 50–125 mcg/mL (not to exceed 60 mg/kg/day). *Depakote ER*—Initial dose of 25 mg/kg once daily; titrated rapidly to desired clinical effect of trough plasma levels of 85–125 mcg/mL (not to exceed 60 mg/kg/day).

### Migraine Prevention

**PO (Adults and Children ≥16 yr):** *Depakote and Stavzor*—250 mg twice daily (up to 1000 mg/day). *Depakote ER*—500 mg once daily for 1 wk, then ↑ to 1000 mg once daily.

### Availability

### Valproic Acid (generic available)

**Capsules:** 250 mg, 500 mg. **Cost:** *Generic*—$29.97/100. **Delayed-release capsules:** 125 mg, 250 mg, 500 mg. **Syrup:** 250 mg/5 mL. **Cost:** *Generic*—$17.99/150 mL.

### Valproate Sodium (generic available)

**Injection:** 100 mg/mL in 5-mL vials.

### Divalproex Sodium (generic available)

**Delayed-release tablets (Depakote):** 125 mg, 250 mg, 500 mg. **Cost:** 125 mg $85.85/100, 250 mg $159.98/100, 500 mg $296.66/100. **Capsules-sprinkle:** 125 mg. **Cost:** $83.31/100. **Extended-release tablets (Depakote ER):** 250 mg, 500 mg. **Cost:** 250 mg $134.97/90, 500 mg $225.97/90.

## NURSING IMPLICATIONS

### Assessment

- **Seizures:** Assess location, duration, and characteristics of seizure activity. Institute seizure precautions.
- **Bipolar Disorder:** Assess mood, ideation, and behavior frequently.
- **Migraine Prophylaxis:** Monitor frequency of migraine headaches.
- Geri: Assess geriatric patients for excessive somnolence.
- Assess for suicidal tendencies, especially during early therapy. Restrict amount of drug available to patient. Risk may be increased in children, adolescents, and adults ≤24 yr.
- ***Lab Test Considerations:*** Monitor CBC, platelet count, and bleeding time prior to and periodically during therapy. May cause leukopenia and thrombocytopenia.
- Monitor hepatic function (LDH, AST, ALT, and bilirubin) and serum ammonia concentrations prior to and periodically during therapy. May cause hepatotoxicity; monitor closely, especially during initial 6 mo of therapy; fatalities have occurred. Therapy should be discontinued if hyperammonemia occurs.
- May interfere with accuracy of thyroid function tests.
- May cause false-positive results in urine ketone tests.
- ***Toxicity and Overdose:*** Therapeutic serum levels range from 50–100 mcg/mL (50–125 mcg/mL for mania). Doses are gradually ↑ until a pre-dose serum concentration of at least 50 mcg/mL is reached. However, a good correlation among daily dose, serum level, and therapeutic effects has not been established. Monitor patients receiving near the maximum recommended 60 mg/kg/day for toxicity.

### Potential Nursing Diagnoses

Risk for injury (Indications)

### Implementation

- Do not confuse *Depakote ER* and regular dose forms. *Depakote ER* produces lower blood levels than *Depakote* dosing forms. If switching from *Depakote* to *Depakote ER*, increase dose by 8-20%.
- Single daily doses are usually administered at bedtime because of sedation.
- **PO:** Administer with or immediately after meals to minimize GI irritation. Extended-release and delayed-release tablets and capsules should be swallowed whole, do not open, break, or chew; will cause mouth or throat irritation and destroy extended release mechanism. Do not administer tablets with milk or carbonated beverages (may cause premature dissolution). Delayed-release divalproex sodium may cause less GI irritation than valproic acid capsules.
- Shake liquid preparations well before pouring. Use calibrated measuring device to ensure accurate dose. Syrup may be mixed with food or other liquids to improve taste.

- Sprinkle capsules may be swallowed whole or opened and entire capsule contents sprinkled on a teaspoonful of soft, cool food (applesauce, pudding). Do not chew mixture. Administer immediately; do not store for future use.
- To convert from valproic acid to divalproex sodium, initiate divalproex sodium at same total daily dose and dosing schedule as valproic acid. Once patient is stabilized on divalproex sodium, attempt administration 2–3 times daily.
- **Rect:** Dilute syrup 1:1 with water for use as a retention enema.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** May be diluted in at least 50 mL of D5W, 0.9% NaCl, or LR. Solution is stable for 24 hr at room temperature. ***Concentration:*** 2 mg/mL. ***Rate:*** Infuse over 60 min (≤20 mg/min). Rapid infusion may cause increased side effects. Has been given as a one-time infusion of 1000 mg over 5–10 min @ 3 mg/kg/min up to 15 mg/kg in patients with no detectable valproate levels.
- **Y-Site Compatibility:** cefepime, ceftazidime.

## Patient/Family Teaching

- Instruct patient to take medication as directed. If a dose is missed on a once-a-day schedule, take as soon as remembered that day. If on a multiple-dose schedule, take it within 6 hr of the scheduled time, then space remaining doses throughout the remainder of the day. Abrupt withdrawal may lead to status epilepticus.
- May cause drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until effects of medication are known. Tell patient not to resume driving until physician gives clearance based on control of seizure disorder.
- Caution patient to avoid taking alcohol, CNS depressants, OTC medications or herbal products concurrently with valproates without consulting health care professional.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Instruct patient to notify health care professional of medication regimen prior to treatment or surgery.
- May cause teratogenic effects. Instruct female patients to notify health care professional immediately if pregnancy is planned or suspected or if breastfeeding. Advise pregnant patients taking valproates to enroll in the NAAED Pregnancy Registry by calling 1-888-233-2334; call must be made by patient. Registry Web site is www.aedpregnancyregistry.org.
- Advise patient to carry identification at all times describing medication regimen.
- Advise patient to notify health care professional if anorexia, abdominal pain, severe nausea and vomiting, yellow skin or eyes, fever, sore throat, malaise, weakness, facial edema, lethargy, unusual bleeding or bruising, pregnancy, or loss of seizure control occurs. Children <2 yr of age are especially at risk for fatal hepatotoxicity.
- Emphasize the importance of routine exams to monitor progress.

## Evaluation/Desired Outcomes

- Decreased seizure activity.
- Decreased incidence of manic episodes in patients with bipolar disorders.
- Decreased frequency of migraine headaches.

**valsartan, See ANGIOTENSIN II RECEPTOR ANTAGONISTS.**

# vancomycin (van-koe-**mye**-sin)

Vancocin

***Classification***

Therapeutic: anti-infectives

**Pregnancy Category C**

## Indications

**IV:** Treatment of potentially life-threatening infections when less toxic anti-infectives are contraindicated. Particularly useful in staphylococcal infections, including: Endocarditis, Meningitis, Osteomyelitis, Pneumonia, Septicemia, Soft-tissue infections in patients who have allergies to penicillin or its derivatives or when sensitivity testing demonstrates resistance to methicillin. **PO:** Treat-

ment of staphylococcal enterocolitis or pseudomembranous colitis due to *Clostridium difficile*.
**IV:** Part of endocarditis prophylaxis in high-risk patients who are allergic to penicillin.

## Action

Binds to bacterial cell wall, resulting in cell death.
**Therapeutic Effects:** Bactericidal action against susceptible organisms. **Spectrum:** Active against gram-positive pathogens, including: Staphylococci (including methicillin-resistant strains of *Staphylococcus aureus*), Group A beta-hemolytic streptococci, *Streptococcus pneumoniae*, *Corynebacterium*, *Clostridium difficile*, *Enterococcus faecalis*, *Enterococcus faecium*.

## Pharmacokinetics

**Absorption:** Poorly absorbed from the GI tract.
**Distribution:** Widely distributed. Some penetration (20–30%) of CSF; crosses placenta.
**Metabolism and Excretion:** Oral doses excreted primarily in the feces; IV vancomycin eliminated almost entirely by the kidneys.
**Half-life:** Neonates: 6–10 hr; Children 3 mo–3 yr: 4 hr; Children >3 yr: 2–2.3 hr; Adults: 5–8 hr (↑ in renal impairment).

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | rapid | end of infusion | 12–24 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Renal impairment (dosage reduction required if CCr ≤80 mL/min); Hearing impairment; Intestinal obstruction or inflammation (↑ systemic absorption when given orally); OB, Lactation: Safety not established.

## Adverse Reactions/Side Effects

**EENT:** ototoxicity. **CV:** hypotension. **GI:** nausea, vomiting. **GU:** nephrotoxicity. **Derm:** rashes. **Hemat:** eosinophilia, leukopenia. **Local:** phlebitis. **MS:** back and neck pain. **Misc:** hypersensitivity reactions including ANAPHYLAXIS, chills, fever, "red man" syndrome (with rapid infusion), superinfection.

## Interactions

**Drug-Drug:** May cause additive ototoxicity and nephrotoxicity with other **ototoxic** and **nephrotoxic drugs** (**aspirin**, **aminoglycosides**, **cyclosporine**, **cisplatin**, **loop diuretics**). May enhance neuromuscular blockade from **nondepolarizing neuromuscular blocking agents**. ↑ risk of histamine flush when used with **general anesthetics** in children.

## Route/Dosage

### Serious Systemic Infections

**IV (Adults):** 500 mg q 6 hr *or* 1 g q 12 hr (up to 4 g/day).
**IV (Children >1 mo):** 40 mg/kg/day divided q 6–8 hr *Staphylococcal CNS infection*—60 mg/kg/day divided q 6 hr, maximum dose: 1 g/dose.
**IV (Neonates 1 wk–1 mo):** <1200 g: 15 mg/kg/day q 24 hr. 1200–2000 g: 10–15 mg/kg/dose q 8–12 hr. >2000 g: 15–20 mg/kg/dose q 8 hr.
**IV (Neonates <1 wk):** <1200 g: 15 mg/kg/day q 24 hr. 1200–2000 g: 10–15 mg/kg/dose q 12–18 hr. >2000 g: 10–15 mg/kg/dose q 8–12 hr.
**IT (Adults):** 20 mg/day.
**IT (Children):** 5–20 mg/day.
**IT (Neonates):** 5–10 mg/day.

### Endocarditis Prophylaxis in Penicillin-Allergic Patients

**IV (Adults and Adolescents):** 1-g single dose 1-hr preprocedure.
**IV (Children):** 20-mg/kg single dose 1-hr preprocedure.

### Pseudomembranous Colitis

**PO (Adults):** 125–500 mg q 6 hr.
**PO (Children):** 40 mg/kg/day divided q 6 hr for 7–10 days (not to exceed 2 g/day).

### Renal Impairment

**IV (Adults):** An initial loading dose of 750 mg–1 g (not less than 15 mg/kg); serum level monitoring is optimal for choosing maintenance dose in patients with renal impairment; these guidelines may be helpful. *CCr 50–80 mL/min*—1 g q 1–3 days; *CCr 10–50 mL/min*—1 g q 3–7 days; *CCr <10 mL/min*—1 g q 7–14 days.

## Availability (generic available)

**Capsules:** 125 mg, 250 mg. **Injection:** 500-mg, 750-mg, 1-, 5-, 10-g vials.

# NURSING IMPLICATIONS

## Assessment

- Assess patient for infection (vital signs; appearance of wound, sputum, urine, and stool; WBC) at beginning of and throughout therapy.
- Obtain specimens for culture and sensitivity prior to initiating therapy. First dose may be given before receiving results.
- Monitor IV site closely. Vancomycin is irritating to tissues and causes necrosis and severe pain with extravasation. Rotate infusion site.
- Monitor blood pressure throughout IV infusion.

- Evaluate eighth cranial nerve function by audiometry and serum vancomycin levels prior to and throughout therapy in patients with borderline renal function or those >60 yr of age. Prompt recognition and intervention are essential in preventing permanent damage.
- Monitor intake and output ratios and daily weight. Cloudy or pink urine may be a sign of nephrotoxicity.
- Assess patient for signs of superinfection (black, furry overgrowth on tongue; vaginal itching or discharge; loose or foul-smelling stools). Report occurrence.
- Observe patient for signs and symptoms of anaphylaxis (rash, pruritus, laryngeal edema, wheezing). Discontinue drug and notify health care professional immediately if these problems occur. Keep epinephrine, an antihistamine, and resuscitation equipment close by in case of an anaphylactic reaction.
- **Pseudomembranous Colitis:** Assess bowel status (bowel sounds, frequency and consistency of stools, presence of blood in stools) throughout therapy.
- ***Lab Test Considerations:*** Monitor for casts, albumin, or cells in the urine or decreased specific gravity, CBC, and renal function periodically during therapy.
- May cause increased BUN levels.
- ***Toxicity and Overdose:*** Trough concentrations should not exceed 10 mcg/mL (mild-moderate infections) or 15–20 mcg/mL (for severe infections).

## Potential Nursing Diagnoses

Risk for infection (Indications)
Disturbed sensory perception (auditory) (Side Effects)

## Implementation

- **PO:** Use calibrated measuring device for liquid preparations. IV dose form may be diluted in 30 mL of water for oral or nasogastric tube administration. Resulting solution has bitter, unpleasant taste. May mix with a flavoring syrup to mask taste. Stable for 14 days if refrigerated.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** To reconstitute, add 10 mL of sterile water for injection to 500-mg vial or 20 mL of sterile water for injection to 1-g vial for a concentration of 50 mg/mL. Dilute further with at least 100 mL of 0.9% NaCl, D5W, D5/0.9% NaCl, or LR for every 500 mg of vancomycin being administered. Reconstituted vials stable for 14 days if refrigerated. Infusion is stable for 96 hr if refrigerated. ***Concentration:*** ≤5 mg/mL. ***Rate:*** Infuse over at least 60 min (90 min for doses >1 g). Do not administer rapidly or as a bolus, to minimize risk of thrombophlebitis, hypotension, and "red-man (neck)" syndrome (sudden, severe hypotension; flushing and/or maculopapular rash of face, neck, chest, and upper extremities). May need to slow infusion further to 1.5–2 hr if red-man syndrome occurs.
- **IT:** ***Diluent:*** Dilute with preservative-free NS. ***Concentration:*** 1–5 mg/mL. ***Rate:*** Directly instill into ventricular cerebrospinal fluid.
- **Y-Site Compatibility:** acyclovir, aldesleukin, allopurinol, amifostine, aldesleukin, alfentanil, allopurinol, alprostadil, amifostine, amikacin, amiodarone, amsacrine, anidulafungin, atracurium, atropine, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, carboplatin, caspofungin, cefonicid, chlorpromazine, cimetidine, cisatracurium, cisplatin, clindamycin, cyanocobalamin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, dexamethasone, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doripenem, doxacurium, doxapram, doxorubicin hydrochloride, doxorubicin liposome, doxycycline, enalaprilat, ephedrine, epinephrine, epirubicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, filgrastim, fluconazole, fludarabine, folic acid, gemcitabine, gentamicin, glycopyrrolate, granisetron, hetastarch, hydromorphone, ifosfamide, imipenem/cilastatin, insulin, isoproterenol, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, metaraminol, methoxamine, methyldopate, methylprednisolone, metoclopramide, metoprolol, metronidazole, midazolam, milrinonemitoxantrone, morphine, mycophenolate, nalbuphine, naloxone, nesiritide, nicardipine, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, paclitaxel, palonosetron, pancuronium, papaverine, pemetrexed, penicillin G, pentamidine, pentazocine, pentobarbital, perphenazine, phenobarbital, phentolamine, phenylephrine, phytonadione, potassium chloride, procainamide,

V

prochlorperazine, promethazine, propranolol, protamine, pyridoxime, ranitidine, remifentanil, sodium acetate, sodium bicarbonate, sodium citrate, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiamine, thiotepa, tigecycline, tirofiban, tobramycin, tolazoline, trastuzumab, trimethaphan, vasopressin, vecuronium, verapamil, vincristine, vinorelbine, voriconazole, zidovudine.

- **Y-Site Incompatibility:** albumin, amphotericin B cholesteryl, amphotericin B colloidal, amphotericin B liposome, azithromycin, bivalirudin, cefoperazone, chloramphenicol, dantrolene, daptomycin, diazepam, diazoxide, drotrecogin, epoetin alfa, fluorouracil, furosemide, ganciclovir, heparin, idarubicin, indomethacin, ketorolac, pantoprazole, phenytoin, rituximab, streptokinase, trimethoprim/sulfamethoxazole, urokinase.

## Patient/Family Teaching

- Advise patients on oral vancomycin to take as directed. Take missed doses as soon as remembered unless almost time for next dose; do not double dose.
- Instruct patient to report signs of hypersensitivity, tinnitus, vertigo, or hearing loss.
- Advise patient to notify health care professional if no improvement is seen in a few days.
- Patients with a history of rheumatic heart disease or valve replacement need to be taught importance of using antimicrobial prophylaxis prior to invasive dental or medical procedures.

## Evaluation/Desired Outcomes

- Resolution of signs and symptoms of infection. Length of time for complete resolution depends on organism and site of infection.
- Endocarditis prophylaxis.

# vardenafil (var-**den**-a-fil)

Levitra

***Classification***

Therapeutic: erectile dysfunction agents
Pharmacologic: phosphodiesterase type 5 inhibitors

**Pregnancy Category C**

## Indications

Erectile dysfunction.

## Action

Increases cyclic guanosine monophosphate (cGMP) levels by inhibiting phosphodiesterase type 5 (PDE5) an enzyme responsible for the breakdown of cGMP. cGMP produces smooth muscle relaxation of the corpus cavernosum, which in turn promotes increased blood flow and subsequent erection. **Therapeutic Effects:** Enhanced blood flow to the corpus cavernosum and erection sufficient to allow sexual intercourse. Requires sexual stimulation.

## Pharmacokinetics

**Absorption:** 15% absorbed following oral administration; absorption is rapid.
**Distribution:** Extensive tissue distribution; penetrates semen.
**Protein Binding:** 95%.
**Metabolism and Excretion:** Mostly metabolized by the liver (mainly CYP3A4 enzyme system, minor metabolism by CYP2C). M1 metabolite has anti-erectile dysfunction activity. Parent drug and metabolites are mostly excreted in feces. 2–6% renally eliminated.
**Half-life:** 4–5 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 0.5–2 hr | 4 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent use of nitrates or nitric oxide donors; Unstable angina, recent history of stroke, life-threatening arrhythmias, CHF or MI within 6 mo; End-stage renal disease requiring dialysis; Known hereditary degenerative retinal disorders; Severe hepatic impairment (Child-Pugh C); Congenital or acquired QT prolongation or concurrent use of Class IA or III antiarrhythmics; Pedi: Women, children or newborns.
**Use Cautiously in:** Other serious underlying cardiovascular disease or left ventricular outflow obstruction; Penile deformity; Underlying conditions predisposing to priapism including sickle cell anemia, multiple myeloma or leukemia; Bleeding disorders or active peptic ulcer diseases; History of sudden severe vision loss or non arteritic ischemic optic neuropathy (NAION); may ↑ risk of recurrence; Strong inhibitors of the CYP3A4 enzyme system; Alpha adrenergic blockers (patients should be on stable dose of alpha blockers before starting vardenafil); Geri: Have ↑ blood levels; ↓ dose required.

## Adverse Reactions/Side Effects

**CNS:** headache, amnesia, dizziness. **EENT:** HEARING LOSS, VISION LOSS, rhinitis, sinusitis. **GI:** dyspepsia, nausea. **GU:** priapism. **Derm:** flushing. **Misc:** flu syndrome.

### Interactions

**Drug-Drug:** Concurrent use of **nitrates** may cause serious, life-threatening hypotension and is contraindicated. Concurrent use of Class IA antiarrhythmics (such as **quindine** or **procainamide**) or **Class III antiarrhythmics** (such as **amiodarone** or **sotalol**) ↑ risk of serious arrhythmias and should be avoided. Concurrent use of alpha-adrenergic blockers may cause serious hypotension, lowest doses of each should be used initially. Strong inhibitors of CYP3A4 including **protease inhibitor antiretrovirals** (including **ritonavir**, **saquinavir**, and **indinavir**), **ketoconazole**, and **itraconazole** ↑ effects and the risk of adverse reactions (dosage adjustments recommended). Concurrent use of moderate inhibitors of CYP2C including **erythromycin** may also ↑ effects. ↑ risk of hypotension with **alpha adrenergic blockers** and acute ingestion of **alcohol**.

### Route/Dosage

**PO (Adults):** 10 mg taken 1 hr prior to sexual activity (range 5–20 mg; not to exceed one dose/24 hr); *concurrent use of ritonavir*—single dose should not exceed 2.5 mg in any 72-hour period; *concurrent use of indinavir, ketoconazole 400 mg daily or itraconazole 400 mg daily*—single dose should not exceed 2.5 mg/24 hr; *concurrent use of ketoconazole or itraconazole 200 mg daily or erythromycin*—single dose should not exceed 5 mg/24 hr.
**PO (Geriatric Patients >65 yr):** 5 mg initial dose; titrate as tolerated.

#### Hepatic Impairment

**PO (Adults):** *Moderate hepatic impairment (Child-Pugh B)*—May start with 5 mg dose, subsequent dosing should not exceed 10.

### Availability

**Tablets:** 2.5 mg, 5 mg, 10 mg, 20 mg. **Cost:** 2.5 mg $68.99/6, 5 mg $111.99/10, 10 mg $109.99/10, 20 mg $115.99/10.

## NURSING IMPLICATIONS

### Assessment

- Determine erectile dysfunction before administration. Vardenafil has no effect in the absence of sexual stimulation.

### Potential Nursing Diagnoses

Sexual dysfunction (Indications)

### Implementation

- **PO:** Dose is usually administered 1 hr before sexual activity. May be administered 30 min to 4 hr before sexual activity.
- May be administered without regard to food.

### Patient/Family Teaching

- Instruct patient to take vardenafil approximately 1 hr before sexual activity and not more than once per day. Inform patient that sexual stimulation is required for an erection to occur after taking vardenafil.
- Advise patient that vardenafil is not indicated for use in women.
- Caution patient not to take tadalafil concurrently with alpha adrenergic blockers (unless on a stable dose) or nitrates. If chest pain occurs after taking tadalafil, instruct patient to seek immediate medical attention.
- Instruct patient to notify health care professional promptly if erection lasts longer than 4 hr, if they are not satisfied with their sexual performance or develop unwanted side effects or if they experience sudden or decreased vision loss in one or both eyes.
- Advise patient to consult health care professional before taking other Rx or OTC medications or herbal supplements that may interact with vardenafil.
- Inform patient that vardenafil offers no protection against sexually transmitted diseases. Counsel patient that protection against sexually transmitted diseases and HIV infection should be considered.

### Evaluation/Desired Outcomes

- Male erection sufficient to allow intercourse.

## **varenicline** (ver-**en**-i-cline)

Chantix

***Classification***

Therapeutic: smoking deterrents
Pharmacologic: nicotine agonists

**Pregnancy Category C**

### Indications

Treatment of smoking cessation; in conjunction with nonpharmacologic support (educational materials/counseling).

### Action

Selectively binds to alpha$_4$, beta$_2$ nicotinic acetylcholine receptors, acting as a nicotine agonist;

prevents the binding of nicotine to receptors.
**Therapeutic Effects:** Decreased desire to smoke.

### Pharmacokinetics
**Absorption:** 100% absorbed following oral administration.
**Distribution:** 24 hr.
**Metabolism and Excretion:** Minimally metabolized; 92% excreted in urine unchanged.
**Half-life:** 24 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 3–4 hr | 24 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Lactation: Lactation; Pedi: Safety not established.
**Use Cautiously in:** Severe renal impairment (↓ dose recommended if CCr <30 mL/min); Psychiatric illness; Geri: Consider age-related ↓ in renal function; OB: Use only if maternal benefit outweighs fetal risk.

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS/BEHAVIOR, ↓ attention span, anxiety, depression, insomnia, irritability, dizziness, restlessness, abnormal dreams, agitation, aggression, amnesia, disorientation, dissociation, hostility, migraine, psychomotor hyperactivity. **EENT:** blurred vision, visual disturbances. **CV:** syncope. **GI:** diarrhea, gingivitis, nausea, ↑ appetite, constipation, dyspepsia, dysphagia, enterocolitis, eructation, flatulence, gallbladder disorder, GI bleeding, ↑ liver function tests, vomiting. **Derm:** STEVENS-JOHNSON SYNDROME, flushing, hyperhydrosis, acne, dermatitis, dry skin. **Hemat:** anemia. **MS:** arthralgia, back pain, musculoskeletal pain, muscle cramps, myalgia, restless legs. **Misc:** ANGIOEDEMA, accidental injury, chills, fever, hypersensitivity, mild physical dependence.

### Interactions
**Drug-Drug:** Smoking cessation may ↓ metabolism of **theophylline**, **warfarin**, and **insulin** resulting in ↑ effects; careful monitoring is recommended. Risk of adverse reactions (nausea, vomiting, dizziness, fatigue, headache) may be ↑ with **nicotine** replacement therapy (nicotine transdermal patches).

### Route/Dosage
**PO (Adults):** Treatment is started one week prior to planned smoking cessation 0.5 mg once daily on the first three days, then 0.5 mg twice daily for the next 4 days, then 1 mg twice daily.

### Renal Impairment
**PO (Adults):** *CCr <30 mL/min*—0.5 mg daily, may ↑ to 0.5 mg twice daily.

### Availability
**Tablets:** 0.5 mg, 1 mg.

## NURSING IMPLICATIONS

### Assessment
- Assess for desire to stop smoking.
- Assess for nausea. Usually dose-dependent. May require dose reduction.
- Assess mental status and mood changes, especially during initial few months of therapy and during dose changes. Risk may be increased in children, adolescents, and adults ≤24 yr. Inform health care professional if patient demonstrates significant increase in signs of depression (depressed mood, loss of interest in usual activities, significant change in weight and/or appetite, insomnia or hypersomnia, psychomotor agitation or retardation, increased fatigue, feelings of guilt or worthlessness, slowed thinking or impaired concentration, suicide attempt or suicidal ideation). Restrict amount of drug available to patient.
- ***Lab Test Considerations:*** May cause anemia.

### Potential Nursing Diagnoses
Ineffective coping (Indications)

### Implementation
- **PO:** Administer after eating with a full glass of water.

### Patient/Family Teaching
- Instruct patient to take varenicline as directed. Set a date to stop smoking. Start taking varenicline 1 wk before quit date. Begin with 0.5 mg/day for the first 3 days, then for the next 4 days take one 0.5 mg tablet in the morning and in the evening. After first 7 days, increase to 1 mg tablet in the morning and evening.
- Encourage patient to attempt to quit, even if they had early lapses after quit day.
- Advise patient to stop taking varenicline and contact health care professional promptly if agitation, depressed mood, any changes in behavior that are not typical of nicotine withdrawal, or if suicidal thoughts or behavior occur.
- Provide patient with educational materials and counseling to support attempts to quit smoking.
- Caution patient not to share varenicline with others. May be harmful.
- May cause blurred vision, dizziness, and disturbance in attention. Caution patient to avoid

driving and other activities requiring alertness until response to medication is known.
- Inform patient that nausea and insomnia may occur and are usually transient. Advise patient to notify health care professional if these symptoms are persistent and bothersome; dose reduction may be considered.
- Advise patient to notify health care professional before taking Rx, OTC, or herbal products. Inform patient that some medications may require dose adjustments after quitting smoking.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.

### Evaluation/Desired Outcomes
- Smoking cessation. Patients who have successfully stopped smoking at the end of 12 wk, should take an additional 12 wk course to increase the likelihood of long-term abstinence. Patients who do not succeed in stopping smoking during 12 wk of initial therapy or who relapse after treatment, should be encouraged to make another attempt once factors contributing to the failed attempt have been identified and addressed.

## **vasopressin** (vay-soe-**press**-in)
Pitressin, Pressyn

***Classification***
Therapeutic: hormones
Pharmacologic: antidiuretic hormones

**Pregnancy Category C**

### Indications
Central diabetes insipidus due to deficient antidiuretic hormone. **Unlabeled Use:** Management of pulseless VT/VF unresponsive to initial shocks, asystole, or pulseless electrical activity (PEA) (ACLS guidlines). Vasodilatory shock. Gastrointestinal hemorrhage.

### Action
Alters the permeability of the renal collecting ducts, allowing reabsorption of water. Directly stimulates musculature of GI tract. In high doses acts as a nonadrenergic peripheral vasoconstrictor. **Therapeutic Effects:** Decreased urine output and increased urine osmolality in diabetes insipidus.

### Pharmacokinetics
**Absorption:** IM absorption may be unpredictable.
**Distribution:** Widely distributed throughout extracellular fluid.
**Metabolism and Excretion:** Rapidly degraded by the liver and kidneys; <5% excreted unchanged by the kidneys.
**Half-life:** 10–20 min.

TIME/ACTION PROFILE (antidiuretic effect)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IM, subcut | unknown | unknown | 2–8 hr |
| IV | unknown | unknown | 30–60 min |

### Contraindications/Precautions
**Contraindicated in:** Chronic renal failure with increased BUN; Hypersensitivity to beef or pork proteins.
**Use Cautiously in:** Perioperative polyuria (increased sensitivity to vasopressin); Comatose patients; Seizures; Migraine headaches; Asthma; Heart failure; Cardiovascular disease; Renal impairment; Pedi: Geri: ↑ sensitivity to vasopressin effects.

### Adverse Reactions/Side Effects
**CNS:** dizziness, "pounding" sensation in head. **CV:** MI, angina, chest pain. **GI:** abdominal cramps, belching, diarrhea, flatulence, heartburn, nausea, vomiting. **Derm:** paleness, perioral blanching, sweating. **Neuro:** trembling. **Misc:** allergic reactions, fever, water intoxication (higher doses).

### Interactions
**Drug-Drug:** Antidiuretic effect may be ↓ by concurrent administration of **alcohol**, **lithium**, **demeclocycline**, **heparin**, or **norepinephrine**. Antidiuretic effect may be ↑ by concurrent administration of **carbamazepine**, **chlorpropamide**, **clofibrate**, **tricyclic antidepressants**, or **fludrocortisone**. Vasopressor effect may be ↑ by concurrent administration of **ganglionic blocking agents**.

### Route/Dosage

#### Diabetes insipidus
**IM, Subcut (Adults):** 5–10 units 2–4 times daily.
**IM, Subcut (Children):** 2.5–10 units 2–4 times daily.
**IV (Adults and Children):** 0.0005 units/kg/hr, double dosage q 30 min as needed to a maximum of 0.01 units/kg/hr.

### Pulseless VT/VF, Asystole, or PEA (ACLS guidelines)

**IV (Adults):** 40 units as a single dose (unlabeled).
**IV (Children):** 0.4 units/kg after resuscitation and at least 2 doses of epinephrine.

### Vasodilatory shock

**IV (Adults):** 0.01–0.1 units/min, titrate to effect.
**IV (Infants and Children):** 0.0003–0.002 units/kg/min, titrate to effect.

### GI Hemorrhage

**IV (Adults):** 0.2–0.4 units/min then titrate to maximum dose of 0.9 units/min; if bleeding stops continue same dose for 12 hr then taper off over 24–48 hr.
**IV (Children):** 0.002–0.005 units/kg/min then titrate to maximum dose of 0.01 units/kg/min; if bleeding stops continue same dose for 12 hr then taper off over 24–48 hr.

### Availability (generic available)

**Injection:** 20 units/mL in 0.5- and 1-mL ampules and vials.

## NURSING IMPLICATIONS

### Assessment

- Monitor BP, HR, and ECG periodically throughout therapy and continuously throughout cardiopulmonary resuscitation.
- **Diabetes Insipidus:** Monitor urine osmolality and urine volume frequently to determine effects of medication. Assess patient for symptoms of dehydration (excessive thirst, dry skin and mucous membranes, tachycardia, poor skin turgor). Weigh patient daily, monitor intake and output, and assess for edema.
- ***Lab Test Considerations:*** Monitor urine specific gravity throughout therapy.
- Monitor serum electrolyte concentrations periodically during therapy.
- ***Toxicity and Overdose:*** Signs and symptoms of water intoxication include confusion, drowsiness, headache, weight gain, difficulty urinating, seizures, and coma.
- Treatment of overdose includes water restriction and temporary discontinuation of vasopressin until polyuria occurs. If symptoms are severe, administration of mannitol, hypertonic dextrose, urea, and/or furosemide may be used.

### Potential Nursing Diagnoses

Deficient fluid volume (Indications)
Excess fluid volume (Adverse Reactions)

### Implementation

- Do not confuse Pitressin (vasopressin) with Pitocin (oxytocin).
- Aqueous vasopressin injection may be administered subcut or IM for diabetes insipidus.
- Administer 1–2 glasses of water at the time of administration to minimize side effects (blanching of skin, abdominal cramps, nausea).

#### IV Administration

- **Direct IV:** ***Diluent:*** Administer undiluted. ***Concentration:*** 20 units/mL. ***Rate:*** Administer over 1–2 sec during pulseless VT/VF, asystole, or PEA.
- **Continuous Infusion:** ***Diluent:*** Dilute 100 units of vasopressin in 250 mL of 0.9% NaCl or D5W. ***Concentration:*** 0.4 units/mL. ***Rate:*** See Route/Dosage section.
- **Y-Site Compatibility:** amiodarone, argatroban, ciprofloxacin, diltiazem, dobutamine, dopamine, drotrecogin, epinephrine, fluconazole, gentamicin, heparin, imipenem/cilastatin, insulin, lidocaine, linezolid, meropenem, metronidazole, milrinone, nitroglycerin, norepinephrine, pantoprazole, phenylephrine, procainamide, sodium bicarbonate.
- **Y-Site Incompatibility:** diazepam, phenytoin, trimethoprim/sulfamethoxazole.

### Patient/Family Teaching

- Instruct patient to take medication as directed. Caution patient not to use more than prescribed amount. Take missed doses as soon as remembered, unless almost time for next dose.
- Advise patient to drink 1–2 glasses of water at time of administration to minimize side effects (blanching of skin, abdominal cramps, nausea). Inform patient that these side effects are not serious and usually disappear in a few minutes.
- Caution patient to avoid concurrent use of alcohol while taking vasopressin.
- Patients with diabetes insipidus should carry identification at all times describing disease process and medication regimen.

### Evaluation/Desired Outcomes

- Decrease in urine volume.
- Relief of polydipsia.
- Increased urine osmolality in patients with central diabetes insipidus.
- Resolution of VT/VF.
- Improvement in signs of septic shock.

## venlafaxine (ven-la-**fax**-een)

Effexor, Effexor XR

***Classification***
Therapeutic: antidepressants, antianxiety agents
Pharmacologic: selective serotonin/norepinephrine reuptake inhibitors

**Pregnancy Category C**

## Indications
Major depressive disorder. Generalized anxiety disorder (Effexor XR only). Social anxiety disorder (Effexor XR only). Panic disorder (Effexor XR only). **Unlabeled Use:** Premenstrual dysphoric disorder.

## Action
Inhibits serotonin and norepinephrine reuptake in the CNS. **Therapeutic Effects:** Decrease in depressive symptomatology, with fewer relapses/recurrences. Decreased anxiety; Decrease in panic attacks.

## Pharmacokinetics
**Absorption:** 92–100% absorbed after oral administration.
**Distribution:** Extensive distribution into body tissues.
**Metabolism and Excretion:** Extensively metabolized on first pass through the liver (primarily through CYP2D6 enzyme pathway). ⛓ A small percentage of the population are poor metabolizers and will have higher blood levels with ↑ effects. One metabolite, O-desmethylvenlafaxine (ODV), has antidepressant activity; 5% of venlafaxine is excreted unchanged in urine; 30% of the active metabolite is excreted in urine.
**Half-life:** *Venlafaxine*—3–5 hr; *ODV*—9–11 hr (both are ↑ in hepatic/renal impairment).

TIME/ACTION PROFILE (antidepressant action)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within 2 wk | 2–4 wk | unknown |

## Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent MAO inhibitor therapy.
**Use Cautiously in:** Cardiovascular disease, including hypertension; Hepatic impairment (↓ dose recommended); Impaired renal function (↓ dose recommended); History of seizures or neurologic impairment; History of mania; History of ↑ intraocular pressure or angle-closure glaucoma; History of drug abuse; OB: Use only if clearly required during pregnancy, weighing benefit to mother versus potential harm to fetus (potential for discontinuation syndrome or toxicity in the neonate when venlafaxine is taken during the 3rd trimester); Lactation: Potential for serious adverse reactions in infant; discontinue drug or discontinue breastfeeding; Pedi: ↑ risk of suicidal thinking and behavior (suicidality) in children and adolescents with major depressive disorder and other psychiatric disorders. Observe closely for suicidality and behavior changes.

## Adverse Reactions/Side Effects
**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, SEIZURES, SUICIDAL THOUGHTS, abnormal dreams, anxiety, dizziness, headache, insomnia, nervousness, weakness, abnormal thinking, agitation, confusion, depersonalization, drowsiness, emotional lability, worsening depression. **EENT:** rhinitis, visual disturbances, epistaxis, tinnitus. **CV:** chest pain, hypertension, palpitations, tachycardia. **GI:** abdominal pain, altered taste, anorexia, constipation, diarrhea, dry mouth, dyspepsia, nausea, vomiting, weight loss. **GU:** sexual dysfunction, urinary frequency, urinary retention. **Derm:** ecchymoses, itching, photosensitivity, skin rash. **Neuro:** paresthesia, twitching. **Misc:** SEROTONIN SYNDROME, chills, bleeding, yawning.

## Interactions
**Drug-Drug:** Concurrent use with **MAO inhibitors** may result in serious, potentially fatal reactions (wait at least 2 wk after stopping MAO inhibitor before initiating venlafaxine; wait at least 1 wk after stopping venlafaxine before starting MAO inhibitors). Concurrent use with **alcohol** or other **CNS depressants**, including **sedatives/hypnotics**, **antihistamines**, and **opioid analgesics** in depressed patients is not recommended. Drugs that affect serotonergic neurotransmitter systems, including **linezolid**, **tramadol**, and **triptans**, ↑ risk of serotonin syndrome. **Lithium** may have ↑ serotonergic effects with venlafaxine; use cautiously in patients receiving venlafaxine. ↑ blood levels and may ↑ effects of **desipramine** and **haloperidol**. **Cimetidine** may ↑ the effects of venlafaxine (may be more pronounced in geriatric patients, those with hepatic or renal impairment, or those with pre-existing hypertension). **Ketoconazole** may ↑ the effects of venlafaxine. ↑ risk of bleeding with **NSAIDS**, **aspirin**, **clopidogrel**, or **warfarin**.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, **chamomile**, or **hops** can ↑ CNS depression. ↑ risk of serotinergic side

V

effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage

### Major Depressive Disorder

**PO (Adults):** *Tablets*—75 mg/day in 2–3 divided doses; may ↑ by up to 75 mg/day every 4 days, up to 225 mg/day (not to exceed 375 mg/day in 3 divided doses); *Extended-release (XR) capsules*—75 mg once daily (some patients may be started at 37.5 mg once daily) for 4–7 days; may ↑ by up to 75 mg/day at intervals of not less than 4 days (not to exceed 225 mg/day).

### General Anxiety Disorder

**PO (Adults):** *Extended-release (XR) capsules*—75 mg once daily (some patients may be started at 37.5 mg once daily) for 4–7 days; may ↑ by up to 75 mg/day at intervals of not less than 4 days (not to exceed 225 mg/day).

### Social Anxiety Disorder

**PO (Adults):** *Extended-release (XR) capsules*—75 mg once daily.

### Panic Disorder

**PO (Adults):** *Extended-release (XR) capsules*—37.5 mg once daily for 7 days; may then ↑ to 75 mg once daily; may then ↑ by 75 mg/day every 7 days (not to exceed 225 mg/day).

### Hepatic Impairment

**PO (Adults):** ↓ daily dose by 50% in patients with mild-to-moderate hepatic impairment.

### Renal Impairment

**PO (Adults):** *CCr 10–70 mL/min*— ↓ daily dose by 25–50%; *Hemodialysis*— ↓ daily dose by 50%.

### Availability (generic available)

**Tablets:** 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg. **Cost:** *Generic*—25 mg $299.95/180, 37.5 mg $299.93/180, 50 mg $341.96/180, 75 mg $337.95/180, 100 mg $343.78/180. **Extended-release capsules:** 37.5 mg, 75 mg, 150 mg. **Cost:** 37.5 mg $275.97/90, 75 mg $318.99/90, 150 mg $355.97/90.

## NURSING IMPLICATIONS

### Assessment

- Assess mental status and mood changes. Inform health care professional if patient demonstrates significant increase in anxiety, nervousness, or insomnia.
- Assess suicidal tendencies, especially in early therapy. Restrict amount of drug available to patient. Risk may be increased in children, adolescents, and adults ≤24 yr.
- Monitor blood pressure before and periodically during therapy. Sustained hypertension may be dose-related; decrease dose or discontinue therapy if this occurs.
- Monitor appetite and nutritional intake. Weigh weekly. Report continued weight loss. Adjust diet as tolerated to support nutritional status.
- Assess for serotonin syndrome (mental changes [agitation, hallucinations, coma], autonomic instability [tachycardia, labile blood pressure, hyperthermia], neuromuscular aberrations [hyper-reflexia, incoordination], and/or GI symptoms [nausea, vomiting, diarrhea]), especially in patients taking other serotonergic drugs (SSRIs, SNRIs, triptans).
- ***Lab Test Considerations:*** Monitor CBC with differential and platelet count periodically during therapy. May cause anemia, leukocytosis, leukopenia, thrombocytopenia, basophilia, and eosinophilia.
- May cause an ↑ in serum alkaline phosphatase, bilirubin, AST, ALT, BUN, and creatinine.
- May also cause ↑ serum cholesterol.
- May cause electrolyte abnormalities (hyperglycemia or hypoglycemia, hyperkalemia or hypokalemia, hyperuricemia, hyperphosphatemia or hypophosphatemia, and hyponatremia).

### Potential Nursing Diagnoses

Ineffective coping (Indications)
Risk for injury (Side Effects)

### Implementation

- **PO:** Administer venlafaxine with food.
- Extended-release capsules should be swallowed whole; do not crush, break, or chew.
- Extended-release capsules may also be opened and contents sprinkled on a spoonful of applesauce. Take immediately and follow with a glass of water. Do not store mixture for later use.

### Patient/Family Teaching

- Instruct patient to take venlafaxine as directed at the same time each day. Take missed doses as soon as possible unless almost time for next dose. Do not double doses or discontinue abruptly. Patients taking venlafaxine for >6 wk should have dose gradually decreased before discontinuation.
- Advise patient, family, and caregivers to look for suicidality, especially during early therapy or dose changes. Notify health care professional immediately if thoughts about suicide or dying, attempts to commit suicide; new or worse depression or anxiety; agitation or restlessness; panic attacks; insomnia; new or

worse irritability; aggressiveness; acting on dangerous impulses, mania, or other changes in mood or behavior or if symptoms of serotonin syndrome occur.
- May cause drowsiness or dizziness. Caution patient to avoid driving or other activities requiring alertness until response to the drug is known.
- Caution patient to avoid taking alcohol or other CNS-depressant drugs during therapy and not to take other Rx, OTC, or herbal products without consulting health care professional.
- Instruct female patients to inform health care professional if pregnancy is planned or suspected or if breastfeeding.
- Instruct patient to notify health care professional if signs of allergy (rash, hives) occur.
- Emphasize the importance of follow-up exams to monitor progress. Encourage patient participation in psychotherapy.

### Evaluation/Desired Outcomes
- Increased sense of well-being.
- Renewed interest in surroundings. Need for therapy should be periodically reassessed. Therapy is usually continued for several months.
- Decreased anxiety.

## verapamil (ver-**ap**-a-mil)
Calan, Calan SR, Covera-HS, Isoptin SR, Novo-Veramil, Nu-Verap, Verelan, Verelan PM

***Classification***
Therapeutic: antianginals, antiarrhythmics (class IV), antihypertensives, vascular headache suppressants
Pharmacologic: calcium channel blockers

**Pregnancy Category C**

### Indications
Management of hypertension, angina pectoris, and/or vasospastic (Prinzmetal's) angina. Management of supraventricular arrhythmias and rapid ventricular rates in atrial flutter or fibrillation. **Unlabeled Use:** Prevention of migraine headache.

### Action
Inhibits the transport of calcium into myocardial and vascular smooth muscle cells, resulting in inhibition of excitation-contraction coupling and subsequent contraction. Decreases SA and AV conduction and prolongs AV node refractory period in conduction tissue. **Therapeutic Effects:** Systemic vasodilation resulting in decreased blood pressure. Coronary vasodilation resulting in decreased frequency and severity of attacks of angina. Reduction of ventricular rate during atrial fibrillation or flutter.

### Pharmacokinetics
**Absorption:** 90% absorbed after oral administration, but much is rapidly metabolized, resulting in bioavailability of 20–25%.
**Distribution:** Small amounts enter breast milk.
**Protein Binding:** 90%.
**Metabolism and Excretion:** Mostly metabolized by the liver.
**Half-life:** 4.5–12 hr.

TIME/ACTION PROFILE (cardiovascular effects)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1–2 hr | 30–90 min† | 3–7 hr |
| PO-ER | unknown | 5–7 hr | 24 hr |
| IV | 1–5 min‡ | 3–5 min | 2 hr‡ |

†Single dose; effects from multiple doses may not be evident for 24–48 hr

‡Antiarrhythmic effects; hemodynamic effects begin 3–5 min after injection and persist for 10–20 min

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Sick sinus syndrome; 2nd- or 3rd-degree AV block (unless an artificial pacemaker is in place); Systolic BP <90 mm Hg; CHF, severe ventricular dysfunction, or cardiogenic shock, unless associated with supraventricular tachyarrhythmias; Concurrent IV beta blocker therapy.
**Use Cautiously in:** Severe hepatic impairment (dose ↓ recommended for most agents); History of serious ventricular arrhythmias or CHF; Geri: Dose ↓ /slower IV infusion rates recommended( ↑ risk of hypotension); OB, Lactation: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** abnormal dreams, anxiety, confusion, dizziness/lightheadedness, drowsiness, headache, jitteriness, nervousness, psychiatric disturbances, weakness. **EENT:** blurred vision, disturbed equilibrium, epistaxis, tinnitus. **Resp:** cough, dyspnea, shortness of breath. **CV:** ARRHYTHMIAS, CHF, bradycardia, chest pain, hypotension, palpitations, peripheral edema, syncope, tachycardia.

**GI:** ↑ liver enzymes, anorexia, constipation, diarrhea, dry mouth, dysgeusia, dyspepsia, nausea, vomiting. **GU:** dysuria, nocturia, polyuria, sexual dysfunction, urinary frequency. **Derm:** dermatitis, erythema multiforme, flushing, photosensitivity, pruritus/urticaria, rash, sweating. **Endo:** gynecomastia, hyperglycemia. **Hemat:** anemia, leukopenia, thrombocytopenia. **Metab:** weight gain. **MS:** joint stiffness, muscle cramps. **Neuro:** paresthesia, tremor. **Misc:** STEVENS-JOHNSON SYNDROME, gingival hyperplasia.

## Interactions

**Drug-Drug:** Additive hypotension may occur when used concurrently with **fentanyl**, other **antihypertensives**, **nitrates**, acute ingestion of **alcohol**, or **quinidine**. Antihypertensive effects may be ↓ by concurrent use of **NSAIDs**. Serum **digoxin** levels may be ↑. Concurrent use with **beta blockers**, **digoxin**, **disopyramide**, or **phenytoin** may result in bradycardia, conduction defects, or CHF. ↑ risk of hypotension and bradycardia with **erythromycin**, **clarithromycin**, or **telithromycin**. May ↓ metabolism of and ↑ risk of toxicity from **cyclosporine**, **prazosin**, **quinidine**, or **carbamazepine**. May ↓ effectiveness of **rifampin**. ↑ the muscle-paralyzing effects of **nondepolarizing neuromuscular-blocking agents**. Effectiveness may be ↓ by coadministration with **vitamin D compounds** and **calcium**. May alter serum **lithium** levels.
**Drug-Natural Products:** ↑ **caffeine** levels with caffeine-containing herbs (**cola nut**, **guarana**, **mate**, **tea**, **coffee**).
**Drug-Food: Grapefruit juice** ↑ serum levels and effect.

## Route/Dosage

**PO (Adults):** 80–120 mg 3 times daily, ↑ as needed. *Patients with hepatic impairment or geriatric patients*—40 mg 3 times daily initially. *Extended-release preparations*—120–240 mg/day as a single dose; may be ↑ as needed (range 240–480 mg/day).
**PO (Children up to 15 yr):** 4–8 mg/kg/day in divided doses.
**IV (Adults):** 5–10 mg (75–150 mcg/kg); may repeat with 10 mg (150 mcg/kg) after 15–30 min.
**IV (Children 1–15 yr):** 2–5 mg (100–300 mcg/kg); may repeat after 30 min (initial dose not to exceed 5 mg; repeat dose not to exceed 10 mg).
**IV (Children <1 yr):** 0.75–2 mg (100–200 mcg/kg); may repeat after 30 min.

## Availability (generic available)

**Tablets:** 40 mg, 80 mg, 120 mg. **Cost:** *Generic*—40 mg $44.96/270, 80 mg $44.96/270, 120 mg $34.45/270. **Extended-release tablets (Isoptin SR, Covera HS):** 120 mg, 180 mg, 240 mg. **Cost:** *Generic*—120 mg $49.97/90, 180 mg $27.97/90, 240 mg $35.97/90. **Extended-release capsules (Verelan PM):** 100 mg, 200 mg, 300 mg. **Cost:** 100 mg $166.01/90, 200 mg $213.02/90, 300 mg $308.52/90. **Extended-release capsules (Verelan):** 120 mg, 180 mg, 240 mg, 360 mg. **Cost:** *Generic*—120 mg $64.99/90, 180 mg $67.99/90, 240 mg $86.99/90, 360 mg $160.97/90. **Solution for injection:** 2.5 mg/mL. ***In combination with:*** trandolapril (Tarka); see Appendix B.

# NURSING IMPLICATIONS

## Assessment

- Monitor blood pressure and pulse before therapy, during dosage titration, and periodically throughout therapy. Monitor ECG periodically during prolonged therapy. Verapamil may cause prolonged PR interval.
- Monitor intake and output ratios and daily weight. Assess for signs of CHF (peripheral edema, rales/crackles, dyspnea, weight gain, jugular venous distention).
- Patients receiving digoxin concurrently with calcium channel blockers should have routine serum digoxin levels and be monitored for signs and symptoms of digoxin toxicity.
- **Angina:** Assess location, duration, intensity, and precipitating factors of patient's anginal pain.
- **Arrhythmias:** Monitor ECG continuously during administration. Notify health care professional promptly if bradycardia or prolonged hypotension occurs. Emergency equipment and medication should be available. Monitor blood pressure and pulse before and frequently during administration.
- ***Lab Test Considerations:*** Total serum calcium concentrations are not affected by calcium channel blockers.
- Monitor serum potassium periodically. Hypokalemia ↑ risk of arrhythmias and should be corrected.
- Monitor renal and hepatic functions periodically during long-term therapy. May cause ↑ hepatic enzymes after several days of therapy, which return to normal on discontinuation of therapy.

## Potential Nursing Diagnoses

Decreased cardiac output (Indications)
Acute pain (Indications)

## Implementation

- Do not confuse verapamil with Virilon (methyltestosterone). Do not confuse Covera (verapamil) with Provera (medroxyprogesterone).
- **PO:** Administer verapamil with meals or milk to minimize gastric irritation.
- Do not open, crush, break, or chew sustained-release capsules or tablets. Empty tablets that appear in stool are not significant.

### IV Administration

- **IV:** Patients should remain recumbent for at least 1 hr after IV administration to minimize hypotensive effects.
- **Direct IV:** ***Diluent:*** Administer undiluted. ***Concentration:*** 2.5 mg/mL. ***Rate:*** Administer over 2 min. Geri: Administer over 3 min.
- **Y-Site Compatibility:** alfentanil, amikacin, argatroban, ascorbic acid, atracurium, atropine, aztreonam, bivalirudin, bumetanide, buprenorphine, butorphanol, calcium chloride, calcium gluconate, carboplatin, caspofungin, cefazolin, cefonocid, cefotaxime, cefotetan, cefoxitin, ceftizoxime, ceftriaxone, cefuroxime, chlorpromazine, cimetidine, ciprofloxacin, clindamycin, cyanocobalamin, cyclophosphamide, cyclosporine, cytarabine, dactinomycin, daptomycin, dexamethasone, dexmedetomidine, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dopamine, doxacurium, doxorubicin hydrochloride, doxycycline, enalaprilat, ephedrine, epinephrine, epirubicin, epotein alfa, eptifibatide, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, gemcitabine, gentamicin, glycopyrrolate, granisetron, heparin, hetastarch, hydralazine, hydrocortisone sodium succinate, hydromorphone, ifosfamide, imipenem/cilastatin, inamrinone, insulin, isoproterenol, ketorolac, labetalol, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, meperidine, metaraminol, methotrexate, methoxamine, methyldopate, methylprednisolone sodium succinate, metoclopramide, metoprolol, metronidazole, miconazole, midazolam, milrinone, mitoxantrone, morphine, multivitamins, nalbuphine, naloxone, nesiritide, nitroglycerin, nitroprusside, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, paclitaxel, palonosetron, papaverine, pemetrexed, penicillin G, pentamidine, pentazocine, phentolamine, phenylephrine, phytonadione, piperacillin/tazobactam, potassium chloride, procainamide, prochlorperazine, promethazine, propranolol, protamine, pyridoxime, quinupristin/dalfopristin, ranitidine, rocuronium, sodium acetate, streptokinase, succinylcholine, sufentanil, tacrolimus, teniposide, theiphylline, thiamine, ticarcillin/clavulanate, tirofiban, tobramycin, tolazoline, trimethaphan, urokinase, vancomycin, vasopressin, vecuronium, vincristine, vinorelbine, voriconazole.
- **Y-Site Incompatibility:** acyclovir, albumin, aminophylline, amphotericin B cholesteryl, amphotericin B colloidal, amphotericin B liposome, ampicillin, ampicillin/sulbactam, azathioprine, cefoperazone, ceftazidime, chloramphenicol, dantrolene, diazepam, diazoxide, ertapenem, fluorouracil, folic acid, furosemide, ganciclovir, indomethacin, pantoprazole, pentobarbital, phenobarbital, phenytoin, piperacillin/tazobactam, propofol, sodium bicarbonate, thiotepa, tigecycline, trimethoprim/sulfamethoxazole.

## Patient/Family Teaching

- Advise patient to take medication as directed, even if feeling well. Take missed doses as soon as possible unless almost time for next dose; do not double doses. May need to be discontinued gradually.
- Advise patient to avoid large amounts (6–8 glasses of grapefruit juice/day) during therapy.
- Instruct patient on correct technique for monitoring pulse. Instruct patient to contact health care professional if heart rate is <50 bpm.
- Caution patient to change positions slowly to minimize orthostatic hypotension.
- May cause drowsiness or dizziness. Advise patient to avoid driving or other activities requiring alertness until response to the medication is known.
- Instruct patient on importance of maintaining good dental hygiene and seeing dentist frequently for teeth cleaning to prevent tenderness, bleeding, and gingival hyperplasia (gum enlargement).
- Instruct patient to avoid concurrent use of alcohol or OTC medications, especially cold preparations, without consulting health care professional.

V

- Advise patient to notify health care professional if irregular heartbeats, dyspnea, swelling of hands and feet, pronounced dizziness, nausea, constipation, or hypotension occurs or if headache is severe or persistent.
- Caution patient to wear protective clothing and use sunscreen to prevent photosensitivity reactions.
- **Angina:** Instruct patient on concurrent nitrate or beta-blocker therapy to continue taking both medications as directed and use SL nitroglycerin as needed for anginal attacks.
- Advise patient to contact health care professional if chest pain does not improve, worsens after therapy, or occurs with diaphoresis; if shortness of breath occurs; or if severe, persistent headache occurs.
- Caution patient to discuss exercise restrictions with health care professional before exertion.
- **Hypertension:** Encourage patient to comply with other interventions for hypertension (weight reduction, low-sodium diet, smoking cessation, moderation of alcohol consumption, regular exercise, and stress management). Medication controls but does not cure hypertension.
- Instruct patient and family in proper technique for monitoring blood pressure. Advise patient to take blood pressure weekly and to report significant changes to health care professional.

### Evaluation/Desired Outcomes

- Decrease in blood pressure.
- Decrease in frequency and severity of anginal attacks.
- Decrease in need for nitrate therapy.
- Increase in activity tolerance and sense of well-being.
- Suppression and prevention of atrial tachyarrhythmias.

HIGH ALERT

## vinBLAStine (vin-**blass**-teen)

Velbe

***Classification***

Therapeutic: antineoplastics
Pharmacologic: vinca alkaloids

**Pregnancy Category D**

### Indications

Combination chemotherapy of: Lymphomas, Nonseminomatous testicular carcinoma, Advanced breast cancer, Other tumors.

### Action

Binds to proteins of mitotic spindle, causing metaphase arrest. Cell replication is stopped as a result (cell cycle–specific for M phase). **Therapeutic Effects:** Death of rapidly replicating cells, particularly malignant ones. Has immunosuppressive properties.

### Pharmacokinetics

**Absorption:** Administered IV only, resulting in complete bioavailability.
**Distribution:** Does not cross the blood-brain barrier well.
**Metabolism and Excretion:** Converted by the liver to an active antineoplastic compound; excreted in the feces via biliary excretion, some renal elimination.
**Half-life:** 24 hr.

TIME/ACTION PROFILE (effects on white blood cell counts)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | 5–7 days | 10 days | 7–14 days |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Infection; ↓ bone marrow reserve; Patients with impaired hepatic function (↓ dose by 50% if serum bilirubin >3 mg/dL); OB: Instruct women of childbearing potential to avoid pregnancy during treatment.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, mental depression, neurotoxicity, weakness. **Resp:** BRONCHOSPASM. **GI:** nausea, vomiting, anorexia, constipation, diarrhea, stomatitis. **GU:** gonadal suppression. **Derm:** alopecia, dermatitis, vesiculation. **Endo:** syndrome of inappropriate antidiuretic hormone (SIADH). **Hemat:** anemia, leukopenia, thrombocytopenia. **Local:** phlebitis at IV site. **Metab:** hyperuricemia. **Neuro:** neuritis, paresthesia, peripheral neuropathy.

### Interactions

**Drug-Drug:** Additive bone marrow depression with other **antineoplastics** or **radiation therapy**. Bronchospasm may occur in patients who have been previously treated with **mitomycin**. May ↓ antibody response to **live-virus vaccines** and ↑ risk of adverse reactions. May ↓ **phenytoin** levels.

### Route/Dosage

Doses may vary greatly, depending on tumor, schedule, condition of patient, and blood counts.

**IV (Adults):** *Initial*—3.7 mg/m² (100 mcg/kg), single dose; ↑ weekly as tolerated by 1.8 mg/m² (50 mcg/kg) to maximum of 18.5 mg/m² (usual dose is 5.5–7.4 mg/m²). *Maintenance*—10 mg 1–2 times/mo or one increment less than last dose q 7–14 days.
**IV (Children):** *Initial*—2.5 mg/m², single dose; ↑ weekly as tolerated by 1.25 mg/m² to maximum of 7.5 mg/m². *Maintenance*—one increment less than last dose q 7 days.

### Availability (generic available)

**Solution for injection:** 1 mg/mL. **Powder for injection:** 10 mg/vial.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure, pulse, and respiratory rate during therapy. Notify physician immediately if respiratory distress occurs. Bronchospasm can be life-threatening and may occur at time of infusion or several hours to weeks later.
- Monitor for bone marrow depression. Assess for bleeding (bleeding gums, bruising, petechiae, guaiac stools, urine, and emesis) and avoid IM injections and taking rectal temperatures if platelet count is low. Apply pressure to venipuncture sites for 10 min. Assess for signs of infection during neutropenia. Anemia may occur. Monitor for increased fatigue, dyspnea, and orthostatic hypotension.
- May cause nausea and vomiting. Monitor intake and output, appetite, and nutritional intake. Prophylactic antiemetics may be used. Adjust diet as tolerated.
- Assess injection site frequently for redness, irritation, or inflammation. If extravasation occurs, infusion must be stopped and restarted elsewhere to avoid damage to subcut tissue. Standard treatment includes infiltration with hyaluronidase and application of heat.
- Monitor for symptoms of gout (increased uric acid, joint pain, edema). Encourage patient to drink at least 2 L of fluid per day. Allopurinol or alkalinization of urine may be used to decrease uric acid levels.
- ***Lab Test Considerations:*** Monitor CBC prior to and routinely throughout therapy. If WBC <2000, subsequent doses are usually withheld until WBC is ≥4000. The nadir of leukopenia occurs in 5–10 days and recovery usually occurs 7–14 days later. Thrombocytopenia may also occur in patients who have received radiation or other chemotherapy agents.
- Monitor liver function studies (AST, ALT, LDH, bilirubin) and renal function studies (BUN, creatinine) prior to and periodically throughout therapy.
- May cause ↑ uric acid. Monitor periodically during therapy.

### Potential Nursing Diagnoses

Risk for infection (Adverse Reactions)
Imbalanced nutrition: less than body requirements (Adverse Reactions)

### Implementation

- ***High Alert:*** Fatalities have occurred with chemotherapeutic agents. Before administering, clarify all ambiguous orders; double check single, daily, and course-of-therapy dose limits; have second practitioner independently double check original order, dose calculations, and infusion pump settings. Do not administer subcut, IM, or intrathecally (IT). IT administration is fatal. Vinblastine must be dispensed in an overwrap stating, "For IV use only." Overwrap should remain in place until immediately before administration.
- ***High Alert:*** Do not confuse vinblastine with vincristine.
- Solution should be prepared in a biologic cabinet. Wear gloves, gown, and mask while handling medication. Discard IV equipment in specially designated containers.
- Do not inject into extremities with impaired circulation; may cause thrombophlebitis.

#### IV Administration

- **Direct IV:** ***Diluent:*** Dilute each 10 mg with 10 mL of 0.9% NaCl for injection with phenol or benzyl alcohol. Solution is clear. Reconstituted medication is stable for 28 days if refrigerated. ***Concentration:*** 1 mg/mL. ***Rate:*** Administer each single dose over 1 min through Y-site injection of a free-flowing infusion of 0.9% NaCl or D5W.
- **Intermittent Infusion:** Dilution in large volumes (100–250 mL) or prolonged infusion (≥30 min) increases chance of vein irritation and extravasation.
- **Syringe Compatibility:** bleomycin, cisplatin, cyclophosphamide, droperidol, fluorouracil, leucovorin calcium, methotrexate, metoclopramide, mitomycin, vincristine.
- **Syringe Incompatibility:** furosemide.
- **Y-Site Compatibility:** allopurinol, amifostine, amphotericin B cholesteryl sulfate complex, az-

treonam, bleomycin, cisplatin, cyclophosphamide, doxorubicin, doxorubicin liposome, droperidol, etoposide phosphate, filgrastim, fludarabine, fluorouracil, gemcitabine, granisetron, heparin, leucovorin calcium, melphalan, methotrexate, metoclopramide, mitomycin, ondansetron, paclitaxel, pemetrexed, piperacillin/tazobactam, sargramostim, teniposide, thiotepa, vincristine, vinorelbine.

- **Y-Site Incompatibility:** cefepime, furosemide, lansoprazole.

## Patient/Family Teaching

- Advise patient to notify health care professional if fever; chills; sore throat; signs of infection; bleeding gums; bruising; petechiae; or blood in urine, stool, or emesis occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush and electric razor. Caution patient not to drink alcoholic beverages or take products containing aspirin or NSAIDs.
- Instruct patient to inspect oral mucosa for redness and ulceration. Advise patient that, if ulceration occurs, to avoid spicy foods, use sponge brush, and rinse mouth with water after eating and drinking. Topical agents may be used if mouth pain interferes with eating. Stomatitis pain may require treatment with opioid analgesics.
- Instruct patient to report symptoms of neurotoxicity (paresthesia, pain, difficulty walking, persistent constipation).
- Advise patient that jaw pain, pain in organs containing tumor tissue, nausea, and vomiting may occur. Avoid constipation and report other adverse reactions.
- Advise patient that this medication may have teratogenic effects. Contraception should be used during and for at least 2 mo after therapy is concluded.
- Discuss with patient the possibility of hair loss. Explore coping strategies.
- Instruct patient not to receive any vaccinations without advice of health care professional.
- Emphasize need for periodic lab tests to monitor for side effects.

## Evaluation/Desired Outcomes

- Regression of malignancy without the appearance of detrimental side effects.

HIGH ALERT

# vinCRIStine (vin-kriss-teen)

Vincasar PFS

***Classification***
Therapeutic: antineoplastics
Pharmacologic: vinca alkaloids

**Pregnancy Category D**

## Indications

Used alone and in combination with other treatment modalities (antineoplastics, surgery, or radiation therapy) in treatment of: Hodgkin's disease, Leukemias, Neuroblastoma, Malignant lymphomas, Rhabdomyosarcoma, Wilms' tumor, Other tumors.

## Action

Binds to proteins of mitotic spindle, causing metaphase arrest. Cell replication is stopped as a result (cell cycle–specific for M phase). Has little or no effect on bone marrow. **Therapeutic Effects:** Death of rapidly replicating cells, particularly malignant ones. Has immunosuppressive properties.

## Pharmacokinetics

**Absorption:** Administered IV only, resulting in complete bioavailability.
**Distribution:** Rapidly and widely distributed; extensively bound to tissues.
**Metabolism and Excretion:** Metabolized by the liver and eliminated in the feces via biliary excretion.
**Half-life:** 10.5–37.5 hr.

TIME/ACTION PROFILE (effects on blood counts†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | unknown | 4 days | 7 days |

†Usually mild

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Infection; ↓ bone marrow reserve; Hepatic impairment (50% dose ↓ recommended if serum bilirubin >3 mg/dL); OB: Instruct women of childbearing potential to avoid pregnancy during treatment.

## Adverse Reactions/Side Effects

**CNS:** agitation, insomnia, mental depression, mental status changes. **EENT:** cortical blindness, diplopia. **Resp:** bronchospasm. **GI:** nausea, vomiting, abdominal cramps, anorexia, constipation, ileus, stomatitis. **GU:** gonadal suppression, nocturia, oliguria, urinary retention. **Derm:** alopecia. **Endo:** syndrome of inappropriate antidiuretic hormone (SIADH). **Hemat:** anemia, leukopenia, thrombocytopenia (mild and brief). **Local:** phlebitis at IV site, tissue necrosis (from extravasa-

tion). **Metab:** hyperuricemia. **Neuro:** ascending peripheral neuropathy.

### Interactions

**Drug-Drug:** Bronchospasm may occur in patients who have been previously treated with **mitomycin**. **L-asparaginase** may ↓ hepatic metabolism of vincristine (give vincristine 12–24 hr prior to asparaginase). May ↓ antibody response to **live-virus vaccines** and ↑ risk of adverse reactions.

### Route/Dosage

Many other protocols are used.
**IV (Adults):** 10–30 mcg/kg (0.4–1.4 mg/m²); may repeat weekly (not to exceed 2 mg/dose).
**IV (Children >10 kg):** 1.5–2 mg/m² single dose; may repeat weekly.
**IV (Children <10 kg):** 50 mcg/kg single dose; may repeat weekly.

### Availability (generic available)

**Solution for injection:** 1 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure, pulse, and respiratory rate during therapy. Report significant changes.
- Monitor neurologic status. Assess for paresthesia (numbness, tingling, pain), loss of deep tendon reflexes (Achilles reflex is usually first involved), weakness (wrist drop or footdrop, gait disturbances), cranial nerve palsies (jaw pain, hoarseness, ptosis, visual changes), autonomic dysfunction (ileus, difficulty voiding, orthostatic hypotension, impaired sweating), and CNS dysfunction (decreased level of consciousness, agitation, hallucinations). Notify physician if these symptoms develop, as they may persist for months.
- Monitor intake and output ratios and daily weight; report significant discrepancies. Decreased urine output with concurrent hyponatremia may indicate SIADH, which usually responds to fluid restriction.
- Assess infusion site frequently for redness, irritation, or inflammation. If extravasation occurs, infusion must be stopped and restarted elsewhere to avoid damage to subcut tissue. Cellulitis and discomfort may be minimized by infiltration with hyaluronidase and application of moderate heat or by application of cold compresses.
- Assess nutritional status. An antiemetic may be used to minimize nausea and vomiting.
- Monitor for symptoms of gout (increased uric acid, joint pain, edema). Encourage patient to drink at least 2 liters of fluid per day. Allopurinol or alkalinization of urine may be used to decrease uric acid levels.
- ***Lab Test Considerations:*** Monitor CBC prior to and periodically throughout therapy. May cause slight leukopenia 4 days after therapy, which resolves within 7 days. Platelet count may ↑ or ↓.
- Monitor liver function studies (AST, ALT, LDH, bilirubin) and renal function studies (BUN, creatinine) prior to and periodically throughout therapy.
- May cause ↑ uric acid. Monitor periodically during therapy.

### Potential Nursing Diagnoses

Risk for injury (Adverse Reactions)
Imbalanced nutrition: less than body requirements (Adverse Reactions)

### Implementation

- ***High Alert:*** Fatalities have occurred with chemotherapeutic agents. Before administering, clarify all ambiguous orders; double check single, daily, and course-of-therapy dose limits; have second practitioner independently double check original order, dose calculations, and infusion pump settings. Do not administer subcut, IM, or intrathecally (IT). IT administration is fatal. Vincristine must be dispensed in an overwrap stating "For IV use only." Overwrap should remain in place until immediately before administration. Do not confuse vincristine with vinblastine.
- Solution should be prepared in a biologic cabinet. Wear gloves, gown, and mask while handling medication. Discard IV equipment in specially designated containers (see Appendix L).

#### IV Administration

- **Direct IV:** ***Diluent:*** Does not need to be reconstituted. ***Concentration:*** Administer undiluted at 1 mg/mL. ***Rate:*** Administer each dose direct IV push over 1 min through Y-site injection of a free-flowing infusion of 0.9% NaCl or D5W.
- **Syringe Compatibility:** bleomycin, cisplatin, cyclophosphamide, doxapram, doxorubicin, droperidol, fluorouracil, heparin, leucovorin calcium, methotrexate, metoclopramide, mitomycin, vinblastine.
- **Syringe Incompatibility:** furosemide.

- **Y-Site Compatibility:** allopurinol, amifostine, amphotericin B cholesteryl sulfate complex, aztreonam, bleomycin, cisplatin, cyclophosphamide, doxorubicin, doxorubicin liposome, droperidol, etoposide phosphate, filgrastim, fludarabine, fluorouracil, gemcitabine, granisetron, heparin, leucovorin calcium, linezolid, melphalan, methotrexate, metoclopramide, mitomycin, ondansetron, oxaliplatin, paclitaxel, pemetrexed, piperacillin/tazobactam, sargramostim, teniposide, thiotepa, topotecan, vinblastine, vinorelbine.
- **Y-Site Incompatibility:** cefepime, furosemide, idarubicin, lansoprazole, sodium bicarbonate.

## Patient/Family Teaching

- Instruct patient to notify health care professional immediately if redness, swelling, or pain at injection site occurs.
- Instruct patient to report symptoms of neurotoxicity (paresthesia, pain, difficulty walking, persistent constipation). Inform patient that increased fluid intake, dietary fiber, and exercise may minimize constipation. Stool softeners or laxatives may be used. Patient should inform health care professional if severe constipation or abdominal discomfort occurs, as this may be a sign of neuropathy.
- Advise patient to notify health care professional if fever; chills; sore throat; signs of infection; bleeding gums; bruising; petechiae; blood in urine, stool, or emesis; or mouth sores occur. Caution patient to avoid crowds and persons with known infections.
- Advise patient that this medication may have teratogenic effects. Contraception should be used during and for at least 2 mo after therapy is concluded.
- Discuss with patient the possibility of hair loss. Explore coping strategies.
- Instruct patient not to receive any vaccinations without advice of health care professional.
- Emphasize need for periodic lab tests to monitor for side effects.

## Evaluation/Desired Outcomes

- Regression of malignancy without the appearance of detrimental side effects.

HIGH ALERT

# vinorelbine (vine-oh-**rel**-been)

Navelbine

***Classification***
Therapeutic: antineoplastics
Pharmacologic: vinca alkaloids

**Pregnancy Category D**

## Indications

Inoperable non–small-cell cancer of the lung in ambulatory patients (alone or with cisplatin).

## Action

Binds to a protein (tubulin) of cellular microtubules, where it interferes with microtubule assembly. Cell replication is stopped as a result (cell cycle–specific for M phase). **Therapeutic Effects:** Death of rapidly replicating cells, particularly malignant ones.

## Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Highly bound to platelets and lymphocytes.
**Metabolism and Excretion:** Mostly metabolized by the liver. At least one metabolite is active. Large amounts eliminated in feces; 11% excreted unchanged by the kidneys.
**Half-life:** 28–44 hr.

TIME/ACTION PROFILE (effect on WBCs)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | unknown | 7–10 days | 7–15 days |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Active infections; ↓ bone marrow reserve; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Impaired hepatic function (dose ↓ recommended if total bilirubin >2 mg/dL); Debilitated patients (↑ risk of hyponatremia); Granulocytopenic patients (temporarily discontinue or reduce dose); Pedi: Safety not established; OB: Instruct women of childbearing potential to avoid pregnancy during treatment.

## Adverse Reactions/Side Effects

**CNS:** fatigue. **Resp:** shortness of breath. **CV:** chest pain. **GI:** constipation, nausea, abdominal pain, anorexia, diarrhea, transient ↑ in liver enzymes, vomiting. **Derm:** alopecia, rashes. **F and E:** hyponatremia. **Hemat:** anemia, neutropenia, thrombocytopenia. **Local:** irritation at IV site, skin reactions, phlebitis. **MS:** arthralgia, back pain, jaw pain, myalgia. **Neuro:** neurotoxicity. **Misc:** pain in tumor-containing tissue.

## Interactions

**Drug-Drug:** ↑ bone marrow depression with other **antineoplastics** or **radiation therapy**.

Concurrent use with **cisplatin** ↑ risk and severity of bone marrow depression. Concurrent use with **mitomycin** or **chest radiation** ↑ risk of pulmonary reactions.

### Route/Dosage

**IV (Adults):** 30 mg/m² once weekly.

### Hepatic Impairment

**IV (Adults):** *Total bilirubin 2.1–3 mg/dL*—15 mg/m² once weekly; *total bilirubin ≥3 mg/dL*—7.5 mg/m² once weekly.

### Availability (generic available)

**Solution for injection:** 10 mg/mL.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure, pulse, and respiratory rate during therapy. Note significant changes. Acute shortness of breath and severe bronchospasm may occur infrequently shortly after administration. Treatment with corticosteroids, bronchodilators, and supplemental oxygen may be required, especially in patients with a history of pulmonary disease.
- Assess frequently for signs of infection (sore throat, temperature, cough, mental status changes), especially when nadir of granulocytopenia is expected.
- Monitor neurologic status. Assess for paresthesia (numbness, tingling, pain), loss of deep tendon reflexes (Achilles reflex is usually first involved), weakness (wrist drop or footdrop, gait disturbances), cranial nerve palsies (jaw pain, hoarseness, ptosis, visual changes), autonomic dysfunction (constipation, ileus, difficulty voiding, orthostatic hypotension, impaired sweating), and CNS dysfunction (decreased level of consciousness, agitation, hallucinations). These symptoms may persist for months. The incidence of neurotoxicity associated with vinorelbine is less than that of other vinca alkaloids.
- Monitor intake and output and daily weight for significant discrepancies.
- Assess nutritional status. Mild to moderate nausea is common. An antiemetic may be used to minimize nausea and vomiting.
- Monitor for symptoms of gout (increased uric acid, joint pain, edema). Encourage patient to drink at least 2 L of fluid/day. Allopurinol and alkalinization of urine may decrease uric acid levels.
- ***Lab Test Considerations:*** Monitor CBC prior to each dose and routinely during therapy. The nadir of granulocytopenia usually occurs 7–10 days after vinorelbine administration and recovery usually follows within 7–15 days. If granulocyte count is <1500/mm³, dose reduction or temporary interruption of vinorelbine may be warranted. If repeated episodes of fever and/or sepsis occur during granulocytopenia, future dose of vinorelbine should be modified. May also cause mild to moderate anemia. Thrombocytopenia rarely occurs.
- Monitor liver function studies (AST, ALT, LDH, bilirubin) and renal function studies (BUN, creatinine) prior to and periodically during therapy. May cause ↑ uric acid; monitor periodically during therapy.

### Potential Nursing Diagnoses

Risk for injury (Adverse Reactions)
Risk for infection (Adverse Reactions)

### Implementation

- ***High Alert:*** Fatalities have occurred with chemotherapeutic agents. Before administering, clarify all ambiguous orders; double check single, daily, and course-of-therapy dose limits; have second practitioner independently double check original order, dose calculations, and infusion pump settings.
- Solution should be prepared in a biologic cabinet. Wear gloves, gown, and mask while handling medication. Discard IV equipment in specially designated containers.
- Assess infusion site frequently for redness, irritation, or inflammation. Vinorelbine is a vesicant. If extravasation occurs, infusion must be stopped and restarted elsewhere to avoid damage to subcut tissue. Treatment of extravasation includes application of warm compresses applied over the area immediately for 30–60 min, then alternating on/off every 15 min for 1 day to increase systemic absorption of the drug. Hyaluronidase 150 units diluted in 1–2 mL of 0.9% NaCl, 1 mL for each mL extravasated, should be injected through existing IV cannula or subcut if the needle has been removed to enhance absorption and dispersion of the extravasated drug.

#### IV Administration

- **Direct IV:** ***Diluent:*** Dilute vinorelbine with 0.9% NaCl or D5W. ***Concentration:*** 1.5–3 mg/mL. ***Rate:*** Infuse over 6–10 min into Y-

V

site closest to bag of a free-flowing IV or into a central line.
- Flush vein with at least 75–125 mL of 0.9% NaCl or D5W administered over 10 min or more following administration of vinorelbine.
- **Intermittent Infusion:** ***Diluent:*** Dilute vinorelbine with 0.9% NaCl, D5W, 0.45% NaCl, D5/0.45% NaCl, Ringer's or lactated Ringer's injection. Solution should be colorless to pale yellow. Do not administer solutions that are discolored or contain particulate matter. Diluted solution is stable for 24 hr at room temperature. ***Concentration:*** 0.5–2 mg/mL. ***Rate:*** Infuse over 6–10 min (up to 30 min) into Y-site closest to bag of a free-flowing IV or into a central line.
- Flush vein with at least 75–125 mL of 0.9% NaCl or D5W administered over 10 min or more following administration of vinorelbine.
- **Y-Site Compatibility:** amikacin, aztreonam, bleomycin, bumetanide, buprenorphine, butorphanol, calcium gluconate, carboplatin, carmustine, cefotaxime, ceftazidime, ceftizoxime, chlorpromazine, cimetidine, cisplatin, clindamycin, cyclophosphamide, cytarabine, dacarbazine, dactinomycin, daunorubicin, dexamethasone sodium phosphate, diphenhydramine, doxorubicin, doxorubicin liposome, doxycycline, droperidol, enalaprilat, etoposide, famotidine, filgrastim, floxuridine, fluconazole, fludarabine, gemcitabine, gentamicin, granisetron, haloperidol, hydrocortisone, hydromorphone, idarubicin, ifosfamide, imipenem/cilastatin, lorazepam, mannitol, mechlorethamine, melphalan, meperidine, mesna, methotrexate, metoclopramide, metronidazole, mitoxantrone, morphine, nalbuphine, ondansetron, oxaliplatin, potassium chloride, prochlorperazine, promethazine, ranitidine, streptozocin, teniposide, ticarcillin/clavulanate, tobramycin, vancomycin, vinblastine, vincristine, zidovudine.
- **Y-Site Incompatibility:** acyclovir, allopurinol, aminophylline, amphotericin B, amphotericin B cholesteryl sulfate, ampicillin, cefazolin, ceftriaxone, cefuroxime, fluorouracil, furosemide, ganciclovir, lansoprazole, methylprednisolone, mitomycin, sodium bicarbonate, thiotepa, trimethoprim/sulfamethoxazole.

### Patient/Family Teaching
- Instruct patient to report symptoms of neurotoxicity (paresthesia, pain, difficulty walking, persistent constipation).
- Inform patient that increased fluid intake, dietary fiber, and exercise may minimize constipation. Stool softeners or laxatives may be necessary. Patient should be advised to report severe constipation or abdominal discomfort, as this may be a sign of ileus, which may occur as a consequence of neuropathy.
- Advise patient to notify health care professional if fever; chills; sore throat; signs of infection; bleeding gums; bruising; petechiae; blood in urine, stool, or emesis; or mouth sores occur.
- Caution patient to avoid crowds and persons with known infections.
- Advise patient that this medication may have teratogenic effects. Contraception should be used during and for at least 2 mo after therapy is concluded.
- Discuss with patient the possibility of hair loss and explore coping strategies.
- Instruct patient not to receive any vaccinations without advice of health care professional.
- Emphasize the need for periodic lab tests to monitor for side effects.

### Evaluation/Desired Outcomes
- Decrease in the size or spread of malignancy without detrimental side effects.

## VITAMIN $B_{12}$ PREPARATIONS

**cyanocobalamin**
(sye-an-oh-koe-**bal**-a-min)
Nascobal, Rubramin PC

**hydroxocobalamin**
(hye-drox-oh-koe-**bal**-a-min)
Cyanokit

***Classification***
Therapeutic: antianemics, vitamins
Pharmacologic: water soluble vitamins

**Pregnancy Category C**

### Indications
Vitamin $B_{12}$ deficiency (parenteral product or nasal spray should be used when deficiency is due to malabsorption). Pernicious anemia (only parenteral products should be used for initial therapy; nasal or oral products are not indicated until patients have achieved hematologic remission following parenteral therapy and have no signs of CNS involvement). Part of the Schilling test (vitamin $B_{12}$ absorption test) (diagnostic). Cyanide poisoning (Cyanokit only).

### Action
Necessary coenzyme for metabolic processes, including fat and carbohydrate metabolism and protein synthesis. Required for cell production

and hematopoiesis. **Therapeutic Effects:** Corrects manifestations of pernicious anemia (megaloblastic indices, GI lesions, and neurologic damage). Corrects vitamin $B_{12}$ deficiency. Reverses symptoms of cyanide toxicity (Cyanokit only).

## Pharmacokinetics

**Absorption:** Oral absorption in GI tract requires intrinsic factor and calcium; well absorbed after IM, subcut and nasal administration.
**Distribution:** Stored in the liver and bone marrow; crosses placenta, enters breast milk.
**Metabolism and Excretion:** Primarily excreted unchanged in urine.
**Half-life:** *Cyanocobalamin*—6 days (400 days in liver); *Hydroxocobalamin*—26–31 hr.

TIME/ACTION PROFILE (reticulocytosis)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Cyanocobalamin IM, subcut, nasal | unknown | 3–10 days | unknown |
| Hydroxocobalamin IM | unknown | unknown | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pedi: Avoid using preparations containing benzyl alcohol in premature infants (associated with fatal "gasping syndrome").
**Use Cautiously in:** Hereditary optic nerve atrophy (accelerates nerve damage); Uremia, folic acid deficiency, concurrent infection, iron deficiency (response to $B_{12}$ will be impaired); Renal dysfunction (when using aluminum-containing products); Pedi: *Cyanokit*—Safety and effectiveness not established.

## Adverse Reactions/Side Effects

**CNS:** headache; *Cyanokit*, dizziness, memory impairment, restlessness. **CV:** heart failure; *Cyanokit*, hypertension, chest pain, tachycardia. **EENT:** *Cyanokit*—dry throat, eye redness, eye swelling. **GI:** diarrhea; *Cyanokit*, abdominal discomfort, dyspepsia, dysphagia, hematochezia, nausea, vomiting. **Derm:** itching; *Cyanokit*, erythema, rash. **F and E:** hypokalemia. **GU:** *Cyanokit*—red urine. **Hemat:** thrombocytosis. **Resp:** pulmonary edema; *Cyanokit*, dyspnea. **Local:** pain at IM site. **Misc:** hypersensitivity reactions including ANAPHYLAXIS.

## Interactions

**Drug-Drug: Chloramphenicol** and **antineoplastics** may ↓ hematologic response to vitamin $B_{12}$. **Colchicine**, **aminosalicylic acid**, **cimetidine**, and excess intake of **alcohol**, or **vitamin C** may ↓ oral absorption/effectiveness of vitamin $B_{12}$.

## Route/Dosage

### Cyanocobalamin (oral products are usually not recommended due to poor absorption and should be used only if patient refuses the IM, deep subcutaneous, or intranasal route of administration)

**PO (Adults and Children):** *Vitamin $B_{12}$ deficiency*—amount depends on deficiency (up to 1000 mcg/day have been used).
**PO (Adults):** *Pernicious anemia (for hematologic remission only)*—1000–2000 mcg/day.
**IM, Subcut (Adults):** *Vitamin $B_{12}$ deficiency*—30 mcg/day for 5–10 days, then 100–200 mcg/month. *Pernicious anemia*—100 mcg/day for 6–7 days; if improvement, give same dose every other day for 7 doses, then every 3–4 days for 2–3 wk; once hematologic values return to normal (remission), can give maintenance dose of 100 mcg/month (doses up to 1000 mcg have been used for maintenance) (could alternatively use oral or intranasal formulations below for maintenance at specified doses). *Schilling test*—Flushing dose is 1000 mcg.
**IM, Subcut (Children):** *Vitamin $B_{12}$ deficiency*—0.2 mcg/kg for 2 days, then 1000 mcg/day for 2–7 days, then 100 mcg/week for 1 month. *Pernicious anemia*-30–50 mcg/day for 2 or more weeks (to a total dose of 1000–5000 mcg), then give maintenance dose of 100 mcg/month (doses up to 1000 mcg have been used for maintenance).
**Intranasal (Adults):** *Vitamin $B_{12}$ deficiency*—500 mcg (one spray) in one nostril once weekly. *Pernicious anemia (for hematologic remission only)*—500 mcg (one spray) in one nostril once weekly.

### Hydroxocobalamin

**IM (Adults):** *Vitamin $B_{12}$ deficiency*—30 mcg/day for 5–10 days, then 100–200 mcg/month. *Pernicious anemia*—100 mcg/day for 6–7 days; if improvement, give same dose every other day for 7 doses, then every 3–4 days for 2–3 wk; once hematologic values return to normal (remis-

V

sion), give maintenance dose of 100 mcg/month. *Schilling test*—Flushing dose is 1000 mcg.
**IM (Children):** *Vitamin $B_{12}$ deficiency*—100 mcg/day for 2 or more weeks (to achieve total dose of 1000–5000 mcg), then 30–50 mcg/month. *Pernicious anemia*—30–50 mcg/day for 2 or more weeks (to achieve total dose of 1000–5000 mcg), then 100 mcg/month.
**IV (Adults):** *Cyanide poisoning (Cyanokit only)*—5 g over 15 min; another 5 g dose may be infused over 15–120 min depending upon severity of poisoning (maximum cumulative dose = 10 g).

### Availability

#### Cyanocobalamin (generic available)

**Tablets:** 50 mcg$^{OTC}$, 100 mcg$^{OTC}$, 250 mcg$^{OTC}$, 500 mcg$^{OTC}$, 1000 mcg$^{OTC}$, 5000 mcg$^{OTC}$. **Extended-release tablets:** 1000 mcg$^{OTC}$, 1500 mcg$^{OTC}$. **Sublingual tablets:** 2500 mcg$^{OTC}$. **Lozenges:** 100 mcg$^{OTC}$, 250 mcg$^{OTC}$, 500 mcg$^{OTC}$. **Nasal spray:** 500 mcg/0.1 mL actuation (8 sprays/bottle). **Injection:** 1000 mcg/mL in 1-, 10- and 30-mL vials.

#### Hydroxocobalamin (generic available)

**Injection:** 1000 mcg/mL in 30-mL vials. **Powder for injection (Cyanokit):** 2.5 g/vial (2 vials in each kit).

## NURSING IMPLICATIONS

### Assessment

- Assess patient for signs of vitamin $B_{12}$ deficiency (pallor; neuropathy; psychosis; red, inflamed tongue) before and periodically during therapy.
- ***Lab Test Considerations:*** Monitor plasma folic acid, vitamin $B_{12}$, and iron levels, hemoglobin, hemtaocrit, and reticulocyte count before treatment, 1 mo after the start of therapy, and then every 3–6 mo. Evaluate serum potassium level in patients receiving vitamin $B_{12}$ for pernicious anemia for hypokalemia during the first 48 hr of treatment. Serum potassium and platelet counts should be monitored routinely during the course of therapy.
- **Cyanokit:** Management of cyanide poisoning should also include establishment of airway, ensuring adequate oxygenation and hydration, cardiovascular support, and seizure management. Monitor BP and HR continuously during and after infusion and immediately report significant changes. The maximal ↑ in BP usually occurs toward the end of the infusion. BP usually returns to baseline within 4 hr of drug administration.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)
Activity intolerance (Indications)

### Implementation

- Usually administered in combination with other vitamins; solitary vitamin $B_{12}$ deficiencies are rare.
- Administration of vitamin $B_{12}$ by the oral route is useful only for nutritional deficiencies. Patients with small-bowel disease, malabsorption syndrome, or gastric or ileal resections require parenteral administration.
- **PO:** Administer with meals to increase absorption.
- May be mixed with fruit juices. Administer immediately after mixing; ascorbic acid alters stability.
- **Intranasal:** Dose should not be administered within 1 hr of hot food or liquids (these substances may result in the formation of nasal secretions which may result in ↓ effectiveness of nasal spray).
- **IM, Subcut:** Vials should be protected from light.
- If subcutaneous route used, deep subcutaneous administration is preferred.

#### IV Administration

- **IV:** IV route should only be used with Cyanokit.
- **Intermittent Infusion:** ***Diluent:*** Dilute each Cyanokit vial with 100 mL of 0.9% NaCl, D5W, or LR. Gently invert the vial for at least 30 sec prior to infusion. Reconstituted vial can be hung for infusion and is stable for 6 hr at room temperature. Discard any unused solution after 6 hr. ***Rate:*** Administer initial 5-g dose over 15 min. Administer additional 5-g dose over 15–120 min.
- **Y-Site Incompatibility:** ascorbic acid, blood products, sodium nitrite, sodium thiosulfate.
- **Additive Incompatibility:** diazepam, dobutamine, dopamine, fentanyl, nitroglycerin, pentobarbital, propofol, thiopental.

### Patient/Family Teaching

- Encourage patient to comply with diet recommendations of health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the four basic food groups.
- Foods high in vitamin $B_{12}$ include meats, seafood, egg yolk, and fermented cheeses; few vitamins are lost with ordinary cooking.
- Patients self-medicating with vitamin supplements should be cautioned not to exceed RDA.

Effectiveness of megadoses for treatment of various medical conditions is unproved and may cause side effects.
- Inform patients with pernicious anemia of the lifelong need for vitamin $B_{12}$ replacement.
- Emphasize the importance of follow-up exams to evaluate progress.
- **Intranasal:** Instruct patient in proper administration technique. Review *Patient Information Sheet* and demonstrate use of actuator. Unit must be primed with 3 strokes upon using for the first time. Unit must be primed with 1 stroke before each of the remaining doses. Advise patient to clear nose, then place tip approximately 1 inch into nostril and press pump once, firmly and quickly. After dose, remove unit from nose and massage dosed nostril gently for a few seconds. Vial delivers 8 doses. Unit should be stored at room temperature and protected from light.
- **Intermittent Infusion:** Advise patient that skin redness may last up to 2 wk and that their urine may remain red for up to 5 wk after drug administration. Instruct patient to avoid sun exposure while their skin is red. Advise patient to contact health care professional if skin or urine redness persist after these time periods. Advise patient that a rash may develop from 7–28 days after drug administration. It will usually resolve without treatment within a few weeks. Advise patient to contact health care professional if rash persists after this time period.

### Evaluation/Desired Outcomes
- Resolution of the symptoms of vitamin $B_{12}$ deficiency.
- Increase in reticulocyte count.
- Improvement in manifestations of pernicious anemia.
- Resolution of symptoms of cyanide poisoning.

## VITAMIN D COMPOUNDS

**calcitriol** (kal-si-**trye**-ole)
1,25-dihydroxycholecalciferol, Calcijex, Rocaltrol, vitamin $D_3$ (active)

**cholecalciferol**
Delta-D, vitamin $D_3$ (inactive)

**doxercalciferol**
(**dox**-er-kal-**sif**-e-role)
Hectorol, vitamin $D_2$

**ergocalciferol**
(**er**-goe-kal-**sif**-e-role)
Drisdol, Ostoforte, vitamin $D_2$

**paricalcitol** (par-i-**kal**-si-tole)
Zemplar

***Classification***
Therapeutic: vitamins
Pharmacologic: fat-soluble vitamins

**Pregnancy Category B (doxercalciferol), C (calcitriol, cholecalciferol, ergocalciferol, paricalcitol)**

### Indications
**Calcitriol:** Management of hypocalcemia in chronic renal dialysis (IV and PO). Treatment of hypocalcemia in patients with hypoparathyroidism or pseudohypoparathyroidism (PO only). Management of secondary hyperparathyroidism and resulting metabolic bone disease in predialysis patients with moderate to severe renal insufficiency (CCr 15–55 mL/min) (PO only). **Cholecalciferol:** Treatment or prevention of vitamin D deficiency. **Doxercalciferol:** Treatment of secondary hyperparathyroidism in patients undergoing chronic renal dialysis (IV and PO). Treatment of secondary hyperparathyroidism in patients with Stage 3 or 4 chronic kidney disease (PO only). **Ergocalciferol:** Treatment of familial hypophosphatemia. Treatment of hypoparathyroidism. Treatment of vitamin D-resistant rickets. **Paricalcitol:** Prevention and treatment of secondary hyperparathyroidism in patients with Stage 3 or 4 (PO) or Stage 5 (PO and IV) chronic kidney disease.

### Action
Cholecalciferol requires activation in the liver and kidneys to create the active form of vitamin $D_3$ (calcitriol). Doxercalciferol and ergocalciferol require activation in the liver to create the active form of vitamin $D_2$. Paricalcitol is a synthetic analogue of calcitriol. Vitamin D: Promotes the absorption of calcium and ↓ parathyroid hormone concentration. **Therapeutic Effects:** Treatment and prevention of deficiency states, particularly bone manifestations. Improved calcium and phosphorous homeostasis in patients with chronic kidney disease.

### Pharmacokinetics
**Absorption:** *Calcitriol, doxercalciferol, ergocalciferol, paricalcitol*—Well absorbed follow-

ing oral administration. *Calcitriol, doxercalciferol, paricalcitol*—IV administration results in complete bioavailability.
**Distribution:** Calcitriol and paricalcitol cross the placenta; calcitriol also enters breast milk.
**Protein Binding:** *Calcitriol and paricalcitol*—99.9%.
**Metabolism and Excretion:** *Calcitriol*—Undergoes enterohepatic recycling and is excreted mostly in bile. *Cholecalciferol*—Converted by the liver and kidneys to calcitriol (active form of vitamin $D_3$). *Ergocalciferol*—Converted to active form of vitamin $D_2$ by sunlight, the liver, and the kidneys. *Doxercalciferol*—Converted by the liver to the active form of vitamin $D_2$. *Paricalcitol*—mostly metabolized by the liver and excreted via hepatobiliary elimination.
**Half-life:** *Calcitriol*—5–8 hr. *Cholecalciferol*—14 hr. *Doxercalciferol*—32–37 hr (up to 96 hr). *Paricalcitol*—14–20 hr.

TIME/ACTION PROFILE (effects on serum calcium)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Calcitriol-PO | 2–6 hr | 2–6 hr | 3–5 days |
| Calcitriol-IV | unknown | unknown | unknown |
| Cholecalciferol-PO | unknown | unknown | unknown |
| Doxercalciferol PO | unknown | 8 wk | 1 wk |
| Doxercalciferol-IV | unknown | 8 wk | 1 wk |
| Ergocalciferol-PO | 12–24 hr | unknown | up to 6 mo |
| Paricalcitol-PO | unknown | 2–4 wk | unknown |
| Paricalitol IV | unknown | up to 2 wk | unknown |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Hypercalcemia; Vitamin D toxicity; Lactation: Potential for serious adverse reactions in infant; Concurrent use of magnesium-containing antacids or other vitamin D supplements; **Ergocalciferol**: Known intolerance to tartrazine; **Cholecalciferol and ergocalciferol**: Malabsorption problems.
**Use Cautiously in: Calcitriol, doxercalciferol, paricalcitol**: Patients receiving digoxin; OB: Pregnancy (safety not established).

## Adverse Reactions/Side Effects

Seen primarily as manifestations of toxicity (hypercalcemia).
**CNS:** headache, somnolence, weakness; *doxercalciferol*, dizziness, malaise. **EENT:** conjunctivitis, photophobia, rhinorrhea. **Resp:** *doxercalciferol and ergocalciferol*—dyspnea. **CV:** arrhythmias, edema, hypertension; *doxercalciferol*, bradycardia; *paricalcitol*, palpitations. **GI:** PANCREATITIS, abdominal pain, anorexia, constipation, dry mouth, liver function test elevation, metallic taste, nausea, polydipsia, vomiting, weight loss. **GU:** albuminuria, azotemia, decreased libido, nocturia, polyuria. **Derm:** pruritus. **F and E:** hypercalcemia. **Metab:** hyperthermia. **MS:** bone pain, muscle pain; *doxercalciferol*, arthralgia; *paricalcitol*, metastatic calcification. **Local:** pain at injection site. **Misc:** *calcitriol*—allergic reactions, chills, fever.

## Interactions

**Drug-Drug: Cholestyramine**, **colestipol**, or **mineral oil** ↓ absorption of vitamin D analogues. Use with **thiazide diuretics** may result in hypercalcemia. **Corticosteroids** ↓ effectiveness of vitamin D analogues. Using calcitriol, doxercalciferol, or paricalcitol with **digoxin** may ↑ risk of arrhythmias. Vitamin D requirements ↓ by **phenytoin** and other **hydantoin anticonvulsants**, **sucralfate**, **barbiturates**, and **primidone**. Concurrent use with **magnesium-containing drugs** may lead to hypermagnesemia. Concurrent use of **calcium-containing drugs** may ↑ risk of hypercalcemia. Concurrent use of other **Vitamin D supplements** may ↑ risk of hypercalcemia. **Agents that induce liver enzymes** (**phenobarbital**, **rifampin**) and **agents that inhibit liver enzymes** (**atazanavir**, **clarithromycin**, **erythromycin**, **indinavir**, **itraconazole**, **ketoconazole**, **nefazodone**, **nelfinavir**, **ritonavir**, **saquinavir**, **verapamil**, **voriconazole**) may alter requirements for doxercalciferol and paricalcitol (monitoring of calcium and phosophorus recommended).
**Drug-Food:** Ingestion of **foods high in calcium content** (see Appendix M) may lead to hypercalcemia.

## Route/Dosage

### Calcitriol

**PO (Adults):** *Hypocalcemia during dialysis*—0.25 mcg/day or every other day; if needed, may ↑ by 0.25 mcg/day at 4–8 wk intervals (typical dosage = 0.5–1 mcg/day). *Hypoparathyroidism*—0.25 mcg/day initially; if needed, may ↑ dose by 0.25 mcg/day at 2–4 wk intervals (typical dosage = 0.5–2 mcg/day). *Predialysis patients*—0.25 mcg/day (up to 0.5 mcg/day).
**PO (Children):** *Hypocalcemia during dialysis*—0.25–2 mcg/day. *Hypoparathyroidism (children ≥6 yr)*—0.25 mcg/day initially; if needed, may ↑ dose by 0.25 mcg/day at 2–4 wk intervals (typical dosage = 0.5–2 mcg/day). *Hypoparathyroidism (children 1–5 yr)*—0.25–

0.75 mcg/day. *Hypoparathyroidism (children <1 yr)*—0.04–0.08 mcg/kg/day. *Predialysis patients (children ≥3 yr)*—0.25 mcg/day (up to 0.5 mcg/day). *Predialysis patients (children <3 yr)*—10–15 ng/kg/day.
**IV (Adults):** *Hypocalcemia during dialysis*—0.5 mcg (0.01 mcg/kg) 3 times weekly. May be increased by 0.25–0.5 mcg/dose at 2-4 wk intervals (typical maintenance dose = 0.5–3.0 mcg 3 times weekly [0.01–0.05 mcg/kg 3 times weekly]).
**IV (Children):** *Hypocalcemia during dialysis*-0.01–0.05 mcg/kg 3 times weekly.

### Cholecalciferol

**PO (Adults):** 400–1000 units daily.

### Doxercalciferol

**PO (Adults):** *Dialysis patients*—10 mcg 3 times weekly (at dialysis); dose may be adjusted by 2.5 mcg at 8-wk intervals based on intact PTH concentrations (maximum dose = 20 mcg 3 times weekly). *Non-dialysis patients*—1 mcg/day; dose may be adjusted by 0.5 mcg at 2 wk intervals based on intact PTH concentrations (maximum dose = 3.5 mcg/day).
**IV (Adults):** 4 mcg 3 times weekly at the end of dialysis; dose may be adjusted by 1–2 mcg at 8-wk intervals based on intact PTH concentrations (maximum dose = 6 mcg 3 times weekly).

### Ergocalciferol

**PO (Adults):** *Vitamin D–resistant rickets*—12,000–500,000 units/day (to be used with phosphate supplement). *Familial hypophosphatemia*—10,000–80,000 units/day (with phosphorus 1–2 g/day). *Hypoparathyroidism*—50,000–200,000 units/day (to be used with calcium supplement).
**PO (Children):** *Vitamin D–resistant rickets*—40,000–80,000 units/day (to be used with phosphate supplement). *Familial hypophosphatemia*—10,000–80,000 units/day (with phosphorus 1–2 g/day). *Hypoparathyroidism*—50,000–200,000 units/day (to be used with calcium supplement).

### Paricalcitol

#### Stage 3 or 4 Chronic Kidney Disease

**PO (Adults):** *Baseline intact PTH concentration ≤500 pg/mL*—Initiate with 1 mcg/day or 2 mcg 3 times weekly; dose can be adjusted at 2–4 wk intervals based on intact PTH, calcium, and phosphate concentrations. *Baseline intact PTH concentration >500 pg/mL*—Initiate with 2 mcg/day or 4 mcg 3 times weekly; dose can be adjusted at 2–4 wk intervals based on intact PTH, calcium, and phosphate concentrations.

#### Stage 5 Chronic Kidney Disease

**PO (Adults):** Initial dose (in mcg) is based on following equation: baseline intact PTH concentration (pg/mL)/80; dose should be given 3 times weekly; dose can be adjusted at 2–4 wk intervals based on intact PTH, calcium, and phosphate concentrations.
**IV (Adults and Children ≥5 yr):** 0.04–0.1 mcg/kg 3 times weekly during dialysis; dose can be adjusted by 2–4 mcg at 2–4 wk intervals based on intact PTH, calcium, and phosphate concentrations (doses up to 0.24 mcg/kg have been used).

### Availability

#### Calcitriol (generic available)

**Capsules:** 0.25 mcg, 0.5 mcg. **Oral solution:** 1 mcg/mL. **Solution for injection:** 1 mcg/mL.

#### Cholecalciferol

**Tablets:** 400 units[OTC], 1000 units[OTC]. ***In combination with:*** alendronate (Fosamax Plus D), see Appendix B.

#### Doxercalciferol

**Capsules:** 0.5 mcg, 1 mcg, 2.5 mcg. **Solution for injection:** 2 mcg/mL.

#### Ergocalciferol (generic available)

**Liquid:** 8000 units/mL[Rx, OTC]. **Capsules:** 50,000 units.

#### Paricalcitol

**Capsules:** 1 mcg, 2 mcg, 4 mcg. **Solution for injection:** 2 mcg/mL, 5 mcg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess for symptoms of vitamin deficiency prior to and periodically during therapy.
- Assess patient for bone pain and weakness prior to and during therapy.
- Observe patient carefully for evidence of hypocalcemia (paresthesia, muscle twitching, laryngospasm, colic, cardiac arrhythmias, and Chvostek's or Trousseau's sign). Protect symptomatic patient by raising and padding side rails; keep bed in low position.
- Pedi: Monitor height and weight; growth arrest may occur in prolonged high-dose therapy.

- **Rickets/Osteomalacia:** Assess patient for bone pain and weakness prior to and during therapy.
- ***Lab Test Considerations:*** During *calcitriol* therapy, serum calcium and phosphate concentrations should be drawn twice weekly initially. Serum calcium, magnesium, alkaline phosphatase, and intact PTH should then be monitored at least monthly. During *cholecalciferol* therapy, serum calcium, phosphate, and alkaline phosphatase concentrations should be monitored periodically. During *doxercalciferol* therapy, serum ionized calcium, phosphate, and intact PTH concentrations should be monitored prior to initiation of therapy, and then weekly during the first 12 wk of therapy, then periodically. Alkaline phosphatase should be monitored periodically. During *ergocalciferol* therapy, serum calcium and phosphate concentrations should be monitored every 2 wk. During oral *paricalcitol* therapy, serum calcium, phosphate, and intact PTH concentrations should be monitored at least every 2 wk for the first 3 mo of therapy or after any dosage adjustment, then monthly for 3 mo, then every 3 mo. During IV *paricalcitol* therapy, serum calcium and phosphate concentrations should be monitored twice weekly initially until dosage stabilized, and then at least monthly. Serum intact PTH concentrations should be monitored every 3 mo.
- The serum calcium × phosphate product (Ca × P) should not exceed 70 $mg^2/dL^2$ (55 $mg^2/dL^2$ for doxercalciferol) (patients may be at ↑ risk of calcification).
- Calcitriol may cause false ↑ cholesterol levels.
- ***Toxicity and Overdose:*** Toxicity is manifested as hypercalcemia, hypercalciuria, and hyperphosphatemia. Assess patient for appearance of nausea, vomiting, anorexia, weakness, constipation, headache, bone pain, and metallic taste. Later symptoms include polyuria, polydipsia, photophobia, rhinorrhea, pruritus, and cardiac arrhythmias. Notify health care professional immediately if these signs of hypervitaminosis D occur. Treatment usually consists of discontinuation of calcitriol, a low-calcium diet, use of low-calcium dialysate in peritoneal dialysis patients, and administration of a laxative. IV hydration and loop diuretics may be ordered to increase urinary excretion of calcium. Hemodialysis may also be used.

## Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)

## Implementation

- Do not confuse Calciferol (ergocalciferol) with calcitriol.
- **PO:** May be administered without regard to meals. Measure solution accurately with calibrated dropper provided by manufacturer. May be mixed with juice, cereal, or food, or dropped directly into mouth. Calcitriol capsules or solution should be protected from light.

### IV Administration

- **Direct IV:** Administer *calcitriol, doxercalciferol, and paracalcitol* undiluted by rapid injection through the catheter at the end of a hemodialysis period.

## Patient/Family Teaching

- Advise patient to take medication as directed. Take missed doses as soon as remembered that day, unless almost time for next dose; do not double up on doses.
- Review diet modifications with patient. See Appendix M for foods high in calcium and vitamin D. Renal patients must still consider renal failure diet in food selection. Health care professional may order concurrent calcium supplement.
- Encourage patient to comply with dietary recommendations of health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the 4 basic food groups and the importance of sunlight exposure. See Appendix M for foods high in vitamin D.
- Patients self-medicating with vitamin supplements should be cautioned not to exceed RDA. The effectiveness of megadoses for treatment of various medical conditions is unproved and may cause side effects.
- Advise patient to avoid concurrent use of antacids containing magnesium.
- Review symptoms of overdosage and instruct patient to report these promptly to health care professional.
- Emphasize the importance of follow-up exams to evaluate progress.

## Evaluation/Desired Outcomes

- Normalization of serum calcium and parathyroid hormone levels.
- Resolution or prevention of vitamin D deficiency.
- Improvement in symptoms of vitamin D–resistant rickets.

## vitamin E (vye-ta-min E)

alpha tocopherol, Amino-Opti-E, Aqua-sol E, E-200, E-400, E-1000, E-Complex-600, E-Vitamin, Liqui-E, Pheryl-E, Vita Plus E, Webber Vitamin E

***Classification***
Therapeutic: vitamins
Pharmacologic: fat-soluble vitamins

**Pregnancy Category A (doses within RDA), C (doses >RDA)**

### Indications
**PO:** Used as a dietary supplement. Used in low-birth-weight infants to prevent and treat hemolysis due to vitamin E deficiency. **Topical:** Treatment of irritated, chapped, or dry skin.

### Action
Prevents the oxidation (antioxidant) of other substances. Protects RBC membranes against hemolysis, especially in low-birth-weight neonates.
**Therapeutic Effects:** Prevention and treatment of deficiency in high-risk patients.

### Pharmacokinetics
**Absorption:** 20–80% absorbed following oral administration. Absorption requires fat and bile salts.
**Distribution:** Widely distributed, stored in adipose tissue (4-yr supply).
**Metabolism and Excretion:** Metabolized by the liver, excreted in bile.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to ingredients in preparations (parabens, propylene, glycol).
**Use Cautiously in:** Anemia due to iron deficiency; Vitamin K deficiency (may ↑ risk of bleeding); Pedi: Oral administration may cause necrotizing enterocolitis in low-birth-weight infants.

### Adverse Reactions/Side Effects
Seen primarily with large doses over long periods of time.
**CNS:** fatigue, headache, weakness. **EENT:** blurred vision. **GI:** NECROTIZING ENTEROCOLITIS (oral administration in low-birth-weight infants), cramps, diarrhea, nausea. **Derm:** rash. **Endo:** gonadal dysfunction.

### Interactions
**Drug-Drug: Cholestyramine**, **colestipol**, **orlistat**, **mineral oil**, and **sucralfate** ↓ absorption. May ↓ hematologic response to **iron supplements**. May ↑ the risk of bleeding with **warfarin** or **aspirin**.
**Drug-Natural Products:** ↑ bleeding risk with **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **garlic**, **ginger**, **ginkgo**, **Panax ginseng**, **licorice**, and others.

### Route/Dosage
Other dosing regimens may be used.
**PO (Adults and Children):** Determined by nutritional intake or degree of deficiency.
**Topical (Adults and Children):** Apply to affected areas as needed.

### Availability
**Capsules:** 100 units[OTC], 200 units[OTC], 400 units[OTC], 600 units[OTC], 800 units[OTC], 1000 units[OTC]. **Oral solution:** 26.6 units/mL[OTC], 50 units/mL[OTC], 77 units/mL[OTC]. **Tablets:** 100 units[OTC], 200 units[OTC], 400 units[OTC], 500 units[OTC], 800 units[OTC]. **Chewable tablets:** 400 units[OTC]. **Ointment:** [OTC]. **Cream:** [OTC]. **Lotion:** [OTC]. **Oil:** [OTC].

## NURSING IMPLICATIONS

### Assessment
- Assess patient for signs of vitamin E deficiency (*neonates*—irritability, edema, hemolytic anemia, creatinuria; *adults/children [rare]*—muscle weakness, ceroid deposits, anemia, creatinuria) prior to and periodically throughout therapy.
- Assess nutritional status through 24-hr diet recall. Determine frequency of consumption of vitamin E–rich foods.
- ***Lab Test Considerations:*** Large doses may increase cholesterol, triglyceride, and CPK levels.

### Potential Nursing Diagnoses
Imbalanced nutrition: less than body requirements (Indications)

### Implementation
- **PO:** Administer with or after meals.
- Chewable tablets should be chewed well or crushed before swallowing. Solution may be dropped directly into mouth or mixed with ce-

real, fruit juice, or other food. Use calibrated dropper supplied by manufacturer to measure solution accurately.

### Patient/Family Teaching

- Instruct patient to take medication as directed. If a dose is missed, it should be omitted, because fat-soluble vitamins are stored in the body for long periods.
- Encourage patient to comply with diet recommendations of health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the four basic food groups.
- Foods high in vitamin E include vegetable oils, wheat germ, whole-grain cereals, egg yolk, and liver. Vitamin E content is not markedly affected by cooking.
- Patients self-medicating with vitamin supplements should be cautioned not to exceed RDA. The effectiveness of megadoses for treatment of various medical conditions is unproved, and this may cause side effects and toxicity.
- Review symptoms of overdosage (blurred vision, flu-like symptoms, headache, breast enlargement). Instruct patient to report these promptly to health care professional.
- Mineral oil may interfere with the absorption of fat-soluble vitamins and should not be used concurrently.

### Evaluation/Desired Outcomes

- Prevention of or decrease in the symptoms of vitamin E deficiency.
- Control of dry or chapped skin.

## voriconazole

(vor-i-**kon**-a-zole)

VFEND

***Classification***

Therapeutic: antifungals

**Pregnancy Category D**

### Indications

Serious systemic fungal infections including candidemia, esophageal candidiasis, candidal deep tissue and skin infections, abdominal, kidney, bladder wall and wound infections, and aspergillosis.

### Action

Inhibits fungal ergosterol synthesis leading to production of abnormal fungal plasma membrane.
**Therapeutic Effects:** Antifungal activity.

### Pharmacokinetics

**Absorption:** Well absorbed following oral administration (96%); IV administration results in complete bioavailability.
**Distribution:** Extensive tissue distribution.
**Metabolism and Excretion:** Highly metabolized by the hepatic P450 enzymes (CYP2C19, CYP2C9, CYP3A4); <2% excreted unchanged in urine. Much individual variation in metabolism; metabolites are inactive. The CYP2C19 enzyme system exhibits genetic polymorphism; 15–20% of Asian patients and 3–5% of Caucasian and Black patients may be poor metabolizers and may have significantly ↑ voriconazole concentrations and an ↑ risk of adverse effects.
**Half-life:** Dose-dependent; increased in hepatic impairment.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | rapid | 1–2 hr | 12 hr |
| IV | rapid | end of infusion | 12 hr |

### Contraindications/Precautions

**Contraindicated in:** Concurrent use of ritonavir, rifampin, rifabutin, St. John's wort, carbamazepine, and phenobarbital (decrease antifungal activity); Concurrent use of sirolimus, pimozide, quinidine, ergotamine, and dihydroergotamine (↑ risk of toxicity of these agents); Tablets contain lactose and should be avoided in patients with galactose intolerance, Lapp lactase deficiency, or glucose-galactose malabsorption.
**Use Cautiously in:** Mild to moderate liver disease (Child-Pugh Class A and B); maintenance dose reduction recommended; Renal impairment (CCr <50 mL/min); use only if justified by risk/benefit assessment (IV form should be avoided, use oral form only); OB, Lactation: Use only if benefits justify risk; Pedi: Children <12 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, hallucinations, headache. **EENT:** visual disturbances, eye hemorrhage. **CV:** changes in blood pressure, tachycardia, peripheral edema, tachycardia. **GI:** HEPATOTOXICITY, abdominal pain, diarrhea, nausea, pancreatitis, vomiting. **Derm:** photosensitivity, rash. **F and E:** hypokalemia, hypomagnesemia. **Misc:** allergic reactions including STEVENS-JOHNSON SYNDROME, chills, fever, infusion reactions.

### Interactions

**Drug-Drug:** Voriconazole is a substrate and inhibitor of the **CYP3A4**, **CYP2C9**, and **CYP2C19**

enzyme systems. **Carbamazepine**, **ritonavir**, **phenobarbital**, **St. John's wort**, **rifabutin**, and **rifampin** ↑ metabolism and ↓ antifungal activity of voriconazole; concurrent use is contraindicated. **Efavirenz** ↑ metabolism and ↓ antifungal activity of voriconazole; voriconazole also ↓ metabolism and ↑ risk of toxicity of **efavirenz**; if used together, ↑ dose of voriconazole to 400 mg q 12 hr and ↓ dose of efavirenz to 300 mg daily. ↓ metabolism and ↑ risk of toxicity from **dihydroergotamine**, **ergotamine**, **pimozide**, **rifabutin**, **quinidine**, and **sirolimus**; concurrent use is contraindicated. ↓ metabolism and ↑ risk of toxicity from **cyclosporine**, **HMG-CoA reductase inhibitors**, some **benzodiazepines** (**alprazolam**, **midazolam**, **triazolam**), some **calcium channel blockers**, **sulfonylureas** (**glipizide**, **glyburide**, **tolbutamine**), **alfentanil**, **tacrolimus**, **warfarin**, **vinca alkaloids** (**vincristine**, **vinblastine**); careful monitoring required during concurrent use. **Phenytoin** ↑ metabolism and ↓ antifungal activity of voriconazole; voriconazole ↑ **phenytoin** levels and may cause toxicity; careful monitoring required during concurrent use. ↑ blood levels of **omeprazole**; ↓ omeprazole dose by 50% during concurrent use. Similar effects may occur with other **proton-pump inhibitors**. May ↓ metabolism and ↑ blood levels and effects of **protease-inhibitor antiretrovirals** and **non-nucleoside reverse transcriptase inhibitor antiretrovirals**; frequent monitoring recommended. **Non-nucleoside reverse transcriptase inhibitor antiretrovirals**; may induce or inhibit the metabolism of voriconazole; frequent monitoring recommended.

### Route/Dosage

**IV (Adults and children >12 yr):** *Loading dose*—6 mg/kg every 12 hour for 2 doses, followed by *maintenance dosing*—3–4 mg/kg every 12 hours. IV then switched to oral dosing when possible. If intolerance occurs, dose may be ↓ to 3 mg/kg every 12 hr. If phenytoin is coadministered, ↑ maintenance dose to 5 mg/kg every 12 hr.

**PO (Adults and children >12 yr and >40 kg):** *Most infections*—(following IV loading dose) 200 mg every 12 hr; may be increased to 300 mg every 12 hr if response is inadequate. If phenytoin is coadministered, ↑ maintenance dose to 400 mg every 12 hr; *esophageal candidiasis*—200 mg every 12 hr for 14 days or 7 days following symptom resolution.

**PO (Adults and children >12 yr and <40 kg):** *Most infections*—(following IV loading dose) 100 mg every 12 hr; may be increased to 150 mg every 12 hr if response is inadequate. If phenytoin is coadministered, ↑ maintenance dose to 200 mg every 12 hr; *esophageal candidiasis*—100 mg every 12 hr for 14 days or 7 days following symptom resolution.

### Hepatic Impairment

**IV (Adults and Children >12 yr):** Use standard loading dose, ↓ maintenance dose by 50%.

### Availability

**Tablets:** 50 mg, 200 mg. **Oral suspension (orange):** 40 mg/mL. **Powder for injection (requires reconstitution):** 200 mg/vial.

## NURSING IMPLICATIONS

### Assessment

- Monitor for signs and symptoms of fungal infections prior to and during therapy.
- Obtain specimens for culture and histopathology prior to therapy to isolate and identify organism. Therapy may be started before results are received.
- Monitor visual function including visual acuity, visual field, and color perception in patients receiving more than 28 days of therapy. Vision usually returns to normal within 14 days after discontinuation of therapy.
- Monitor for allergic reactions during infusion of voriconazole (flushing, fever, sweating, tachycardia, chest tightness, dyspnea, faintness, nausea, pruritus, rash). Symptoms occur immediately upon start of infusion. May require discontinuation.
- Monitor patients with risk factors for acute pancreatitis (recent chemotherapy, hematopoietic stem cell transplantation [HSCT]) for the signs of pancreatitis (abdominal pain, ↑ serum amylase and lipase).
- ***Lab Test Considerations:*** Monitor liver function tests prior to and during therapy. If abnormal liver function tests occur, monitor for development of severe hepatic injury. Discontinue therapy if clinical signs and symptoms of liver disease develop.
- Monitor renal function (serum creatinine) during therapy.

### Potential Nursing Diagnoses

Risk for infection (Indications)

## Implementation

- Once patient can tolerate oral medication, PO voriconazole may be used.
- Correct electrolyte disturbances (hypokalemia, hypomagnesemia, hypocalcemia) prior to initiation therapy.
- **PO:** Administer 1 hr before or 1 hr after a meal.

### IV Administration

- **Intermittent Infusion:** Reconstitute each 200-mg vial with 19 mL of sterile water for injection to achieve concentration of 10 mg/mL. Calculate volume of 10 mg/mL solution required for patient dose. ***Diluent:*** Withdraw and discard equal volume of diluent from infusion bag or bottle to be used. Withdraw required volume of voriconazole solution from vial(s) and add to appropriate volume of 0.9% NaCl, LR, D5/LR, D5/0.45% NaCl, D5W, 0.45% NaCl, or D5/0.9% NaCl. Reconstituted solution stable for 24 hr if refrigerated. Discard partially used vials. ***Concentration:*** Final concentration of infusion should be 0.5–5 mg/mL. ***Rate:*** Infuse over 1–2 hr at a rate not to exceed 3 mg/kg/hr.
- **Y-Site Compatibility:** acyclovir, alfentanil, allopurinol, amifostine, amikacin, aminocaproic acid, aminophylline, amiodarone, amphotericin B liposome, ampicillin, ampicillin/sulbactam, anidulafungin, azithromycin, aztreonam, bivalirudin, bleomycin, bumetanide, buprenorphine, butorphanol, calcium acetate, calcium chloride, calcium gluconate, carboplatin, carmustine, caspofungin, cefazolin, cefotaxime, cefotetan, cefoxitin, ceftazidime, ceftizoxime, ceftriaxone, chloramphenicol, chlorpromazine, cimetidine, ciprofloxacin, cisatracurium, cisplatin, clindamycin, cyclophosphamide, cytarabine, dacarbazine, dactinomycin, daptomycin, daunorubicin, dexamethasone, dexmedetomidine, dexrazoxane, digoxin, diltiazem, diphenhydramine, dobutamine, docetaxel, dolasetron, dopamine, doripenem, doxacurium, doxycycline, droperidol, enalaprilat, ephedrine, epinephrine, epirubicin, ertapenem, erythromycin, esmolol, etoposide, etoposide phosphate, famotidine, fenoldopam, fentanyl, fluconazole, fludarabine, fluorouracil, foscarnet, fosphenytoin, furosemide, ganciclovir, gemcitabine, gentamicin, glycopyrrolate, granisetron, haloperidol, heparin, hydralazine, hydrocortisone, ifosfamide, imipenem/cilastatin, inamrinone, insulin, irinotecan, isoproterenol, ketorolac, labetalol, leucovorin, levofloxacin, lidocaine, linezolid, lorazepam, magnesium sulfate, mannitol, mechlorethamine, melphalan, meperidine, meropenem, mesna, metaraminol, methohexital, methotrexate, methyldopate, methylprednisolole, metioclopramide, metoprolol, metronidazole, midazolam, milrinone, mitomycin, morphine, nafcillin, nalbuphine, naloxone, nicardipine, nitroglycerin, norepinephrine, octreotide, ondansetron, oxaliplatin, oxytocin, paclitaxel, pamidronate, pancuronium, pentamidine, pentazocine, pentobarbital, phenobarbital, phentolamine, phenylephrine, piperacillin/tazobactam, potassium chloride, potassium phosphates, procainamide, promethazine, propranolol, quinupristin/dalfopristin, remifentanil, rocuronium, sodium acetate, sodium bicarbonate, sodium phosphates, streptozocin, succinylcholine, sufentanil, tacrolimus, teniposide, theophylline, thiotepa, ticarcillin/clavulanate, tirofiban, tobramycin, topotecan, trimethobenzamide, trimethoprim/sulfamethoxazole, vancomycin, vasopressin, vecuronium, verapamil, vinblastine, vincristine, vinorelbine, zidovudine.
- **Y-Site Incompatibility:** amphotericin B colloidal, busulfan, cefepime, cyclosporine, dantrolene, diazepam, doxorubicin, idarubicin, mitoxantrone, nitroprusside, pantoprazole, phenytoin, thiopental.

## Patient/Family Teaching

- May cause blurred vision, photophobia, and dizziness. Caution patient to avoid driving and other activities requiring alertness until response to medication is known. Also advise patient to avoid driving at night during voriconazole therapy.
- Advise patient to avoid direct sunlight during voriconazole therapy.

## Evaluation/Desired Outcomes

- Resolution of fungal infections.

HIGH ALERT

## warfarin (war-fa-rin)

Coumadin, Jantoven, Warfilone

***Classification***

Therapeutic: anticoagulants
Pharmacologic: coumarins

**Pregnancy Category X**

### Indications

Prophylaxis and treatment of: Venous thrombosis, Pulmonary embolism, Atrial fibrillation with embolization. Management of myocardial infarction: Decreases risk of death, Decreases risk of subsequent MI, Decreases risk of future thromboembolic events. Prevention of thrombus formation and embolization after prosthetic valve placement.

### Action

Interferes with hepatic synthesis of vitamin K-dependent clotting factors (II, VII, IX, and X). **Therapeutic Effects:** Prevention of thromboembolic events.

### Pharmacokinetics

**Absorption:** Well absorbed from the GI tract after oral administration.
**Distribution:** Crosses the placenta but does not enter breast milk.
**Protein Binding:** 99%.
**Metabolism and Excretion:** Metabolized by the liver.
**Half-life:** 42 hr.

TIME/ACTION PROFILE (effects on coagulation tests)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, IV | 36–72 hr | 5–7 days† | 2–5 days‡ |

† At a constant dose
‡ After discontinuation

### Contraindications/Precautions

**Contraindicated in:** Uncontrolled bleeding; Open wounds; Active ulcer disease; Recent brain, eye, or spinal cord injury or surgery; Severe liver or kidney disease; Uncontrolled hypertension; OB: Crosses placenta and may cause fatal hemorrhage in the fetus. May also cause congenital malformation.
**Use Cautiously in:** Malignancy; Patients with history of ulcer or liver disease; History of poor compliance; Women with childbearing potential; Asian patients or those who carry the CYP2C9*2 allele and/or the CYP2C9*3 allele, or with the VKORC1 AA genotype (↑ risk of bleeding with standard dosing; lower initial doses should be considered); Pedi: Has been used safely but may require more frequent PT/INR assessments; Geri: Due to greater than expected anticoagulant response, initiate and maintain at lower doses.

### Adverse Reactions/Side Effects

**GI:** cramps, nausea. **Derm:** dermal necrosis. **Hemat:** BLEEDING. **Misc:** fever.

### Interactions

**Drug-Drug: Abciximab**, **androgens**, **capecitabine**, **cefotetan**, **chloral hydrate**, **chloramphenicol**, **clopidogrel**, **disulfiram**, **fluconazole**, **fluoroquinolones**, **itraconazole**, **metronidazole** (including vaginal use), **thrombolytics**, **eptifibatide**, **tirofiban**, **ticlopidine**, **sulfonamides**, **quinidine**, **quinine**, **NSAIDs**, **valproates**, and **aspirin** may ↑ the response to warfarin and ↑ the risk of bleeding. Chronic use of **acetaminophen** may ↑ the risk of bleeding. Chronic **alcohol** ingestion may ↓ action of warfarin; if chronic **alcohol** abuse results in significant liver damage, action of warfarin may be ↑ due to ↓ production of clotting factor. Acute **alcohol** ingestion may ↑ action of warfarin. **Barbiturates**, **carbamazepine**, **rifampin**, and **hormonal contraceptives containing estrogen** may ↓ the anticoagulant response to warfarin. **Many other drugs** may affect the activity of warfarin.
**Drug-Natural Products: St. John's wort** ↓ effect. ↑ bleeding risk with **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **garlic**, **ginger**, **ginkgo**, **Panax ginseng**, **licorice**, and others.
**Drug-Food:** Ingestion of large quantities of **foods high in vitamin K content** (see list in Appendix M) may antagonize the anticoagulant effect of warfarin.

### Route/Dosage

**PO, IV (Adults):** 2–5 mg/day for 2–4 days; then adjust daily dose by results of INR. Initiate therapy with lower doses in geriatric or debilitated patients or in Asian patients or those with CYP2C9*2 and/or CYP2C9*3 alleles or VKORC1 AA genotype.
**PO, IV (Children >1 mo):** Initial loading dose—0.2 mg/kg (maximum dose: 10 mg) for 2–4 days then adjust daily dose by results of INR, use 0.1 mg/kg if liver dysfunction is present. Maintenance dose range—0.05–0.34 mg/kg/day.

### Availability (generic available)

**Tablets:** 1 mg, 2 mg, 2.5 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7.5 mg, 10 mg. **Cost:** *Coumadin*—5 mg $85.00/90; *Jantoven*—5 mg $58.14/90; *Generic*—5 mg $34.99/90. **Injection:** 5 mg/vial.

## NURSING IMPLICATIONS

### Assessment

- Assess for signs of bleeding and hemorrhage (bleeding gums; nosebleed; unusual bruising; tarry, black stools; hematuria; fall in hematocrit or blood pressure; guaiac-positive stools, urine, or nasogastric aspirate).
- Assess for evidence of additional or increased thrombosis. Symptoms depend on area of involvement.
- Geri: Patients over 60 yr exhibit greater than expected PT/INR response. Monitor for side effects at lower therapeutic ranges.
- Pedi: Achieving and maintaining therapeutic PT/INR ranges may be more difficult in the pediatric patient. Assess PT/INR levels more frequently.
- ***Lab Test Considerations:*** Monitor PT, INR and other clotting factors frequently during therapy. Therapeutic PT ranges 1.3–1.5 times greater than control; however, the INR, a standardized system that provides a common basis for communicating and interpreting PT results, is usually referenced. Normal INR (not on anticoagulants) is 0.8–1.2. An INR of 2.5–3.5 is recommended for patients at very high risk of embolization (for example, patients with mitral valve replacement and ventricular hypertrophy). Lower levels are acceptable when risk is lower. Heparin may affect the PT/INR; draw blood for PT/INR in patients receiving both heparin and warfarin at least 5 hr after the IV bolus dose, 4 hr after cessation of IV infusion, or 24 hr after subcut heparin injection. Asian patients and those who carry the CYP2C9*2 allele and/or the CYP2C9*3 allele, or those with VKORC1 AA genotype may require more frequent monitoring and lower doses.
- Monitor hepatic function and CBC before and periodically throughout therapy.
- Monitor stool and urine for occult blood before and periodically during therapy.
- ***Toxicity and Overdose:*** Withholding 1 or more doses of warfarin is usually sufficient if INR is excessively elevated or if minor bleeding occurs. If overdose occurs or anticoagulation needs to be immediately reversed, the antidote is vitamin K (phytonadione, AquaMEPHYTON). Administration of whole blood or plasma also may be required in severe bleeding because of the delayed onset of vitamin K.

### Potential Nursing Diagnoses

Ineffective tissue perfusion (Indications)
Risk for injury (Side Effects)

### Implementation

- ***High Alert:*** Medication errors involving anticoagulants have resulted in serious harm or death from internal or intracranial bleeding. Before administering, evaluate recent INR or PT results and have second practitioner independently check original order.
- Because of the large number of medications capable of significantly altering warfarin's effects, careful monitoring is recommended when new agents are started or other agents are discontinued. Interactive potential should be evaluated for all new medications (Rx, OTC, and natural products).
- Administer medication at same time each day.
- **PO:** Medication requires 3–5 days to reach effective levels; usually begun while patient is still on heparin.
- Do not interchange brands; potencies may not be equivalent.

#### IV Administration

- **Direct IV:** Reconstitute each 5-mg vial with 2.7 mL of sterile water for injection. Reconstituted solution is stable for 4 hr at room temperature. ***Diluent:*** No further dilution needed before administration. ***Concentration:*** 2 mg/mL. ***Rate:*** Administer over 1–2 min.
- **Y-Site Compatibility:** amikacin, ascorbic acid, cefazolin, ceftriaxone, dopamine, epinephrine, heparin, lidocaine, metaraminol, morphine, nitroglycerin, oxytocin, potassium chloride, ranitidine.
- **Y-Site Incompatibility:** aminophylline, ceftazidime, cimetidine, ciprofloxacin, dobutamine, esmolol, gentamicin, labetalol, metronidazole.

### Patient/Family Teaching

- Instruct patient to take medication as directed. Take missed doses as soon as remembered that day; do not double doses. Inform health care professional of missed doses at time of checkup or lab tests. Inform patients that anticoagulant effect may persist for 2–5 days following discontinuation. Advise patient to read *Medication Guide* before starting therapy and with each Rx refill.
- Review foods high in vitamin K (see Appendix M). Patient should have consistent limited intake of these foods, as vitamin K is the

antidote for warfarin, and alternating intake of these foods will cause PT levels to fluctuate. Advise patient to avoid cranberry juice or products during therapy.
- Caution patient to avoid IM injections and activities leading to injury. Instruct patient to use a soft toothbrush, not to floss, and to shave with an electric razor during warfarin therapy. Advise patient that venipunctures and injection sites require application of pressure to prevent bleeding or hematoma formation.
- Advise patient to report any symptoms of unusual bleeding or bruising (bleeding gums; nosebleed; black, tarry stools; hematuria; excessive menstrual flow) and pain, color, or temperature change to any area of your body to health care professional immediately. 🧬 Patients with a deficiency in protein C and/or S mediated anticoagulant response may be at greater risk for tissue necrosis.
- Instruct patient not to drink alcohol or take other Rx, OTC, or herbal products, especially those containing aspirin or NSAIDs, or to start or stop any new medications during warfarin therapy without advice of health care professional.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- Instruct patient to carry identification describing medication regimen at all times and to inform all health care personnel caring for patient on anticoagulant therapy before lab tests, treatment, or surgery.
- Emphasize the importance of frequent lab tests to monitor coagulation factors.

### Evaluation/Desired Outcomes

- Prolonged PT (1.3–2.0 times the control; may vary with indication) or INR of 2–4.5 without signs of hemorrhage.

W

## zafirlukast (za-feer-loo-kast)

Accolate

***Classification***

Therapeutic: antiasthmatics, bronchodilators
Pharmacologic: leukotriene antagonists

**Pregnancy Category B**

### Indications

Long-term control agent in the management of asthma.

### Action

Antagonizes the effects of leukotrienes, which are components of slow-reacting substance of anaphylaxis (SRSA). These substances mediate the following: Airway edema, Smooth muscle constriction, Altered cellular activity. Result is decreased inflammatory process that is part of asthma. **Therapeutic Effects:** Decreased frequency and severity of asthma.

### Pharmacokinetics

**Absorption:** Rapidly absorbed after oral administration.
**Distribution:** Enters breast milk.
**Protein Binding:** 99%.
**Metabolism and Excretion:** Mostly metabolized by the liver; 10% excreted unchanged by the kidneys.
**Half-life:** 10 hr.

TIME/ACTION PROFILE (improved symptoms of asthma)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1 wk | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Lactation.
**Use Cautiously in:** Acute attacks of asthma; Patients >55 yr (↑ risk of infection); Hepatic impairment (may need lower doses); Geri: May need lower doses to avoid side effects; OB, Pedi: Pregnancy or children <7 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** SUICIDAL THOUGHTS, headache, agitation, aggression, anxiety, depression, dizziness, dream abnormalities, hallucinations, insomnia, irritability, restlessness, tremor, weakness. **GI:** HEPATOTOXICITY, abdominal pain, diarrhea, dyspepsia, nausea, vomiting. **MS:** arthralgia, back pain, myalgia. **Misc:** CHURG-STRAUSS SYNDROME, fever, infection (geriatric patients), pain.

### Interactions

**Drug-Drug:** Levels are ↑ by **aspirin**. Levels are ↓ by **erythromycin** and **theophylline**. ↑ effects and risk of bleeding with **warfarin**.
**Drug-Food: Food** (especially high-fat or high-protein meal) ↓ absorption.

### Route/Dosage

**PO (Adults and Children ≥12 yr):** 20 mg twice daily.
**PO (Children 7–11 yr):** 10 mg twice daily.

### Availability

**Tablets:** 10 mg, 20 mg.

## NURSING IMPLICATIONS

### Assessment

- Assess lung sounds and respiratory function before and periodically during therapy.
- Monitor closely for changes in behavior that could indicate the emergence or worsening of depression or suicidal thoughts.
- ***Lab Test Considerations:*** Monitor liver function periodically during therapy. May cause ↑ ALT concentrations. If liver dysfunction occurs, zafirlukast should be discontinued.

### Potential Nursing Diagnoses

Ineffective airway clearance (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- **PO:** Administer at regular intervals on an empty stomach, 1 hr before or 2 hr after meals.

### Patient/Family Teaching

- Instruct patient to take medication on an empty stomach as directed, at evenly spaced intervals, even if not experiencing symptoms of asthma. Take missed doses as soon as remembered unless almost time for next dose. Do not double doses. Do not discontinue therapy without consulting health care professional.
- Instruct patient not to discontinue or reduce other asthma medications without consulting health care professional.
- Advise patient that zafirlukast is not used to treat acute asthma attacks but may be continued during an acute exacerbation.
- Advise patient to notify health care professional of behavioral changes or thoughts of suicide.

- Advise patient to notify health care professional if symptoms of Churg-Strauss syndrome (generalized flu-like syndrome, fever, muscle aches and pain, weight loss, worsening respiratory symptoms) occur. Occurs rarely but may be life-threatening. More likely to occur when weaning from systemic corticosteroids.

### Evaluation/Desired Outcomes

- Prevention of and reduction in symptoms of asthma.

## zaleplon (za-lep-lon)

Sonata

***Classification***

Therapeutic: sedative/hypnotics

**Schedule IV**

**Pregnancy Category C**

### Indications

Short-term management of insomnia in patients unable to get at least 4 hr of sleep; especially useful in sleep initiation disorders.

### Action

Produces CNS depression by binding to GABA receptors in the CNS. Has no analgesic properties.
**Therapeutic Effects:** Sedation and induction of sleep.

### Pharmacokinetics

**Absorption:** Rapidly absorbed following oral administration.
**Distribution:** Enters breast milk.
**Metabolism and Excretion:** Extensively metabolized in the liver (mostly by aldehyde oxidase and some by CYP 450 3A4 enzymes).
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within min | unknown | 3–4 hr |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Severe hepatic impairment; OB, Lactation: Pregnancy or lactation.
**Use Cautiously in:** Mild to moderate hepatic impairment, weight ≤50 kg, or concurrent cimetidine therapy (initiate therapy at lowest dose); Impaired respiratory function; History of suicide attempt; Pedi: Safety not established; Geri: ↑ risk of cognitive impairment. If used, start at lowest dose.

### Adverse Reactions/Side Effects

**CNS:** abnormal thinking, amnesia, anxiety, behavior changes, depersonalization, dizziness, drowsiness, hallucinations, headache, impaired memory (briefly following dose), impaired psychomotor function (briefly following dose), malaise, sleep—driving, vertigo, weakness. **EENT:** abnormal vision, ear pain, epistaxis, hearing sensitivity, ocular pain, altered sense of smell. **CV:** peripheral edema. **GI:** abdominal pain, anorexia, colitis, dyspepsia, nausea. **GU:** dysmenorrhea. **Derm:** photosensitivity. **Neuro:** hyperesthesia, paresthesia, tremor. **Misc:** fever.

### Interactions

**Drug-Drug: Cimetidine** ↓ metabolism and ↑ effects (initiate therapy at a lower dose). Additive CNS depression with other **CNS depressants** including **alcohol**, **antihistamines**, **opioid analgesics**, other **sedative/hypnotics**, **phenothiazines**, and **tricyclic antidepressants**. Effects may be ↓ by drugs that induce the CYP 450 3A4 enzyme system including **rifampin**, **phenytoin**, **carbamazepine**, and **phenobarbital**.
**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, **chamomile**, or **hops** can ↑ CNS depression.
**Drug-Food:** Concurrent ingestion of a **high-fat meal** slows the rate of absorption.

### Route/Dosage

**PO (Adults <65 yr):** 10 mg (range 5–20 mg) at bedtime.
**PO (Geriatric Patients or Patients <50 kg):** Initiate therapy at 5 mg at bedtime (not to exceed 10 mg at bedtime).

#### Hepatic Impairment

**PO (Adults):** Initiate therapy at 5 mg at bedtime (not to exceed 10 mg at bedtime).

### Availability (generic available)

**Capsules:** 5 mg, 10 mg. **Cost:** 5 mg $106.99/30, 10 mg $103.99/90.

## NURSING IMPLICATIONS

### Assessment

- Assess mental status, sleep patterns, and potential for abuse prior to administering this medication. Prolonged use of >7–10 days may lead to physical and psychological dependence. Limit amount of drug available to the patient.
- Assess alertness at time of peak effect. Notify health care professional if desired sedation does not occur.
- Assess patient for pain. Medicate as needed. Untreated pain decreases sedative effects.

### Potential Nursing Diagnoses
Insomnia (Indications)
Risk for injury (Side Effects)

### Implementation
- Before administering, reduce external stimuli and provide comfort measures to increase effectiveness of medication.
- Protect patient from injury. Supervise ambulation and transfer of patients after administration. Remove cigarettes. Side rails should be raised and call bell within reach at all times.
- **PO:** Tablets should be swallowed whole with full glass of water immediately before bedtime or after going to bed and experiencing difficulty falling asleep. Do not administer with or immediately after a high-fat or heavy meal.

### Patient/Family Teaching
- Instruct patient to take zaleplon as directed. Do not take more than the amount prescribed because of the habit-forming potential. Not recommended for use longer than 7–10 days. Rebound insomnia (1–2 nights) may occur when stopped. If used for 2 wk or longer, abrupt withdrawal may result in dysphoria, insomnia, abdominal or muscle cramps, vomiting, sweating, tremors, and seizures.
- Because of rapid onset, advise patient to go to bed immediately after taking zaleplon.
- May cause daytime drowsiness or dizziness. Advise patient to avoid driving or other activities requiring alertness until response to this medication is known.
- Inform patient that amnesia may occur, but can be avoided if zaleplon is only taken when patient is able to get >4 hr sleep.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants.

### Evaluation/Desired Outcomes
- Relief of insomnia.

## zanamivir (za-**na**-mi-veer)
Relenza

***Classification***
Therapeutic: antivirals
Pharmacologic: neuramidase inhibitors

**Pregnancy Category C**

### Indications
Treatment of uncomplicated acute illness caused by influenza virus in patients ≥7 yr who have been symptomatic ≤2 days. Prevention of influenza in patients ≥5 yr.

### Action
Inhibits the enzyme neuramidase, which may alter virus particle aggregation and release. **Therapeutic Effects:** Reduced duration or prevention of flu-related symptoms.

### Pharmacokinetics
**Absorption:** 4–17% of inhaled dose is systemically absorbed.
**Distribution:** Unknown.
**Protein Binding:** <10%.
**Metabolism and Excretion:** Mainly excreted by kidneys as unchanged drug; unabsorbed drug is excreted in feces.
**Half-life:** 2.5–5.1 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Inhalation | rapid | 1–2 hr | 12 hr |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to zanamivir or lactose.
**Use Cautiously in:** Chronic obstructive pulmonary disease or asthma (increased risk of decreased lung function and/or bronchospasm); OB, Lactation: Safety not established; Pedi: Children <7 yr (for treatment) or <5 yr (for prophylaxis) (safety not established; children may be at ↑ risk for neuropsychiatric events).

### Adverse Reactions/Side Effects
**CNS:** SEIZURES, abnormal behavior, agitation, delirium, hallucinations, nightmares. **Resp:** bronchospasm. **Misc:** allergic reactions.

### Interactions
**Drug-Drug:** None noted.

### Route/Dosage

### Treatment
**Inhaln (Adults and children ≥7 yr):** 10 mg (given as 2 inhalations of 5 mg each) twice daily for 5 days.

### Prophylaxis
**Inhaln (Adults and children ≥5 yr):** 10 mg (given as 2 inhalations of 5 mg each) daily for 10 days (for household setting) (28 days for community outbreaks).

### Availability
**Powder for inhalation:** 5 mg/blister.

## NURSING IMPLICATIONS

### Assessment

- Assess patient for signs and symptoms of influenza (fever, headache, myalgia, cough, sore throat) before administration. Determine duration of symptoms. Indicated for patients who have been symptomatic for up to 2 days.

### Potential Nursing Diagnoses

Risk for infection (Indications)

### Implementation

- Consider available information on influenza drug susceptibility patterns and treatment effects before using zanamivir for prophylaxis.
- **Inhaln:** Administer 2 doses on the first day of treatment whenever possible; must have at least 2 hours between doses. Doses should be administered 12 hr apart on subsequent days.

### Patient/Family Teaching

- Instruct patient to use zanamivir exactly as directed and to finish entire 5-day course, even if feeling better.
- Instruct patient in the use of the DISKHALER. Patient should read the accompanying Patient Instructions for Use.
- Advise patients that zanamivir is not a substitute for a flu shot. Patients should receive annual flu shot according to immunization guidelines.
- Patients with a history of asthma should be advised to have a fast-acting inhaled bronchodilator available in case of bronchospasm following zanamivir administration. If using bronchodilator and zanamivir concurrently, administer bronchodilator first.
- Advise patients to report behavioral changes (hallucinations, delirium, and abnormal behavior) to health care professional immediately.

### Evaluation/Desired Outcomes

- Reduced duration or prevention of flu-related symptoms.

## ziconotide (zi-ko-no-tide)

Prialt

***Classification***

Therapeutic: analgesics
Pharmacologic: n-type calcium channel blockers

**Pregnancy Category C**

### Indications

Management of severe chronic pain when conventional therapies (analgesics or other adjunctive measures) have failed.

### Action

Blocks spinal N-channel calcium channels, decreasing transmission of pain signals to the brain. Has no effect on opioid receptors. **Therapeutic Effects:** Decrease in severe pain.

### Pharmacokinetics

**Absorption:** IT administration results in complete bioavailability in the CSF. Minimal plasma distribution.
**Distribution:** Distributes in entire CSF volume.
**Metabolism and Excretion:** Degraded by enzymes in tissues and fluids.
**Half-life:** 4.6 hr (in CSF).

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IT | rapid | 2–3 days | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; History of psychosis; Infection at microinfusion injection site; Uncontrolled bleeding; Spinal cord obstruction; Lactation: Can cause sedation and side effects in the infant.
**Use Cautiously in:** History of suicidal ideation/psychiatric disorder; Pedi: Safety not established; OB: Pregnancy; Geri: ↑ susceptibility to adverse CNS effects.

### Adverse Reactions/Side Effects

**CNS:** MENINGITIS, confusion, dizziness, drowsiness, headache, impaired memory, weakness, aphasaia, ↓ alertness/responsiveness, cognitive impairment, hallucinations, memory impairment, psychiatric symptoms, speech disorder. **CV:** changes in blood pressure. **EENT:** nystagmus, abnormal vision. **GI:** nausea, anorexia, vomiting. **Local:** catheter/injection site reactions. **MS:** hypertonia, urinary retention, ↑ creatine kinase. **Neuro:** abnormal gait, ataxia. **Misc:** fever.

### Interactions

**Drug-Drug:** ↑ risk of CNS depression with other **CNS depressants** including **anticonvulsants**, **phenothiazines**, **antipsychotics**, **antihistamines**, **opioids**, **sedatives**,or **diuretics**.

### Route/Dosage

**IT (Adults):** up to 2.4 mcg/day initially (0.1 mcg/hr), may be gradually ↑ 2–3 times/wk in increments of 2.4 mcg/day up to a maximum of 19.2 mcg/day (0.8 mcg/hr) over 21 days.

### Availability

**Solution for intrathecal use:** 25 mcg/mL, 100 mcg/mL.

## NURSING IMPLICATIONS

### Assessment

- Assess level of pain prior to and periodically during therapy.
- Assess mental status during therapy. If psychiatric symptoms (cognitive impairment, hallucinations, changes in mood or level of consciousness) or neurological impairment. Discontinuation of therapy may be required, but other causes should be considered. Ziconotide may be discontinued abruptly without withdrawal symptoms.
- Monitor for signs of meningitis (fever, headache, stiff neck, altered mental status, nausea, vomiting, seizures) frequently during therapy. May occur within 24 hr of breach in sterility. If meningitis occurs, obtain CSF cultures and institute antibiotic therapy. Usually requires removal of microinfusion system, catheter, and any other foreign body within the IT space.
- ***Lab Test Considerations:*** Monitor serum CK levels every other week for the first month, monthly thereafter, and if neuromuscular symptoms (myalgias, myasthenia, muscle cramps, asthenia, reduction in physical activity) occur. May cause ↑ CK levels. If symptoms continue and CK remains ↑ or continues to rise, dose reduction or discontinuation may be required.

### Potential Nursing Diagnoses

Chronic pain (Indications)

### Implementation

- Ziconotide is not an opioid and cannot prevent or relieve symptoms of opioid withdrawal. Do not discontinue opioids abruptly. For withdrawal from IT opioid, gradually taper opioid IT infusion over several weeks, and replace with an equianalgesic dose of oral opioids. Ziconotide does not potentiate opioid-induced respiratory depression.
- Ziconotide should be administered under the direction of a physician experienced in IT therapy. Do not administer IV.
- **IT:** IT dose is delivered using a programmable implanted variable-rate microinfusion device or an external microinfusion device and catheter. Ziconotide may be administered undiluted (25 mcg/mL in 20-mL vial) or diluted (100 mg/mL in 1-, 2-, or 5-mL vials). Dilute with 0.9% NaCl (preservative—free) using aseptic technique. 100 mg/mL formulation may be administered undiluted once an appropriate dose is established. Refrigerate, but do not freeze, after preparation; administer within 24 hr. Discard solution if discolored or containing particulate matter or any unused portion in vial. Pump refills should be done every 40 days if diluted solution is used or every 60 days if solution is undiluted. Pump should be rinsed and filled according to manufacturer's directions.
- ***Rate:*** Dose should be adjusted according to patient's severity of pain, response to therapy, and occurrence of side effects.

### Patient/Family Teaching

- Instruct patient on correct technique for care of equipment.
- May cause dizziness and drowsiness. Caution patient to avoid driving and other activities requiring alertness until response to ziconotide is known.
- Advise patient to avoid taking alcohol and other CNS depressants during ziconotide therapy. Consult health care professional prior to taking Rx, OTC, or herbal products during therapy.
- Instruct patient and caregiver to contact health care professional immediately if changes in mental status (lethargy, confusion, disorientation, decreased alertness), changes in mood or perception (hallucinations, including unusual tactile sensations in oral cavity), symptoms of depression or suicidal ideation, or nausea, vomiting, seizures, fever, headache, or still neck occur; may be symptoms of developing meningitis.
- Advise patient to consult health care professional if new or worsening muscle pain, soreness, or weakness with or without darkened urine occur.

### Evaluation/Desired Outcomes

- Decrease in pain intensity.

Z

## zidovudine (zye-doe-vue-deen)

Apo-Zidovudine, azidothymidine, AZT, Novo-AZT, Retrovir

***Classification***

Therapeutic: antiretrovirals
Pharmacologic: nucleoside reverse transcriptase inhibitors

**Pregnancy Category C**

### Indications

HIV infection (with other antiretrovirals). Reduction of maternal/fetal transmission of HIV. **Unla-**

**beled Use:** Chemoprophylaxis after occupational exposure to HIV.

## Action

Following intracellular conversion to its active form, inhibits viral RNA synthesis by inhibiting the enzyme DNA polymerase (reverse transcriptase). Prevents viral replication. **Therapeutic Effects:** Virustatic action against selected retroviruses. Slowed progression and decreased sequelae of HIV infection. Decreased viral load and improved CD4 cell counts. Decreased transmission of HIV to infants born to HIV-infected mothers.

## Pharmacokinetics

**Absorption:** Well absorbed following oral administration.
**Distribution:** Widely distributed; enters the CNS. Crosses the placenta.
**Metabolism and Excretion:** Mostly (75%) metabolized by the liver; 15–20% excreted unchanged by the kidneys.
**Half-life:** 1 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 0.5–1.5 hr | 4 hr |
| IV | rapid | end of infusion | 4 hr |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Breastfeeding not recommended in HIV-infected patients.
**Use Cautiously in:** ↓ bone marrow reserve (dose ↓ required for anemia or granulocytopenia); Severe hepatic or renal disease (dose modification may be required); Geri: Select dose carefully due to potential for age-related ↓ in hepatic, renal, or cardiac function.

## Adverse Reactions/Side Effects

**CNS:** SEIZURES, headache, weakness, anxiety, confusion, ↓ mental acuity, dizziness, insomnia, mental depression, restlessness, syncope. **GI:** HEPATOMEGALY (with steatosis), PANCREATITIS, abdominal pain, diarrhea, nausea, anorexia, drug-induced hepatitis, dyspepsia, oral mucosa pigmentation, vomiting. **F and E:** LACTIC ACIDOSIS. **Derm:** nail pigmentation. **Endo:** fat redistribution, gynecomastia. **Hemat:** anemia, granulocytopenia, pure red-cell aplasia, thrombocytosis. **MS:** back pain, myopathy. **Neuro:** tremor.

## Interactions

**Drug-Drug:** ↑ bone marrow depression with other **agents having bone marrow–depressing properties**, **antineoplastics**, **radiation therapy**, or **ganciclovir**. ↑ neurotoxicity may occur with **acyclovir**. Toxicity may be ↑ by concurrent administration of **probenecid** or **fluconazole**. Levels are ↓ by **clarithromycin**.

## Route/Dosage

### Management of HIV Infection

**PO (Adults):** 100 mg q 4 hr while awake or 200 mg 3 times daily or 300 mg twice daily (depends on combination and clinical situation).
**PO (Children 6 wk–<12 yr):** *4–8.9 kg*–12 mg/kg 2 times daily or 8 mg/kg 3 times daily; *9–29.9 kg*–9 mg/kg 2 times daily or 6 mg/kg 3 times daily; *≥30 kg*–300 mg 2 times daily or 200 mg 3 times daily.
**IV (Adults and Children >12 yr):** 1 mg/kg infused over 1 hr q 4 hr. Change to oral therapy as soon as possible.
**IV (Children):** 120 mg/m² q 6 hr (not to exceed 160 mg/dose) or 20 mg/m²/hr as a continuous infusion.

### Prevention of Maternal/Fetal Transmission of HIV Infection

**PO (Adults >14 wk Pregnant):** 100 mg 5 times daily until onset of labor.
**IV (Adults during Labor and Delivery):** 2 mg/kg over 1 hr, then continuous infusion of 1 mg/kg/hr until umbilical cord is clamped.
**IV (Infants):** 1.5 mg/kg q 6 hr until able to take PO.
**PO (Infants):** 2 mg/kg q 6 hr, started within 12 hr of birth and continued for 6 wk.
**PO (Neonates premature <30 wk gestational age at birth):** 2 mg/kg q 12 hr then ↑ to q 8 hr at 4 wk of age.
**PO (Neonates premature ≥30 wk gestational age at birth):** 2 mg/kg q 12 hr then ↑ to q 8 hr at 2 wk of age.
**IV (Neonates premature <30 wk gestational age at birth ):** 1.5 mg/kg q 12 hr then ↑ to q 8 hr at 4 wk of age.
**IV (Neonates premature ≥30 wk gestational age at birth ):** 1.5 mg/kg q 12 hr then ↑ to q 8 hr at 2 wk of age.

## Availability (generic available)

**Capsules:** 100 mg. **Tablets:** 300 mg. **Oral syrup:** 50 mg/5 mL. **Solution for injection:** 10 mg/mL. ***In combination with:*** lamivudine (Combivir; see Appendix B).

## NURSING IMPLICATIONS

### Assessment

- Assess patient for change in severity of symptoms of HIV and for symptoms of opportunistic infections during therapy.
- ***Lab Test Considerations:*** Monitor viral load and CD4 counts prior to and periodically during therapy.
- Monitor CBC every 2 wk during the first 8 wk of therapy in patients with advanced HIV disease, and decrease to every 4 wk after the first 2 mo if zidovudine is well tolerated or monthly during the first 3 mo and every 3 mo thereafter unless indicated in patients who are asymptomatic or have early symptoms. Commonly causes granulocytopenia and anemia. Anemia may occur 2–4 wk after initiation of therapy. Anemia may respond to epoetin administration (see epoetin monograph). Granulocytopenia usually occurs after 6–8 wk of therapy. Consider dose reduction, discontinuation of therapy, or blood transfusions if hemoglobin is <7.5 g/dL or reduction of >25% from baseline and/or granulocyte count is <750/mm$^3$ or reduction of >50% from baseline. Therapy may be gradually resumed when bone marrow recovery is evident.
- May cause ↑ serum AST, ALT, and alkaline phosphatase levels. Lactic acidosis may occur with hepatic toxicity, causing hepatic steatosis; may be fatal, especially in women.
- Monitor serum amylase, lipase, and triglycerides periodically during therapy. Elevated serum levels may indicate pancreatitis and require discontinuation.

### Potential Nursing Diagnoses

Risk for infection (Indications, Side Effects)

### Implementation

- Do not confuse Retrovir (zidovudine) with Ritonavir.
- Administer doses around the clock.
- **IV:** Patient should receive the IV infusion only until oral therapy can be administered.

#### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Remove calculated dose from the vial and dilute with D5W or 0.9% NaCl. Do not use solutions that are discolored. Stable for 8 hr at room temperature or 24 hr if refrigerated. ***Concentration:*** Not to exceed 4 mg/mL. ***Rate:*** Infuse at a constant rate over 1 hr or over 30 min in neonates. Avoid rapid infusion or bolus injection.
- **Continuous Infusion:** Has also been administered via continuous infusion.
- **Y-Site Compatibility:** acyclovir, allopurinol, amifostine, amikacin, amphotericin B, amphotericin B cholesteryl sulfate, amphotericin B colloidal, amphotericin B liposome, aztreonam, bivalirudin, carboplatin, caspofungin, cefepime, ceftazidime, ceftriaxone, cimetidine, cisatracurium, cisplatin, clindamycin, cyclophosphamide, cytarabine, dactinomycin, dexamethasone sodium phosphate, dexmedetomidine, diltiazem, dobutamine, docetaxel, dopamine, doripenem, doxacurium, doxorubicin hydrochloride, doxorubicin liposome, epirubicin, ertapenem, erythromycin lactobionate, etoposide, etoposide phosphate, fenoldopam, filgrastim, fluconazole, fludarabine, fluorouracil, gemcitabine, gentamicin, granisetron, heparin, hydromorphone, ifosfamide, imipenem/cilastatin, levofloxacin, linezolid, lorazepam, mechlorethamine, melphalan, meperidine, methotrexate, metoclopramide, metronidazole, milrinone, mitoxantrone, morphine, nafcillin, nesiritide, octreotide, ondansetron, oxacillin, oxaliplatin, oxytocin, paclitaxel, palonosetron, pantoprazole, pemetrexed, pentamidine, phenylephrine, piperacillin/tazobactam, potassium chloride, quinapristin/dalfopristin, ranitidine, remifentanil, rituxumab, rocuronium, sargramostim, sodium acetate, tacrolimus, teniposide, thiotepa, tigecycline, tirofiban, tobramycin, trimethoprim/sulfamethoxazole, trastuzumab, trimetrexate, vancomycin, vasopressin, vecuronium, vincristine, vinorelbine, voriconazole.
- **Y-Site Incompatibility:** lansoprazole.
- **Additive Incompatibility:** blood products or protein solutions.

### Patient/Family Teaching

- Instruct patient to take zidovudine as directed, around the clock, even if sleep is interrupted. Emphasize the importance of compliance with therapy, not taking more than prescribed amount, and not discontinuing without consulting health care professional. Take missed doses as soon as remembered unless almost time for next dose; do not double doses. Inform patient that long-term effects of zidovudine are unknown at this time.
- Instruct patient that zidovudine should not be shared with others.

- Zidovudine may cause dizziness or fainting. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Inform patient that zidovudine does not cure HIV and does not reduce the risk of transmission of HIV to others through sexual contact or blood contamination. Caution patient to use a condom during sexual contact and avoid sharing needles or donating blood to prevent spreading the AIDS virus to others.
- Instruct patient to notify health care professional promptly if fever, sore throat, signs of infection, muscle weakness, or shortness of breath occurs. Caution patient to avoid crowds and persons with known infections. Instruct patient to use soft toothbrush, to use caution when using toothpicks or dental floss, and to have dental work done prior to therapy or deferred until blood counts return to normal. Patient should also notify health care professional if shortness of breath, muscle aches, symptoms of hepatitis or pancreatitis, or other unexpected reactions occur.
- Advise patient to avoid taking any RX, OTC, or herbal products without consulting health care professional.
- Inform patient that redistribution and accumulation of body fat may occur, causing central obesity, dorsocervical fat enlargement (buffalo hump), peripheral wasting, breast enlargement, and cushingoid appearance. The cause and long-term effects are not known.
- Advise patients not to breastfeed during therapy.
- Emphasize the importance of regular follow-up exams and blood counts to determine progress and monitor for side effects.

### Evaluation/Desired Outcomes

- Decrease in viral load and increase in CD4 counts in patients with HIV.
- Delayed progression of AIDS and decreased opportunistic infections in patients with HIV.
- Reduction of maternal/fetal transmission of HIV.

## zinc sulfate (zink **sul**-fate)

Orazinc, PMS Egozinc, Verazinc, Zinc 220, Zincate, Zinkaps

***Classification***

Therapeutic: mineral and electrolyte replacements/supplements
Pharmacologic: trace metals

**Pregnancy Category C (parenteral)**

### Indications

Replacement and supplementation therapy in patients who are at risk for zinc deficiency, including patients on long-term parenteral nutrition.
**Unlabeled Use:** Management of impaired wound healing due to zinc deficiency.

### Action

Serves as a cofactor for many enzymatic reactions. Required for normal growth and tissue repair, wound healing, and senses of taste and smell.
**Therapeutic Effects:** Replacement in deficiency states.

### Pharmacokinetics

**Absorption:** Poorly absorbed from the GI tract (20–30%).
**Distribution:** Widely distributed. Concentrates in muscle, bone, skin, kidney, liver, pancreas, retina, prostate, RBCs, and WBCs.
**Metabolism and Excretion:** 90% excreted in feces, remainder lost in urine and sweat.
**Half-life:** Unknown.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2 hr | unknown |
| IV | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity or allergy to any components in formulation; Pregnancy or lactation (supplemental amounts >RDA for pregnant or lactating patients); Preparations containing benzyl alcohol should not be used in neonates.
**Use Cautiously in:** Renal failure.

### Adverse Reactions/Side Effects

**GI:** gastric irritation (oral use only), nausea, vomiting.

### Interactions

**Drug-Drug:** Oral zinc may ↓ absorption of **tetracyclines** or **fluoroquinolones**.
**Drug-Food: Caffeine**, **dairy products**, and **bran** may ↓ absorption of orally administered zinc.

### Route/Dosage

RDA = 15 mg. Doses expressed in mg of elemental zinc unless otherwise noted. Zinc sulfate contains 23% zinc.

### Deficiency

**PO (Adults):** *Prevention of deficiency*—15–19 mg/day; *treatment of deficiency*—must be individualized; based on degree of deficiency.

### IV Nutritional Supplementation—Metabolically Stable Patients

**IV (Adults):** 2.5–4 mg/day; up to 12 mg/day in patients with excessive losses.
**IV (Infants and Children ≤5 yr):** 100 mcg/kg/day.
**IV (Infants up to 3 kg):** 300 mcg/kg/day.

### Availability (generic available)

**Tablets:** 66 mg[OTC], 110 mg[OTC]. **Capsules:** 220 mg[OTC]. **Injection:** 1 mg/mL in 10- and 30-mL vials, 5 mg/mL in 5- and 10-mL vials.

## NURSING IMPLICATIONS

### Assessment

- Monitor progression of zinc deficiency symptoms (impaired wound healing, growth retardation, decreased sense of taste, decreased sense of smell) during therapy.
- ***Lab Test Considerations:*** Serum zinc levels may not accurately reflect zinc deficiency.
- Long-term high-dose zinc therapy may cause ↓ serum copper concentrations.
- Monitor serum alkaline phosphatase concentrations monthly; may ↑ with zinc therapy.
- Monitor HDL concentrations monthly in patients on long-term high-dose zinc therapy. Serum concentrations may be ↓.

### Potential Nursing Diagnoses

Imbalanced nutrition: less than body requirements (Indications)

### Implementation

- **PO:** Administer oral doses with food to decrease gastric irritation. Administration with caffeine, dairy products, or bran may impair absorption.
- **IV:** Zinc is often included as a trace mineral in total parenteral nutrition solution prepared by pharmacist.

### Patient/Family Teaching

- Encourage patient to comply with diet recommendations of health care professional. Explain that the best source of vitamins is a well-balanced diet with foods from the four basic food groups. Foods high in zinc include seafood, organ meats, and wheat germ.
- Patients self-medicating with vitamin supplements should be cautioned not to exceed RDA. The effectiveness of megadoses for treatment of various medical conditions is unproved and may cause side effects.
- Instruct patients receiving oral zinc to notify health care professional if severe nausea or vomiting, abdominal pain, or tarry stools occur.
- Emphasize the importance of follow-up exams to evaluate progress.

### Evaluation/Desired Outcomes

- Improved wound healing.
- Improved senses of taste or smell. 6–8 wk of therapy may be required before full effect is seen.

## ziprasidone (zi-pra-si-done)

Geodon

***Classification***

Therapeutic: antipsychotics, mood stabilizers
Pharmacologic: piperazine derivatives

**Pregnancy Category C**

### Indications

Schizophrenia; IM form is reserved for control of acutely agitated patients. Bipolar mania (acute manic and manic/mixed episodes).

### Action

Effects probably mediated by antagonism of dopamine type 2 (D2) and serotonin type 2 ($5\text{-}HT_2$). Also antagonizes $\alpha_2$ adrenergic receptors. **Therapeutic Effects:** Diminished schizophrenic behavior.

### Pharmacokinetics

**Absorption:** 60% absorbed following oral administration; 100% absorbed from IM sites.
**Distribution:** Unknown.
**Protein Binding:** 99%; potential for drug interactions due to drug displacement is minimal.
**Metabolism and Excretion:** 99% metabolized by the liver; <1% excreted unchanged in urine.
**Half-life:** *PO*—7 hr; *IM*—2–5 hr.

TIME/ACTION PROFILE (blood levels)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | within hours | 1–3 days† | unknown |
| IM | rapid | 60 min | unknown |

†Steady state achieved following continuous use

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; History of QT prolongation (persistent QTc measurements >500 msec), arrhythmias, recent MI or uncompensated heart failure; Concurrent use of other drugs known to prolong the QT interval including quinidine, dofetilide, sotalol, other class Ia and III antiarrhythmics, pimozide, sotalol, thioridazine, chlorpromazine, pentamidine, arsenic trioxide, mefloquine, dolasetron, tacrolimus, droperidol, and moxifloxacin; Hypokalemia or hypomagnesemia; Lactation: Discontinue drug or bottle feed.
**Use Cautiously in:** Concurrent diuretic therapy or diarrhea (may ↑ the risk of hypotension, hypokalemia, or hypomagnesemia); Significant hepatic impairment; History of cardiovascular or cerebrovascular disease; Hypotension, concurrent antihypertensive therapy, dehydration, or hypovolemia (may ↑ risk of orthostatic hypotension); OB: Use only if potential benefit outweighs potential risk to the fetus; Pedi: Safety not established; Geri: Alzheimer's dementia or age >65 yr (may ↑ risk of seizures). Geriatric patients (may require ↓ doses; ↑ risk of mortality in elderly patients treated for dementia-related psychosis); Patients at risk for aspiration pneumonia; History of suicide attempt.

## Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, seizures, dizziness, drowsiness, restlessness, extrapyramidal reactions, syncope, tardive dyskinesia. **Resp:** cough/runny nose. **CV:** PROLONGED QT INTERVAL, orthostatic hypotension. **GI:** constipation, diarrhea, nausea, dysphagia. **GU:** amenorrhea, impotence. **Hemat:** AGRANULOCYTOSIS, leukopenia, neutropenia. **Endo:** galactorrhea. **Derm:** rash, urticaria.

## Interactions

**Drug-Drug:** Concurrent use of **quinidine**, **dofetilide**, **other class Ia and III antiarrhythmics**, **pimozide**, **sotalol**, **thioridazine**, **chlorpromazine**, **pentamidine**, **arsenic trioxide**, **mefloquine**, **dolasetron**, **tacrolimus**, **droperidol**, **moxifloxacin**, or other agents that prolong the QT interval may result in potentially life-threatening adverse drug reactions (concurrent use contraindicated). Additive CNS depression may occur with **alcohol**, **antidepressants**, **antihistamines**, **opioid analgesics**, or **sedative/hypnotics**. Blood levels and effectiveness may be ↓ by **carbamazepine**. Blood levels and effects may be ↑ by **ketoconazole**.

## Route/Dosage

**PO (Adults):** *Schizophrenia*—20 mg twice daily initially; dose increments may be made at 2-day intervals up to 80 mg twice daily; *Mania*—40 mg twice on first day, then 60 or 80 mg twice daily on second day, then 40–80 mg twice daily.
**IM (Adults):** 10–20 mg as needed up to 40 mg/day; may be given as 10 mg every 2 hr or 20 mg every 4 hr.

## Availability

**Capsules:** 20 mg, 40 mg, 60 mg, 80 mg. **Cost:** 20 mg $974.88/180, 40 mg $975.96/180, 60 mg $1,172.00/180, 80 mg $1,172.00/180. **Lyophilized powder for injection (requires reconstitution):** 20 mg/vial.

# NURSING IMPLICATIONS

## Assessment

- Monitor patient's mental status (orientation, mood, behavior) prior to and periodically during therapy.
- Assess weight and BMI initially and throughout therapy.
- Monitor blood pressure (sitting, standing, lying) and pulse rate prior to and frequently during initial dose titration. Patients found to have persistent QTc measurements of >500 msec should have ziprasidone discontinued. Patients who experience dizziness, palpitations, or syncope may require further evaluation (i.e., Holter monitoring).
- Assess for rash during therapy. May be treated with antihistamines or corticosteroids. Usually resolves upon discontinuation of ziprasidone. Medication should be discontinued if no alternative etiology for rash is found.
- Observe carefully when administering medication to ensure medication is actually taken and not hoarded or cheeked.
- Monitor for onset of akathisia (restlessness or desire to keep moving) and extrapyramidal side effects (*parkinsonian*—difficulty speaking or swallowing, loss of balance control, pill rolling of hands, mask-like face, shuffling gait, rigidity, tremors and dystonic muscle spasms, twisting motions, twitching, inability to move eyes, weakness of arms or legs) every 2 mo during therapy and 8–12 wk after therapy has been discontinued. Notify health care professional if these symptoms occur, as reduction in dose or discontinuation of medication may be necessary. Trihexyphenidyl or benztropine may be used to control these symptoms.
- Although not yet reported for ziprasidone, monitor for possible tardive dyskinesia (uncontrolled rhythmic movement of mouth, face, and extremities, lip smacking or puckering, puffing of cheeks, uncontrolled chewing, rapid

or worm-like movements of tongue). Report these symptoms immediately; may be irreversible.
- Monitor frequency and consistency of bowel movements. Increasing bulk and fluids in the diet may help to minimize constipation.
- Ziprasidone lowers the seizure threshold. Institute seizure precautions for patients with history of seizure disorder.
- Monitor for development of neuroleptic malignant syndrome (fever, respiratory distress, tachycardia, seizures, diaphoresis, hypertension or hypotension, pallor, tiredness). Notify health care professional immediately if these symptoms occur.
- Monitor for symptoms related to hyperprolactinemia (menstrual abnormalities, galactorrhea, sexual dysfunction).
- ***Lab Test Considerations:*** Monitor serum potassium and magnesium prior to and periodically during therapy. Patients with low potassium or magnesium should have levels treated and check prior to resuming therapy. Obtain fasting blood glucose and cholesterol levels initially and throughout therapy.
- Monitor CBC frequently during initial months of therapy in patients with pre-existing or history of low WBC. May cause leukopenia, neutropenia, or agranulocytosis. Discontinue therapy if this occurs.
- Monitor serum prolactin prior to and periodically during therapy. May cause ↑ serum prolactin levels.

## Potential Nursing Diagnoses

Risk for other-directed violence (Indications)
Disturbed thought process (Indications)
Imbalanced nutrition: risk for more than body requirements (Side Effects)

## Implementation

- Dose adjustments should be made at intervals of no less than 2 days. Usually patients should be observed for several weeks before dose titration.
- Patients on parenteral therapy should be converted to oral doses as soon as possible.
- **PO:** Administer capsules with food or milk to decrease gastric irritation. Capsules should be swallowed whole; do not open.
- **IM:** Add 1.2 mL of Sterile Water for Injection to the vial; shake vigorously until all drug is dissolved for a concentration of 20 mg/mL. Discard unused portion. Do not mix with other products or solutions. Do not administer solutions that are discolored or contain particulate matter.

## Patient/Family Teaching

- Instruct patient to take medication as directed. Do not discontinue medication without discussing with health care professional, even if feeling well. Patients on long-term therapy may need to discontinue gradually.
- Inform patient of possibility of extrapyramidal symptoms. Instruct patient to report these symptoms immediately.
- Advise patient to change positions slowly to minimize orthostatic hypotension.
- May cause seizures and drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Caution patient to avoid concurrent use of alcohol, other CNS depressants, Rx, OTC and herbal products without consulting health care professional.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery.
- Instruct patient to notify health care professional promptly if dizziness, loss of consciousness, palpitations, menstrual abnormalities, galactorrhea or sexual dysfunction occur or if pregnancy is planned or suspected.
- Advise female patients to notify health care professional if pregnancy is planned or suspected, or if breastfeeding or planning to breastfeed.
- Advise patient of need for continued medical follow-up for psychotherapy, eye exams, and laboratory tests.

## Evaluation/Desired Outcomes

- Decrease in acute excited, manic behavior.
- Decrease in positive (delusions, hallucinations) and negative symptoms (social withdrawal, flat, blunted affect) of schizophrenia.

Z

# zoledronic acid

(zoe-led-**dron**-ic **as**-id)
Reclast, Zometa

***Classification***
Therapeutic: bone resorption inhibitors, electrolyte modifiers, hypocalcemics
Pharmacologic: biphosphonates

**Pregnancy Category C**

## Indications

Hypercalcemia of malignancy (Zometa only). Multiple myeloma and metastatic bone lesions from solid tumors (Zometa only). Paget's disease (Reclast only). Treatment of osteoporosis in men (Reclast only). Treatment and prevention of osteoporosis in postmenopausal women (Reclast only). Treatment and prevention of glucocorticoid-induced osteoporosis in patients expected to be on glucocorticoids for at least 12 months (Reclast only).

## Action

Inhibits bone resorption. Inhibits increased osteoclast activity and skeletal calcium release induced by tumors. **Therapeutic Effects:** Decreased serum calcium. Decreased serum alkaline phosphatase. Decreased fractures, radiation/surgery to bone, or spinal cord compression in patients with multiple myeloma or metastatic bone lesions. Decreased hip, vertebral, or non-vertebral osteoporosis-related fractures in postmenopausal women. Increased bone mass in men, postmenopausal women, and patients on prolonged corticosteroid therapy.

## Pharmacokinetics

**Absorption:** IV administration results in complete bioavailability.
**Distribution:** Unknown.
**Metabolism and Excretion:** Mostly excreted unchanged by the kidneys.
**Half-life:** 167 hr.

TIME/ACTION PROFILE (effect on serum calcium)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| IV | within 4 days | 4-7 days | 30 days |

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to zoledronic acid or other bisphosphonates.
**Use Cautiously in:** Severe renal impairment (not recommended if CCr <35 mL/min); History of aspirin-induced asthma; Concurrent use of loop diuretics or dehydration (↑ risk of renal impairment; correct deficits prior to use); Concurrent use of nephrotoxic drugs; Dental surgery (may ↑ risk of jaw osteonecrosis); OB, Lactation: Pedi: Safety not established.

## Adverse Reactions/Side Effects

**CNS:** agitation, anxiety, confusion, insomnia. **EENT:** conjunctivitis. **CV:** hypotension, chest pain, leg edema. **GI:** abdominal pain, constipation, diarrhea, nausea, vomiting, dysphagia. **GU:** renal impairment/failure. **Derm:** pruritus, rash. **F and E:** hypophosphatemia, hypocalcemia, hypokalemia, hypomagnesemia. **Hemat:** anemia. **MS:** musculoskeletal pain, osteonecrosis (primarily of jaw). **Misc:** fever, flu-like syndrome.

## Interactions

**Drug-Drug:** Concurrent use of **loop diuretics** or **aminoglycosides** ↑ risk of hypocalcemia. Concurrent use of **NSAIDs** may ↑ risk of nephrotoxicity.

## Route/Dosage

### Reclast

**IV (Adults):** *Paget's disease*—5 mg as a single dose (information regarding retreatment unknown); *Treatment of osteoporosis in men or postmenopausal women, treatment/prevention of glucocorticoid-induced osteoporosis*—5 mg once early; *Prevention of osteoporosis in postmenopausal women*—5 mg every 2 yr.

### Zometa

**IV (Adults):** *Hypercalcemia of malignancy*—4 mg; may be repeated after 7 days; *Multiple myeloma and bone metastases from solid tumors*—4 mg q 3–4 wk (has been used for up to 15 mo).

## Availability

**Solution for IV infusion (Zometa):** 4 mg/5–mL vial. **Solution for IV infusion (premixed) (Reclast):** 5 mg/100 mL.

# NURSING IMPLICATIONS

## Assessment

- Monitor intake and output ratios. Initiate a vigorous saline hydration promptly and maintain a urine output of 2 L/day during therapy. Patients should be adequately hydrated, but avoid overhydration. Do not use diuretics prior to treatment of hypovolemia.
- Assess for acute-phase reaction (fever, mylagia, flu-like symptoms, headache, arthralgia). Usually occur within 3 days of dose and resolve within 3 days of onset, but may take 7–14 days to resolve; incidence decreases with repeat dosing.
- **Hypercalcemia:** Monitor symptoms of hypercalcemia (nausea, vomiting, anorexia, weakness, constipation, thirst, cardiac arrhythmias).
- Observe for evidence of hypocalcemia (paresthesia, muscle twitching, laryngospasm, Chvostek's or Trousseau's sign).
- **Paget's Disease:** Assess for symptoms of Paget's disease (bone pain, headache, decreased visual and auditory acuity, increased skull size) periodically during therapy.

- **Osteoporosis:** Assess patients via bone density study for low bone mass before and periodically during therapy.
- ***Lab Test Considerations:*** Monitor serum creatinine prior to each treatment. Patients with a normal serum creatinine prior to treatment, who develop an increase of 0.5 mg/dL within 2 wk of next dose should have next dose withheld until serum creatinine is within 10% of baseline value. Patients with an abnormal serum creatinine prior to treatment who have an increase of 1.0 mg/dL within 2 wk of next dose should have next dose withheld until serum creatinine is within 10% of baseline value.
- Assess serum calcium, phosphate, and magnesium before and periodically during therapy. If hypocalcemia, hypophosphatemia, or hypomagnesemia occur, temporary supplementation may be required.
- Monitor CBC with differential and hemoglobin and hematocrit closely during therapy.
- *Paget's Disease:* Monitor serum alkaline phosphatase prior to and periodically during therapy to monitor effectiveness.

## Potential Nursing Diagnoses

Risk for injury (Indications)

## Implementation

- Vigorous saline hydration alone may be sufficient to treat mild, asymptomatic hypercalcemia. Adequate rehydration is required prior to administration.
- Patients on long-term therapy should have 1200 mg of oral calcium and 800–1000 units of Vitamin D each day.
- Patients treated for *Paget's disease* should receive 1500 mg elemental calcium and 800 IU of vitamin D daily, particularly during the 2 wk after dosing. Patients with osteoporosis should take 1200 mg of calcium and 800–1000 IU of Vitamin D daily.
- Administration of acetaminophen or ibuprofen following administration may reduce the incidence of acute-phase reaction symptoms.

### IV Administration

- **Intermittent Infusion:** ***Diluent:*** Reconstitute *Zometa* by adding 5 mL of sterile water for injection to each vial for a solution containing 4 mg of zoledronic acid. Medication must be completely dissolved prior to withdrawal of solution. Dilute 4-mg dose further with 100 mL of 0.9% NaCl or D5W. If not used immediately, may be refrigerated for up to 24 hr. *Reclast* comes ready to use 5 mg in 100-mL solution. If refrigerated, allow solution to reach room temperature prior to administration. Do not administer solution that is discolored or contains particulate matter. ***Rate:*** Administer as a single infusion over at least 15 min. Rapid infusions increase risk of renal deterioration and renal failure.
- **Y-Site Compatibility:** bivalirudin, daptomycin, ertapenem, octreotide, oxytocin, tigecycline, tirofiban.
- **Y-Site Incompatibility:** Manufacturer recommends administration as a single infusion in a line separate from all other drugs. Calcium-containing solutions.
- **Additive Incompatibility:** Do not mix with solutions containing calcium, such as Lactated Ringer's solution.

## Patient/Family Teaching

- Explain the purpose of zoledronic acid to patient. Advise patient to read medication guide prior to administration.
- Advise patients of the importance of adequate hydration. Patient should be instructed to drink at least two glasses of water prior to receiving dose.
- Advise patient to notify health care professional before taking any Rx, OTC, or herbal products with zoledronic acid.
- Advise patient to eat a balanced diet and consult health care professional about the need for supplemental calcium and vitamin D.
- Inform patient that severe musculoskeletal pain may occur within days, months, or yr after starting zoledronic acid. Symptoms may resolve completely after discontinuation or slow or incomplete resolution may occur. Notify health care professional if severe pain occurs.
- Encourage patient to participate in regular exercise and to modify behaviors that increase the risk of osteoporosis (stop smoking, reduce alcohol consumption).
- Advise patient to inform health care professional of zoledronic acid therapy prior to dental surgery.
- Advise patient to notify health care professional if pregnancy is planned or suspected or if breastfeeding.
- Emphasize the importance of lab tests to monitor progress.

### Evaluation/Desired Outcomes

- Decrease in serum calcium.
- Decrease in serum alkaline phosphatase and the progression of Paget's disease.
- Reversal of the progression of osteoporosis with decreased fractures and other sequelae.

## zolmitriptan (zole-mi-trip-tan)

Zomig, Zomig- ZMT

***Classification***

Therapeutic: vascular headache suppressants

Pharmacologic: 5-$HT_1$ agonists

**Pregnancy Category C**

### Indications

Acute treatment of migraine headache.

### Action

Acts as an agonist at specific 5-$HT_1$receptor sites in intracranial blood vessels and sensory trigeminal nerves. **Therapeutic Effects:** Cranial vessel vasoconstriction with resultant decrease in migraine headache.

### Pharmacokinetics

**Absorption:** Well absorbed (40%) following oral and intranasal administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Mostly metabolized by the liver; some conversion to metabolites that are more active than zolmitriptan. 8% excreted unchanged in urine.
**Half-life:** 3 hr (for zolmitriptan and active metabolite).

TIME/ACTION PROFILE (relief of headache)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 1.5 hr* | unknown |
| Intranasal | unknown | 3 hr | unknown |

*3 hr for orally disintegrating tablets

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Significant underlying heart disease (including ischemic heart disease, history of MI, coronary artery vasospasm, uncontrolled hypertension); Stroke or transient ischemic attack; Peripheral vascular disease (including, but not limited to ischemic bowel disease); Concurrent (or within 24 hr) use of other 5-HT agonists, ergotamine, or ergot-type medications; Concurrent (or within 2 wk) use of MAO inhibitors; Hemiplegic or basilar migraine; Symptomatic Wolff-Parkinson-White syndrome or other arrhythmias.

**Use Cautiously in:** Cardiovascular risk factors (hypertension, hypercholesterolemia, cigarette smoking, obesity, diabetes, strong family history, menopausal females or males >40 yr [use only if cardiovascular status has been evaluated and determined to be safe and 1st dose is administered under supervision]); Hepatic impairment (use lower doses); OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** dizziness, drowsiness, vertigo, weakness. **EENT:** throat pain/tightness/pressure. **CV:** MI, angina, chest pain/pressure/tightness/heaviness, hypertension, palpitations. **GI:** dry mouth, dyspepsia, dysphagia, nausea. **Derm:** sweating, warm/cold sensation. **MS:** myalgia, myasthenia. **Neuro:** hypesthesia, paresthesia. **Misc:** feeling of heaviness, pain.

### Interactions

**Drug-Drug:** Because of ↑ risk of cerebral vasospasm, avoid concurrent use of other **5-HT agonists (naratriptan, sumatriptan, rizatriptan)** and/or **ergot-type preparations (dihydroergotamine)**. Concurrent use of **MAO inhibitors** ↑ blood levels and risk of toxicity (avoid use within 2 wk of MAO inhibitors). Blood levels may be ↑ by **hormonal contraceptives**. **Cimetidine** ↑ half-life of zolmitriptan and its active metabolite. Concurrent use with **SSRI antidepressants** may result in weakness, hyperreflexia and incoordination. ↑ serotonin levels and serotonin syndrome may occur when used concurrently with **SSRI and SNRI antidepressants**.
**Drug-Natural Products:** ↑ risk of serotinergic side effects including serotonin syndrome with **St. John's wort** and **SAMe**.

### Route/Dosage

**PO (Adults):** 2.5 mg or less initially; if headache returns, dose may be repeated after 2 hr (not to exceed 10 mg/24 hr).
**Intranasal (Adults):** single 5-mg dose; may be repeated after 2 hr (not to exceed 10 mg/24 hr).

### Availability

**Tablets:** 2.5 mg, 5 mg. **Orally disintegrating tablets:** 2.5 mg, 5 mg. **Nasal spray:** 5 mg/100 mcL unit-dose spray device (package of 6).

## NURSING IMPLICATIONS

### Assessment

- Assess pain location, intensity, duration, and associated symptoms (photophobia, phonophobia, nausea, vomiting) during migraine attack.

- Monitor for serotonin syndrome in patients taking SSRIs or SNRIs concurrently with zolmitriptan.

### Potential Nursing Diagnoses
Acute pain (Indications)

### Implementation
- Do not confuse zolmitriptan with sumatriptan.
- **PO:** Initial dose is 2.5 mg. Lower doses can be achieved by breaking 2.5-mg tablet.
- Orally disintegrating tablets should be left in the package until use. Remove from the blister pouch. Do not push tablet through the blister; peel open the blister pack with dry hands and place tablet on tongue. Tablet will dissolve rapidly and be swallowed with saliva. No liquid is needed to take the orally disintegrating tablet.
- **Intranasal:** Remove cap from nasal spray. Hold upright and block one nostril. Tilt head slightly back, insert device into opposite nostril, and depress plunger. May repeat in 2 hr.

### Patient/Family Teaching
- Inform patient that zolmitriptan should be used only during a migraine attack. It is meant to be used to relieve migraine attack but not to prevent or reduce the number of attacks.
- Instruct patient to administer zolmitriptan as soon as symptoms appear, but it may be administered any time during an attack. If migraine symptoms return, a 2nd dose may be used. Allow at least 2 hr between doses, and do not use more than 10 mg in any 24-hr period.
- If dose does not relieve headache, additional zolmitriptan doses are not likely to be effective; notify health care professional.
- Advise patient that lying down in a darkened room following zolmitriptan administration may further help relieve headache.
- May cause dizziness or drowsiness. Caution patient to avoid driving or other activities requiring alertness until response to medication is known.
- Advise patient to notify health care professional prior to next dose of zolmitriptan if pain or tightness in the chest occurs during use. If pain is severe or does not subside, notify health care professional immediately. If wheezing; heart throbbing; swelling of eyelids, face, or lips; skin rash; skin lumps; or hives occur, notify health care professional immediately and do not take more zolmitriptan without approval of health care professional. If feelings of tingling, heat, flushing, heaviness, pressure, drowsiness, dizziness, tiredness, or sickness develop, discuss with health care professional at next visit.
- Advise patient to avoid alcohol, which aggravates headaches, during zolmitriptan use.
- Advise patient to consult health care professional before taking other Rx, OTC, or herbal products concurrently with sumatriptan. Patients concurrently taking SSRI or SNRI antidepressants should notify health care professional promptly if signs of serotonin syndrome (mental status changes: agitation, hallucinations, coma; autonomic instability: tachycardia, labile blood pressure, hyperthermia; neuromuscular aberrations: hyper-reflexia, incoordination; and/or gastrointestinal symptoms: nausea, vomiting, diarrhea) occur.
- Caution patient not to use zolmitriptan if pregnancy is planned or suspected or if breastfeeding. Adequate contraception should be used during therapy.

### Evaluation/Desired Outcomes
- Relief of migraine attack.

## zolpidem (zole-pi-dem)
Ambien, Ambien CR, Edluar, Zolpimist

***Classification***
Therapeutic: sedative/hypnotics

**Schedule IV**

**Pregnancy Category C**

### Indications
Insomnia.

### Action
Produces CNS depression by binding to GABA receptors. Has no analgesic properties. **Therapeutic Effects:** Sedation and induction of sleep.

### Pharmacokinetics
**Absorption:** Rapidly absorbed following oral administration. Controlled-release formulation releases 10 mg immediately, then another 2.5 mg later.
**Distribution:** Minimal amounts enter breast milk; remainder of distribution not known.
**Metabolism and Excretion:** Converted to inactive metabolites, which are excreted by the kidneys.
**Half-life:** 2.5–3 hr (↑ in geriatric patients and patients with hepatic impairment).

TIME/ACTION PROFILE (sedation)

| ROUTE | ONSET | PEAK* | DURATION |
|---|---|---|---|
| PO | rapid | 30 min–2 hr | 6–8 hr |
| PO-ER | rapid | 2–4 hr | 6–8 hr |
| PO-Spray | rapid | unknown | unknown |
| SL | rapid | unknown | unknown |

*Food delays peak levels and effects

## Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Sleep apnea.

**Use Cautiously in:** History of previous psychiatric illness, suicide attempt, drug or alcohol abuse; Hepatic impairment (initial dose reduction recommended); Geri: Geriatric patients (initial dose ↓ recommended); Pulmonary disease; OB, Lactation: Pedi: Pregnancy, lactation, or children (safety not established).

## Adverse Reactions/Side Effects

**CNS:** daytime drowsiness, dizziness, abnormal thinking, amnesia, behavior changes, "drugged" feeling, hallucinations, sleep-driving. **GI:** diarrhea, nausea, vomiting. **Misc:** ANAPHYLACTIC REACTIONS, hypersensitivity reactions, physical dependence, psychological dependence, tolerance.

## Interactions

**Drug-Drug:** CNS depression may ↑ with **sedatives/hypnotics**, **alcohol**, **phenothiazines**, **tricyclic antidepressants**, **opioid analgesics**, or **antihistamines**.

**Drug-Natural Products:** Concomitant use of **kava-kava**, **valerian**, or **chamomile** can ↑ CNS depression.

**Drug-Food: Food** ↓ and delays absorption.

## Route/Dosage

**PO, SL (Adults):** *Tablets, spray, or SL tablets*—10 mg at bedtime; *Extended-release tablets*—12.5 mg at bedtime .

**PO, SL (Geriatric Patients, Debilitated Patients, or Patients with Hepatic Impairment):** *Tablets, spray or SL tablets*—5 mg at bedtime initially; *Extended-release tablets*—6.25 mg at bedtime.

## Availability (generic available)

**Tablets:** 5 mg, 10 mg. **Cost:** *Generic*—5 mg $15.99/30, 10 mg $17.99/30. **Extended-release tablets:** 6.25 mg, 12.5 mg. **Cost:** 6.25 mg $109.99/30, 12.5 mg $110.99/30. **Sublingual tablets (Edluar):** 5 mg, 10 mg. **Oral spray (Zolpimist):** 5 mg/spray (60 sprays/container).

# NURSING IMPLICATIONS

## Assessment

- Assess mental status, sleep patterns, and potential for abuse prior to administration. Prolonged use of >7–10 days may lead to physical and psychological dependence. Limit amount of drug available to the patient.
- Assess alertness at time of peak effect. Notify health care professional if desired sedation does not occur.
- Assess patient for pain. Medicate as needed. Untreated pain decreases sedative effects.

## Potential Nursing Diagnoses

Insomnia (Indications)
Risk for injury (Side Effects)

## Implementation

- Before administering, reduce external stimuli and provide comfort measures to increase effectiveness of medication.
- Protect patient from injury. Raise bed side rails. Assist with ambulation. Take patient's cigarettes.
- **PO:** Tablets should be swallowed whole with full glass of water. For faster onset of sleep, do not administer with or immediately after a meal.
- Swallow extended-release tablets whole; do not crush, break, or chew.
- **SL:** To open the blister pack, separate the individual blisters at the perforations. Peel off top layer of paper and push tablet through foil. Place the tablet under the tongue, allow to disintegrate; do not swallow or take with water.
- **Oral Spray:** Do not take with or immediately after a meal. Spray is a clear, colorless, and cherry-flavor solution.

## Patient/Family Teaching

- Instruct patient to take zolpidem as directed. Advise patient not to take zolpidem unless able to stay in bed a full night (7–8 hours) before being active again. Do not take more than the amount prescribed because of the habit-forming potential. Not recommended for use longer than 7–10 days. If used for 2 wk or longer, abrupt withdrawal may result in fatigue, nausea, flushing, light-headedness, uncontrolled crying, vomiting, GI upset, panic attack, or nervousness. Instruct patient to read *Patient Information* for correct product before taking and with each Rx refill, changes may occur.
- Because of rapid onset, advise patient to go to bed immediately after taking zolpidem.
- May cause daytime drowsiness or dizziness. Advise patient to avoid driving or other activi-

ties requiring alertness until response to this medication is known.
- Caution patient that complex sleep-related behaviors (sleep-driving) may occur while asleep.
- Advise patient to notify health care professional immediately if signs of anaphylaxis (swelling of the tongue or throat, trouble breathing, and nausea and vomiting) occur.
- Caution patient to avoid concurrent use of alcohol or other CNS depressants.
- **Oral Spray:** To prime, patients should be told to point the black spray opening away from their face and other people and spray 5 times. For administration, hold container upright with the black spray opening pointed directly into the mouth. Press down fully on pump to make sure a full dose (5 mg) is sprayed directly into mouth over tongue. For 10-mg dose, a second spray should be administered. If not used for 14 days, re-prime with 1 spray.

### Evaluation/Desired Outcomes
- Relief of insomnia.

## zonisamide (zoe-niss-a-mide)
Zonegran

***Classification***
Therapeutic: anticonvulsants
Pharmacologic: sulfonamides

**Pregnancy Category C**

### Indications
Partial seizures in adults.

### Action
Raises the threshold for seizures and reduces duration of seizures probably by action on sodium and calcium channels. **Therapeutic Effects:** Decreased frequency of partial seizures.

### Pharmacokinetics
**Absorption:** Well absorbed following oral administration.
**Distribution:** Binds extensively to red blood cells.
**Metabolism and Excretion:** Mostly metabolized by the liver; 35% excreted unchanged in urine. Some metabolism occurs via CYP3A4 enzyme system.
**Half-life:** 63 hr (plasma).

TIME/ACTION PROFILE (blood levels†)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 2–6 hr | 24 hr |

†Requires 2 weeks of dosing to achieve steady-state blood levels

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to zonisamide or sulfonamides.
**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Hepatic or renal disease (may require slower titration/more frequent monitoring; ↑ risk of metabolic acidosis with renal impairment); Patients with respiratory disorders, diarrhea, or undergoing surgery (↑ risk of metabolic acidosis); OB, Lactation: Use only if potential benefit justifies risk to fetus/infant; Pedi: Children ≤16 yr (safety not established; ↑ risk of oligohydrosis, hyperthermia, and/or metabolic acidosis).

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, drowsiness, fatigue, agitation/irritability, depression, dizziness, psychomotor slowing, psychosis, weakness. **EENT:** amblyopia, tinnitus. **Resp:** cough, pharyngitis. **GI:** anorexia, nausea, vomiting. **F and E:** metabolic acidosis. **GU:** kidney stones. **Derm:** oligohydrosis (↑ in children), rash. **Metab:** hyperthermia (↑ in children). **Neuro:** abnormal gait, hyperasthesia, incoordination, tremor. **Misc:** ALLERGIC REACTIONS INCLUDING STEVENS-JOHNSON SYNDROME.

### Interactions
**Drug-Drug: Drugs that induce or inhibit CYP3A4** may alter blood levels and effects of zonisamide. Blood levels and effects may be ↓ by **phenytoin**, **carbamzepine**, **phenobarbital**, or **valproate**.

### Route/Dosage
**PO (Adults and Children >16 yr):** 100 mg once daily initially for 2 wk, then ↑ to 200 mg daily for 2 wk; with subsequent increments of 100 mg made at 2-wk intervals as required (range 100–600 mg/day). Can be given as a single daily dose or in 2 divided doses.

### Availability (generic available)
**Capsules:** 25 mg, 50 mg, 100 mg.

## NURSING IMPLICATIONS

### Assessment
- Monitor closely for notable changes in behavior that could indicate the emergence or wors-

ening of suicidal thoughts or behavior or depression.
- Monitor frequency, duration, and characteristics of seizures.
- Monitor patient frequently for development of skin rash. Unexplained rash may require discontinuation of therapy.
- Assess patient for allergy to sulfa drugs.
- ***Lab Test Considerations:*** Monitor renal function periodically during therapy. May cause ↑ creatinine and BUN.
- Measure serum bicarbonate before starting and periodically during therapy. Metabolic acidosis may be more frequent and severe in younger patients.
- May cause ↑ in serum alkaline phosphatase.

## Potential Nursing Diagnoses

Risk for injury (Adverse Reactions)

## Implementation

- **PO:** May be administered with or without meals. Capsules should be swallowed whole.

## Patient/Family Teaching

- Instruct patient to take zonisamide as directed, even if feeling well. Consult health care professional if a dose is missed. Do not discontinue abruptly without consulting health care professional; may cause seizures. Instruct patient to read the *Medication Guide* before starting and with each Rx refill, changes may occur.
- Instruct patient to contact health care professional immediately if skin rash occurs or seizures worsen. Patient should also contact health care professional if a child taking zonisamide is not sweating as usual, with or without a fever, or if they develop fever, sore throat, oral ulcers, easy bruising, depression, unusual thoughts, speech or language problems.
- May cause drowsiness. Caution patient to avoid driving or other activities requiring alertness until cleared by physician and effects of medication is known.
- Advise patient to increase fluid intake to at least 6–8 glasses of water/day to minimize risk of kidney stones. Instruct patient to contact health care professional if symptoms of kidney stones (sudden back pain, abdominal pain, blood in urine) occur.
- Advise patient and family to notify health care professional if thoughts about suicide or dying, attempts to commit suicide; new or worse depression; new or worse anxiety; feeling very agitated or restless; panic attacks; trouble sleeping; new or worse irritability; acting aggressive; being angry or violent; acting on dangerous impulses; an extreme increase in activity and talking, other unusual changes in behavior or mood occur.
- Instruct patient to consult health care professional prior to taking other Rx, OTC, or herbal products.
- May have teratogenic effects. Advise women of childbearing age to use effective contraception throughout therapy. Instruct patient to notify health care professional if pregnancy is planned or suspected or if planning to breast feed.

## Evaluation/Desired Outcomes

- Decrease in frequency and duration of partial seizures.

# Less Commonly Used Drugs

## acamprosate calcium
(a-**cam**-pro-sate)
Campral

***Classification***
Therapeutic: alcohol abuse therapy adjuncts
Pharmacologic: gamma aminobutyric acid (GABA) analogues

**Pregnancy Category C**

### Indications
Maintenance of alcohol abstinence; part of a comprehensive alcohol abstinence program.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; CCr 30 mL/min or less.
**Use Cautiously in:** CCr 30–50 mL/min (dose reduction necessary); History of depression or suicide attempt; OB: Use only if potential maternal benefit outweighs fetal risk; Lactation, Pedi: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** abnormal thinking, anxiety, depression, drowsiness, headache. **EENT:** abnormal vision. **Resp:** cough, dyspnea, pharyngitis, rhinitis. **CV:** palpitations, peripheral edema, syncope, vasodilation. **GI:** abdominal pain, anorexia, constipation, diarrhea, flatulence, ↑ appetite, nausea, taste perversion, vomiting. **GU:** ↓ libido, erectile dysfunction. **Derm:** rash. **Metab:** weight gain. **MS:** arthralgia, back pain, mylagia. **Neuro:** tremor.

### Route/Dosage
**PO (Adults):** Two 333-mg tablets (666 mg/dose) three times daily. Lower doses may be effective in some patients.

#### Renal Impairment
**PO (Adults):** *CCr 30–50 mL/min*—One 333-mg tablet three times daily.

## activated charcoal
Acta-Char Liquid-A, Actidose-Aqua, Aqueous Charcodote, Charac-50, CharcoAid 2000, Charcodote, Insta-Char, Insta-Char Aqueous Suspension, Liqui-Char, SuperChar Aqueous

***Classification***
Therapeutic: antidotes
Pharmacologic: adsorbents

**Pregnancy Category C**

### Indications
Acute management of many oral poisonings following emesis/lavage.

### Contraindications/Precautions
**Contraindicated in:** No known contraindications.
**Use Cautiously in:** Poisonings due to cyanide, corrosives, ethanol, methanol, petroleum distillates, organic solvents, mineral acids, or iron; Endoscopic examination (observation will be obscured).

### Adverse Reactions/Side Effects
**GI:** black stools, constipation, diarrhea, vomiting.

### Route/Dosage

#### Antidote
**PO (Adults):** 25–100 g (may be repeated q 4–6 hr).
**PO (Children 1–12 yr):** 25–50 g (may be repeated q 4–6 hr).
**PO (Children <1 yr):** 1 g/kg (may be repeated q 4–6 hr).

## aldesleukin (al-dess-**loo**-kin)
interleukin-2, IL-2, Proleukin

***Classification***
Therapeutic: antineoplastics
Pharmacologic: interleukins

**Pregnancy Category C**

### Indications
Management of metastatic renal cell carcinoma.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to aldesleukin or mannitol; Cross-sensitivity to *Escherichia coli*—derived proteins may occur; Patients with any history of cardiac or pulmonary disease as assessed by abnormal thallium stress

testing or abnormal pulmonary function testing; Patients who have experienced any of the following toxicities during previous courses of aldesleukin—sustained ventricular tachycardia (≥5 beats), angina pectoris or MI as indicated by ECG changes, respiratory problems requiring more than 72 hr of intubation, pericardial tamponade, renal toxicity requiring more than 72 hr of dialysis, CNS dysfunction consisting of more than 48 hr of coma or psychosis, intractable seizures, bowel perforation or ischemia, GI bleeding requiring surgical intervention; Patients who have had allograft organ transplantation (increased risk of rejection).
**Use Cautiously in:** Patients with a history of cardiovascular, respiratory, hepatic, or renal disease; Patients with a history of seizures or suspected CNS metastases (symptoms may be exaggerated and seizures may occur); Patients with child-bearing potential; OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects

**Resp:** APNEA, RESPIRATORY FAILURE, dyspnea, pulmonary congestion, pulmonary edema, hemoptysis, pleural effusion, pneumothorax, tachypnea, wheezing. **CV:** CARDIAC ARREST, CHF, MI, STROKE, arrhythmias, hypotension, tachycardia, myocardial ischemia, pericardial effusion, thrombosis. **GI:** BOWEL PERFORATION, diarrhea, jaundice, nausea, stomatitis, vomiting, ascites, hepatomegaly. **GU:** oliguria/anuria, proteinuria, dysuria, hematuria, renal failure. **Derm:** EXFOLIATATIVE DERMATITIS, pruritus. **F and E:** acidosis, hypocalcemia, hypokalemia, hypomagnesemia, hypophosphatemia, alkalosis, hyperkalemia, hyperuricemia, hyponatremia. **Hemat:** anemia, coagulation disorders, leukopenia, thrombocytopenia, eosinophilia, leukocytosis. **Misc:** CAPILLARY LEAK SYNDROME, chills, fever, weight gain, weight loss.

### Route/Dosage

**IV (Adults):** 600,000 IU/kg (0.037 mg/kg) every 8 hr for 14 doses. Cycle is repeated once after a 9-day rest period to a total of 28 doses. After a rest period of 7 wk, patients who have had a beneficial response may be evaluated for additional courses.

## alitretinoin (a-li-**tret**-i-noyn)

Panretin

***Classification***
Therapeutic: antineoplastics
Pharmacologic: retinoids

**Pregnancy Category D**

### Indications

Topical treatment of cutaneous lesions from AIDS-related Kaposi's sarcoma (KS).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to retinoids; OB: Potential for birth defects; Lactation: Use breast milk alternative.
**Use Cautiously in:** Patients with childbearing potential; Pedi: Safety not established.

### Adverse Reactions/Side Effects

**Local:** pain, pruritus, rash, edema, exfoliative, dermatitis, paresthesia.

### Route/Dosage

**Topical (Adults):** Apply generous coating twice daily to KS lesions initially; application may be increased to 3–4 times daily.

## amoxapine (a-**mox**-a-peen)

Asendin

***Classification***
Therapeutic: antidepressants

**Pregnancy Category C**

### Indications

Treatment of various types of depression. **Unlabeled Use:** Anxiety, insomnia, neuropathic and chronic pain syndromes.

### Contraindications/Precautions

**Contraindicated in:** Angle-closure glaucoma; Recent MI; Prolongation of QTc interval; Cardiac arrhythmia; Heart failure.
**Use Cautiously in:** Pre-existing cardiovascular disease; Prostatic hyperplasia (increased susceptibility to urinary retention); History of seizures (threshold may be lowered); May ↑ risk of suicide attempt/ideation especially during dose early treatment or dose adjustment; OB: Use only if clearly needed and maternal benefits outweigh risk to fetus; Lactation: May result in sedation in infant; discontinue drug or bottle feed; Pedi: Suicide risk, especially at initiation of therapy, may be greater in children and adolescents; Geri: May be more susceptible to adverse effects; dosage reduction required.

### Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, fatigue, sedation, extrapyramidal reactions, tardive dyskinesia. **EENT:** blurred vision, dry eyes, dry mouth. **CV:** ARRHYTHMIAS, hypotension, ECG changes. **GI:** constipation, increased appetite, weight gain, paralytic ileus. **GU:** testicular swelling, urinary retention. **Derm:** photosensitivity, rash. **Endo:**

gynecomastia, sexual dysfunction. **Hemat:** blood dyscrasias. **Misc:** fever.

### Route/Dosage

**PO (Adults):** 50 mg 2–3 times daily, increase to 100 mg 2–3 times daily by end of 1 week (not to exceed 300 mg daily in outpatients, 600 mg daily in divided doses in hospitalized patients). Once optimal dose is achieved, may be given as a single bedtime dose; no single dose to exceed 300 mg.

**PO (Geriatric Patients):** 25 mg 2–3 times daily, may be increased to 50 mg 2–3 times daily (not >300 mg/day).

## arsenic trioxide

(**ar**-sen-ik trye-**ox**-ide )

Trisenox

***Classification***

Therapeutic: antineoplastics

Pharmacologic: heavy metals

**Pregnancy Category D**

### Indications

Induction of remission and consolidation in patients with acute promyelocytic leukemia (APL) who do not respond to or tolerate retinoid and anthracycline chemotherapy and whose disease is associated with the presence of the t(15; 17) translocation or PML/RAR-alpha gene expression.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to arsenic; OB: Can cause fetal injury; Lactation: Excreted in breast milk.

**Use Cautiously in:** Renal impairment.

**Exercise Extreme Caution in:** Pre-existing electrolyte abnormalities (correct prior to administration); concurrent use of drugs known to prolong QT interval, concurrent use of potassium wasting diuretics or amphotericin; Pedi: Safety not established in children <5 yr.

### Adverse Reactions/Side Effects

**CNS:** fatigue, headache, insomnia, weakness. **Resp:** hypoxia, dyspnea, pleural effusion. **CV:** QT PROLONGATION, COMPLETE AV BLOCK, atrial arrhythmias. **GI:** abdominal pain, constipation, increase liver enzymes. **GU:** renal failure. **Derm:** dermatitis. **Endo:** hyperglycemia, hypoglycemia. **F and E:** acidosis, hypocalcemia, hyperkalemia, hypokalemia, hypomagnesemia. **Hemat:** NEUTROPENIA, APL DIFFERENTIATION SYNDROME, DISSEMINATED INTRAVASCULAR COAGULATION, THROMBOCYTOPENIA, hyperleukocytosis, anemia, leukocytosis. **MS:** back pain, arthralgia, bone pain, neck pain, limb pain, myalgia. **Misc:** allergic reactions, fever, infection/sepsis.

### Route/Dosage

**IV (Adults and Children ≥5 yr):** *Induction*—0.15 mg/kg/day until bone marrow remission (not to exceed 60 doses); *consolidation*—starting 3–6 wk after completion of induction; 0.15 mg/kg/day for 25 doses over a period of 5 wk.

## ascorbic acid

(as-**kor**-bik **as**-id)

Apo-C, Ascorbicap, Cebid, Cecon, Cecore-500, Cemill, Cenolate, Cetane, Cevalin, Cevi-Bid, Flavorcee, Mega-C/A Plus, Ortho/CS, Sunkist

***Classification***

Therapeutic: vitamins

Pharmacologic: water soluble vitamins

**Pregnancy Category C**

### Indications

Treatment and prevention of vitamin C deficiency (scurvy) with dietary supplementation. Supplemental therapy in some GI diseases during long-term parenteral nutrition or chronic hemodialysis. States of increased requirements such as: Pregnancy, Lactation, Stress, Hyperthyroidism, Trauma, Burns, Infancy. **Unlabeled Use:** Prevention of the common cold.

### Contraindications/Precautions

**Contraindicated in:** Tartrazine hypersensitivity (some products contain tartrazine—FDC yellow dye #5).

**Use Cautiously in:** Recurrent kidney stones; OB: Avoid chronic use of large doses in pregnant women.

### Adverse Reactions/Side Effects

**CNS:** drowsiness, fatigue, headache, insomnia. **GI:** cramps, diarrhea, heartburn, nausea, vomiting. **GU:** kidney stones. **Derm:** flushing. **Hemat:** deep vein thrombosis, hemolysis (in G6PD deficiency), sickle cell crisis. **Local:** pain at subcut or IM sites.

### Route/Dosage

**PO (Adults):** *Scurvy*—500 mg/day for at least 14 days. *Prevention of deficiency*—50–100 mg/day.
**PO (Children):** *Scurvy*—100–300 mg/day for at least 14 days. *Prevention of deficiency*—30–45 mg/day.
**IM (Adults):** *Scurvy*—100–500 mg/day for at least 14 days.
**IM (Children):** *Scurvy*—100–300 mg/day for at least 14 days.
**IV (Adults and Children):** *Prevention of deficiency*—determined by need.

## bethanechol (be-**than**-e-kole)

Duvoid, Urabeth, Urecholine

***Classification***
Therapeutic: urinary tract stimulants
Pharmacologic: cholinergics

**Pregnancy Category C**

### Indications

Postpartum and postoperative nonobstructive urinary retention or urinary retention caused by neurogenic bladder.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Mechanical obstruction of the GI or GU tract.
**Use Cautiously in:** History of asthma; Ulcer disease; Cardiovascular disease; Epilepsy; Hyperthyroidism; Sensitivity to cholinergic agents or effects; OB: Lactation, Pedi: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** headache, malaise. **EENT:** lacrimation, miosis. **Resp:** bronchospasm. **CV:** HEART BLOCK, SYNCOPE/CARDIAC ARREST, bradycardia, hypotension. **GI:** abdominal discomfort, diarrhea, nausea, salivation, vomiting. **GU:** urgency. **Misc:** flushing, sweating, hypothermia.

### Route/Dosage

**PO (Adults):** 25–50 mg 3 times daily. Dose may be determined by administering 5–10 mg q 1–2 hr until response is obtained or total of 50 mg administered *or* by starting with 10 mg, giving 25 mg 6 hr later, then, if needed, 50 mg 6 hr later.
**PO (Children):** 0.2 mg/kg 3 times daily or 0.15 mg/kg 4 times daily.
**Subcut (Adults):** 5 mg 3–4 times daily. Dose may be determined by administering 2.5 mg q 15–30 min until response is obtained or total of 4 doses administered.
**Subcut (Children):** 0.06 mg/kg 3 times daily or 0.05 mg/kg 4 times daily.

## biperiden (by-**per**-i-den)

Akineton

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications

Adjunctive treatment of all forms of Parkinson's disease, including drug-induced extrapyramidal effects and acute dystonic reactions.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Angle-closure glaucoma; Bowel obstruction; Megacolon; Tardive dyskinesia.
**Use Cautiously in:** Prostatic enlargement; Seizure disorders; Cardiac arrhythmias; OB, Lactation: Safety not established; Geri: Increased risk of adverse reactions; lower doses may be necessary.

### Adverse Reactions/Side Effects

**CNS:** confusion, depression, dizziness, hallucinations, headache, sedation, weakness. **EENT:** blurred vision, dry eyes, mydriasis. **CV:** arrhythmias, hypotension, palpitations, tachycardia. **GI:** constipation, dry mouth, ileus, nausea. **GU:** hesitancy, urinary retention. **Misc:** decreased sweating.

### Route/Dosage

#### Parkinsonism

**PO (Adults):** 2 mg 3–4 times daily initially (not to exceed 16 mg/day).

#### Extrapyramidal Reactions

**PO (Adults):** 2 mg 1–3 times daily.
**IM, IV (Adults):** 2 mg, may repeat q 30 min (not to exceed 8 mg or 4 doses/24 hr).
**IM (Children):** 40 mcg (0.04 mg)/kg or 1.2 mg/m$^2$, may repeat q 30 min (not to exceed 4 doses/24 hr).

## botulism immune globulin (**bo**tyoo-lism im-**yoon glob**-yoo-lin)

BabyBIG

***Classification***
Therapeutic: vaccines/immunizing agents
Pharmacologic: immune globulins

**Pregnancy Category UK**

### Indications
Infant botulism caused by type A or B toxin in children <1 yr.

### Contraindications/Precautions
**Contraindicated in:** History of severe reactions to other immunoglobulins; Selective immunoglobulin A deficiency.
**Use Cautiously in:** Pre-existing renal impairment, diabetes mellitus, volume depletion, sepsis, paraproteinemia, concurrent nephrotoxic agents (↑ risk of adverse renal reactions; use lowest concentration and slowest infusion rate).

### Adverse Reactions/Side Effects
**Derm:** rash. **Misc:** infusion reactions.

### Route/Dosage
**IV (Children <1 yr):** 1 mL/kg (50 mg/kg) as a single infusion.

## bromocriptine
(broe-moe-**krip**-teen)
Alti-Bromocriptine, Apo-Bromocriptine, Cycloset, Parlodel

***Classification***
Therapeutic: antiparkinson agents, antidiabetics
Pharmacologic: dopamine agonists

**Pregnancy Category B**

### Indications
Adjunct to levodopa in the treatment of parkinsonism (Parlodel only). Treatment of hyperprolactinemia (amenorrhea/galactorrhea), including associated female infertility (Parlodel only). Treatment of prolactin-secreting adenomas (Parlodel only). Treatment of acromegaly (Parlodel only). Treatment of type 2 diabetes (as adjunct to diet and exercise) (Cycloset only). **Unlabeled Use:** Management of neuroleptic malignant syndrome.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to bromocriptine, ergot alkaloids, or bisulfites; Severe cardiovascular disease or peripheral vascular disease; History of syncopal migraines (↑ risk of syncope) (Cycloset only); Lactation; Concurrent use of dopamine antagonists (e.g., clozapine, olanzapine, ziprasidone) or other dopamine agonists (e.g., ropinirole); Type 1 diabetes (Cycloset only); Diabetic ketoacidosis (Cycloset only).
**Use Cautiously in:** Cardiac disease; Mental disturbances; May restore fertility (additional contraception may be required if pregnancy is undesirable); Hepatic impairment; Concurrent antihypertensive therapy (↑ risk of hypotension); OB, Pedi: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** dizziness, drowsiness, confusion, hallucinations, headache, insomnia, nightmares. **EENT:** burning eyes, nasal stuffiness, visual disturbances. **Resp:** PULMONARY FIBROSIS, effusions, pulmonary infiltrates. **CV:** MI, orthostatic hypotension. **GI:** nausea, abdominal pain, anorexia, dry mouth, metallic taste, vomiting. **Derm:** urticaria. **MS:** leg cramps. **Misc:** digital vasospasm (acromegaly only).

### Route/Dosage

#### Parkinsonism
**PO (Adults):** 1.25 mg 1–2 times daily, ↑ by 2.5 mg/day in 2–4 wk intervals (range is 2.5–100 mg/day in divided doses; up to 40 mg/day have been used).

#### Hyperprolactinemia
**PO (Adults):** 1.25–2.5 mg/day initially, may be gradually ↑ q 3–7 days up to 2.5 mg 2–3 times daily.

#### Acromegaly
**PO (Adults):** 1.25–2.5 mg/day for 3 days, ↑ by 1.25–2.5 mg q 3–7 days until optimal response is obtained (usual range 10–30 mg/day; up to 100 mg/day).

#### Pituitary Adenomas
**PO (Adults):** 1.25 mg 2–3 times daily, may be ↑ over several weeks (range 2.5–20 mg/day).

#### Type 2 Diabetes (Cycloset only)
**PO (Adults):** 0.8 mg once daily (within 2 hr of arising in morning); may be ↑ by 0.8 mg q 7 days (range 1.6–4.8 mg/day).

#### Neuroleptic Malignant Syndrome (Unlabeled)
**PO (Adults):** 5 mg once daily initially, dose increased as required up to 20 mg/day.

## brompheniramine
(brome-fen-**ir**-a-meen)
Bromfenac, Dimetapp Allergy, Nasahist B, Dimetane

***Classification***
Therapeutic: allergy, cold, and cough remedies, antihistamines

**Pregnancy Category B**

### Indications
Symptomatic relief of allergic symptoms (rhinitis, urticaria) caused by histamine release.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Acute attacks of asthma; Known alcohol intolerance (some elixirs); Lactation: Potential for adverse reaction in nursing infants.
**Use Cautiously in:** Angle-closure glaucoma; Liver disease; OB: Safety not established; Geri: More susceptible to adverse reactions; use lower initial dose; Pedi: Children <4 yr (OTC cough and cold products containing this medication should be avoided).

### Adverse Reactions/Side Effects
**CNS:** drowsiness, sedation, dizziness, excitation (in children). **EENT:** blurred vision. **CV:** hypertension, arrhythmias, hypotension, palpitations. **GI:** dry mouth, constipation, obstruction. **GU:** retention, urinary hesitancy. **Derm:** sweating.

### Route/Dosage
**PO (Adults and Children ≥12 yr):** 4 mg q 4–6 hr daily as needed (not to exceed 24 mg/day).
**PO (Children 6–12 yr):** 2 mg q 4–6 hr as needed (not to exceed 12 mg/day).
**PO (Children 4–6 yr):** 1 mg q 4–6 hr as needed (not to exceed 6 mg/day).

## chlorambucil
(klor-**am**-byoo-sill)
Leukeran

***Classification***
Therapeutic: antineoplastics, immunosuppressants
Pharmacologic: alkylating agents

**Pregnancy Category D**

### Indications
Management of chronic lymphocytic leukemia, malignant lymphoma, and Hodgkin's disease (alone and in combination with other agents).

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Previous resistance; OB, Lactation: Can cause fetal or neonatal harm; avoid becoming pregnant; do not breastfeed.
**Use Cautiously in:** Infection; Other chronic debilitating diseases; Geri: More sensitive to effects.

### Adverse Reactions/Side Effects
**Resp:** pulmonary fibrosis. **GI:** nausea, stomatitis (rare), vomiting. **GU:** decreased sperm count, sterility. **Derm:** alopecia (rare), dermatitis, rash. **Hemat:** LEUKOPENIA, anemia, thrombocytopenia. **Metab:** hyperuricemia. **Misc:** allergic reactions, risk of second malignancy.

### Route/Dosage
**PO (Adults):** 0.1–0.2 mg/kg/day (3–6 mg/m²/day) (usual range 4–10 mg/day as a single dose or in divided doses), then adjust dose on basis of blood counts; *or* 0.4 mg/kg (12 mg/m²) twice weekly, increased by 0.1 mg/kg (3 mg/m²) q 2 wk, then adjusted as necessary.
**PO (Geriatric Patients):** Initial dose should not be more than 2–4 mg/day.
**PO (Children):** 0.1–0.2 mg/kg/day (4.5 mg/m²/day) single dose or in divided doses.

## clomiPRAMINE
(kloe-**mip**-ra-meen)
Anafranil

***Classification***
Therapeutic: antiobsessive agents
Pharmacologic: tricyclic antidepressants

**Pregnancy Category C**

### Indications
Obsessive-Compulsive Disorder (OCD). **Unlabeled Use:** Depression, neuropathic pain/chronic pain.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Angle-closure glaucoma; Recent myocardial infarction; History of QTc prolongation; Cardiac arrythmias; Heart failure; Concurrent MAO inhibitor or clonidine use (avoid if possible); OB: Potential for fetal harm or neonatal withdrawal syndrome; Lactation: Discontinue drug or bottle feed.
**Use Cautiously in:** History of seizures (threshold may be lowered); Patients with pre-existing cardiovascular disease; Older men with prostatic hyperplasia (may be more susceptible to urinary retention); Hyperthyroidism (increased risk of arrhythmias); May ↑ risk of suicide attempt/ide-

ation especially during dose early treatment or dose adjustment; risk may be greater in children or adolescents; Pedi: Safety not established in children <10 yr; Geri: ↑ risk of arrhythmias.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, lethargy, sedation, weakness, aggressive behavior. **EENT:** blurred vision, dry eyes, dry mouth, vestibular disorder. **CV:** ARRHYTHMIAS, ECG changes, orthostatic hypotension. **GI:** constipation, nausea, vomiting, weight gain, eructation. **GU:** male sexual dysfunction, urinary retention. **Derm:** dry skin, photosensitivity. **Endo:** gynecomastia. **Hemat:** anemia. **MS:** muscle weakness. **Neuro:** extrapyramidal reactions. **Misc:** hyperthermia.

### Route/Dosage

**PO (Adults):** *Antiobsessive*—25 mg/day, increased over 2-wk period to 100 mg/day in divided doses. May be further increased over several weeks up to 250–300 mg/day in divided doses. Once stabilizing dose is reached, entire daily dose may be given at bedtime. *Antidepressant*—25 mg 3 times daily, may be increased as needed (unlabeled).
**PO (Geriatric Patients):** 20–30 mg/day initially, may be increased as needed.
**PO (Children >10–17 yr):** 25 mg/day initially, increased over 2-wk period to 3 mg/kg/day or 100 mg/day (whichever is smaller) in divided doses. May be further increased to 3 mg/kg/day or 200 mg/day (whichever is smaller) in divided doses. Once stabilizing dose is reached, entire daily dose may be given at bedtime.

## cytomegalovirus immune globulin

(site-oh-**meg**-a-loe-vye-rus)
CMVIG, CytoGam

***Classification***
Therapeutic: vaccines/immunizing agents
Pharmacologic: immune globulins

**Pregnancy Category C**

### Indications

Prevention of cytomegalovirus (CMV) disease associated with transplantation of kidney, lung, liver, pancreas, or heart (if transplant is other than kidney from CMV-positive donors to CMV-negative recipient, then concurrent ganciclovir should be considered).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity to immune globulins or albumin; Selective IgA deficiency.
**Use Cautiously in:** OB: Lactation: Pregnancy or lactation (safety not established); Renal insufficiency or predisposition to acute renal failure.

### Adverse Reactions/Side Effects

**CNS:** headache, tremor, anxiety, seizures. **Hemat:** pancytopenia, hemolysis, leukopenia. **Resp:** wheezing, dyspnea, pulmonary edema. **CV:** hypotension, thromboembolism. **GI:** nausea, vomiting, hepatic dysfunction. **Derm:** flushing, rash. **GU:** oliguria, anuria, acute renal failure. **MS:** back pain, muscle cramps. **Misc:** allergic reactions including chills, fever, ANAPHYLAXIS.

### Route/Dosage

#### Kidney Transplant

**IV (Adults):** 150 mg/kg within 72 hr of transplantation, followed by 100 mg/kg at 2, 4, 6, and 8 wk, then 50 mg/kg at 12 and 16 wk post-transplantation.

#### Liver, Pancreas, Lung, or Heart Transplant

**IV (Adults):** 150 mg/kg within 72 hr of transplantation, and at 2, 4, 6, and 8 wk, then 100 mg/kg after at 12 and 16 wk post-transplantation.
**IV (Children):** Safety and efficacy has not been established in pediatrics, however adult doses have been used in children.

## danazol (da-na-zole)

Cyclomen, Danocrine

***Classification***
Therapeutic: hormones
Pharmacologic: androgens

**Pregnancy Category X**

### Indications

Treatment of moderate endometriosis that is unresponsive to conventional therapy. Palliative therapy of fibrocystic breast disease. Prophylaxis of hereditary angioedema.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Male patients with breast or prostate cancer; Hypercalcemia; Severe hepatic, renal, or cardiac disease; Pregnancy or lactation.

**Use Cautiously in:** Previous history of liver disease; History of porphyria; Coronary artery disease; Prepubertal boys.

### Adverse Reactions/Side Effects

**CNS:** emotional lability. **EENT:** deepening of voice. **CV:** edema. **GI:** hepatitis (cholestatic jaundice). **GU:** amenorrhea, clitoral enlargement, testicular atrophy. **Derm:** acne, hirsutism, oiliness. **Endo:** amenorrhea, anovulation, decreased breast size (women), decreased libido. **Metab:** weight gain.

### Route/Dosage

**PO (Adults and Adolescents):** *Endometriosis*—400 mg twice daily (for milder cases may initiate therapy with 100–200 mg twice daily). *Fibrocystic breast disease*—50–200 mg twice daily. *Hereditary angioedema*—200 mg 2–3 times daily. Attempt to decrease dosage by 50% or less q 1–3 mo. If acute attack occurs, increase dose by up to 200 mg/day.

## didanosine (dye-dan-oh-seen)

ddI, dideoxyinosine, Videx, Videx EC

***Classification***

Therapeutic: antiretrovirals
Pharmacologic: nucleoside reverse transcriptase inhibitors

**Pregnancy Category B**

### Indications

HIV infection (with other antiretrovirals).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Lactation: Lactation; Concurrent use of ribavirin or allopurinol.

**Use Cautiously in:** History of gout; Renal impairment (dosage modification required if CCr <60 mL/min; ↑ risk of pancreatitis); History of seizures; Diabetes mellitus; Pedi: ↑ risk of pancreatitis.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, headache, dizziness, insomnia, lethargy, pain, weakness. **EENT:** rhinitis, ear pain, epistaxis, optic neuritis, parotid gland enlargement, photophobia, retinal depigmentation, sialoadenitis. **Resp:** cough, asthma. **CV:** arrhythmias, edema, hypertension, vasodilation. **GI:** HEPATOMEGALY (WITH STEATOSIS), LIVER FAILURE, PANCREATITIS, anorexia, diarrhea, liver function abnormalities, nausea, vomiting, abdominal pain, constipation, dry mouth, dyspepsia, flatulence, stomatitis. **GU:** urinary frequency. **Derm:** alopecia, ecchymoses, rash. **Endo:** fat redistribution, hyperglycemia. **Hemat:** granulocytopenia, anemia, bleeding, leukopenia. **Metab:** LACTIC ACIDOSIS, hyperlipidemia, hyperuricemia, weight loss. **MS:** RHABDOMYOLYSIS, arthritis, myalgia. **Neuro:** peripheral neuropathy, poor coordination. **Misc:** chills, fever, anaphylactoid reactions.

### Route/Dosage

**PO (Adults ≥60 kg):** *Oral solution*—200 mg bid; *Videx EC capsules*—400 mg once daily; *with tenofovir*—250 mg once daily.
**PO (Adults <60 kg):** *Oral solution*—125 mg bid; *Videx EC capsules*—250 mg once daily; *with tenofovir*—200 mg once daily.
**PO (Children 2 wk-8 mo):** *Oral solution*—100 mg/m² q 12 hr.
**PO (Children >8 mo):** *Oral solution*—120 mg q 12 hr.
**PO (Children 6–18 yr and ≥20 kg):** *Videx EC capsules*—20–24.9 kg: 200 mg once daily; 25–59.9 kg: 250 mg once daily; ≥60 kg: 400 mg once daily.

### Renal Impairment

**PO (Adults >60 kg):** *CCr 30–59 mL/min—Oral solution*—100 mg q 12 hr or 200 mg once daily; *Videx EC capsules*—200 mg once daily; *CCr 10–29 mL/min—Oral solution*–150 mg once daily; *Videx EC capsules*—125 mg once daily; *CCr <10 mL/min—Oral solution*–100 mg once daily *Videx EC capsules*—125 mg once daily.
**PO (Adults <60 kg):** *CCr 30–59 mL/min—Oral solution*—75 mg q 12 hr or 150 mg once daily; *Videx EC capsules*—125 mg once daily; *CCr 10–29 mL/min—Oral solution*—100 mg once daily; *Videx EC capsules*—125 mg once daily; *CCr <10 mL/min—Oral solution*—75 mg once daily; *Videx EC capsules*—not to be used.

## disulfiram (di-sul-fir-am)

Antabuse

***Classification***

Therapeutic: alcohol abuse therapy adjuncts
Pharmacologic: enzyme inhibitors

**Pregnancy Category C**

### Indications

Management of chronic alcoholism in patients who require or desire an enforced state of sobriety, which may allow for additional supportive and psychotherapeutic treatment.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to disulfiram or other thiurams (including those used in rubber vulcanization and pesticides); Significant cardiovascular disease; Psychosis; Concurrent or recent use of metronidazole, paraldehyde, alcohol or alcohol-containing products; Lactation.
**Use Cautiously in:** Diabetes; Hyperthyroidism; Epilepsy; Cerebral damage; Hepatic or renal impairment or pathology; Pregnancy or children (safety not established).

### Adverse Reactions/Side Effects
**CNS:** drowsiness, fatigue, headache, psychoses. **EENT:** optic neuritis. **GI:** HEPATIC TOXICITY, metallic/garlic-like taste. **GI:** erectile dysfunction. **Derm:** acneiform eruptions, allergic dermatitis. **Neuro:** peripheral neuritis/neuropathy, polyneuritis.

### Route/Dosage
**PO (Adults):** 500 mg/day for 1–2 wk, then 250 mg/day (up to 500 mg/day).

## eflornithine (topical)
(ee-**flor**-ni-theen)
Vaniqa

***Classification***
Therapeutic: facial hair removers (topical)

**Pregnancy Category C**

### Indications
Reduction of unwanted facial hair in women.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Pregnancy, lactation or children <12 yr (safety not established).

### Adverse Reactions/Side Effects
**Local:** burning, rash, stinging, tingling.

### Route/Dosage
**Topical (Adults):** Apply a thin layer to affected areas of the face and adjacent involved areas under the chin and rub in thoroughly. Do not wash for 4 hr following application. Use twice daily at least 8 hr apart.

## enfuvirtide (en-**foo**-veer-tide)
Fuzeon

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: fusion inhibitors

**Pregnancy Category B**

### Indications
Management of HIV infection in combination with other antiretrovirals in patients with evidence of progressive HIV-1 replication despite ongoing treatment.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Lactation: Breastfeeding not recommended for HIV-infected mothers.
**Use Cautiously in:** OB: Use only if clearly indicated; Pedi: Safety not established in children <6 yr.

### Adverse Reactions/Side Effects
**CNS:** fatigue. **EENT:** conjunctivitis. **Resp:** cough, pneumonia, sinusitis. **GI:** diarrhea, nausea, abdominal pain, anorexia, dry mouth, pancreatitis, weight loss. **Local:** injection site reactions. **MS:** myalgia, limb pain. **Misc:** hypersensitivity reactions, herpes simplex.

### Route/Dosage
**Subcut (Adults):** 90 mg twice daily.
**Subcut (Children 6–16 yr):** 2 mg/kg twice daily (not to exceed 90 mg/dose).

## flutamide (**floo**-ta-mide)
Eulexin

***Classification***
Therapeutic: antineoplastics
Pharmacologic: antiandrogens

**Pregnancy Category D**

### Indications
Treatment of prostate carcinoma in conjunction with luteinizing hormone–releasing hormone (LHRH) analogues such as leuprolide.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Severe hepatic impairment.
**Use Cautiously in:** Severe cardiovascular disease.

### Adverse Reactions/Side Effects
Side effects primarily caused by LHRH antagonist.
**CNS:** anxiety, confusion, drowsiness, mental depression, nervousness. **CV:** edema, hypertension.

**GI:** HEPATOTOXICITY, diarrhea, nausea, vomiting. **GU:** erectile dysfunction, loss of libido. **Derm:** photosensitivity, rash. **Endo:** gynecomastia. **Misc:** hot flashes.

### Route/Dosage

**PO (Adults):** 250 mg q 8 hr; given concurrently with leuprolide.

## guanfacine (gwahn-fa-seen)

Intuniv, Tenex

***Classification***

Therapeutic: antihypertensives
Pharmacologic: centrally acting antiadrenergics

**Pregnancy Category B**

### Indications

Hypertension (with thiazide-type diuretics) (immediate-release). Attention-deficit hyperactivity disorder (ADHD) (extended-release).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Severe coronary artery disease or recent myocardial infarction; Geri: May have ↑ sensitivity, especially those with hepatic, cardiac, or renal dysfunction; Cerebrovascular disease; Severe renal or liver disease; History of hypotension, heart block, bradycardia, or cardiovascular disease; OB, Lactation: Pedi: Pregnancy, lactation, or children <6 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** drowsiness, headache, weakness, depression, dizziness, fatigue, insomnia, irritability. **EENT:** tinnitus. **Resp:** dyspnea. **CV:** bradycardia, chest pain, hypotension, palpitations, rebound hypertension. **GI:** constipation, dry mouth, abdominal pain, nausea. **GU:** erectile dysfunction.

### Route/Dosage

Immediate-release and extended-release tablets should not be interchanged.

### Hypertension

**PO (Adults):** 1 mg daily given at bedtime, may be ↑ if necessary at 3–4 wk intervals up to 2 mg/day; may also be given in 2 divided doses.

### ADHD

**PO (Adults and Children ≥6 yr):** 1 mg daily in morning; may be ↑ by 1 mg/day at weekly intervals to achieve dose of 1–4 mg/day.

## hydroxyurea (hye-drox-ee-yoor-**ee**-a)

Droxia, Hydrea, Mylocel

***Classification***

Therapeutic: antineoplastics
Pharmacologic: antimetabolites

**Pregnancy Category D**

### Indications

Treatment of head and neck carcinoma. Treatment of ovarian carcinoma. Treatment of resistant chronic myelogenous leukemia. Treatment of melanoma. Reduction of painful crises in sickle cell anemia and decreased need for transfusions in adult patients with a history of recurrent moderate to severe crises (at least 3 in the preceding yr). **Unlabeled Use:** Used as part of antiretroviral therapy in patients with HIV infection.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pregnancy or lactation; Some products contain tartrazine (FDC yellow dye #5) and should be avoided in patients with known hypersensitivity.
**Use Cautiously in:** Patients with childbearing potential; Renal impairment (close monitoring of hematologic parameters recommended, dosage reduction may be necessary); Hepatic impairment (close monitoring of hematologic parameters recommended); Myeloproliferative disorders (may increase risk of vasculitic ulcerations and gangrene); Active infections; Decreased bone marrow reserve; Other chronic debilitating illness; Geriatric patients (may be more sensitive to effects, lower doses may be required); Obese patients or patients with edema (dose should be determined using ideal body weight).

### Adverse Reactions/Side Effects

**CNS:** drowsiness (large doses). **GI:** anorexia, diarrhea, nausea, vomiting, constipation, hepatitis, stomatitis. **GU:** dysuria, infertility, renal tubular dysfunction. **Derm:** alopecia, exacerbation of post-radiation erythema, erythema, pruritus, rashes. **Hemat:** leukopenia, anemia, thrombocytopenia. **Metab:** hyperuricemia. **Misc:** chills, fever, malaise.

### Route/Dosage

### Head and Neck Cancer, Ovarian Cancer, Malignant Melanoma

**PO (Adults):** 60–80 mg/kg (2–3 g/m$^2$) as a single daily dose q 3 days or 20–30 mg/kg/day

as a single dose. Therapy should be initiated 7 days prior to radiation and continued.

### Resistant Chronic Myelogenous Leukemia

**PO (Adults):** 20–30 mg/kg/day in 1–2 divided doses.

### Sickle Cell Anemia

**PO (Adults and Children):** 15 mg/kg/day as a single dose, may increase by 5 mg/kg/day q 12 wk up to 35 mg/kg/day.

## iloprost (**eye**-lo-prost)

Ventavis

***Classification***

Therapeutic: vasodilators
Pharmacologic: prostacyclins

**Pregnancy Category C**

### Indications

Management of New York Class III/IV symptoms of pulmonary hypertension, where there is marked limitation of physical activity.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Systolic BP <85 mm Hg; Lactation: Lactation.
**Use Cautiously in:** Concurrent use of drugs or coexisting medical conditions that may ↑ risk of syncope; COPD, asthma, or acute pulmonary infection (may ↑ risk of bronchospasm); Pedi: Safety not established; OB: Use only if maternal benefit outweighs fetal risk.

### Adverse Reactions/Side Effects

**CNS:** dizziness, fainting, headache, insomnia. **EENT:** epistaxis. **Resp:** ↑ cough, bronchospasm, dyspnea, hemoptysis, wheezing. **CV:** CHF, vasodilation, chest pain, hypotension, peripheral edema, supraventricular tachycardia. **GI:** diarrhea, gingival bleeding, nausea, vomiting. **GU:** renal failure. **Derm:** facial flushing. **MS:** back pain, jaw-muscle spasm, muscle cramps.

### Route/Dosage

**Inhaln (Adults):** 2.5 mcg initially, then 5 mcg/dose 6–9 times daily; not more than every 2 hr.

## indinavir (in-**din**-a-veer)

Crixivan

***Classification***

Therapeutic: antiretrovirals
Pharmacologic: protease inhibitors

**Pregnancy Category C**

### Indications

HIV infection (with other antiretrovirals). **Unlabeled Use:** Prevention of HIV infection after known exposure (with other antiretrovirals).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Dehydration; Concurrent amiodarone, alprazolam, dihydroergotamine, ergotamine, ergonovine, methylergonovine, midazolam, pimozide, rifampin, triazolam, lovastatin, simvastatin, rosuvastatin, atazanavir, or St. John's wort.
**Use Cautiously in:** Hepatic impairment (dose ↓ recommended in moderate to severe hepatic insufficiency caused by cirrhosis); Hemophilia (↑ risk of bleeding); Diabetes mellitus; Lactation, Pedi: Safety not established; breastfeeding not recommended in HIV-infected patients.

### Adverse Reactions/Side Effects

**CNS:** dizziness, drowsiness, fatigue, headache, insomnia, weakness. **GI:** abdominal pain, acid regurgitation, altered taste, asymptomatic hyperbilirubinemia, diarrhea, nausea, vomiting. **GU:** nephrolithiasis. **Endo:** hyperglycemia. **F and E:** KETOACIDOSIS. **MS:** back pain, flank pain. **Misc:** redistribution of body fat.

### Route/Dosage

**PO (Adults):** 800 mg q 8 hr.

## mebendazole

(me-**ben**-da-zole)

Vermox

***Classification***

Therapeutic: antihelmintics

**Pregnancy Category C**

### Indications

Treatment of: Whipworm (trichuriasis), Pinworm (enterobiasis), Roundworm (ascariasis), Hookworm (uncinariasis) infections, Drug of choice for capillariasis.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Impaired liver function; Crohn's ileitis; Ulcerative colitis; Pregnancy, lac-

tation, or children <2 yr (safety not established; may be used in first trimester only if benefit justifies potential risk to fetus).

### Adverse Reactions/Side Effects

Most side effects and adverse reactions are seen with high-dose therapy only. **CNS:** SEIZURES (rare), dizziness, headache. **EENT:** tinnitus. **GI:** abdominal pain, diarrhea, increased liver enzymes (high dose, long-term therapy), nausea, vomiting. **Derm:** rash, urticaria, alopecia. **Hemat:** agranulocytosis, reversible myelosuppression (leukopenia, thrombocytopenia). **Neuro:** numbness. **Misc:** fever.

### Route/Dosage

#### Enterobiasis

**PO (Adults and Children >2 yr):** 100 mg as a single dose; repeat in 2–3 wk.

#### Trichuriasis, Ascariasis, Hookworm, or Mixed Infections

**PO (Adults and Children >2 yr):** 100 mg twice daily for 3 days. If not cured in 3–4 wk, a 2nd course is given.

#### Capillariasis

**PO (Adults and Children >2 yr):** 200 mg twice daily for 20 days.

## mechlorethamine

(me-klor-**eth**-a-meen)

Mustargen, nitrogen mustard

***Classification***

Therapeutic: antineoplastics
Pharmacologic: alkylating agents

**Pregnancy Category D**

### Indications

Part of combination therapy of Hodgkin's disease and malignant lymphomas. Used palliatively in: Bronchogenic carcinoma, Leukemias. Administered into cavities (pleural, peritoneal) to prevent reaccumulation of malignant effusions.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pregnancy; Lactation.

**Use Cautiously in:** Infections; Decreased bone marrow reserve; Previous radiotherapy or chemotherapy (dose reduction required); Obesity or severe edema (dose should be based on ideal dry body weight); Geri: Geriatric patients or patients with chronic debilitating illnesses; Patients with childbearing potential.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, drowsiness, headache, vertigo, weakness. **GI:** nausea, vomiting, anorexia, diarrhea. **GU:** infertility. **Derm:** rashes, alopecia. **Hemat:** LEUKOPENIA, THROMBOCYTOPENIA, anemia. **Local:** tissue necrosis, phlebitis at IV site. **Metab:** hyperuricemia. **Misc:** reactivation of herpes zoster.

### Route/Dosage

**IV (Adults and Children):** 0.4 mg/kg as single dose or divided over 2–4 days (not to exceed 0.2–0.3 mg/kg in patients who have received previous chemotherapy or radiation therapy); *as part of MOPP regimen for Hodgkin's lymphoma in adults*—6 mg/m² on days 1 and 8 of 28-day cycle; doses in subsequent cycles are determined by blood counts.
**Intracavitary** (Adults): 0.4 mg/kg.
**Intrapericardial** (Adults): 0.2 mg/kg.

## mercaptopurine

(mer-kap-toe-**pyoor**-een)

Purinethol

***Classification***

Therapeutic: antineoplastics
Pharmacologic: antimetabolites

**Pregnancy Category D**

### Indications

Leukemias (with other agents), including: Acute lymphocytic leukemia, Acute myelogenous leukemia. **Unlabeled Use:** Treatment of: Some lymphomas, Polycythemia vera, Crohn's disease, Psoriatic arthritis.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; OB, Lactation: Pregnancy or lactation; Severe liver disease.

**Use Cautiously in:** Infections; ↓ bone marrow reserve; ⛓ Patients with TPMT enzyme deficiency (substantial dosage reductions are required to avoid hematologic adverse events); Geri: ↑ risk of adverse reactions; Other chronic debilitating illnesses; OB: Patients with childbearing potential.

### Adverse Reactions/Side Effects

**CNS:** weakness. **GI:** HEPATOTOXICITY, anorexia, diarrhea, nausea, vomiting. **Derm:** alopecia, hyperpigmentation. **Endo:** gonadal suppression, oligospermia. **Hemat:** anemia, leukopenia, thrombocytopenia. **Metab:** hyperuricemia. **Misc:** fever.

### Route/Dosage

**PO (Adults):** *Initial dose*—2.5 mg/kg (80–100 mg/m²)/day as a single dose or divided doses; after 4 wk, if necessary, dose may be slowly ↑ to 5 mg/kg/day (dose should be rounded to the nearest 25 mg); *maintenance dose*—1.5–2.5 mg/kg (50–100 mg/m²)/day.
**PO (Children):** 2.5 mg/kg/day (75 mg/m²) single dose or divided doses (dose should be rounded to the nearest 25 mg).

## minoxidil (systemic)
(mi-**nox**-i-dill)

***Classification***
Therapeutic: antihypertensives
Pharmacologic: vasodilators

**Pregnancy Category C**

### Indications

Severe symptomatic hypertension or hypertension associated with end-organ damage that has failed to respond to combinations of more conventional therapy.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Pheochromocytoma.
**Use Cautiously in:** Recent MI; Severe renal impairment (can be used in moderate renal impairment); Geri: May be more sensitive to effects; consider age-related ↓ in body mass and hepatic/renal/cardiovascular function; OB, Lactation: Safety not established.

### Adverse Reactions/Side Effects

**CNS:** headache. **Resp:** PULMONARY EDEMA. **CV:** CHF, ECG changes (alteration in T waves), tachycardia, angina, pericardial effusion. **GI:** nausea. **Derm:** hypertrichosis, pigment changes, rashes. **Endo:** gynecomastia, menstrual irregularities. **F and E:** sodium and water retention. **Misc:** intermittent claudication.

### Route/Dosage

**PO (Adults and Children >12 yr):** *Hypertension*—5 mg once daily or in 2 divided doses; may double at 3-day intervals; usual range 10–40 mg/day (for rapid control with careful monitoring, doses may be adjusted q 6 hr; up to 100 mg/day have been used).
**PO (Children <12 yr):** *Hypertension*—0.2 mg/kg/day (5 mg maximum) as a single dose or 2 divided doses; may be gradually ↑ at 3-day intervals in increments of 50–100% until response is obtained; usual range 0.25–1 mg/kg/day (for rapid control, doses may be adjusted q 6 hr; not to exceed 50 mg/day).

## nelfinavir (nell-**finn**-a-veer)
Viracept

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: protease inhibitors

**Pregnancy Category B**

### Indications

HIV infection (with other antiretrovirals).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Concurrent amiodarone, ergot derivatives, midazolam, quinidine, rifampin, pimozide, simvastatin, lovastatin, St. John's wort, or triazolam; Lactation: Breastfeeding should be avoided by HIV-infected patients.
**Use Cautiously in:** Hemophiliacs (↑ risk of bleeding); Diabetes mellitus (may exacerbate condition); Hepatic impairment.

### Adverse Reactions/Side Effects

**CNS:** SEIZURES, anxiety, depression, dizziness, drowsiness, emotional lability, headache, hyperkinesia, insomnia, malaise, migraine headache, sleep disorders, suicidal ideation, weakness. **EENT:** acute iritis, pharyngitis, rhinitis, sinusitis. **Resp:** dyspnea. **GI:** diarrhea, anorexia, dyspepsia, ↑ liver function tests, epigastric pain, flatulence, GI bleeding, hepatitis, nausea, oral ulcerations, pancreatitis, vomiting. **GU:** nephrolithiasis, sexual dysfunction. **Derm:** pruritus, rash, sweating, urticaria. **Endo:** fat redistribution, hyperglycemia. **F and E:** dehydration. **Hemat:** anemia, leukopenia, thrombocytopenia. **Metab:** hyperlipidemia, hyperuricemia. **MS:** arthralgia, arthritis, back pain, myalgia, myopathy. **Neuro:** myasthenia, paresthesia. **Misc:** allergic reactions, fever.

### Route/Dosage

**PO (Adults and Children >13 yr):** 750 mg 3 times daily *or* 1250 mg twice daily.
**PO (Children 2–13 yr):** 20–30 mg/kg 3 times daily (not to exceed 750 mg 3 times daily).

## pegaptanib (peg-**apt**-i-nib)
Macugen

***Classification***
Therapeutic: ocular agents
Pharmacologic: vascular endothelial growth-factor antagonists

**Pregnancy Category B**

### Indications
Neovascular (wet) age-related macular degeneration.

### Contraindications/Precautions
**Contraindicated in:** Ocular/periocular infections.
**Use Cautiously in:** OB: Use only if maternal benefit outweighs fetal risk; Lactation, Pedi: Safety not established.

### Adverse Reactions/Side Effects
**EENT:** cataract, blurred vision, conjunctival bleeding, irritation/pain, ↑ intraocular pressure, ocular inflammation, infection (rare), retinal detachment (rare), traumatic cataract formation (rare). **Misc:** Anaphylaxis, angioedema.

### Route/Dosage
**Intravitreal (Adults):** 0.3 mg every 6 wk.

## penicillamine
(pen-i-**sill**-a-meen)
Cuprimine, Depen

***Classification***
Therapeutic: antidotes, antirheumatics (DMARD), antiurolithics
Pharmacologic: chelating agents

**Pregnancy Category D**

### Indications
Progressive rheumatoid arthritis resistant to conventional therapy. Management of copper deposition in Wilson's disease. Management of recurrent cystine calculi. **Unlabeled Use:** Adjunct in the treatment of heavy metal poisoning.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Cross-sensitivity with penicillin may exist; Patients currently receiving gold salts, antimalarials, antineoplastics, oxyphenbutazone, or phenylbutazone; Concurrent use of iron supplements; OB: Pregnancy (penicillamine should be avoided in pregnant patients with rheumatoid arthritis or cystinuria); OB: Lactation.
**Use Cautiously in:** Renal impairment (increased risk of adverse renal reactions in patients with rheumatoid arthritis); History of aplastic anemia due to penicillamine; Patients requiring surgery (may impair wound healing); Geri: Geriatric patients (increased risk of hematologic toxicity, skin rash and taste abnormality; dose reduction recommended); OB: Pregnancy (for patients with Wilson's disease, limit daily dose to <1 g. If cesarean section is planned, decrease daily dose to 250 mg for last 6 wk of pregnancy and until incision is healed).

### Adverse Reactions/Side Effects
**EENT:** blurred vision, eye pain. **Resp:** coughing, shortness of breath, wheezing. **GI:** altered taste, anorexia, cholestatic jaundice, diarrhea, drug-induced pancreatitis, dyspepsia, epigastric pain, hepatic dysfunction, nausea, oral ulceration, vomiting. **GU:** proteinuria. **Derm:** pemphigus, ecchymoses, hives, itching, rashes, wrinkling. **Hemat:** APLASTIC ANEMIA, anemia, eosinophilia, leukopenia, thrombocytopenia, thrombocytosis. **MS:** arthralgia, migratory polyarthritis. **Neuro:** myasthenia gravis syndrome. **Misc:** GOODPASTURE'S SYNDROME (GLOMERULONEPHRITIS AND INTRA-ALVEOLAR HEMORRHAGE), allergic reactions, fever, lymphadenopathy, systemic lupus erythematosus-like syndrome.

### Route/Dosage
**PO (Adults):** *Antirheumatic*—125–250 mg/day as a single dose; may be slowly ↑ up to 1.5 g/day. *Chelating agent (Wilson's disease)*—250 mg qid. *Antiurolithic*—500 mg 4 times daily.
**PO (Children >6 mo):** *Chelating agent (Wilson's disease)*—250 mg/day as a single dose; older children may receive the adult dose. *Antiurolithic*—7.5 mg/kg 4 times daily.

## pentobarbital
(pen-toe-**bar**-bi-tal)
Nembutal, Novopentobarb, Nova Rectal

***Classification***
Therapeutic: anticonvulsants, sedative/hypnotics
Pharmacologic: barbiturates

**Schedule II (oral and parenteral), III (rectal)**

**Pregnancy Category D**

### Indications
Hypnotic agent (short-term). Preoperative sedation and other situations in which sedation is required. Treatment of seizures. **Unlabeled Use:** **IV:** Induction of coma in selected patients with

cerebral ischemia and management of increased intracranial pressure (high doses).

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Some products contain tartrazine, alcohol, or propylene glycol and should be avoided in patients with known hypersensitivity or intolerance; Comatose patients or those with pre-existing CNS depression (unless used to induce coma); Uncontrolled severe pain; Pregnancy or lactation.

**Use Cautiously in:** Hepatic dysfunction; Severe renal impairment; Patients who may be suicidal or who may have been addicted to drugs previously; Geriatric or debilitated patients (initial dosage reduction recommended); Hypovolemic shock; Hypnotic use should be short-term (chronic use may lead to dependence).

### Adverse Reactions/Side Effects

**CNS:** drowsiness, hangover, lethargy, delirium, excitation, mental depression, vertigo. **Resp:** respiratory depression. *IV*, LARYNGOSPASM, bronchospasm. **CV:** *IV*—hypotension. **GI:** constipation, diarrhea, nausea, vomiting. **Derm:** rashes, urticaria. **Local:** phlebitis at IV site. **MS:** arthralgia, myalgia, neuralgia. **Misc:** hypersensitivity reactions including ANGIOEDEMA and SERUM SICKNESS, physical dependence, psychological dependence.

### Route/Dosage

**PO (Adults):** *Sedative*—20 mg 3–4 times daily. *Hypnotic/preoperative sedative*—100 mg.

**PO (Children):** *Sedative*—2–6 mg/kg/day. *Preoperative sedative*—2–6 mg/kg (up to 100 mg/dose).

**IM (Adults):** *Hypnotic/preoperative sedative*—150–200 mg.

**IM (Children):** *Sedative*—2–6 mg/kg/day in divided doses. *Preoperative sedative*—2–6 mg/kg (up to 100 mg/dose).

**IV (Adults):** *Hypnotic/anticonvulsant*—100 mg initially; additional small doses may be given q min up to 500 mg total. *Induction of coma*—5–7 mg/kg, then 3–4 mg/kg q 3–4 hr dose adjusted by serum level (unlabeled).

**IV (Children):** *Sedative*—1–3 mg/kg to a maximum of 100 mg until asleep. *Conscious sedation*—Initial 2 mg/kg, may repeat q 5–10 min with 1–2 mg/kg until adequate sedation acheived. Maximum total dose 6 mg/kg or 150–200 mg. *Induction of coma*—10–15 mg/kg slowly over 1–2 hr, followed by a maintenance infusion of 1–3 mg/kg/hr.

**Rect (Adults):** *Sedative*—30 mg 2–4 times daily. *Hypnotic*—120–200 mg at bedtime.

**Rect (Children):** *Sedative*—2 mg/kg (60 mg/$m^2$) 3 times daily.

**Rect (Children 12–14 yr):** *Preoperative sedative/hypnotic*—60–120 mg.

**Rect (Children 5–12 yr):** *Preoperative sedative/hypnotic*—60 mg.

**Rect (Children 1–4 yr):** *Preoperative sedative/hypnotic*—30–60 mg.

**Rect (Children 2 mo–1 yr):** *Preoperative sedative/hypnotic*—30 mg.

## polycarbophil

(pol-i-**kar**-boe-fil)

Bulk Forming Fiber Laxative, Equalactin, FiberCon, Fiber-Lax, Konsyl Fiber, Mitrolan

***Classification***

Therapeutic: antidiarrheals, laxatives
Pharmacologic: bulk-forming agents

**Pregnancy Category UK**

### Indications

Treatment of constipation or diarrhea that may be associated with diverticulosis or irritable bowel syndrome.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Abdominal pain; Nausea or vomiting (especially when associated with fever or other signs of acute abdomen); Serious intra-abdominal adhesions; Dysphagia.

**Use Cautiously in:** Pregnancy or lactation (has been used safely).

### Adverse Reactions/Side Effects

**GI:** abdominal fullness.

### Route/Dosage

**PO (Adults):** 1 g 1–4 times daily or as needed (not to exceed 6 g/24 hr); for severe diarrhea, may repeat q 30 min.

**PO (Children 6–12 yr):** 500 mg 1–3 times daily or as needed (not to exceed 3 g/24 hr); for severe diarrhea, may repeat q 30 min.

**PO (Children 2–6 yr):** 500 mg 1–2 times daily or as needed (not to exceed 1.5 g/24 hr); for severe diarrhea, may repeat q 30 min.

## POTASSIUM PHOSPHATES
(poe-**tass**-ee-um **foss**-fates)

**monobasic potassium phosphate**
K-Phos Original

**potassium phosphates**
Neutra-Phos-K

**potassium phosphate**

***Classification***
Therapeutic: antiurolithics, mineral and electrolyte replacements/supplements

**Pregnancy Category C**

### Indications
Treatment and prevention of phosphate depletion in patients who are unable to ingest adequate dietary potassium. Adjunct therapy of urinary tract infections with methenamine hippurate or mandelate (potassium and sodium phosphates or monobasic potassium phosphate). Prevention of calcium urinary stones (potassium and sodium phosphates or monobasic potassium phosphate). Phosphate salts of potassium may be used in hypokalemic patients with metabolic acidosis or coexisting phosphorus deficiency.

### Contraindications/Precautions
**Contraindicated in:** Hyperkalemia; Hyperphosphatemia; Hypocalcemia; Severe renal impairment; Untreated Addison's disease; Severe tissue trauma; Hyperkalemic familial periodic paralysis.
**Use Cautiously in:** Hyperparathyroidism; Cardiac disease; Renal impairment.

### Adverse Reactions/Side Effects
Related to hyperphosphatemia, unless otherwise indicated. **CNS:** confusion, listlessness, weakness. **CV:** ARRHYTHMIAS, CARDIAC ARREST, ECG changes (absent P waves, widening of the QRS complex with biphasic curve), hypotension, *hyperkalemia*, ARRHYTHMIAS, ECG changes (prolonged PR interval, ST segment depression, tall-tented T waves). **GI:** diarrhea, abdominal pain, nausea, vomiting. **F and E:** hyperkalemia, hyperphosphatemia, hypocalcemia, hypomagnesemia. **Local:** irritation at IV site, phlebitis. **MS:** *hyperkalemia*—muscle cramps; *hypercalcemia*—tremors. **Neuro:** flaccid paralysis, heaviness of legs, paresthesias.

### Route/Dosage

#### Monobasic Potassium Phosphate
**PO (Adults and Children >4 yr):** 1 g (7.4 mmol) in water 4 times daily.
**PO (Children <4 yr):** 200 mg (6.4 mmol) in water 4 times daily.

#### Potassium Phosphates
**PO (Adults and Children >4 yr):** 1.45 g (8 mmol) 4 times daily.
**PO (Children <4 yr):** 200 mg (6.4 mmol) phosphorus 4 times daily.
**IV (Adults):** 10 mmol phosphorus/day as an infusion.
**IV (Infants):** 1.5–2 mmol phosphorus/day as an infusion.

## ranibizumab
(ran-i-**bi**-zoo-mab)
Lucentis

***Classification***
Therapeutic: ocular agents
Pharmacologic: monoclonal antibodies

**Pregnancy Category C**

### Indications
Treatment of neovascular (wet) macular degeneration.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Ocular/periocular infections.
**Use Cautiously in:** OB: Use only in pregnancy if clearly needed, use cautiously during lactation; Pedi: Safe use in children not established.

### Adverse Reactions/Side Effects
**EENT:** conjunctival hemorrhage, eye pain, ↑ intraocular pressure, intraocular inflammation, vitreal floaters, endophthalmitis, retinal detachment. **CV:** arterial thromboembolic events.

### Route/Dosage
**Intravitreal (Adults):** 0.5 mg (0.05 ml) once monthly; after 4 months, injections may be given every 1–3 months.

## riboflavin (**rye**-boe-flay-vin)
vitamin $B_2$

***Classification***
Therapeutic: vitamins
Pharmacologic: water soluble vitamins

**Pregnancy Category A**

### Indications
Treatment and prevention of riboflavin deficiency, which may be associated with poor nutritional status or chronic debilitating illnesses.

### Contraindications/Precautions
**Contraindicated in:** No known contraindications.
**Use Cautiously in:** No known precautions.

### Adverse Reactions/Side Effects
**GU:** yellow discoloration of urine (large doses only).

### Route/Dosage
### Treatment of Deficiency
**PO (Adults):** 5–10 mg/day.

## **rifapentine** (rif-a-**pen**-teen)
Priftin

***Classification***
Therapeutic: agents for amyotrophic lateral sclerosis, antituberculars

**Pregnancy Category C**

### Indications
Treatment of pulmonary tuberculosis: Must be used in combination with other agents.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to rifapentine or other rifamycins (rifampin or rifabutin).
**Use Cautiously in:** History of liver disease; Pregnancy, lactation, or children <12 yr (safety not established).
**Exercise Extreme Caution in:** Concurrent protease inhibitor therapy.

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache. **Resp:** hemoptysis. **CV:** hypertension. **GI:** PSEUDOMEMBRANOUS COLITIS, anorexia, diarrhea, dyspepsia, increased liver enzymes, nausea, vomiting. **GU:** hematuria, proteinuria, pyuria, urinary casts. **Derm:** acne, pruritus, rash. **Hemat:** anemia, leukopenia, lymphopenia, neutropenia, thrombocytosis. **MS:** arthralgia. **Misc:** pain.

### Route/Dosage
Must be used in combination with other antituberculars.
**PO (Adults):** *Intensive phase*—600 mg twice weekly (not less than 72 hr between doses) for 2 months; *continuation phase*—600 mg once weekly for 4 months.

## **saquinavir** (sa-**kwin**-a-vir)
Invirase

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: protease inhibitors

**Pregnancy Category B**

### Indications
HIV infection with ritonavir (may also add other antiretrovirals).

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent dihydroergotamine (or other ergot derivatives), midazolam, rifabutin, rifampin, lovastatin, simvastatin, and triazolam; Lactation: Breastfeeding not recommended in HIV-infection.
**Use Cautiously in:** Diabetes mellitus (may exacerbate hyperglycemia; hyperglycemia may progress to ketoacidosis); Hemophilia (↑ risk of bleeding); Hepatic impairment (may exacerbate liver dysfunction caused by hepatitis B or C or other causes); OB, Pedi: Pregnancy or children <16 yr (safety not established).

### Adverse Reactions/Side Effects
**CNS:** SEIZURES, confusion, headache, mental depression, psychic disorders, weakness. **CV:** thrombophlebitis. **GI:** abdominal discomfort, diarrhea, ↑ liver enzymes, jaundice, nausea. **Derm:** photosensitivity, severe cutaneous reactions. **Endo:** hyperglycemia. **Hemat:** acute myeloblastic leukemia, hemolytic anemia, thrombocytopenia. **Neuro:** ataxia. **Misc:** STEVENS-JOHNSON SYNDROME.

### Route/Dosage
**PO (Adults):** 600 mg 3 times daily within 2 hr of a meal *or* 1000 mg twice daily.

## **sodium phosphate**
(**soe**-dee-um **foss**-fate)

***Classification***
Therapeutic: mineral and electrolyte replacements/supplements
Pharmacologic: phosphate supplements

**Pregnancy Category C**

### Indications
Treatment and prevention of phosphate depletion in patients who are unable to ingest adequate dietary phosphates.

### Contraindications/Precautions

**Contraindicated in:** Hyperphosphatemia; Hypocalcemia; Severe renal impairment.
**Use Cautiously in:** Hyperparathyroidism; Cardiac disease; Hypernatremia; Hypertension.

### Adverse Reactions/Side Effects

Related to hyperphosphatemia, unless otherwise indicated. **CNS:** confusion, listlessness, weakness. **Resp:** *hypernatremia*—shortness of breath. **CV:** ARRHYTHMIAS, CARDIAC ARREST, ECG changes (absent P waves, widening of the QRS complex with biphasic curve), hypotension; *hypernatremia*—edema. **GI:** diarrhea, abdominal pain, nausea, vomiting. **F and E:** hyperkalemia, hypernatremia, hyperphosphatemia, hypocalcemia, hypomagnesemia. **Local:** irritation at IV site, phlebitis. **MS:** *hypocalcemia*—tremors. **Neuro:** flaccid paralysis, heaviness of legs, paresthesias of extremities.

### Route/Dosage

**IV (Adults):** 12–15 mmol phosphorus/liter of parenteral nutrition.
**IV (Children):** *Hypophosphatemia*–0.08–0.36 mmol/kg over 6 hr; *Maintenance*—<25 kg: 0.5–1.5 mmol/kg/day; 25–45 kg: 0.5–1 mmol/kg/day.
**IV (Neonates):** *Maintenance*—0.8–1.5 mmol/kg/day (infused as part of parenteral nutrition).

## stavudine (stav-yoo-deen)

d4T, Zerit, Zerit XR

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: nucleoside reverse transcriptase inhibitors

**Pregnancy Category C**

### Indications

HIV infection unresponsive or intolerant to conventional therapy.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity.
**Use Cautiously in:** Patients with a history of alcohol abuse; Patients with a history of liver disease or hepatic impairment; Renal impairment (dose reduction and/or increased dosing interval recommended if CCr <50 mL/min); History of peripheral neuropathy; OB, Lactation: Safety not established; avoid breastfeeding by HIV-infected mothers because of transmission of the virus in breast milk; concurrent use with didanosine during pregnancy may ↑ the risk of fetal lactic acidosis.

### Adverse Reactions/Side Effects

**CNS:** headache, insomnia, weakness. **GI:** HEPATOMEGALY (WITH STEATOSIS), HEPATIC TOXICITY, PANCREATITIS, anorexia, diarrhea. **F and E:** LACTIC ACIDOSIS. **Hemat:** anemia. **MS:** arthralgia, myalgia. **Endo:** fat redistribution. **Neuro:** peripheral neuropathy.

### Route/Dosage

**PO (Adults ≥60 kg):** 40 mg q 12 hr.
**PO (Adults <60 kg):** 30 mg q 12 hr.
**PO (Children ≥30 kg):** 30 mg q 12 hr.
**PO (Children at least 14 days old and <30 kg):** 1 mg/kg q 12 hr (not to exceed 40 mg q 12 hr).
**PO (Infants birth–13 days):** 0.5 mg/kg q 12 hr.

### Renal Impairment

**PO (Adults ≥60 kg):** *CCr 26–50 mL/min*—20 mg q 12 hr; *CCr 10–25 mL/min*—20 mg q 24 hr.
**PO (Adults <60 kg):** *CCr 26–50 mL/min*—15 mg q 12 hr; *CCr 10–25 mL/min*—15 mg q 24 hr.

## succimer (sux-i-mer)

Chemet

***Classification***
Therapeutic: antidotes
Pharmacologic: chelating agents

**Pregnancy Category C**

### Indications

Treatment of lead poisoning in children with blood lead levels >45 mcg/dL.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity or allergy to succimer; Lactation (should be discouraged during succimer therapy).
**Use Cautiously in:** Renal failure (chelates are not dialyzable); Children (increased risk of bradyarrhythmias); Children with skeletal muscle myopathy (more prone to rare, but serious, adverse reactions); Geriatric patients (use lower doses to adjust for decreased renal, hepatic, and cardiac function); Pregnancy or children <1 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, drowsiness, headache. **EENT:** cloudy film in eye, otitis media, plugged ears, watery eyes. **Resp:** cough, nasal congestion, rhinorrhea, sore throat. **CV:** arrhythmias. **GI:** nausea, vomiting, abdominal cramps, anorexia, diarrhea,

elevated liver function tests, hemorrhoidal symptoms, metallic taste. **GU:** oliguria, proteinuria, voiding difficulty. **Derm:** mucocutaneous eruptions, pruritus, rashes. **Hemat:** eosinophilia, thrombocytosis. **MS:** back, rib, flank pain; leg pain. **Neuro:** paresthesia, sensorimotor neuropathy. **Misc:** chills, fever, flu-like syndrome, moniliasis.

### Route/Dosage

**PO (Adults and Children):** 10 mg/kg (350 mg/m$^2$) q 8 hr for 5 days, then reduce to 10 mg/kg (350 mg/m$^2$) q 12 hr for 2 more wk. Repeated courses should follow a 2-wk rest period.

## tegaserod (te-**gas**-er-od)

Zelnorm

***Classification***

Therapeutic: anti-irritable bowel syndrome agents

Pharmacologic: 5-HT$_4$ antagonists

**Pregnancy Category B**

### Indications

Short-term treatment of irritable bowel syndrome (IBS) in women whose primary symptom is constipation in patients <55 yr. Chronic idiopathic constipation in patients <55 yr for whom no other treatment has provided satisfactory relief and/or who had satisfactory improvement previously with tegaserod. Only available under an emergency invesitgational new drug (IND) process. To qualify, patients must have a condition characterized as immediately life-threatening or requiring hospitalization. Physicians would need to make the request for emergency use through the FDA.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Moderate to severe hepatic impairment; Severe renal impairment; History of bowel obstruction, gallbladder disease, sphincter of Oddi dysfunction, or intra-abdominal adhesions; Concurrent or frequent diarrhea; Exclusion criteria for emergency access include: History, current diagnosis, or symptoms of CV disease, Presence of CV risk factors, Uncompensated depression or anxiety, Suicidal ideation or behavior.

**Use Cautiously in:** Mild hepatic impairment; Geri: Safety not established; OB: Pregnancy, lactation or children <18 yr (safety not established).

### Adverse Reactions/Side Effects

**CNS:** headache. **GI:** diarrhea.

### Route/Dosage

**PO (Adults):** 6 mg twice daily before meals.

## temsirolimus

(tem-si-**ro**-li-mus)

Torisel

***Classification***

Therapeutic: antineoplastics

Pharmacologic: enzyme inhibitors, kinase inhibitors

**Pregnancy Category D**

### Indications

Advanced renal cell carcinoma.

### Contraindications/Precautions

**Contraindicated in:** OB: Pregnancy and lactation.

**Use Cautiously in:** Hypersensitivity to temsirolimus, sirolimus or polysorbate 80; Perioperative patients (may impair wound healing); OB: Patients which child-bearing potential; Pedi: Safe use in children not established.

### Adverse Reactions/Side Effects

**CNS:** weakness. **EENT:** conjunctivitis. **CV:** hypertension, venous thromboembolism. **Resp:** INTERSTITIAL LUNG DISEASE. **GI:** BOWEL PERFORATION, anorexia, ↑ liver enzymes, mucositis, nausea. **GU:** RENAL FAILURE. **Derm:** rash, abnormal wound healing. **Endo:** hyperglycemia. **F and E:** edema, hypophosphatemia. **Hemat:** anemia, leukopenia, lymphopenia, thrombocytopenia. **Metab:** hyperlipidemia, hypertriglyceridemia. **Misc:** hypersensitivity reactions including ANAPHYLAXIS, ↑ risk of infections.

### Route/Dosage

**IV (Adults):** 25 mg once weekly; dose modification is required for bone marrow toxicity or concurrent use of agents affecting the CYP 3A4 enzyme system (pre-treatment with antihistamine is recommended).

## thioguanine

(thye-oh-**gwon**-een)

6-thioguanine, Lanvis

***Classification***
Therapeutic: antineoplastics
Pharmacologic: antimetabolites

**Pregnancy Category D**

### Indications
Induction and consolidation of remission in acute nonlymphocytic leukemia (in combination with other agents).

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; OB, Lactation: Pregnancy or lactation; Tumors with demonstrated resistance to thioguanine or mercaptopurine (usually complete cross-resistance).
**Use Cautiously in:** Patients with childbearing potential; Infections; ↓ bone marrow reserve; Other chronic debilitating illnesses; Patients with TPMT enzyme deficiency (substantial dosage reductions are required to avoid hematologic adverse events).

### Adverse Reactions/Side Effects
**EENT:** loss of vibratory sense. **GI:** diarrhea, hepatotoxicity, jaundice, nausea, stomatitis, vomiting, anorexia, hepatic veno-occlusive disease. **GU:** gonadal suppression. **Derm:** dermatitis, rash. **Hemat:** anemia, leukopenia, thrombocytopenia, pancytopenia. **Metab:** hyperuricemia. **Neuro:** unsteady gait.

### Route/Dosage
Many other protocols are used.
**PO (Adults and Children):** *Induction*—2 mg/kg (75–100 mg/m$^2$) per day, rounded off to nearest 20 mg given as single dose; after 4 wk may ↑ to 3 mg/kg. *Maintenance*—2–3 mg/kg (100 mg/m$^2$) per day.

## **tiludronate** (tye-**loo**-droe-nate)
Skelid

***Classification***
Therapeutic: bone resorption inhibitors
Pharmacologic: biphosphonates

**Pregnancy Category C**

### Indications
Management of Paget's disease of the bone in patients with: Serum alkaline phosphatase ≥2 times the upper limit of normal, Symptoms, Risk for complications.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Severe renal impairment (CCr <30 mL/min).
**Use Cautiously in:** Dental surgery (may ↑ risk of jaw osteonecrosis); OB, Lactation: Pedi: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** anxiety, drowsiness, fatigue, insomnia, nervousness, syncope, vertigo, weakness. **EENT:** cataracts, conjunctivitis, glaucoma, pharyngitis, rhinitis, sinusitis. **Resp:** bronchitis. **CV:** chest pain, dependent edema, hypertension, peripheral edema. **GI:** abdominal pain, anorexia, constipation, diarrhea, dry mouth, dysphagia, esophageal ulcer, esophagitis, flatulence, gastric ulcer, gastritis, nausea, tooth disorder, vomiting. **GU:** urinary tract infection. **Derm:** flushing, increased sweating, pruritus, rash, skin disorder. **Endo:** hyperparathyroidism. **F and E:** hypocalcemia. **MS:** musculoskeletal pain, arthrosis, involuntary muscle contractions, osteonecrosis (primarily of jaw), pathological fractures. **Neuro:** paresthesia. **Misc:** infection.

### Route/Dosage
**PO (Adults):** 400 mg/day taken with 8 oz of plain water only, for 3 mo.

## **tipranavir** (ti-**pran**-a-veer)
Aptivus

***Classification***
Therapeutic: antiretrovirals
Pharmacologic: protease inhibitors

**Pregnancy Category C**

### Indications
Advanced HIV disease resistant to more than one protease inhibitor (must be used with ritonavir).

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Moderate to severe hepatic impairment (Child-Pugh Class B or C); Concurrent use of some antiarrhythmics (amiodarone, flecainide, propafenone, quinidine), ergot derivatives, midazolam (oral), or triazolam.
**Use Cautiously in:** Known sulfonamide allergy (contains sulfa moiety); Pre-existing liver disease (may ↑ risk of hepatotoxicity); History of or risk factors for diabetes (may cause hyperglycemia); Hemophilia (may ↑ risk of bleeding); Patients at ↑ risk for bleeding.

### Adverse Reactions/Side Effects
**CV:** INTRACRANIAL HEMORRHAGE, fatigue, headache. **GI:** HEPATOTOXICITY, abdominal pain, diarrhea, nausea, vomiting. **Derm:** rash ( ↑ in

women and peds). **Endo:** hyperglycemia. **Metab:** ↑ cholesterol, ↑ triglycerides. **Misc:** allergic reactions, bleeding, fat redistribution, fever, immune reconstitution syndrome.

### Route/Dosage

**PO (Adults):** 500 mg twice daily with ritonavir 200 mg twice daily.
**PO (Children ≥2 yr):** 14 mg/kg (max: 500 mg/dose) twice daily with ritonavir 6 mg/kg (max: 200 mg/dose) twice daily; if intolerance develops, may ↓ dose to tipranavir 12 mg/kg twice daily with ritonavir 5 mg/kg twice daily.

## tolmetin (tole-met-in)

Tolectin, Tolectin DS, Novo-Tolmetin

***Classification***
Therapeutic: antirheumatics, nonsteroidal anti-inflammatory agents

**Pregnancy Category UK**

### Indications

Management of inflammatory disorders including: Rheumatoid arthritis, Juvenile rheumatoid arthritis, Osteoarthritis.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity may exist with other NSAIDs, including aspirin; Active GI bleeding or ulcer disease; Perioperative pain from coronary artery bypass graft (CABG) surgery.
**Use Cautiously in:** Cardiovascular disease or risk factors for cardiovascular disease (may ↑ risk of serious cardiovascular thrombotic events, myocardial infarction, and stroke, especially with prolonged use); Severe renal, or hepatic disease; History of ulcer disease; Severe hepatic or renal impairment (dosage reduction recommended); Geri: Geriatric patients ( ↑ risk of GI bleeding; **OB, Pedi:** Pregnancy and lactation (safety not established; avoid use during 2nd and 3rd trimesters).

### Adverse Reactions/Side Effects

**CNS:** dizziness, headache, drowsiness, mental depression, sleep disturbances. **EENT:** tinnitus, visual disturbances. **CV:** edema, hypertension. **GI:** DRUG-INDUCED HEPATITIS, GI BLEEDING, diarrhea, discomfort, dyspepsia, nausea, vomiting, constipation, flatulence. **GU:** renal failure. **Derm:** EXFOLIATIVE DERMATITIS, STEVENS-JOHNSON SYNDROME, TOXIC EPIDERMAL NECROLYSIS, rashes. **Hemat:** prolonged bleeding time. **MS:** muscle weakness. **Misc:** allergic reactions including ANAPHYLAXIS.

### Route/Dosage

**PO (Adults):** 400 mg 3 times daily initially, followed by maintenance dose of 600–1800 mg/day in 3–4 divided doses (not to exceed 2000 mg/day).
**PO (Children >2 yr):** 20 mg/kg/day in 3–4 divided doses initially, followed by maintenance dose of 15–30 mg/kg/day in 3–4 divided doses.

## trifluoperazine (trye-floo-oh-pair-a-zeen)

Apo-Trifluoperazine, Novo-Flurazine, PMS-Trifluoperazine, Solazine, Terfluzine

***Classification***
Therapeutic: antipsychotics (conventional)
Pharmacologic: phenothiazines

**Pregnancy Category C**

### Indications

Schizophrenia, nonpsychotic anxiety. Considered second-line treatment after failure with atypical antipsychotics. **Unlabeled Use:** Other psychotic disorders; bipolar disorder.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Cross-sensitivity with other phenothiazines may exist; Hypersensitivity to bisulfites (oral concentrate only); Angle-closure glaucoma; Bone marrow depression; Severe liver or cardiovascular disease; Lactation: Discontinue drug or bottle feed.
**Use Cautiously in:** Geri: Geriatric or debilitated patients (dose reduction recommended); ↑ risk of mortality in elderly patients treated for dementia-related psychosis; OB: Safety not established; may cause adverse effects in the newborn; Diabetes mellitus; Respiratory disease; Prostatic hyperplasia; CNS tumors; Epilepsy; Intestinal obstruction.

### Adverse Reactions/Side Effects

**CNS:** NEUROLEPTIC MALIGNANT SYNDROME, extrapyramidal reactions, sedation, tardive dyskinesia. **EENT:** dry eyes, blurred vision, lens opacities. **CV:** hypotension, tachycardia. **GI:** constipation, anorexia, dry mouth, hepatitis, ileus. **GU:** urinary retention, priapism. **Derm:** photosensitivity, pigment changes, rashes. **Endo:** galactorrhea,

amenorrhea. **Hemat:** AGRANULOCYTOSIS, leukopenia. **Metab:** hyperthermia. **Misc:** allergic reactions.

### Route/Dosage

**PO (Adults):** *Psychoses*—2–5 mg 1–2 times daily (up to 40 mg/day). *Anxiety*—1–2 mg bid (not to exceed 6 mg/day or treatment longer than 12 wk).
**PO (Children 6–12 yr):** 1 mg once or twice daily (up to 15 mg/day).
**IM (Adults):** 1–2 mg q 4–6 hr (up to 10 mg/day).
**IM (Children):** 1 mg once or twice daily.

## trihexyphenidyl

(trye-hex-ee-**fen**-i-dill)
Apo-Trihex, Artane, PMS-Trihexyphenidyl, Trihexane, Trihexy

***Classification***
Therapeutic: antiparkinson agents
Pharmacologic: anticholinergics

**Pregnancy Category C**

### Indications

Adjunct in the management of parkinsonian syndrome of many causes, including drug-induced parkinsonism.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Angle-closure glaucoma; Acute hemorrhage; Tachycardia secondary to cardiac insufficiency; Thyrotoxicosis; Known alcohol intolerance (elixir only).
**Use Cautiously in:** Geriatric and very young patients (increased risk of adverse reactions); Intestinal obstruction or infection; Prostatic hyperplasia; Chronic renal, hepatic, pulmonary, or cardiac disease; Pregnancy, lactation, or children (safety not established).

### Adverse Reactions/Side Effects

**CNS:** dizziness, nervousness, confusion, drowsiness, headache, psychoses, weakness. **EENT:** blurred vision, mydriasis. **CV:** orthostatic hypotension, tachycardia. **GI:** dry mouth, nausea, constipation, vomiting. **GU:** urinary hesitancy, urinary retention. **Derm:** decreased sweating.

### Route/Dosage

**PO (Adults):** 1–2 mg/day initially; increase by 2 mg q 3–5 days. Usual maintenance dose is 6–10 mg/day in 3 divided doses (up to 15 mg/day). Extended-release (Artane Sequels) preparations may be given q 12 hr after daily dose has been determined using conventional tablets or liquid.

## trimipramine

(trye-**mip**-ra-meen)
Surmontil

***Classification***
Therapeutic: antidepressants
Pharmacologic: tricyclic antidepressants

**Pregnancy Category C**

### Indications

Treatment of depression, often in conjunction with psychotherapy.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; cross-sensitivity may occur with other tricyclic antidepressants; Recovery phase following MI; Concurrent MAO inhibitor therapy; wait 2 wk following cessation to initiate trimipramine in lower doses initially; Angle-closure glaucoma.
**Use Cautiously in:** History or symptoms compatible with bipolar disease (may precipitate mixed/manic episodes; May ↑ risk of suicide attempt/ideation especially during early treatment or dose adjustment; Pedi: risk may be greater in children and adolescents; Prostatic hyperplasia (↑ risk of urinary retention); History of seizures (may ↓ threshold); Hepatic impairment; Electroshock therapy (may ↑ risk of adverse reactions); Increased intraocular pressure; Hyperthyroidism (↑ risk of cardiovascular toxicity); OB: Use only if clearly needed and maternal benefits outweigh risks to fetus; Lactation: May cause sedation in infant; Pedi: Safety not established; Geri: ↑ risk of adverse reactions, including falls secondary to sedative and anticholinergic affects.
**Exercise Extreme Caution in:** Pre-existing cardiovascular disease.

### Adverse Reactions/Side Effects

**CNS:** lethargy, sedation. **EENT:** blurred vision, dry eyes, dry mouth. **CV:** arrhythmias, hypotension, ECG changes. **GI:** constipation, hepatitis, paralytic ileus, increased appetite, weight gain. **GU:** urinary retention, ↓ libido. **Derm:** photosensitivity. **Endo:** changes in blood glucose, gynecomastia. **Hemat:** blood dyscrasias.

### Route/Dosage

**PO (Adults):** 75 mg/day in divided doses or as a single daily dose at bedtime; may be increased up to 150 mg/day; not to exceed 200 mg/day (300 mg/day in hospitalized patients). *Adolescent and elderly patients*—50 mg/day, may gradually increase up to 100 mg/day.

## triptorelin (trip-to-**rel**-in)
Trelstar Depot

***Classification***
Therapeutic: antineoplastics
Pharmacologic: hormones

**Pregnancy Category X**

### Indications
Palliative treatment of advanced prostate cancer when orchiectomy or estrogen administration are contraindicated or unacceptable.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to triptorelin or similar agents; Pregnancy, lactation, or children.
**Use Cautiously in:** Metastatic vertebral lesions and/or upper or lower urinary tract obstruction (symptoms may transiently worsen following initiation of therapy); Renal or hepatic impairment (may need dosage adjustment).

### Adverse Reactions/Side Effects
**CNS:** dizziness, emotional lability, fatigue, headache, insomnia. **CV:** hypertension. **GI:** diarrhea, vomiting. **GU:** erectile dysfunction, urinary retention, urinary tract infection. **Derm:** pruritus. **Hemat:** anemia. **Local:** injection site pain. **MS:** musculoskeletal pain. **Misc:** allergic reactions including ANAPHYLAXIS and ANGIOEDEMA.

### Route/Dosage
**IM (Adults):** 3.75 mg monthly.

## verteporfin (ver-te-**por**-fin)
Visudyne

***Classification***
Therapeutic: none assigned
Pharmacologic: photodynamic agents

**Pregnancy Category C**

### Indications
Treatment of age-related macular degeneration in patients with predominantly classic subfoveal choroidal neovascularization.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Porphyria; Exposure to direct sunlight.
**Use Cautiously in:** Moderate/severe hepatic impairment; Pregnancy, lactation or children (safety not established).

### Adverse Reactions/Side Effects
**CNS:** headache, weakness. **EENT:** visual disturbances, cataracts, conjunctivitis/conjunctival injection, dry eyes, ocular itching, severe vision loss, subconjunctival/subretinal/vitreous hemorrhage. **Derm:** photosensitivity. **Local:** injection site reactions including extravasation and rashes. **MS:** back pain (during infusion). **Misc:** fever, flu-like syndrome.

### Route/Dosage
**IV (Adults):** 6 mg/m$^2$ infused over 10 min, followed by appropriate laser light delivery initiated 15 min after the start of the infusion.

## zileuton (zye-**loo**-ton)
Zyflo CR

***Classification***
Therapeutic: bronchodilators
Pharmacologic: leukotriene antagonists

**Pregnancy Category C**

### Indications
Long-term control agent in the management of asthma.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Active liver disease or transaminases ≥3 times upper limit of normal.
**Use Cautiously in:** Acute attacks of asthma; History of liver disease or alcohol consumption; OB, Lactation: Pedi: Pregnancy, lactation, or children <12 yr (safety not established).

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, headache, agitation, aggression, anxiety, depression, dizziness, dream abnormalities, hallucinations, insomnia, irritability, malaise, nervousness, restlessness, somnolence, tremor, weakness. **EENT:** conjunctivitis. **CV:** chest pain. **GI:** abdominal pain, constipation, dyspepsia, flatulence, ↑ liver enzymes, nausea, vomiting. **GU:** urinary tract infection, vaginitis. **Derm:** pruritus. **MS:** arthralgia, myalgia, neck pain. **Neuro:** hypertonia. **Misc:** fever, lymphadenopathy.

### Route/Dosage
**PO (Adults and Children ≥12 yr):** 1200 mg twice daily.

# Natural/Herbal Products

The following monographs introduce some commonly used natural products. Because the amounts of active ingredients in these agents are not standardized or currently subject to FDA guidelines for medicines, *Davis's Drug Guide for Nurses*, although respectful of patients' right to choose from a variety of therapeutic options, does not endorse their routine use unless supervised by a knowledgeable health care professional. Users should take into account the possibility of adverse reactions and interactions and consider the relative lack of data supporting widespread use of these products. Doses are poorly standardized, and individuals are advised to read package labels carefully to ensure safe and efficacious use.

## aloe (al-oh)

***Other Name(s):***
Aloe vera, Cape aloe, Aloe latex, Burn plant, Curacao aloe

***Classification***
Therapeutic: laxatives, wound/ulcer/decubiti healing agent

### Common Uses
**PO:** Cathartic laxative. **Topical:** Use on burns/sunburns, wounds, irritated skin, psoriasis; topical anti-infective.

### Action
**PO:** Exerts a laxative effect by increasing colonic motility, reducing water absorption from the bowel and stimulating bowel, chloride secretion and water content. **Topical:** May help accelerate wound healing through inhibition of thromboxane A2 and increased microcirculation, although the evidence is inconsistent. May have some activity against gram-positive, gram-negative bacteria and yeast. **Therapeutic Effects:** Relief of constipation. Improved wound healing.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO, Topical | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Intestinal obstruction; Inflammatory intestinal diseases (including Crohn's disease); Appendicitis and abdominal pain of unknown origin; OB: Safety not established; Pedi: Oral aloe not appropriate for children <12 yr.
**Use Cautiously in:** Renal disease; Fluid or electrolyte abnormalities; Diabetes; Alcohol containing products should be used cautiously in patients with known intolerance or liver disease; Pedi: Cautious use in children >12 yr old.

### Adverse Reactions/Side Effects
**Derm:** Contact dermatitis, skin irritation. **Endo:** hypoglycemia. **F and E:** HYPOKALEMIA, dehydration. **GI:** Cramping, diarrhea, laxative dependence (chronic use). **GU:** hematuria.

### Interactions
**Natural Product-Drug:** Combining oral aloe with potassium-wasting drugs (e.g., **diuretics**, other **laxatives**, **corticosteroids**, **cisplatin**, **amphotericin B**) may worsen hypokalemia. Hypokalemia may ↑ risk of toxicity from **digoxin** and some **antiarrhythmics**. May have additive effects with **antidiabetic** agents. May ↑ bleeding risk with **warfarin**. **Alcohol**-containing preparations may interact with **disulfiram** and **metronidazole**.
**Natural-Natural:** ↑ hypokalemia risk with **licorice** and **horsetail**. Additive effects with stimulant laxative herbs and herbs with hypoglycemic potential.

### Route/Commonly Used Doses
**PO (Adults):** *Constipation*—100–200 mg aloe or 50 mg of aloe extract taken in the evening. Do not use for >1–2 wk without medical advice; *Juice*—1 teaspoonful tid after meals.
**Topical (Adults):** Aloe gel can be applied liberally to affected areas 3–5 times daily.

### Availability
**Alone or in combination with other herbal medicinals[OTC]; Capsules[OTC]; Juice[OTC]; Tincture (1:10 in 50% alcohol)[OTC]; Topical or gel or applied directly from cut plant.**

## NURSING IMPLICATIONS

### Assessment

- **Constipation:** Assess for abdominal distention, presence of bowel sounds, and usual pattern of elimination.
- Assess color, consistency, and amount of stool produced.
- **Topical:** Perform baseline skin assessment prior to applying aloe to minor wounds, burns, and abrasions. Observe the size, character, and location of the affected area prior to the application of aloe.
- Note topical response assessing for increased inflammation, drainage, pain, warmth, and/or pruritus.
- ***Lab Test Considerations:*** Monitor serum potassium in patients with chronic use and CBC in patients who self medicate and experience bloody diarrhea or have ulcerative colitis or Crohn's disease.

### Potential Nursing Diagnoses

Constipation (Indications)
Risk for impaired skin integrity
Deficient knowledge, related to medication regimen

### Implementation

- **PO:** Administer laxative at bedtime to induce a bowel movement in the morning.
- **Topical:** Wash hands and then apply liberally to affected area of skin. Cover broken areas of skin with a light nonadhering dressing (e.g., band-aid dressing with *Telfa* lining) to facilitate keeping area clean. Do not apply an occlusive dressing over site of application.

### Patient/Family Teaching

- **Constipation:** Instruct patients with preexisting intestinal disorders (e.g., ulcerative colitis, Crohn's disease, irritable bowel syndrome) not to take aloe juice without the advice of a health care professional.
- Counsel patients that the oral juice should not be taken if they are experiencing abdominal pain, nausea, vomiting, or fever.
- Inform patients that occasional constipation may not be an issue but persistent constipation may represent a more serious health problem and to consult their health care professional.
- Advise patients to expect laxative response to the oral juice in 8–12 hr.
- Caution patients that the cathartic effects may be dramatic and that accompanying dehydration and electrolyte imbalances may occur. If severe diarrhea occurs or persists, seek out treatment from their health care professional.
- Advise patients other than those with spinal cord injury that laxatives should only be used for short-term therapy. Although this is considered by some to be a natural way of correcting constipation it still carries the risk of electrolyte imbalance and dependency with chronic use.
- Encourage patients to use other forms of bowel regulation: increasing bulk in the diet, increasing fluid intake, and increasing mobility, as appropriate. Normal bowel habits are individualized and may vary from 3 times/day to 3 times/wk.
- Advise patients to consume a 1500–2000 mL/day during therapy to prevent dehydration.
- Direct patients with a known cardiac history not to take this herbal supplement without the advice of their health care professional because of the risk of hypokalemia worsening arrhythmias.
- Caution patients with cardiac history to avoid straining during bowel movements (Valsalva maneuver).
- **Topical:** Advise patients that topical applications should only be used for minor burns, abrasions, or wounds. Wounds of larger size or more serious burns should be treated by a health care professional.
- Instruct patients using topical application on a nonintact skin surface about signs and symptoms of infection (milky or discolored drainage, redness, warmth, swelling, pain) and to promptly seek out treatment of a health care professional if this occurs.
- Counsel patients that if improvement in the wound is not occurring or it worsens, stop treatment with aloe vera and seek the advice of a health care professional.
- Warn patients with risk factors for delayed wound healing (e.g., diabetic patients, vascular disease) not to self-medicate with aloe vera without the approval of their health care professional.

### Evaluation

- A soft, formed bowel movement.
- Evacuation of the colon.
- Relief of sunburn pain.
- Wound healing in small localized burns or abrasions.

## arnica (ar-ni-cuh)

***Other Name(s):***
Arnica montana, leopard's bane, mountain tobacco, mountain snuff, wolf's bane

***Classification***
Therapeutic: immune stimulant, anti-inflammatory

### Common Uses
Topical treatment of insect bites, bruises, acne, boils, sprains, muscle, and joint pain.

### Action
Polysaccharides in arnica may produce a slight anti-inflammatory and analgesic effect. Some antibacterial effects are seen, in addition to a counterirritant effect, which may aid in wound healing. **Therapeutic Effects:** Decreased inflammation. Pain relief.

### Pharmacokinetics
**Absorption:** Systemic absorption may occur following topical application to broken skin.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| Topical | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Not for oral use (except in highly diluted homeopathic preparations); Arnica allergy; Avoid use on broken skin; Infectious or inflammatory GI conditions; OB: Pregnancy and lactation.
**Use Cautiously in:** Infectious or inflammatory GI conditions; Surgery (discontinue use 2 wk prior to procedure due to antiplatelet effects).

### Adverse Reactions/Side Effects
**GI:** abdominal pain, vomiting, diarrhea (if taken orally). **Derm:** edematous dermatitis with pustules (chronic treatment of damaged skin), eczema (prolonged use). **Misc:** local allergic reactions.

### Interactions
**Natural Product-Drug: Alcohol**-containing preparations may interact with **disulfuram** and **metronidazole**. Potential for reduced effectiveness of **antihypertensives** has been noted. May potentiate the effects of **anticoagulants** and **antiplatelet agents,** increasing the risk of bleeding.
**Natural-Natural:** May increase risk of bleeding with **clove**, **garlic**, **ginger**, **ginkgo**, and **ginseng**.

### Route/Commonly Used Doses
**Topical (Adults):** *Topical*—rub or massage arnica tincture, cream or gel onto injured area. Do not apply to broken skin; *Compress*—dilute 1 tablespoon of arnica tincture in ½ L water. Wet a gauze pad with solution and apply to affected area for 15 min. For use in poultices, dilute tincture 3 to 10 times with water.

### Availability
**Cream, tincture, salve, ointment, gel, and oil[OTC]; Topical (preparations should contain not more than 20-25% arnica tincture or 15% arnica oil)[OTC]; Homeopathic preparations[OTC].**

## NURSING IMPLICATIONS

### Assessment
- Inspect skin for breaks prior to application to ensure arnica is applied only to an intact surface. Note the size, character, and location of affected area prior to application of arnica.
- After application, assess the affected area for signs of allergic response.
- ***Toxicity and Overdose:*** Systemic absorption may result in nausea, vomiting, organ damage, hypertension, cardiotoxicity, arrhythmias, muscular weakness, collapse, vertigo, renal dysfunction, coma and death. If ingested orally, induce emesis and gastric lavage to remove undigested contents. Supportive care may be necessary. Do not take orally or apply to nonintact skin to avoid systemic absorption.

### Potential Nursing Diagnoses
Acute pain (Indications)

### Implementation
- Clean skin with a non-alcohol containing cleanser prior to applying arnica. Apply topically to affected area, or site of injury ensuring skin is intact.
- Do not take orally or apply to an open wound because of potential for systemic absorption with toxicity.

### Patient/Family Teaching
- Teach patients to inspect the affected area for breaks in the skin and not to apply arnica to any areas where the skin is broken.

- Warn patients that use on nonintact skin and oral ingestion may cause life-threatening toxicity.
- Advise patients that arnica should only be used for short period of time in the treatment of minor aches and pains associated with local muscle, joint, or skin pain. Prolonged use may cause allergic/hypersensitivity reactions to develop.
- Instruct patients taking antihypertensive agents to avoid concurrent use of arnica.
- Advise female patients to notify health care professional if pregnancy is planned or suspected. Arnica should be avoided during pregnancy.

### Evaluation

- Relief of, or improvement in, minor aches and pains associated with muscle or joint overuse, or sprains and/or local skin irritation from insect bites, bruises, boils, or acne.

## bilberry

***Other Name(s):***
Vaccinium myrtillus

***Classification***
Therapeutic: ocular agents

### Common Uses

Visual acuity improvement, atherosclerosis, venous insufficiency, varicose veins, diabetes mellitus, diarrhea, hemorrhoids, peptic ulcer disease, osteoarthritis, and chronic fatigue syndrome.

### Action

Anthocyanidins in bilberry have a variety of effects including increased glycosaminoglycans synthesis, decreasing vascular permeability, reducing membrane thickness, redistribution of microvascular blood flow and formation of interstitial fluid. **Therapeutic Effects:** Decreased inflammation. Decreased edema. Decreased blood glucose. Improved circulation.

### Pharmacokinetics

**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Eliminated by the kidneys.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | Unknown | Unknown | Unknown |

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity or allergy to bilberry; Leaves are potentially toxic with chronic use of 1.5 g/kg/day.
**Use Cautiously in:** Diabetic patients; Patients at risk for bleeding; OB: Avoid use in pregnancy due to lack of safety data.

### Adverse Reactions/Side Effects

**Endo:** low blood sugar. **GI:** diarrhea, upset stomach. **Hemat:** bleeding, bruising.

### Interactions

**Natural Product-Drug:** May ↑ effects of **anticoagulants and antiplatelet drugs** and ↓ platelet activity. May ↑ effects of **antidiabetic agents** and cause hypoglycemia.
**Natural-Natural:** Avoid use with chromium-containing herbs and supplements (bilberry contains chromium). Avoid use with herbs with hypoglycemic properties.

### Route/Commonly Used Doses

**PO (Adults):** 80-480 mg of bilberry extract daily in 2-3 divided doses.

### Availability

**Liquid extract**; Tablets; Softgel capsules.

## NURSING IMPLICATIONS

### Assessment

- Monitor blood pressure periodically during therapy, coagulation panel, blood glucose.
- ***Lab Test Considerations:*** Monitor coagulation studies in patients on anticoagulants and antiplatelet agents.
- Monitor blood glucose periodically during therapy. May cause hypoglycemia.

### Potential Nursing Diagnoses

Activity intolerance (Indications)
Diarrhea (Indications)

### Implementation

- Administer without regard to food.

### Patient/Family Teaching

- Instruct patient to take bilberry as directed.

### Evaluation

- Improvement in vascular insufficiency.
- Decrease in diarrhea.

## black cohosh (blak coe-hosh)

Remifemin

***Other Name(s):***
baneberry, black snakeroot, bugbane,

phytoestrogen, rattle root, rattleweed, rattle top, squawroot

***Classification***
Therapeutic: none assigned

Do not confuse black cohosh with blue or white cohosh

## Common Uses
Management of menopausal symptoms. Premenstrual discomfort. Dysmenorrhea. Mild sedative. Rheumatism.

## Action
Therapeutic effects are produced by glycosides isolated from the fresh or dried rhizome with attached roots. Mechanism of action is unclear.
**Therapeutic Effects:** May decrease symptoms of menopause, including hot flashes, sweating, sleep disturbance, and anxiety. Has no effect on vaginal epithelium.

## Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

## Contraindications/Precautions
**Contraindicated in:** OB: Pregnancy and lactation.
**Use Cautiously in:** Breast cancer (may increase risk of metastasis); Hormone-sensitive cancers; Protein S deficiency (increased risk for thrombosis); Liver disease.

## Adverse Reactions/Side Effects
**Neuro:** SEIZURES (in combination with evening primrose and chasteberry), headache, dizziness. **GI:** GI upset, hepatotoxicity. **Derm:** rash. **Misc:** weight gain, cramping, breast tenderness, vaginal spotting/bleeding.

## Interactions
**Natural Product-Drug:** Unknown effects when combined with hormone replacement therapy and **antiestrogens** (e.g., **tamoxifen**). Concurrent use with **hepatotoxic drugs** may ↑ risk of liver damage. **Alcohol-containing preparations** may interact with **disulfiram** and **metronidazole**. May ↓ cytotoxic effects of **cisplatin**. May precipitate hypotension when used in combination with **antihypertensives**.
**Natural-Natural:** May ↑ risk of hepatotoxicity when used with **chaparral**, **comfrey**, **kava**, and **niacin**.

## Route/Commonly Used Doses
**PO (Adults):** *Tablets (Remifemin®)*—20 mg bid. *Liquid extract*—0.3–2 mL bid-tid. *Tincture*—2–4 mL bid–tid. *Dried rhizome*—0.3–2 g tid. Do not use for more than 6 mo.

## Availability
**Alone or in combination with other herbal medicinals[OTC]; Tablets (Remifemin® 20 mg [best studied black cohosh product])[OTC]; Liquid extract (1:1 in 90% alcohol)[OTC]; Tincture (1:10 in 60% alcohol)[OTC]; Dried rhizome.**

# NURSING IMPLICATIONS

## Assessment
- Assess frequency and severity of menopausal symptoms.
- Monitor blood pressure for patients on antihypertensive drugs; may increase effects and cause hypotension.
- Assess for history of seizures or liver disease.

## Potential Nursing Diagnoses
Sleep deprivation (Indications)

## Implementation
- Administration with food may help to minimize nausea.

## Patient/Family Teaching
- Advise patient to notify health care professional if pregnancy is planned or suspected. Avoid use during pregnancy; may induce a miscarriage.
- Patients with seizures, liver dysfunction, excessive alcohol intake, cancer, or other medical problems should be advised to consult their health care professional prior to initiating self-therapy with this herb.
- Advise patient to consult health care professional before taking with other estrogen replacements.
- Emphasize the importance of continued medical supervision for Pap smears, mammograms, pelvic examinations, and blood pressure monitoring at the intervals indicated by health care professional.

## Evaluation
- Resolution of menopausal vasomotor symptoms.

## chondroitin (konn-droy-tinn)

***Other Name(s):***
chondroitin polysulfate, CPS, CDS

***Classification***
Therapeutic: nonopioid analgesics

### Common Uses
Osteoarthritis. Ischemic heart disease. Hyperlipidemia. Osteoporosis. **Ophth:** In combination with sodium hyaluronate, for use as a surgical aid in cataract extraction or lens implantation, and as a lubricant.

### Action
May serve as a building block of articular cartilage. May protect cartilage against degradation. May have antiatherogenic properties. **Therapeutic Effects:** Improvement in osteoarthritis symptoms.

### Pharmacokinetics
**Absorption:** 8–18% is absorbed orally.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** OB: Pregnancy and lactation.
**Use Cautiously in:** Asthma (may exacerbate symptoms); Clotting disorders (may ↑ risk of bleeding); Prostate cancer (may ↑ risk of metastasis or recurrence).

### Adverse Reactions/Side Effects
**GI:** heartburn, nausea, diarrhea. **Hemat:** bleeding (antiplatelet effect). **Misc:** allergic reactions, edema, hair loss.

### Interactions
**Natural Product-Drug:** Use of chondroitin with **anticoagulant** and **antiplatelet** drugs, **thrombolytics**, **NSAIDs**, some **cephalosporins**, and **valproates** may ↑ risk of bleeding.
**Natural-Natural: Herbs** with anticoagulant or antiplatelet properties may ↑ bleeding risk when combined with chondroitin, including: **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **feverfew**, **ginger**, **ginkgo**, **Panax ginseng**, **licorice**, and others.

### Route/Commonly Used Doses
**PO (Adults):** *Osteoarthritis*—200–400 mg 2–3 times daily or 1000–1200 mg once daily. *Prevention of recurrent myocardial infarction*—10 grams daily in 3 divided doses for 3 months followed by 1.5 grams daily in 3 divided doses as maintenance therapy.
**IM (Adults):** *Osteoarthritis*—50 mg twice weekly for 8 wk every 4 mo.

### Availability
**Tablets[OTC]; Capsules[OTC]; Injection (not available in US)**; Ophthalmic Drops Rx in combination with sodium hyaluronate (Viscoat).

## NURSING IMPLICATIONS

### Assessment
- Evaluate drug profile before starting therapy with this herbal supplement. If the patient is taking anticoagulants or antiplatelet drugs, avoid use of this herb.
- Monitor pain (type, location, and intensity) and range of motion on an ongoing basis as an indicator of drug efficacy.
- Evaluate gastric discomfort and instruct patient to seek out the advice of a health care professional if persistent gastric discomfort occurs.
- Assess for signs of bleeding and discontinue herbal supplement promptly and seek out health care professional for follow-up.

### Potential Nursing Diagnoses
Chronic pain (Indications)
Impaired physical mobility (Indications)

### Implementation
- Administer with food.

### Patient/Family Teaching
- Advise patients that this herbal supplement is usually taken with glucosamine.
- Caution patients who take aspirin or NSAIDs or other nonprescription medications not to take this herbal supplement without conferring with their health care professional.
- Advise female patients to notify health care professional if pregnancy is planned or suspected or if breastfeeding; avoid use.
- Instruct patients that this medication works by building up cartilage and that this requires that the medication be taken consistently over a period of time. It is not recommended as a supplemental pain medication.

### Evaluation
- Improvement in pain and range of motion.
- Reduced need for supplemental or breakthrough pain medication.

***Crataegus Species***, see **hawthorn**.

## dong quai (don kwi)

***Other Name(s):***
Angelica sinensis, Chinese Angelica, Dang Gui, Danggui, Don Quai, Ligustilides, Phytoestrogen, Radix angelicae gigantis, Tang Kuei, Tan Kue Bai Zhi

***Classification***
Therapeutic: none assigned

### Common Uses
Premenstrual syndrome. Various uses as a blood purifier. Topically in combination with other ingredients for premature ejaculation.

### Action
May have vasodilating and antispasmodic properties. Binds to estrogen receptors. **Therapeutic Effects:** Improved ejaculatory latency.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Allergy to carrot, celery, mugwort or other members of the Apiaceae family; OB: Pregnancy and lactation.
**Use Cautiously in:** Hormone sensitive cancers and conditions (may exacerbate effects or stimulate growth of cancer cells); Protein S deficiency (↑ risk for thrombosis); Surgery (discontinue 2 wk prior to procedure).

### Adverse Reactions/Side Effects
**Derm:** photosensitivity. **GI:** diarrhea. **Misc:** Some constituents are carcinogenic and mutagenic.

### Interactions
**Natural Product-Drug: Alcohol**-containing preparations may interact with **disulfiram** and **metronidazole**. Use of dong quai with **anticoagulant** and **antiplatelet** drugs, **thrombolytics**, **NSAIDs**, some **cephalosporins**, and **valproates** may increase risk of bleeding.
**Natural-Natural:** Herbs with antiplatelet or anticoagulant properties may increase bleeding risk when combined with dong quai including: **angelica**, **clove**, **danshen**, **garlic**, **ginger**, **ginkgo**, **panax ginseng**, and **willow**.

### Route/Commonly Used Doses
**PO (Adults):** *Bulk herb*—3–4.5 g per day in divided doses with meals; *Extract*—1 ml (20–40 drops) three times daily.

### Availability
**Bulk herb$^{OTC}$; Extract$^{OTC}$.**

## NURSING IMPLICATIONS

### Assessment
- Assess pain and menstrual patterns prior to and following menstrual cycle to determine effectiveness of this herbal supplement.
- Assess for pregnancy prior to recommending use of the herbal supplement and warn women not to take this herb if pregnancy is planned or suspected.
- Assess for history of hormone sensitive cancers or conditions and warn against use.
- Assess medication profile including prescription and over the counter use of products such as aspirin and ibuprofen-based products to treat menstrual pain.

### Potential Nursing Diagnoses
Acute pain (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- Take with meals.

### Patient/Family Teaching
- Warn patients not to take this medication if pregnant or breastfeeding.
- Inform patients to avoid use of aspirin or other NSAIDs concurrently because of the risk of bleeding.
- Notify patients that there are no studies supporting the use of this herbal supplement for treatment of menopausal symptoms.
- Tell patients to consult their health care professional if taking prescription medications before taking Dong Quai.

- Discontinue the herbal supplement if diarrhea or excessive bleeding occurs and contact a health care provider if symptoms do not resolve.
- Instruct patients that photosensitivity may occur and to wear sun screen and protective clothing if sun exposure is anticipated.

### Evaluation

- Reduction in menstrual pain and cramping and regular periods with normal flow.

## echinacea (Echinacea Purpurea) (ek-i-**nay**-sha)

***Other Name(s):***
American coneflower, black sampson, black susan, brauneria angustifolia, kansas snakeroot, purple coneflower, red sunflower, rudbeckia, sampson root, scurvy root

***Classification***
Therapeutic: immune stimulants

### Common Uses

Bacterial and viral infections. Prevention and treatment of colds, coughs, flu, and bronchitis. Fevers. Wounds and burns. Inflammation of the mouth and pharynx. Urinary tract infections. Vaginal candidiasis.

### Action

Medicinal parts derived from the roots, leaves, or whole plant of perennial herb (Echinacea). *Echinacea purpurea herba* has been reported to promote wound healing, which may be due to an increase in white blood cells, spleen cells, and increased activity of granulocytes, as well as an increase in helper T cells and cytokines. *E. purpurea radix* has been shown to have antibacterial, antiviral, anti-inflammatory, and immune-modulating effects. **Therapeutic Effects:** Resolution of respiratory and urinary tract infections. Decreased duration and intensity of common cold. Improved wound healing. Stimulates phagocytosis; inhibits action of hyaluronidase (secreted by bacteria), which helps bacteria gain access to healthy cells. Externally, has antifungal and bacteriostatic properties.

### Pharmacokinetics

**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Multiple sclerosis, leukosis, collagenoses, AIDS, tuberculosis, auto-immune diseases; Hypersensitivity and cross-sensitivity in patients allergic to plants in Asteraceae/Compositae plant family (daisies, chrysanthemums, marigolds, etc.); OB: Pregnancy and lactation.
**Use Cautiously in:** Diabetes; Pedi: May increase risk of rash in children; Tinctures should be used cautiously in alcoholics or patients with liver disease; Do not take longer than 8 wk—may suppress immune function.

### Adverse Reactions/Side Effects

**CNS:** dizziness, fatigue, headache, somnolence. **EENT:** tingling sensation on tongue, sore throat. **GI:** nausea, vomiting, heartburn, constipation, abdominal pain, diarrhea. **Derm:** allergic reaction, rash (more common in children). **Misc:** fever.

### Interactions

**Natural Product-Drug:** May possibly interfere with **immunosuppressants** because of its immunostimulant activity. May ↑ risk for hepatotoxicity from **anabolic steroids**, **methotrexate**, or **ketoconazole** when taken with echinacea. May ↑ **midazolam** availability.
**Natural-Natural:** May ↑ risk for hepatotoxicity when taken with **kava**.

### Route/Commonly Used Doses

**PO (Adults):** *Tablets*—6.78 mg tablets, take 2 tabs 3 times daily. *Capsules*—500–1000 mg 3 times a day for 5–7 days. *Fluid extract*—1–2 mL tid; solid form (6.5:1)—150–300 mg tid. Should not be used for more than 8 wk at a time. *Tea*—½ tsp comminuted drug, steeped and strained after 10 min, 1 cup 5–6 times daily on the first day, titrating down to 1 cup daily over the next 5 days. *Echinacea purpuren herb juice*—6-9 mL/day. *Liquid*—20 drops every 2 hr for the first day of symptoms, then 3 times daily for up to 10 days.
**Topical (Adults):** *Ointment, lotion, tincture used externally*—1.5–7.5 mL tincture, 2–5 g dried root.

### Availability

**Capsules[OTC]; Tablets; Dried Root[OTC]: The dried root can be steeped and strained in**

**boiling water and taken as a tea; Liquid extract[OTC]:** 1:1 in 45% alcohol. **Tincture[OTC]:** 1:5 in 45% alcohol. **Blended teas[OTC]; Echinacea purpuren herb juice[OTC].**

## NURSING IMPLICATIONS

### Assessment

- Assess wound for size, appearance, and drainage prior to the start of and periodically during therapy.
- Assess frequency of common mild illnesses (such as a cold) in response to use.

### Potential Nursing Diagnoses

Risk for impaired skin integrity (Indications)

### Implementation

- Tinctures may contain significant concentrations of alcohol and may not be suitable for children, alcoholics, patients with liver disease, or those taking disulfiram, metronidazole, some cephalosporins, or sulfonylurea oral antidiabetic agents.
- Prolonged use of this agent may cause overstimulation of the immune system, and use beyond 8 wk is not recommended. Therapy of 10–14 days is usually considered sufficient.
- May be taken without regard to food.

### Patient/Family Teaching

- Herb is more effective for treatment than prevention of colds. Take at first sign of symptoms.
- Advise patient to seek immediate treatment for an illness that does not improve after taking this herb.
- Instruct patient that the usual course of therapy is 10–14 days and 8 wk is the maximum.
- Inform patient that use of this herb is not recommended in severe illnesses (e.g., AIDS, tuberculosis) or autoimmune diseases (e.g., multiple sclerosis, collagen diseases, etc.).
- Caution patient that prolonged use of this herb may result in overstimulation of the immune system, possibly with subsequent immunosuppression.
- Warn pregnant or breastfeeding women not to use this herb.
- Instruct patient to consult health care professional before taking any prescription or OTC medications concurrently with echinacea.
- Keep tincture in a dark bottle away from sunlight. Should be taken several times a day.
- Store herb in airtight container away from sunlight.

### Evaluation

- Improved wound healing.
- Infrequent common illnesses.
- Illnesses of shorter duration and less severity.

## feverfew (fee-vurr-fyoo)

***Other Name(s):***
Altamisa, Bachelor's Button, Chrysanthemum parethenium, Featerfoiul, Featherfew, Featherfoil, Flirtwort Midsummer Daisy, Pyrethrum parthenium, Santa Maria, Tanaceti parthenii, Wild chamomile, Wild quinine

***Classification***
Therapeutic: vascular headache suppressants

### Common Uses

**PO:** Migraine headache prophylaxis. **Topical:** Toothaches and as an antiseptic.

### Action

The sesquiterpene lactone, parthenolide, may provide feverfew's migraine prophylaxis effects. Feverfew may also have antiplatelet and vasodilatory effects and block prostaglandin synthesis. **Therapeutic Effects:** May reduce the symptoms and frequency of migraine headaches.

### Pharmacokinetics

**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 2–4 mo | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** OB: Pregnancy and lactation; Feverfew hypersensitivity or allergy to Asteraceae/Compositae family plants, including ragweed, chrysanthemums, daisies, and marigolds. **Use Cautiously in:** Use >4 mo (safety and efficacy not established).

### Adverse Reactions/Side Effects

**CNS:** "Post-Feverfew Syndrome" (anxiety, headache, insomnia, muscle and joint aches). **CV:** *with long-term use*—tachycardia. **GI:** nausea, vomiting, diarrhea, heartburn, mouth ulceration and soreness (from chewing fresh leaves). **Derm:** contact dermatitis (when used topically).

### Interactions

**Natural Product-Drug:** Use of feverfew with **anticoagulant** and **antiplatelet** drugs, **thrombolytics**, **NSAIDs**, some **cephalosporins**, and **valproates** may increase risk of bleeding. Concomitant use with **NSAIDs** may also reduce feverfew effectiveness.
**Natural-Natural:** Use with **anise**, **arnica**, **chamomile**, **clove**, **dong quai**, **fenugreek**, **garlic**, **ginger**, **ginkgo**, **licorice**, and **Panax ginseng** may increase anticoagulant potential of feverfew.

### Route/Commonly Used Doses

**PO (Adults):** 50–100 mg feverfew extract daily (standardized to 0.2–0.35% parthenolide) or 50–125 mg freeze-dried leaf daily with or after food.

### Availability

**Feverfew extract**, standardized to 0.2-0.35% parthenolide[OTC]. **Freash leaf [OTC]; Freeze-dried leaf [OTC].**

## NURSING IMPLICATIONS

### Assessment

- Monitor frequency, intensity, and duration of migraine headaches prior to and during ongoing therapy.
- Assess for mouth ulcers or skin ulcerations during therapy.

### Potential Nursing Diagnoses

Acute pain (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Take with food or on a full stomach.

### Patient/Family Teaching

- Instruct patients to take this medication on a consistent basis to prevent migraine headaches. This herbal supplement is not for treatment of migraines.
- Warn patients about mouth ulcers and sores and that if this occurs to seek the advice of a health care professional. Encourage proper oral hygiene.
- Advise patients not to abruptly stop this product because of the possibility of post- feverfew syndrome. Tell patients that anxiety, headache, insomnia, and muscle aches may indicate withdrawal. Feverfew should be gradually tapered.
- Review dietary and medication profile of patient to identify potential interactions. Instruct patient about other herbs that may interact with feverfew.
- Counsel patients on anticoagulants not to take feverfew except as directed by their health care provider.
- Advise patients to avoid using NSAIDs as this may reduce the effectiveness of feverfew.
- Instruct patients to look for signs of bleeding such as unusual bruising or inability to clot after a cut and to seek the advice of a health care professional if this occurs.
- Inform patients that feverfew should reduce the number of migraines and severity of symptoms but that duration of the migraine may not be affected.

### Evaluation

- Reduction in the frequency and severity of migraine headaches.

## garlic (gar-lik)

***Other Name(s):***
Alli sativa bulbus, Allium sativum

***Classification***
Therapeutic: lipid-lowering agents

### Common Uses

**PO:** Hypertension, hyperlipidemia, cardiovascular disease prevention, colorectal and gastric cancer prevention. **Topical:** Dermal fungal infections including tinea corporis, cruris, and pedis.

### Action

May have HMG-CoA inhibitor properties in lowering cholesterol, but less effectively than statin drugs; vasodilatory and antiplatelet properties.
**Therapeutic Effects:** Decreased cholesterol levels. Decreased platelet aggregation.

### Pharmacokinetics

**Absorption:** Garlic oil is well absorbed.
**Distribution:** Unknown.
**Metabolism and Excretion:** Kidney and lungs.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 4–25 wk | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Bleeding disorders. Discontinue use 1-2 wk prior to surgery.

**Use Cautiously in:** Diabetes, gastrointestinal infection or inflammation.

### Adverse Reactions/Side Effects

**CNS:** dizziness. **GI:** Irritation of the mouth, esophagus, and stomach, nausea, bad breath, vomiting, flatulence, diarrhea. **Derm:** Contact dermatitis and other allergic reactions (asthma, rash, anaphylaxis [rare]), Diaphoresis. **Hemat:** Chronic use or excessive dose may lead to ↓ hemoglobin production and lysis of RBCs, platelet dysfunction, prolonged bleeding time. **Misc:** body odor.

### Interactions

**Natural Product-Drug:** Use of garlic with **anticoagulants**, **antiplatelet agents**, and **thrombolytics** may ↑ risk of bleeding. May ↓ the effectiveness of **contraceptive drugs** and **cyclosporine**. May ↓ plasma concentrations of **saquinavir**, **nevirapine**, **delavirdine**, and **efavirenz**. May ↓ **isoniazid** levels by 65%.
**Natural-Natural:** Herbs with anticoagulant or antiplatelet properties may increase bleeding risk when combined with garlic, including: **angelica**, **anise**, **asafoetida**, **bogbean**, **boldo**, **capsicum**, **celery**, **chamomile**, **clove**, **danshen**, **dong quai**, **fenugreek**, **feverfew**, **ginger**, **ginkgo**, **Panax ginseng**, **horse chestnut**, **horseradish**, **licorice**, **meadowsweet**, **prickly ash**, **onion**, **papain**, **passionflower**, **poplar**, **quassia**, **red clover**, **turmeric**, **wild carrot**, **wild lettuce**, **willow**, and others.

### Route/Commonly Used Doses

**PO (Adults):** 200–400 mg tid of standardized garlic powder extract with 1.3% allin. *Fresh garlic*—1–7 cloves per day. One clove contains approximately 4 grams of garlic.
**Topical (Adults):** *Tinea infections*—0.4% cream, 0.6% gel, or 1% gel applied bid × 7 days.

### Availability

**Capsules[OTC]; Tablets[OTC]; Topical cream; Topical gel; Fresh garlic[OTC].**

## NURSING IMPLICATIONS

### Assessment

- Elicit from patients their usual dietary intake especially in regard to fat consumption.
- Assess patient's reason for using this herbal remedy and knowledge about hyperlipidemia.
- Ascertain the amount of garlic the patient consumes on a regular basis.

### Potential Nursing Diagnoses

Deficient knowledge, related to medication regimen (Patient/Family Teaching)
Noncompliance (Patient/Family Teaching)

### Implementation

- Take orally as fresh clove, capsule, or tablet.
- Do not exceed recommended dose.

### Patient/Family Teaching

- Instruct patients about the need to follow a healthy diet (low in fat and high in vegetables and fruits) in conjunction with garlic. Other lipid reducing strategies, such as exercise and smoking cessation, should also be employed.
- Inform patients that there are other more effective agents for lipid reduction available.
- Emphasize the need for follow-up exams with a health care professional to assess effectiveness of the regimen.
- Warn patients about the potential for bleeding and not to take this herbal remedy without notifying their health care provider if they are on other medications. Instruct patients undergoing elective surgery to stop using garlic 2 weeks prior to surgery and to notify the surgeon that they are taking garlic in the event of emergent surgery.
- Notify patients that allergies may occur and to discontinue use if symptoms develop.

### Evaluation

- Normalization of lipid profile.
- Prevention of cardiac disease.

## ginger (Zingiber Officinale)

(**jin**-jer)

***Other Name(s):***
Calicut, cochin, gengibre, ginger root, imber, ingwerwurzel, ingwer, Jamaica ginger, jenjibre, jiang, kankyo, zenzero, zingiber

***Classification***
Therapeutic: antianemics

### Common Uses

Prevention and treatment of nausea and vomiting associated with motion sickness, loss of appetite, pregnancy, surgery, and chemotherapy. Prevention of postoperative nausea and vomiting. May be used for dyspepsia, flatulence, relief of joint pain in rheumatoid arthritis, cramping, and diarrhea. Tonic (toning/strengthening agent) in gout, gas, respiratory infections, anti-inflammatory,

stimulant (tones the gut, increases saliva and gastric juices, acts as anticoagulant, decreases blood cholesterol).

### Action
Antiemetic effect due to increasing GI motility and transport; may act on serotonin receptors. Shown to be hypoglycemic, hypotensive or hypertensive, and positive inotropic agent. Inhibits prostaglandins and platelets, lowers cholesterol, and improves appetite and digestion. **Therapeutic Effects:** Decreased nausea and vomiting due to motion sickness, surgery, and chemotherapy. Decreased joint pain and improvement of joint motion in rheumatoid arthritis. Antioxidant.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Pregnancy and lactation (if using large amounts); Gallstones.
**Use Cautiously in:** Patients with increased risk of bleeding; Diabetes; Anticoagulant therapy; Cardiovascular disease.

### Adverse Reactions/Side Effects
**GI:** minor heartburn. **Derm:** dermatitis (when used topically).

### Interactions
**Natural Product-Drug:** May increase risk of bleeding when used with **anticoagulants**, **antiplatelet agents**, and **thrombolytics**. May have additive effects with **antidiabetic agents** (causing hypoglycemia) and **calcium channel blockers** (causing hypotension).
**Natural-Natural:** May theoretically increase risk of bleeding when used with other **herbs** that have anticoagulant or antiplatelet activities.

### Route/Commonly Used Doses
**PO (Adults):** *Motion sickness*—1000 mg dried ginger root taken 30 min–4 hr before travel or 250 mg qid. *Postoperative nausea prevention*—1000 mg ginger taken 1 hr before induction or anesthesia. *Chemotherapy–induced nausea*—2-4 g/day. Up to 2 g freshly powdered drug has been used as an antiemetic (not to exceed 4 g/day). *Osteoarthritis*—170 mg tid or 225 mg bid of ginger extract. *Whole root rhizome*—0.25–1 g for other illnesses. *Tea*—pour 150 mL boiling water over 0.5–1 g of ginger and strain after 5 min. *Tinture*—0.25-3 mL.

### Availability
**Alone or in combination with other herbal medicinals[OTC]; Dried powdered root[OTC]; Syrup[OTC]; Tincture[OTC]; Tablets[OTC]; Capsules (≥550 mg)[OTC]; Spice[OTC]; Tea[OTC].**

## NURSING IMPLICATIONS

### Assessment
- Assess patient for nausea, vomiting, abdominal distention, and pain prior to and after administration of the herb when used as an antiemetic agent.
- Assess pain, swelling, and range of motion in affected joints prior to and after administration when used in the treatment of arthritis.
- Assess patient for epigastric pain prior to and after administration when used as a gastroprotective agent.
- Monitor blood pressure in patients with cardiovascular disease including hypertension.

### Potential Nursing Diagnoses
Acute pain (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- Administer ginger prior to situations where nausea or vomiting is anticipated (e.g., motion sickness).
- Dosage form and strengths vary with each disease state. Ensure that proper formulation and dose are administered for the indicated use.
- Give to increase peristalsis.

### Patient/Family Teaching
- Instruct patients receiving anticoagulants not to take this herb without the advice of health care professional (increased risk of bleeding).
- Tell patient to stop the herb immediately if palpitations occur and contact health care professional.
- Advise patient to observe for easy bruising or other signs of bleeding. If they occur, stop the herb immediately and contact health care professional.
- Warn patients with a history of gallbladder disease to use this herb only under the supervision of health care professional.
- Instruct patient to consult health care professional before taking any prescription or OTC medications concurrently with ginger.

- Herb is meant to be used as a tonic, not for long-term use.

### Evaluation
- Prevention of nausea and vomiting.
- Relief of epigastric pain.
- Improved joint mobility and relief of pain.

## ginkgo (ging-ko)

***Other Name(s):***
Bai guo ye, fossil tree, ginkgo folium, Japanese silver apricot, kew tree, maidenhair-tree, salisburia adiantifolia, yinhsing

***Classification***
Therapeutic: antiplatelet agents, central nervous system stimulants

### Common Uses
Symptomatic relief of organic brain dysfunction (dementia syndromes, short-term memory deficits, inability to concentrate, depression). Intermittent claudication. Vertigo and tinnitus of vascular origin. Improvement of peripheral circulation. Premenstrual syndrome.

### Action
Improves tolerance to hypoxemia, especially in cerebral tissue. Inhibits development of cerebral edema and accelerates its regression. Improves memory, blood flow (microcirculation), compensation of disequilibrium, and rheological properties of blood. Inactivates toxic oxygen radicals. Antagonizes platelet-activating factor. Interferes with bronchoconstriction and phagocyte chemotaxis. **Therapeutic Effects:** Symptomatic relief of dementia syndromes. Inhibits arterial spasm, decreases capillary fragility and blood viscosity. Improves venous tone, relaxes vascular smooth muscle.

### Pharmacokinetics
**Absorption:** 70–100% absorption.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Pregnancy and lactation.

**Use Cautiously in:** Bleeding disorders; Children (fresh seeds have caused seizures and death); Diabetes; Epilepsy Surgery (discontinue use 2 wk prior).

### Adverse Reactions/Side Effects
**CNS:** CEREBRAL BLEEDING, dizziness, headache, vertigo, seizure. **CV:** palpitations. **GI:** flatulence, stomach upset. **Derm:** allergic skin reaction. **Hemat:** bleeding. **Misc:** hypersensitivity reactions.

### Interactions
**Natural Product-Drug:** Theoretically may potentiate effects of **anticoagulants**, **thrombolytics**, **antiplatelet agents**, and **MAO inhibitors**. May also ↑ risk of bleeding with some **cephalosporins**, **valproic acid**, and **NSAIDs**. May ↓ effectiveness of **anticonvulsants**. May alter **insulin** metabolism requiring dose adjustments of antidiabetic drugs.
**Natural-Natural:** May ↑ risk of bleeding when used with other **herbs** with antiplatelet effects (including **angelica**, **arnica**, **chamomile**, **feverfew**, **garlic**, **ginger**, and **licorice**).

### Route/Commonly Used Doses

#### Organic Brain Syndromes
**PO (Adults):** 120–240 mg ginkgo leaf extract daily in 2 or 3 doses.

#### Intermittent Claudication
**PO (Adults):** 120–240 mg ginkgo leaf extract daily in 2 or 3 doses.

#### Vertigo and Tinnitus
**PO (Adults):** 120–160 mg ginkgo leaf extract daily in 2 or 3 doses.

#### Cognitive Function Improvement
**PO (Adults):** 120–600 mg per day.

#### Premenstrual Syndrome
**PO (Adults):** 80 mg BID starting on the 16th day of the menstrual cycle until the 5th day of the next cycle.

### Availability
**Ginkgo leaf extract (acetone/water):** 22–27% flavonoid glycosides, 5–7% terpene lactones, 2.6–3.2% bilobalide, <5 ppm of ginkgolic acids.

## NURSING IMPLICATIONS

### Assessment
- Exclude other treatable causes of dementia prior to instituting treatment with ginkgo.

- Assess cognitive function (memory, attention, reasoning, language, ability to perform simple tasks) periodically throughout therapy.
- Assess frequency, duration, and severity of muscle cramps (claudication) experienced by the patient prior to and periodically throughout therapy.
- Assess for headache and neurosystem changes (thromboembolism).

### Potential Nursing Diagnoses

Disturbed thought process (Indications)
Acute pain (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Start dose at 120 mg per day and increase as needed to minimize side effects.
- Administration for a minimum of 6–8 wk of 80 mg (tid) (not <6 wk) is required to determine response.
- May be administered without regard to food.
- Use of dried leaf preparations in the form of a tea is not recommended because of insufficient quantity of active ingredients.
- Advise patients to avoid crude ginkgo plant parts which can cause severe allergic reactions.
- Take this herb at the same time daily.
- Keep this herb out of the reach of children as seizures may occur with increased doses of ginkgo seeds.

### Patient/Family Teaching

- Advise patient to observe for easy bruising and other signs of bleeding and report to health care professional if they occur.
- Caution patient to keep this herb out of the reach of children because ingestion has been associated with seizures.
- Warn patient to avoid handling the pulp or seed coats because of the risk of contact dermatitis. Wash skin under free-flowing water promptly if contact does occur.
- Instruct patient not to exceed recommended doses because large doses may result in toxicity (restlessness, diarrhea, nausea and vomiting, headache).
- Notify patients receiving anticoagulant or antiplatelet therapy not to take this medication without approval of health care professional and frequent monitoring.
- Instruct patient to consult health care professional before taking any prescription or OTC medications concurrently with ginkgo.

### Evaluation

- Improvement in walking distances pain-free.
- Improvement in tinnitus and vertigo.
- Improvement in short-term memory, attention span, and ability to perform simple tasks.
- Improvement in sexual function.
- Decreased symptoms of premenstrual syndrome.

## ginseng (Panax Ginseng)

(**jin**-seng)

***Other Name(s):***
Asian ginseng, Chinese ginseng, hong shen, Japanese ginseng, Korean ginseng, red ginseng, renshen, white ginseng

***Classification***
Therapeutic: none assigned

### Common Uses

Improving physical and mental stamina. General tonic to energize during times of fatigue and inability to concentrate. Sedative, sleep aid, antidepressant. Diabetes. Enhanced sexual performance/aphrodisiac. Increased longevity. Adjunctive treatment of cancer. Increased immune response. Increased appetite.

### Action

Main active ingredient is ginsenoside from the dried root. Serves as CNS stimulant and depressant. Enhances immune function. Interferes with platelet aggregation and coagulation. Has analgesic, anti-inflammatory, and estrogen-like effects. **Therapeutic Effects:** Improves mental and physical ability. May improve appetite, memory, sleep pattern. May reduce fasting blood glucose level in diabetic patients.

### Pharmacokinetics

**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Pregnancy (androgenization of fetus); Lactation; Children; Manic-depressive disorders and psychosis; Hypertension;

Asthma; Infection; Organ transplant recipients (can interfere with immunosuppressive therapy); Hormone-sensitive cancers.
**Use Cautiously in:** Autoimmune diseases; Cardiovascular disease; Diabetics (may have hypoglycemic effects); Patients receiving anticoagulants; Bleeding disorders; Schizophrenia (may cause agitation).

### Adverse Reactions/Side Effects

**CNS:** agitation, depression, dizziness, euphoria, headaches, insomnia, nervousness. **CV:** hypertension, tachycardia. **GI:** diarrhea. **GU:** amenorrhea, vaginal bleeding. **Derm:** skin eruptions. **Endo:** estrogen-like effects. **Misc:** fever, mastalgia, STEVENS-JOHNSON SYNDROME.

### Interactions

**Natural Product-Drug:** May ↓ anticoagulant activity of **warfarin**. May interfere with **MAO inhibitors** treatment and cause headache, tremulousness, and manic episodes. May enhance blood glucose lowering effects of **oral hypoglycemics** and **insulin**. May interfere with **immunosuppressant** therapy. Use with caution when taking **estrogens**.
**Natural-Natural:** May ↑ risk of bleeding when used with **herbs** that have antiplatelet or anticoagulant activities. May prolong the QT interval when used with **bitter orange**, **country mallow** and **ephedra** and ↑ risk of life-threatening arrhythmias. May ↑ risk of hypoglycemia when used with herbs with hypoglycemic potential.
**Natural-Food:** May potentiate effects of **caffeine** in **coffee** or **tea** and CNS stimulant effects of **mate**.

### Route/Commonly Used Doses

**PO (Adults):** *Capsule*—200–600 mg/day; *extract*—100–300 mg 3 times daily; *crude root*—1–2 g/day; *infusion—tea*—1–2 g root daily (½ tbsp/cup water) up to 3 times daily (P. ginseng tea bag usually contains 1500 mg of ginseng root). Do not use for longer than 3 months. *Cold/flu prevention*—100 mg daily 4 wk prior to influenza vaccination and continued for 8 wk; *Chronic bronchitis*—100 mg BID for 9 days combined with antibiotic therapy; *Erectile dysfunction*—900 mg TID; *Type 2 diabetes*—200 mg daily.

### Availability (generic available)

**Root powder[OTC]; Extract in alcohol[OTC]; Capsules[OTC]; Tea bags[OTC].**

## NURSING IMPLICATIONS

### Assessment

- Assess level of energy, attention span, and fatigue person is experiencing prior to initiating and periodically during therapy.
- Assess appetite; sleep duration; and perceived quality, emotional lability, and work efficiency prior to and during therapy.
- Patients with chronic medical problems should not use this herb without the advice of health care professional.
- Assess for ginseng toxicity (nervousness, insomnia, palpitations, and diarrhea).
- Monitor patients with diabetes more frequently for hypoglycemia until response to the agent is ascertained.
- Assess for the development of ginseng abuse syndrome (occurs when large doses of the herb are taken concomitantly with other psychomotor stimulants such as coffee and tea. May present as diarrhea, hypertension, restlessness, insomnia, skin eruptions, depression, appetite suppression, euphoria, and edema).

### Potential Nursing Diagnoses

Energy field disturbance (Indications)
Insomnia (Indications)

### Implementation

- May be taken without regard to food.
- Take at the same time daily and do not increase dose above the recommended amount because of potential toxic effects.

### Patient/Family Teaching

- Warn patients with cardiovascular disease, hypertension or hypotension, or on steroid therapy to avoid the use of this herb.
- Caution pregnant or breastfeeding women not to use this herb.
- Instruct patient in the symptoms of ginseng toxicity and to reduce dose or stop use of the herb if they occur.
- Inform patient to limit the amount of caffeine consumed.
- Advise patients with diabetes to monitor blood sugar levels until response to this agent is known.
- Inform patient that the recommended course of therapy is 3 wk. A repeated course is feasible. Do not use for longer than 3 mo.
- Teach patient about the signs and symptoms of hepatitis (yellow skin or whites of eyes, dark urine, light colored stools, lack of appetite for

several days or longer, nausea, abdominal pain) and to stop use of the herb and promptly contact health care professional if they occur. (This herb is hepatoprotectant at low doses, but hepatodestructive at high doses.)
- Caution patient not to exceed recommended doses because of potential side effects and toxicity.
- If diarrhea develops, stop herb.
- Instruct patient to consult health care professional before taking any Rx or OTC medications concurrently with ginseng.

### Evaluation
- Improved energy level and sense of well-being.
- Improved quality of sleep.
- Improved concentration and work efficiency.
- Improved appetite.
- May need to take for several weeks before seeing results.

## glucosamine
(glew-**kos**-ah-meen)

***Other Name(s):***
2-amino-2-deoxyglucose sulfate, chitosamine

***Classification***
Therapeutic: antirheumatics

### Common Uses
Osteoarthritis. Temporomandibular joint (TMJ) arthritis. Glaucoma.

### Action
May stop or slow osteoarthritis progression by stimulating cartilage and synovial tissue metabolism. **Therapeutic Effects:** Decreased pain and improved joint function.

### Pharmacokinetics
**Absorption:** 0.9% absorbed.
**Distribution:** Unknown.
**Metabolism and Excretion:** 74% eliminated via first-pass metabolism.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Shellfish allergy (glucosamine is often derived from marine exoskeletons); Pregnancy and lactation.

**Use Cautiously in:** Diabetes (may worsen glycemic control); Asthma (may exacerbate symptoms).

### Adverse Reactions/Side Effects
**GI:** nausea, heartburn, diarrhea, constipation.
**CNS:** headache, drowsiness. **Derm:** skin reactions.

### Interactions
**Natural Product-Drug:** May antagonize the effects of **antidiabetics**. May induce resistance to some chemotherapy drugs such as **etoposide**, **teniposide**, and **doxorubicin**.
**Natural-Natural:** None known.

### Route/Commonly Used Doses
**PO (Adults):** 500 mg three times daily.
**Topical (Adults):** use cream as needed for up to 8 wk.

### Availability
**Tablets**[OTC]**; Capsules**[OTC]**; Topical cream**, 30 mg/g in combination with other ingredients[OTC].

## NURSING IMPLICATIONS

### Assessment
- Evaluate for shellfish allergy prior to initiating therapy.
- Monitor pain (type, location, and intensity) and range of motion on an ongoing basis as an indicator of drug efficacy.
- Assess glucose levels via home monitoring device for patients with diabetes until response is ascertained.
- Evaluate gastric discomfort and instruct patient to seek out the advice of a health care provider if persistent gastric discomfort occurs.
- Assess bowel function and symptomatically treat constipation with improved fluid intake and bulk in diet and bulk laxatives if necessary.

### Potential Nursing Diagnoses
Acute pain (Indications)
Impaired physical mobility (Indications)

### Implementation
- Take prior to meals.

### Patient/Family Teaching
- Warn patients with a shellfish allergy that this herbal supplement should not be used.
- Instruct patients that the effects of this drug come from stimulating cartilage and synovial tissue metabolism and that the supplement must be taken on a regular basis to achieve

benefit. It should not be used as an intermittent pain medication.
- Contact a health care provider if gastric discomfort develops and persists.
- Caution diabetics to monitor glucose values to ascertain impact on glycemic control.

### Evaluation
- Improvement in pain and range of motion.

## grape seed extract

***Other Name(s):***
Vitis vinifera, Vitis coignetiae, Oligomeric Proanthocyanidins (OPCs)

***Classification***
Therapeutic: cardioprotective agents

### Common Uses
Chronic venous insufficiency, edema, diabetic retinopathy, varicose veins, cancer prevention, atherosclerosis, cirrhosis, prevention of collagen breakdown, vision problems, constipation, antioxidant, wound healing.

### Action
Grape flavonoids have a wide range of effects including antioxidant, vasodilatory, antiplatelet, decreased superoxide production, free-radical removal and inhibition of collagenase.
**Therapeutic Effects:** Reduced risk of coronary disease. Decreased skin and vasculature breakdown.

### Pharmacokinetics
**Absorption:** unknown.
**Distribution:** unknown.
**Metabolism and Excretion:** unknown.
**Half-life:** unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | Unknown | Unknown | Unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity or allergy to grape seed extract; Patients with bleeding disorders or receiving anticoagulant therapy.
**Use Cautiously in:** OB: Avoid use in pregnancy due to lack of safety data.

### Adverse Reactions/Side Effects
**CV:** hypertension. **CNS:** dizziness, headache. **Derm:** dry skin. **EENT:** sore throat, cough. **GI:** nausea, diarrhea. **Hemat:** ↑ risk of bleeding.

### Interactions
**Natural Product-Drug:** May ↑ anticoagulant effects of **warfarin**. May ↓ plasma levels of CYP1A2 substrates.
**Natural-Natural:** May inhibit the growth of **lactobacillus acidophilus**. May ↑ BP in hypertensive patients also taking **vitamin C**.

### Route/Commonly Used Doses
**PO (Adults):** 75–300 mg daily.

### Availability
**Tablets**; Capsules.

## NURSING IMPLICATIONS

### Assessment
- Monitor blood pressure periodically during therapy.
- ***Lab Test Considerations:*** Monitor serum cholesterol levels periodically during therapy.

### Potential Nursing Diagnoses
Activity intolerance (Indications)

### Implementation
- Administer as directed. Doses may vary.

### Patient/Family Teaching
- Advise patient not to take grape seed extract with Vitamin C; may cause increase in blood pressure.
- Advise female patients to notify health care professional if pregnancy is planned or suspected.

### Evaluation
- Decrease in cholesterol.
- Decrease in blood pressure.

## green tea (green tee)

***Other Name(s):***
Camellia sinensis

***Classification***
Therapeutic: central nervous system stimulants

### Common Uses
Bladder, esophageal, ovarian and pancreatic cancer risk reduction, mental alertness, hypotension, cervical dysplasia associated with human papillomavirus infection, hyperlipidemia, weight loss, protection of the skin from sun damage, genital warts, dental caries, Parkinson's disease.

### Action
Caffeine in green tea stimulates the CNS and cardiovascular system through adenosine receptor

blockade and phosphodiesterase inhibition.
**Therapeutic Effects:** Improved cognitive performance and mental alertness.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | Unknown | Unknown | Unknown |

### Contraindications/Precautions
**Contraindicated in:** Allergy/hypersensitivity; Pregnancy and lactation (doses >200 mg/day due to caffeine content).
**Use Cautiously in:** Patients with caffeine sensitivity. Long-term use of doses >250 mg/day may produce tolerance, psychological dependence, tachyarrhythmias, and sleep disturbances; Iron deficiency anemia (may worsen); Diabetes (may impair glucose control); Cardiac conditions (may induce arrhythmias in sensitive individuals); Bleeding disorders.

### Adverse Reactions/Side Effects
**CV:** arrhythmia, tachycardia. **CNS:** agitation, dizziness, excitement, insomnia, tremors. **GI:** nausea, vomiting, diarrhea, hepatotoxicity, abdominal pain. **F and E:** hypokalemia. **Endo:** hyperglycemia. **Hemat:** prolonged bleeding time.

### Interactions
**Natural Product-Drug:** Green tea may ↓ effects of **adenosine**. ↑ risk of bleeding with **anticoagulants** or **antiplatelet** agents. ↑ effects of **CNS stimulants**. May impair glucose control from **antidiabetic** agents. Abrupt withdrawal can ↑ **lithium** levels. May ↓ **dipyridamole**—induced vasodilation. **Verapamil** can ↑ caffeine concentrations by 25%. Additive effects with **methylxanthines**.
**Natural-Natural:** ↑ risk of adverse cardiovascular effects with **bitter orange**. ↑ risk of hepatotoxicity with hepatotoxic herbs or supplements. ↑ risk of seizures, hypertension, or stroke with **ephedra** and **creatine**.

### Route/Commonly Used Doses
**PO (Adults):** Range: 1–10 cups/day. One cup provides approximately 60 mg of caffeine.

### Availability
**Tea leaves**.

## NURSING IMPLICATIONS

### Assessment
- Monitor blood pressure and heart rate periodically during therapy.
- ***Lab Test Considerations:*** Monitor serum glucose, homocysteine and uric acid levels periodically during therapy.
- Monitor liver and kidney function periodically during therapy.

### Potential Nursing Diagnoses
Impaired memory (Indications)

### Implementation
- May be taken as tea or as an extract in capsules.

### Patient/Family Teaching
- Advise women who may be pregnant or who are breastfeeding to limit green tea due to the caffeine content.

### Evaluation
- Improvement in memory.

## hawthorne (Crataegus Species)
(**haw**-thorn)

***Other Name(s):***
aubepine, cum flore, hagedorn, maybush, whitehorn

***Classification***
Therapeutic: antihypertensives, inotropics

### Common Uses
Hypertension. Mild to moderate CHF. Angina. Spasmolytic. Sedative.

### Action
Active compounds in hawthorn include flavonoids and procyanidins. Increase coronary blood flow. Positive inotropic and chronotropic effects because of increased permeability to calcium and inhibition of phosphodiesterase. **Therapeutic Effects:** Increased cardiac output. Decreased blood pressure, myocardial workload, and oxygen consumption.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | unknown | 6-8 wk | unknown |

### Contraindications/Precautions

**Contraindicated in:** Pregnancy (potential uterine activity); Lactation.

**Use Cautiously in:** Concurrent use with ACE inhibitors and digoxin; Do not discontinue use abruptly.

### Adverse Reactions/Side Effects

**CNS:** agitation, dizziness, fatigue, vertigo, headache, sedation (high dose), sleeplessness, sweating. **CV:** hypotension (high dose), palpitations. **GI:** nausea.

### Interactions

**Natural Product-Drug:** May potentiate effects of **digoxin**, **calcium channel blockers**, and **beta blockers**. Concurrent use with **theophylline**, **caffeine**, **epinephrine**, **phosphodiesterase-5 inhibitors** (**sildenafil**, **tadalafil**, **vardenafil**) and **nitrates** may potentiate adverse cardiovascular effects. May cause additive CNS depression when used with other **CNS depressants**.

**Natural-Natural:** Additive effect with other cardiac glycoside–containing **herbs** (**digitalis leaf**, **black hellebore**, **oleander leaf**, and others). Additive hypotensive effects with herbs than lower blood pressure such as **ginger**, **panax ginseng**, and **valerian**. Additive effect with other cardioactive herbs (**devil's claw**, **fenugreek**, and others).

### Route/Commonly Used Doses

**PO (Adults):** *Heart failure*—160–1800 mg standardized hawthorn leaf with flower extract in 2–3 divided doses daily. *Hawthorn fluid extract (1:1 in 25% alcohol)*—0.5–1 mL tid; *hawthorn fruit tincture (1:5 in 45% alcohol)*—1–2 mL tid; *dried hawthorn berries*—300–1000 mg tid.

### Availability (generic available)

**Dried fruit[OTC]; Liquid extract of the fruit or leaf [OTC]; Tincture of the fruit or leaf [OTC].**

## NURSING IMPLICATIONS

### Assessment

- Auscultate lung sounds for signs of heart failure (rales, crackles, wheezing).
- Assess weight daily and look for signs of fluid overload (swelling of ankles, shortness of breath, sleeping with multiple pillows).
- Assess blood pressure periodically throughout therapy.
- Assess pulse for rate and regularity of rhythm.

### Potential Nursing Diagnoses

Decreased cardiac output (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Administered as 2–3 divided doses daily at the same time.
- May be taken without regard to food.

### Patient/Family Teaching

- Advise patients that there are other proven therapies available for treatment of heart failure. These therapies should be employed prior to initiating treatment with hawthorn.
- Tell patient not to take hawthorn without the advice of health care professional.
- Instruct patients in the symptoms of a heart attack (pain in the region of the heart, jaw, arm, or upper abdomen; sweating; chest tightness) and heart failure (shortness of breath, chest tightness, dizziness, sweating) and to promptly contact health care professional if they occur.
- Advise patient to report weight gain or persistent swelling of the feet to health care professional.
- Warn patients who self-medicate to consult health care professional if there is no improvement in symptoms in 6-8 wk. Effects may not be seen for 3 mo.
- Teach patient to make position changes slowly to minimize the risk of orthostatic hypotension.
- Caution patient not to combine with other cardiac and BP medications unless under supervision of health care professional because of possible additive effects.
- This herb may cause drowsiness. Patients should avoid driving or other activities that require mental alertness until response to herb is known.
- Avoid alcohol and other CNS depressants while taking hawthorn unless under supervision of health care professional.
- Profuse sweating and dehydration under extreme heat may increase the BP-lowering properties of hawthorn, leading to severe hypotension. Warn patients to avoid exertion in hot weather to minimize the risk of side effects.
- Instruct patients that hawthorn helps control the symptoms of heart failure but does not

cure the disease. Lifestyle changes (salt restriction, weight management, exercise as tolerated, adherence to medication regimens) still need to be followed.
- Although hawthorn has been studied in Europe for management of heart failure, there are no conclusive studies to recommend use of this herb.
- Instruct patient to consult health care professional before taking any prescription or OTC medications concurrently with hawthorn.

### Evaluation
- Decrease in symptoms of CHF.
- Improved cardiac output as evidenced by improved activity tolerance.

***Hypericum Perforatum***, see **St. John's wort**

## kava-kava (Piper Methysticum)
(**ka**-va-**ka**-va)

***Other Name(s):***
Ava pepper, intoxicating pepper, kao, kew, tonga, wurzelstock, yagona

***Classification***
Therapeutic: antianxiety agents, sedative/hypnotics

### Common Uses
Anxiety, stress, restlessness, insomnia, benzodiazepine withdrawal. Mild muscle aches and pains. Menstrual cramps and PMS.

### Action
Alters the limbic system modulation of emotional processes. Shown to have centrally-acting skeletal muscle relaxant properties activated. **Therapeutic Effects:** Relief of anxiety. Sedation.

### Pharmacokinetics
**Absorption:** Peak plasma level occurs about 1.8 hr after an oral dose.
**Distribution:** Enters breast milk.
**Metabolism and Excretion:** Elimination occurs primarily by renal excretion (both unchanged and metabolites) and in the feces. Metabolized by the liver (reduction or demethylation).
**Half-life:** Approximately 9 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1.8 hr | unknown | 8 hr |

### Contraindications/Precautions
**Contraindicated in:** Pregnancy (may affect uterine tone) and lactation; Patients with endogenous depression (may increase risk of suicide); Children under 12 yr of age; Hepatitis or other liver disease.
**Use Cautiously in:** Concurrent use of other hepatotoxic agents; Depression and Parkinson's disease (may worsen symptoms); Should not be used for more than 3 mo to prevent psychological addiction.

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache, drowsiness, sensory disturbances, extrapyramidal effects. **EENT:** Pupil dilation, red eyes, visual accommodation disorders. **GI:** HEPATIC TOXICITY, gastrointestinal complaints. **Derm:** allergic skin reactions, yellow discoloration of skin, pellagroid dermopathy. **Hemat:** decreased lymphocytes, decreased platelets. **Metab:** weight loss (long-term, high dose). **Neuro:** ataxia, muscle weakness.

### Interactions
**Natural Product-Drug:** Additive effect when used with **alprazolam**. Potentiates effect of **CNS depressants** (**ethanol**, **barbiturates**, **benzodiazepines**, **opioid analgesics**). Has decreased the effectiveness of **levodopa** in few cases. Theoretically, may have additive effects with **antiplatelet agents**.
**Natural-Natural:** Concurrent use with other hepatotoxic products such as **DHEA**, **coenzyme Q-10** (high doses), and **niacin** can increase the risk of liver damage. Theoretically, may have additive sedative effects when used with other **herbs** with sedative properties.

### Route/Commonly Used Doses
**PO (Adults):** *Antianxiety*—100 mg (70 mg kavalactones) 3 times daily; *Benzodiazepine withdrawal*—50–300 mg/day over one week while tapering benzodiazepine over 2 wk (use 70% kavalactone extract). *Insomnia*—180–210 mg kavalactones. Typically taken as a tea by simmering the root in boiling water and then straining.

### Availability (generic available)
**Dried root extracts (alcohol or acetone based) containing 30–70% kavapyrones.**

## NURSING IMPLICATIONS

### Assessment

- Assess muscle spasm, associated pain, and limitations of movement prior to and periodically throughout therapy.
- Assess degree of anxiety and level of sedation (visual disturbances and changes in motor reflexes are side effects) prior to and periodically throughout therapy.
- Assess sleep patterns and level of sedation upon arising.
- Prolonged use may lead to depression of platelet and lymphocyte counts.

### Potential Nursing Diagnoses

Anxiety (Indications)
Impaired physical mobility (Adverse Reactions)
Risk for injury (Side Effects)

### Implementation

- Prepared as a drink from pulverized roots, tablets, capsules, or extract.

### Patient/Family Teaching

- Inform patient that significant, serious side effects may occur with prolonged use. Use for longer than 1 mo is not recommended without supervision of health care professional.
- Caution patient to not use alcohol or other CNS depressants while taking this herb because the combination potentiates the herb's sedative effect.
- Advise patients that driving a car or performing other activities requiring mental alertness should be avoided until response to therapy is determined.
- Warn patients to stop use of the herb immediately if shortness of breath or signs of liver disease (yellowing of the skin or whites of the eyes, brown urine, nausea, vomiting, light-colored stools, unusual tiredness, weakness, stomach or abdominal pain, loss of appetite) occur and contact health care professional.
- Advise patients who have liver disease or liver problems, or persons who are taking drug products that can affect the liver, to consult health care professional before using kava-containing supplements.
- Inform patient that although there is no evidence of physiological dependence, the risk of psychological dependence still exists.
- Counsel pregnant and breastfeeding women not to use this herb.
- Instruct patient to consult health care professional before taking any prescription or OTC medications concurrently with kava-kava.

### Evaluation

- Decrease in anxiety level.
- Decrease in muscle spasms.
- Relief of insomnia.

## milk thistle (milk **this**-ul)

***Other Name(s):***
Holy thistle, Lady's thistle, Mary Thistle, Silybin, Silymarin

***Classification***
Therapeutic: antidotes

### Common Uses

Cirrhosis, chronic hepatitis, gallstones, psoriasis, liver cleansing and detoxification, treatment of liver toxicity due to alcohol, Amanita mushroom poisoning (European IV formulation) and chemicals.

### Action

The active component, silymarin, has antioxidant and hepatoprotectant actions. Silymarin helps prevent toxin penetration and stimulates hepatocyte regeneration.

### Pharmacokinetics

**Absorption:** 23–47% absorbed after oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Hepatic metabolism by cytochrome P450 3A4.
**Half-life:** 6 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 5–30 days or more | unknown | unknown |

### Contraindications/Precautions

**Contraindicated in:** Pregnancy and lactation (insufficient information available); Allergy to chamomile, ragweed, asters, chrysanthemums and other members of the family Compositae.
**Use Cautiously in:** Hormone sensitive cancers/conditions (milk thistle plant parts may have estrogenic effects).

### Adverse Reactions/Side Effects

**GI:** Laxative effect, nausea, bloating, anorexia.
**Misc:** Allergic reactions.

### Interactions

**Natural Product-Drug:** In vitro, milk thistle extract inhibited the drug-metabolizing enzyme **cy-**

**tochrome P450 3A4**. Interactions have not been reported in humans, but milk thistle should be used cautiously with other drugs metabolized by 3A4, such as **cyclosporine**, **carbamazepine**, **HMG-CoA inhibitors**, **ketoconazole**, and **alprazolam**.
**Natural-Natural:** None known.

### Route/Commonly Used Doses
**PO (Adults):** *Hepatic cirrhosis*—420 mg/day of extract containing 70–80% silymarin; *Chronic active hepatitis*—240 mg bid of silibinin; *Tea*—3–4 times daily 30 minutes before meals. Tea is not recommended as silymarin is not sufficiently water soluble.
**IV (Adults):** 20–50 mg/kg over 24 hr, 48 hr post mushroom ingestion (IV formulation not available in US).

### Availability
**Capsules$^{OTC}$; Tablets$^{OTC}$; Crude drug$^{OTC}$; Tea$^{OTC}$; Extract$^{OTC}$.**

## NURSING IMPLICATIONS

### Assessment
- Assess patients for signs of liver failure such as jaundice, mental status changes, abdominal distention (ascites) and generalized edema.
- Monitor liver function tests periodically throughout therapy.
- Evaluate consistency and frequency of bowel movements.

### Potential Nursing Diagnoses
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- Orally as an extract, capsule, tablets or as a dried fruit as a single daily dose or divided into three doses.
- Tea is not recommended as Milk Thistle is not water-soluble.

### Patient/Family Teaching
- Inform patient of the symptoms of liver failure; advise patient to report worsening symptomotolgy promptly to health care professional.
- Emphasize the need for blood tests to monitor liver function tests.
- Advise patients to abstain from alcohol and to follow a diet consistent with the liver or gallbladder disease being treated.

### Evaluation
- Normalization of liver function tests.
- Reduction in jaundice, abdominal distention, fatigue, and other symptoms associated with liver disease.

***Panax Ginseng***, see **ginseng**.

***Piper Methysticum***, see **kava-kava**.

## SAMe (sam-ee)

***Other Name(s):***
Ademetionine, S-adenosylmethionine,

***Classification***
Therapeutic: antidepressants

**Pregnancy Category UK**

### Common Uses
Treatment of depression. Has also been used to manage: osteoarthritis, fibromyalgia, liver disease, migraine headaches.

### Action
May aid in the production, activation, and metabolism of various amines, phospholipids, hormones, and neurotransmitters. May stimulate articular cartilage growth and repair. **Therapeutic Effects:** Decreased depression. Anti-inflammatory and analgesic effects improve symptoms of osteoarthritis.

### Pharmacokinetics
**Absorption:** Rapidly and extensively metabolized following oral administration.
**Distribution:** Unknown.
**Metabolism and Excretion:** Actively metabolized by the liver.
**Half-life:** 100 min.

TIME/ACTION PROFILE (antidepressant action)

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO (depression) | 1–2 wk | unknown | unknown |
| PO (osteoarthritis) | 30 days | unknown | unknown |

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Bipolar disorder.

**Use Cautiously in:** Pregnancy, lactation, or children (safety not established); Bipolar disorder (can induce mania); Parkinson's disease (may worsen symptoms).

### Adverse Reactions/Side Effects
**CNS:** agitation, dizziness, mild insomnia, manic reactions (in patients with bipolar disorder). **GI:** vomiting, diarrhea, flatulence.

### Interactions
**Natural Product-Drug:** Avoid use with **antidepressants**, **meperidine**, **pentazocine**, **tramadol**, and **dextromethorphan** (additive serotonergic effects may occur). May reduce the effectiveness of **levodopa** and worsen Parkinsonian symptoms. Should not be used concurrently with **MAO inhibitors**. Avoid use of SAMe within 2 wk of using an **MAO inhibitor**.
**Natural-Natural:** Avoid use with natural products that increase serotonin levels such as **l-tryptophan** and **St. John's wort**.

### Route/Commonly Used Doses
**PO (Adults):** *Depression*—200 mg once or twice daily, adjusted upward over 2 wk (range 400–1600 mg/day); *Liver disorders*—1200–1600 mg/day; *Osteoarthritis*—200 mg tid; *Fibromyalgia*—800 mg/day.

### Availability
**Tablets:** 100 mg, 200 mg, 400 mg[OTC].

## NURSING IMPLICATIONS

### Assessment
- Assess mental status for symptoms of depression prior to and periodically during therapy; advise patients with depression to be evaluated by a health care professional.
- Assess symptoms of pain and fatigue prior to and periodically during therapy.

### Potential Nursing Diagnoses
Ineffective coping (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation
- Only enteric-coated formulations are recommended due to bioavailability problems.
- **PO:** Initial dose should be 200 mg once or twice daily to minimize GI disturbances. Dose may be adjusted upward over 1–2 wk depending on response and tolerance.

### Patient/Family Teaching
- Instruct patient to take SAMe according to directions.
- The SAMe butanedisulfonate salt may be preferable due to greater stability.

### Evaluation
- Decrease in symptoms of depression.
- Improvement in osteoarthritis symptoms.

## saw palmetto

***Other Name(s):***
American Dwarf Palm Tree, Cabbage Palm, Ju-Zhong, Palmier Nain, Sabal, Sabal Fructus, Saw Palmetto Berry, Serenoa repens

***Classification***
Therapeutic: benign prostatic hyperplasia (BPH) agents

### Common Uses
Benign prostatic hyperplasia.

### Action
Exerts antiandrogenic, anti-inflammatory, and antiproliferative properties in prostate tissue resulting in improvement in BPH symptoms such as frequent urination, hesitancy, urgency, and nocturia. Comparable in efficacy to finasteride but may be less effective than prazosin. **Therapeutic Effects:** Decreased urinary symptoms of BPH.

### Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 1–2 mo | unknown | 48 wk (longest studied treatment duration) |

### Contraindications/Precautions
**Contraindicated in:** Pregnancy and lactation.
**Use Cautiously in:** Prior to surgery (discontinue 2 weeks before to prevent bleeding).

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache. **GI:** nausea, vomiting, constipation, and diarrhea.

### Interactions
**Natural Product-Drug:** Hormonal action may interfere with other hormonal therapies (**testosterone**, **hormonal contraceptives**). Avoid use

with **antiplatelet** or **anticoagulant drugs** (may ↑ bleeding risk).
**Natural-Natural:** Concomitant use with herbs that affect platelet aggregation such as **ginger**, **garlic**, **ginkgo**, and **ginseng** may ↑ bleeding risk.

### Route/Commonly Used Doses

**PO (Adults):** *Lipophilic extract (80–90% fatty acids)* — 160 mg twice daily or 320 mg once daily. *Whole berries* — 1–2 g daily. *Liquid extract from berry pulp* — 1–2 mL three times daily. *Tea (efficacy is questionable due to lipophilicity of active constituents)* — 1 cup three times daily. Tea is prepared by steeping 0.5–1 g dried berry in 150 mL boiling water for 5–10 minutes.

### Availability

**Lipophilic extract (80-90% fatty acids)[OTC]; Whole berries[OTC]; Liquid extract[OTC].**

## NURSING IMPLICATIONS

### Assessment

- Assess patient for symptoms of benign prostatic hypertrophy (BPH) (urinary hesitancy, feeling of incomplete bladder emptying, interruption in urinary stream, impairment in size and force of urinary stream, terminal urinary dribbling, straining to start flow, dysuria, urgency) before and periodically during therapy.
- Rectal exams prior to and periodically throughout therapy to assess prostate size are recommended.

### Potential Nursing Diagnoses

Impaired urinary elimination (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- Take on a full stomach to minimize GI effects.

### Patient/Family Teaching

- Advise patients to start therapy with this herbal supplement only after evaluation by a health care professional who will provide continued follow-up care.
- Inform patients that saw palmetto does not alter the size of the prostate but still should relieve the symptoms associated with BPH.
- Tell patients that taking this herbal supplement with food should reduce the GI effects and make it easier to tolerate.

### Evaluation

- Decrease in urinary symptoms of BPH.

# St. John's wort (Hypericum perforatum) (saynt **jonz** wort)

***Other Name(s):***
Amber, Demon chaser, Goatweed, Hardhay, Klamath weed, Rosin rose, Tipton weed

***Classification***
Therapeutic: antidepressants

### Common Uses

**PO:** Management of mild to moderate depression and obsessive compulsive disorder (OCD). (Not effective for major depression.) **Topical:** Inflammation of the skin, blunt injury, wounds, and burns. Other uses are for capillary strengthening, decreasing uterine bleeding, and reducing tumor size.

### Action

Derived from *Hypericum perforatum*; the active component is *hypericin*. **PO:** Antidepressant action may be due to ability to inhibit reuptake of serotonin and other neurotransmitters. **Topical:** Anti-inflammatory, antifungal, antiviral, and antibacterial properties. **Therapeutic Effects: PO:** Decreased signs and symptoms of depression. **Topical:** Decreased inflammation of burns or other wounds.

### Pharmacokinetics

**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** *Hypericum constituents* — 24.8–26.5 hr.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 10–14 days | within 4–6 wk | unknown |

### Contraindications/Precautions

**Contraindicated in:** Pregnancy, lactation, or children.
**Use Cautiously in:** History of phototoxicity; Surgery (discontinue 2 wk prior to surgical procedures); Alzheimer's disease (may induce psychosis); Patients undergoing general anesthesia (may cause cardiovascular collapse); History of suicide attempt, severe depression, schizophrenia or bipolar disorder (can induce hypomania or psychosis).

### Adverse Reactions/Side Effects

**CNS:** dizziness, restlessness, sleep disturbances. **CV:** hypertension. **Endo:** hypoglycemia. **GI:** abdominal pain, bloating, diarrhea, dry mouth, feeling of fullness, flatulence, nausea, vomiting. **Neuro:** neuropathy. **Derm:** allergic skin reactions (hives, itching, skin rash), phototoxicity. **Misc:** serotonin syndrome.

### Interactions

**Natural Product-Drug:** Concurrent use with **alcohol** or other **antidepressants** (including **SSRIs** and **MAO inhibitors**) may ↑ risk of adverse CNS reactions. May ↓ the effectiveness and serum concentrations of **digoxin**, **alprazolam**, **amitriptyline**, **imatinib**, **irinotecan**, **warfarin**, and **protease inhibitors**. Use with **MAO inhibitors**, **tramadol**, **pentazocine**, and **selective serotonin agonists** could result in serotonin syndrome. May ↓ effectiveness of **oral contraceptives**. May ↓ plasma **cyclosporine** and **tacrolimus** levels by 30–70% and cause acute transplant rejection. May ↑ metabolism of **phenytoin** and **phenobarbital** and cause loss of seizure control. Avoid use of St. John's wort and **MAO inhibitors** within 2 wk of each other. **Natural-Natural:** May ↑ risk of serotonin syndrome when taken with **tryptophan** and **SAM-e**.

### Route/Commonly Used Doses

**PO (Adults):** *Mild Depression*—300 mg of St. John's wort (standardized to 0.3% hypericin) 3 times daily or 250 mg twice daily of 0.2% hypericin extract. *OCD*-450 mg twice daily of extended release preparation.
**Topical (Adults):** 0.2–1 mg total hypericin daily.

### Availability

### Preparations for Oral Use

**Dried herb[OTC]; Dried (hydroalcoholic) extract[OTC]; Oil[OTC]; Tincture[OTC].**

### Preparations for Topical Application

**Liquid[OTC]; Semisolid[OTC].**

## NURSING IMPLICATIONS

### Assessment

- **Depression:** Assess patient for depression periodically during therapy.
- **Inflammation:** Assess skin or skin lesions periodically during therapy.

### Potential Nursing Diagnoses

Ineffective coping (Indications)
Anxiety (Indications)
Deficient knowledge, related to medication regimen (Patient/Family Teaching)

### Implementation

- **PO:** Tea can be prepared by mixing 2-4 dried herb in 150 mL of boiling water and steeping for 10 min.

### Patient/Family Teaching

- Instruct patient to take St. John's wort as directed.
- Patients with depression should be evaluated by health care professional. Standard therapy may be of greater benefit for moderate to severe depression.
- Advise patient to notify health care professional of medication regimen prior to treatment or surgery.
- Caution patients to avoid sun exposure and use protective sunscreen to reduce the risk of photosensitivity reactions.
- Inform patient to purchase herbs from a reputable source and that products and their contents vary among different manufacturers.
- Caution patient not to use alcohol while taking St. John's wort.
- Warn patients that St. John's wort may reduce the therapeutic effectiveness of several drugs.
- May potentiate effect of sedatives and side effects of other antidepressants. Do not take within 2 wk of MAO inhibitor therapy.
- Instruct patient to consult health care professional before taking other Rx, OTC, or herbal products concurrently with St. John's wort.
- Inform patient that St. John's wort is usually taken for a period of 4–6 wk. If no improvement is seen, another therapy should be considered.

### Evaluation

- Decrease in signs and symptoms of depression or anxiety.
- Improvement in skin inflammation.

## valerian (**vuh**-lare-ee-en)

***Other Name(s):***
Amantilla, All-Heal, Baldrian, Baldrianwurzel, Belgium Valerian, Common Valerian, Fragrant Valerian, Garden Heliotrope, Garden Valerian, Indian Valerian, Mexican Valerian, Pacific Valerian, Tagara, Valeriana, Valeriana officinalis, Valerianae radix, Valeriana rhizome, Valeriane

***Classification***
Therapeutic: antianxiety agents, sedative/hypnotics

## Common Uses
Insomnia. Anxiety.

## Action
May increase concentrations of the inhibitory CNS transmitter GABA. **Therapeutic Effects:** Improvement in sleep quality.

## Pharmacokinetics
**Absorption:** Unknown.
**Distribution:** Unknown.
**Metabolism and Excretion:** Unknown.
**Half-life:** Unknown.

TIME/ACTION PROFILE

| ROUTE | ONSET | PEAK | DURATION |
|---|---|---|---|
| PO | 30–60 min | 2 hr | unknown |

## Contraindications/Precautions
**Contraindicated in:** Pregnancy and lactation.
**Use Cautiously in:** Alcohol use (may have additive sedative effects).

## Adverse Reactions/Side Effects
**CNS:** drowsiness, headache. **Misc:** Benzodiazepine-like withdrawal symptoms with discontinuation after long-term use.

## Interactions
**Natural Product-Drug:** Additive CNS depression with **alcohol**, **antihistamines**, **sedative hypnotics** and other **CNS depressants**. Alcohol-containing preparations may interact with **disulfuram** and **metronidazole**.
**Natural-Natural:** Additive sedative effects can occur when used with herbal supplements with sedative properties such as **kava**, **l-tryptophan**, **melatonin**, **SAMe**, and **St. John's wort**.

## Route/Commonly Used Doses
**PO (Adults):** *Tea*—1 cup tea 1–5 times daily. Tea is made by steeping 2–3 g root in 150 mL boiling water for 5–10 min then straining. *Tincture*—1–3 mL 1–5 times daily. *Extract*—400–900 mg up to 2 hr before bedtime or 300–450 mg divided tid.

## Availability
**Capsules$^{OTC}$; Extract$^{OTC}$; Tea$^{OTC}$; Tincture$^{OTC}$.**

# NURSING IMPLICATIONS

## Assessment
- Assess degree of anxiety and level of sedation prior to and periodically throughout therapy.
- Assess sleep patterns.
- Assess response in the elderly population where drowsiness and loss of balance may pose a significant risk for injury.

## Potential Nursing Diagnoses
Anxiety (Indications)
Risk for injury (Side Effects)

## Implementation
- Take 1 to 2 hr before bedtime if used for nighttime hypnotic.
- Administer orally three to five times daily to control anxiety.

## Patient/Family Teaching
- Warn patients to avoid use of other medications or herbals that have a sedative effect, as the combination will increase drowsiness and sedation.
- Warn patients against driving or operating heavy machinery after taking valerian.
- Inform patients not to take this herbal supplement if pregnant or breastfeeding.
- Counsel patients to avoid activities requiring mental alertness until response to this supplement is known.
- Notify patients that dependence with withdrawal symptoms may develop with prolonged use.
- Instruct patients to avoid consuming alcohol while taking this herbal supplement.
- Encourage patients to eliminate stimulants such as caffeine and to provide an environment that promotes restful sleep.

## Evaluation
- Decreased anxiety level.
- Improvement in sleep with a feeling of restfulness without drowsiness upon awakening.

***Zingiber Officinale***, see **ginger**.

# Recent Drug Approvals

To view full-text monographs of drugs that have been recently released from the FDA or to learn about changes to dosage forms, please visit www.DrugGuide.com.

## benzyl alcohol

(**ben**-zill **al**-ko-hol)
Ulesfia

***Classification***
Therapeutic: pediculocides

**Pregnancy Category B**

### Indications
Topical treatment of head lice in patients ≥6 mo.

### Contraindications/Precautions
**Contraindicated in:** None noted; Pedi: Children <6 mo (safety not established; risk of gasping syndrome in neonates).
**Use Cautiously in:** OB: Lactation.

### Adverse Reactions/Side Effects
**EENT:** ocular irritation. **Derm:** contact dermatitis, erythema, pruritus, pyoderma. **Local:** application site anesthesia, application site hypoesthesia, application site irritation, pain.

### Route/Dosage
**Topical (Adults and Children ≥6 mo):** *Short hair 0–2 in long*—apply 4–6 oz (½–¾ bottle), repeat in 7 days; *Short hair 2–4 in long*—apply 6–8 oz (¾–1 bottle), repeat in 7 days; *Medium hair 4–8 in long*—apply 8–12 oz (1–1 ½ bottles), repeat in 7 days; *Medium hair 8–16 in long*—apply 12–24 oz (1 ½–3 bottles), repeat in 7 days; *Long hair 16–22 in long*—apply 24–32 oz (3–4 bottles), repeat in 7 days; *Long hair >22 in long*—apply 32–48 oz (4–6 bottles), repeat in 7 days.

## ciclesonide (inhalation)

(si-**kless**-o-nide)
Alvesco

***Classification***
Therapeutic: antiasthmatics
Pharmacologic: corticosteroids (inhalation)

**Pregnancy Category C**

### Indications
Maintenance treatment of asthma as preventive therapy in patients ≥12 yr. Not for acute treatment of bronchospasm.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to ciclesonide or any other ingredients in the formulation; Acute asthma/status asthmaticus.
**Use Cautiously in:** Geri: Consider age-related ↓ in cardiac, renal and hepatic function, concurrent disease state and drug therapy; consider lower initial dose; OB: ↓ dose may be sufficient; Lactation: Many corticosteroids enter breast milk, hypercorticism may be seen with ↑ maternal doses; Pedi: Safety and effectiveness in children <12 has not been established.

### Adverse Reactions/Side Effects
**CNS:** headache. **EENT:** *candida* infection of mouth and pharynx, nasal congestion, nasopharyngitis, pharyngolaryngeal pain, cataracts, ↑ intraocular pressure. **Endo:** adrenal suppression (↑ dose, long term therapy), ↓ growth (children). **MS:** arthralgia, back pain, ↓ bone mineral density (↑ dose, long term therapy), extremity pain. **Misc:** worsening of infections.

### Route/Dosage
**Inhaln (Adults ≥12 yr):** *Previous therapy with bronchodilators alone*—80 mcg twice daily, may be ↑ to 160 mcg twice daily; *Previous therapy with inhaled corticosteroids*—80 mcg twice daily, may be ↑ to 320 mcg twice daily; *Previous therapy with oral corticosteroids*—320 mcg twice daily.

## dalfampridine

(dal-**fam**-pri-deen)
Ampyra

***Classification***
Therapeutic: anti-multiple sclerosis agents
Pharmacologic: potassium channel blockers

**Pregnancy Category C**

### Indications
Treatment of multiple sclerosis, to improve walking speed.

### Contraindications/Precautions
**Contraindicated in:** History of seizures; Moderate/severe renal impairment (↑ risk of seizures); Lactation: Avoid use during lactation.
**Use Cautiously in:** Geri: Consider age-related ↓ in renal function; OB: Use during pregnancy only if potential benefit justifies potential risk to fetus; Pedi: safety and effectiveness in children <18 yr not established.

### Adverse Reactions/Side Effects
**CNS:** dizziness, headache, insomnia, weakness. **EENT:** nasopharyngitis, pharyngolaryngeal pain. **GI:** constipation, dyspepsia, nausea. **GU:** urinary tract infection. **MS:** back pain. **Neuro:** balance disorder, multiple sclerosis relapse, paresthesia.

### Route/Dosage
**PO (Adults):** 10 mg twice daily.

## everolimus (e-ve-**ro**-li-mus)
Afinitor

***Classification***
Therapeutic: antineoplastics
Pharmacologic: kinase inhibitors

**Pregnancy Category D**

### Indications
Advanced renal cell carcinoma which has failed treatment with sunitinib or sorafenib.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity to everolimus or other rapamycins; Severe hepatic impairment (Child-Pugh class C); OB: May cause fetal harm, avoid use during pregnancy; Lactation: Avoid breastfeeding.
**Use Cautiously in:** Moderate hepatic impairment (Child-Pugh class B); dose reduction required; Geri: Elderly patients may be more sensitive to drug effects; consider age-related ↓ in hepatic function, concurrent disease states and drug therapy; Pedi: Safe use in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** fatigue, weakness, headache. **Resp:** PNEUMONITIS, cough, dyspnea. **GI:** anorexia, diarrhea, mucositis, mouth ulcers, nausea, stomatitis, vomiting, dysgeusia. **F and E:** peripheral edema. **Derm:** dry skin, pruritus, rash. **Hemat:** anemia, leukopenia, thrombocytopenia. **Metab:** hyperglycemia, hyperlipidemia, hypertriglyceridemia. **MS:** extremity pain. **Misc:** INFECTIONS, hypersensitivity reactions including ANAPHYLAXIS, fever.

### Route/Dosage
**PO (Adults):** 10 mg once daily; *Concurrent use of strong inducers of CYP3A4*— ↑ dose in 5 mg increments up to 20 mg/daily.

### Hepatic Impairment
**PO (Adults):** *Moderate hepatic impairment*—5 mg once daily.

## fosaprepitant (injection)
(fos-a-**prep**-i-tant)
Emend

***Classification***
Therapeutic: antiemetics
Pharmacologic: neurokinin antagonists

**Pregnancy Category B**

### Indications
Prevention of nausea and vomiting associated with emetogenic chemotherapy.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Concurrent use with pimozide (risk of life-threatening adverse cardiovascular reactions); Lactation: May cause unwanted effects in nursing infants.
**Use Cautiously in:** OB: Use only if clearly needed; Pedi: Safety not established.

### Adverse Reactions/Side Effects
**CNS:** dizziness, fatigue, weakness. **GI:** diarrhea. **Misc:** hiccups.

### Route/Dosage
**IV (Adults):** 115 mg 30 min prior to chemotherapy on day 1.

## fospropofol (foss-**pro**-po-fol)
Lusedra

***Classification***
Therapeutic: general anesthetics

**Pregnancy Category B**

### Indications
Monitored anesthesia care (MAC) in adults undergoing diagnostic/therapeutic procedures.

### Contraindications/Precautions

**Contraindicated in:** None noted.
**Use Cautiously in:** Compromised cardiac function, reduced vascular tone or reduced intravascular volume (↑ risk of hypotension); Hepatic impairment; Renal impairment (safety not established for CCr <30 mL/min); Geri: Patients ≥65 yr or those with severe systemic disease (dose reduction required); OB, Lactation: Not recommended for use during labor, delivery or lactation (may cause neonatal respiratory and cardiovascular depression); Pedi: Children <18 yr (safety not established, use not recommended).

### Adverse Reactions/Side Effects

**Resp:** RESPIRATORY DEPRESSION, cough, hypoxemia. **CV:** hypotension. **Derm:** pruritus. **Neuro:** paresthesia. **Misc:** loss of purposeful responsiveness.

### Route/Dosage

Patients weighing >90 kg should be dosed as if they are 90 kg; patients weighing <60 kg should be dosed as if they are 60 kg.
**IV (Adults):** 6.5 mg/kg (not to exceed 16.5 mL) initially, followed by supplemental doses of 1.6 mg/kg (not to exceed 4 mL or more frequently that every 4 min) as needed.

## lacosamide (la-**kose**-a-mide)
Vimpat

***Classification***
Therapeutic: anticonvulsants
**Schedule V**

**Pregnancy Category C**

### Indications

Adjunctive therapy of partial-onset seizures.

### Contraindications/Precautions

**Contraindicated in:** Hypersensitivity; Severe hepatic impairment; Lactation: Lactation.
**Use Cautiously in:** CCr <30 mL/min (use lower daily dose); All patients (may ↑ risk of suicidal thoughts/behaviors); Mild to moderate hepatic impairment; titrate dose carefully, use lower daily dose; Known cardiac conduction problems or severe cardiac disease (MI or CHF); OB: Use during pregnancy only if potential benefit justifies risk to the fetus; Pedi: Children <17 yr (safety and effectiveness not established); Geri: Titrate dose carefully.

### Adverse Reactions/Side Effects

**CNS:** SUICIDAL THOUGHTS, dizziness, headache, syncope, vertigo. **EENT:** diplopia. **CV:** PR interval prolongation. **GI:** nausea, vomiting. **Neuro:** ataxia. **Misc:** physical dependence, psychological dependence, multiorgan hypersensitivity reactions (Drug Reaction with Eosinophilia and Systemic Symptoms—DRESS).

### Route/Dosage

**PO, IV (Adults):** 50 mg twice daily; may be ↑ weekly by 100 mg/day in two divided doses up to a maintenance dose of 200–400 mg/day given in two divided doses.

### Hepatic/Renal Impairment

**PO, IV (Adults):** *CCr ≤30 mL/min or mild to moderate hepatic impairment*—daily dose should not exceed 300 mg.

## liraglutide (lir-**ah**-gloo-tide)
Victoza

***Classification***
Therapeutic: antidiabetics
Pharmacologic: glucagon-like peptide-1 (GLP-1) receptor agonists

**Pregnancy Category C**

### Indications

Adjunct treatment to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus; not recommended as first line therapy.

### Contraindications/Precautions

**Contraindicated in:** Personal or family history of Medullary Thyroid Carcinoma (MTC)/Multiple Endocrine Neoplasia syndrome type 2 (MEN 2); Lactation: Avoid use during lactation; Pedi: Not recommended in children.
**Use Cautiously in:** History of pancreatitis; Hepatic/renal impairment; OB: Use during pregnancy only if potential benefit justifies potential risk to fetus.

### Adverse Reactions/Side Effects

**CNS:** headache. **GI:** diarrhea, nausea, vomiting, constipation, pancreatitis. **Local:** injection site reactions.

### Route/Dosage
**Subcut (Adults):** 0.6 mg once daily initially, may be ↑ at weekly intervals up to 1.8 mg/day.

## ofatumumab
(oh-fa-**too**-moo-mab)
Azerra

***Classification***
Therapeutic: antineoplastics
Pharmacologic: monoclonal antibodies

**Pregnancy Category C**

### Indications
Chronic lymphocytic leukemia (CLL) refractory to fludarabine and alemtuzumab.

### Contraindications/Precautions
**Contraindicated in:** None noted.
**Use Cautiously in:** History of hepatitis B infection (may reactivate); OB: Use during pregnancy only if potential benefit to mother justifies potential risk to fetus; Lactation: Use cautiously during lactation; Pedi: safe and effectiveness in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** weakness. **CV:** peripheral edema. **GI:** INTESTINAL OBSTRUCTION, REACTIVATION OF HEPATITIS B. **Derm:** sweating. **Hemat:** anemia, neutropenia, thrombocytopenia. **MS:** back pain, muscle spasm. **Neuro:** PROGRESSIVE MULTIFOCAL LEUKOENCEPHALOPATHY (PML). **Misc:** INFECTIONS, INFUSION REACTIONS, chills, fever.

### Route/Dosage
**IV (Adults):** 300 mg initial initially, followed 1 wk later by 2000 mg weekly for 7 doses, followed 4 wk later by 2000 mg every 4 wk for 4 doses (total regimen is 12 doses).

## romidepsin (roe-mi-**dep**-sin)
ISTODAX

***Classification***
Therapeutic: antineoplastics
Pharmacologic: enzyme inhibitors, histone deacetylase (HDAC) inhibitors

**Pregnancy Category D**

### Indications
Treatment of cutaneous T-cell lymphoma (CTCL) that has not responded to at least one prior systemic therapy.

### Contraindications/Precautions
**Contraindicated in:** OB: Pregnancy (may cause fetal harm); Lactation: Avoid use.
**Use Cautiously in:** Congenital long QT syndrome, history of significant cardiovascular disease, and concurrent antiarrhythmic or other medications that cause significant QT prolongation ( ↑ risk of arrhythmias); Electrolyte abnormalities (correct magnesium and potassium abnormalities prior to use); Moderate to severe hepatic impairment or end-stage renal disease; Geri: Elderly patients may be more sensitive to drug effects; Pedi: safe and effective use in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** fatigue. **CV:** ECG changes. **GI:** anorexia, nausea, vomiting. **Hemat:** anemia, leukopenia, thrombocytopenia.

### Route/Dosage
**IV (Adults):** 14 mg/m² on days 1, 8, and 15 of a 28-day cycle, cycle may be repeated every 28 days depending on benefit and patient tolerance; dose may be ↓ to 10 mg/m² if adverse reactions occur.

## rufinamide (roo-**fin**-a-mide)
Banzol

***Classification***
Therapeutic: anticonvulsants
Pharmacologic: triazoles

**Pregnancy Category C**

### Indications
Adjunctive treatment of seizures associated with Lennox-Gastaut syndrome in patients >4 yr.

### Contraindications/Precautions
**Contraindicated in:** Hypersensitivity; Familial short QT syndrome; Severe hepatic impairment.
**Use Cautiously in:** All patients (may ↑ risk of suicidal thoughts/behaviors); Mild to moderate hepatic impairment.

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, dizziness, fatigue, headache, somnolence. **EENT:** diplopia. **CV:** QT prolongation. **GI:** nausea, changes in appetite. **GU:** urinary frequency. **Derm:** rash. **Hemat:** anemia. **Neuro:** ataxia, coordination abnormalities, gait disturbances. **Misc:** MULTI-ORGAN HYPERSENSITIVITY REACTIONS, hypersensitivity reactions ( ↑ children).

### Route/Dosage

**PO (Adults):** 400–800 mg/day in two divided doses, ↑ by 400–800 mg every 2 days until a maximum daily dose of 3200 mg/day (1600 mg twice daily) is reached.
**PO (Children ≥4 yr):** 10 mg/kg/day in two divided doses, ↑ by 10 mg/kg every 2 days until a maximum daily dose of 45 mg/kg/day or 3200 mg/day given in 2 divided doses, whichever is less, is reached.

## telavancin (tel-a-**van**-sin)
Vibativ

***Classification***
Therapeutic: anti-infectives
Pharmacologic: lipoglycopeptides

**Pregnancy Category C**

### Indications

Treatment of complicated skin/skin structure infections caused by susceptible bacteria.

### Contraindications/Precautions

**Contraindicated in:** Congenital long QT syndrome, known prolongation of the QTc interval, uncompensated heart failure, or severe left ventricular hypertrophy (risk of fatal arrhythmias); OB: do not use during pregnancy unless potential maternal benefit outweighs potential risk to fetus.
**Use Cautiously in:** Renal impairment (efficacy may be reduced; dose reduction recommended for CCr ≤50 mL/min); Geri: Consider age-related ↓ in renal function, adjust dose accordingly (↑ risk of adverse renal reactions); Lactation: Use cautiously during breastfeeding; Pedi: Safety and effectiveness in children have not been established.

### Adverse Reactions/Side Effects

**CNS:** dizziness. **CV:** QTc prolongation. **GI:** PSEUDOMEMBRANOUS COLITIS, taste disturbance, nausea, vomiting, abdominal pain. **GU:** foamy urine, nephrotoxicity. **Misc:** infusion reactions.

### Route/Dosage

**IV (Adults):** 10 mg/kg ever 24 hr for 7–14 days.

### Renal Impairment

**IV (Adults):** *CCr 30–50 mL/min*—7.5 mg/kg every 24 hr; *CCr 10–≤30 mL/min*—10 mg/kg every 48 hr.

## tetrabenazine
(te-tra-**ben**-a-zeen)
Xenazine

***Classification***
Therapeutic: antichoreas
Pharmacologic: reversible monoamine depleters

**Pregnancy Category C**

### Indications

Treatment of chorea due to Huntington's Disease.

### Contraindications/Precautions

**Contraindicated in:** Hepatic impairment; Concurrent use of reserpine or MAO inhibitors; Patients who are actively suicidal or have untreated depression; Lactation: Lactation.
**Use Cautiously in:** History of/propensity for depression or history of psychiatric illness; history of suicidality; Poor CYP2D6 metabolizers; initial dose reduction required; Concurrent use of CYP2D6 inhibitors; dose modification required; Recent history of myocardial infarction or unstable heart disease; OB: Use during pregnancy only when potential benefit justifies potential risk to the fetus; Pedi: Safety and efficacy not established.

### Adverse Reactions/Side Effects

**CNS:** anxiety, fatigue, insomnia, depression, sedation/somnolence, cognitive defects, dizziness, headache. **Resp:** shortness of breath. **CV:** hypotension, QTc prolongation. **GI:** nausea, dysphagia. **Neuro:** akathisia, balance difficulty, dysarthria, Parkinsonism, unsteady gait. **Misc:** NEUROLEPTIC MALIGNANT SYNDROME.

### Route/Dosage

**PO (Adults):** 12.5 mg/day for one wk initially, ↑ by 12.5 weekly up to 37.5–50 mg/day in three divided doses; *concurrent use of strong inhibitors or CYP2D6 or poor CYP2D6 metabolizers*—start with initial dose of 6.25 mg, titrate carefully.

## tocilizumab
(toe-si-**liz**-oo-mab)
Actemra

***Classification***
Therapeutic: antirheumatics, immunosuppressants
Pharmacologic: interleukin antagonists

**Pregnancy Category C**

### Indications
Treatment of adults with moderately-to severely-active rheumatoid arthritis who have not responded to one or more TNF antagonist therapies. May be used alone or with methotrexate or other DMARDs.

### Contraindications/Precautions
**Contraindicated in:** Serious infections; Patients at risk for GI perforation, including patients with diverticulitis; Active hepatic disease/impairment; Absolute neutrophil count (ANC) <2000/mm³ (<500/mm³ while on therapy) or platelet count below 100,000/mm³ ( <50,000/mm³ while on therapy); Lactation: Not recommended during lactation.
**Use Cautiously in:** Renal or hepatic impairment; Patients with tuberculosis risk factors; Geri: ↑ risk of adverse reactions; OB: Use during pregnancy only if potential benefit justifies potential risk to fetus; Pedi: Safe and effective use in children has not been established.

### Adverse Reactions/Side Effects
**CNS:** headache, dizziness. **EENT:** nasopharyngitis. **Resp:** upper respiratory tract infections. **CV:** hypertension. **GI:** GASTROINTESTINAL PERFORATION, ↑ liver enzymes. **Derm:** rash. **Hemat:** NEUTROPENIA, THROMBOCYTOPENIA. **Metab:** ↑ lipids. **Misc:** SERIOUS INFECTIONS INCLUDING TUBERCULOSIS, DISSEMINATED FUNGAL INFECTIONS AND INFECTIONS WITH OPPORTUNISTIC PATHOGENS, hypersensitivity reactions including ANAPHYLAXIS, infusion reactions.

### Route/Dosage
**PO (Adults):** 4 mg/kg may be ↑ to 8 mg/kg based on clinical response; dosage reductions are recommended for elevated liver enzymes, neutropenia, and thrombocytopenia.

## vigabatrin (vye-**gah**-bat-rin)
Sabril

***Classification***
Therapeutic: anticonvulsants, none assigned

**Pregnancy Category C**

### Indications
Management (adjunctive) of refractory Complex Partial Seizures in Adults in patients who have responded inadequately to several alternative treatments; not a first-line treatment. Management of infantile spasms (IS) in patients 1 mo-2 yr.

### Contraindications/Precautions
**Contraindicated in:** History or high risk of other types of irreversible vision loss unless benefits of treatment clearly outweigh risks; OB: Use during pregnancy only if the potential benefit justifies the potential risk to the fetus (may cause fetal harm); Lactation: Enters breast milk; breastfeeding should be avoided.
**Use Cautiously in:** Renal impairment (dose modification recommended for CCr <50 mL/min); History of suicidal ideation; Geri: Consider age-related ↓ in renal function adjust dose accordingly ( ↑ risk of sedation/confusion); Pedi: abnormal MRI signal changes have been seen in infants.

### Adverse Reactions/Side Effects
**CNS:** SUICIDAL THOUGHTS, confusional state, memory impairment, drowsiness, fatigue. **CV:** edema. **EENT:** blurred vision, nystagmus, vision loss. **Hemat:** anemia. **Metab:** weight gain. **MS:** arthralgia. **Neuro:** abnormal coordination, tremor, peripheral neuropathy.

### Route/Dosage
**PO (Adults):** 500 mg twice daily initially, may be ↑ in 500 mg increments every 7 days depending on response up to 1.5 g twice daily.

#### Renal Impairment
**PO (Adults):** *CCr >50 –80 mL/min*— ↓ dose by 25%; *CCr >30–50 mL/min*— ↓ dose by 50%; *CCr >10– <30 mL/min*— ↓ dose by 75%.
**PO (Children 1 mo–2 yr):** 50 mg/kg/day given in 2 divided doses initially, increasing by 25–50 mg/kg/day increments every 3 days up to a maximum of 150 mg/kg/day; dosage adjustments are necessary for renal impairment.

## NEW DOSAGE FORMS

| Generic Name (Brand Name) | New Dosage Form |
|---|---|
| **acyclovir/hydrocortisone** (Lipsovir) | Topical cream for early treatment of coldsores. |
| **alpha$_1$-proteinase inhibitor** (Prolastin-C) | More concentrated form allows ↓ infusion volume and time. |
| **amlodipine/telmisartan** (Twynsa) | Combination calcium channel blocker/angiotensin receptor blocker for hypertension. |
| **aztreonam** (Cayston) | 75 mg inhalation solution for cystic fibrosis. |
| **calcitriol** (Vectical) | 3 mcg/g ointment for plaque psoriasis. |
| **capsaicin** (Qutenza) | 8% capsaicin for postherpetic neuralgia pain. |
| **ciprofloxacin** (Cetraxal) | 0.2% otic solution for acute otitis externa. |
| **clonidine** | Once daily extended-release tablet and oral suspension formulation for hypertension. |
| **colesevelam** (Welchol) | 1.875 g and 3.75 g single-dose packets for oral suspension for LDL and glucose control. |
| **dexamethasone** (Ozurdex) | 0.7 mg intravitreal implant for macular edema. |
| **diclofenac** (Pennsaid) | 1.5% topical solution for osteoarthritis of the knee. |
| **estradiol** (Vagifem) | 10 mcg vaginal tablet, a lower dose for atrophic vaginitis. |
| **ganciclovir** (Zirgan) | 0.015% ophthalmic gel for acute herpetic keratitis. |
| **human papillomavirus vaccine, bivalent (Types 16 and 18) , recombinant** (Cervarix) | IM Injection for prevention of some diseases caused by oncogenic human papillomavirus (HPV) types 16 and 18. |
| **hydromorphone** (Exalgo) | Extended-release tablets 8 mg, 12 mg, and 16 mg for once-daily dosing. |
| **levonorgestrel** (Plan B One-Step) | 1.5 mg tablet single-dose emergency contraceptive. |
| **meningococcal vaccine, quadravalent** (Menveo) | For routine immunization of adolescents 11–18 yr and other high risk groups. |
| **olanzapine** (Zyprexa Relprew) | 210 mg, 300 mg, and 405 mg extended-release injection for schizophrenia. |
| **omeprazole/sodium bicarbonate** (Zegerid OTC) | 20 mg omeprazole/1100 mg sodium bicarbonate for over-the-counter treatment of heartburn. |
| **pneumococcal 13-valent conjugate vaccine** (Prevnar 13) | Replacement vaccine for Prevnar, a 7-valent vaccine for infants/young children ages 6 wk–5 yr for the prevntion of invasive pneumococcal disease (IPD) and otitis media; adds six additional types of bacteria. |
| **pramipexole** (Mirapex ER) | 0.375 mg, 0.75 mg, 1.5 mg, 3 mg, and 4.5 mg extended-release tablets for treatment of early Parkinson's disease. |
| **pregabalin** (Lyrica) | 20 mg/ml oral solution for treatment of various painful syndromes and as an adjunct anticonvulsant. |
| **ritonavir** (Norvir) | 100 mg tablets, no refrigeration needed, must be taken with meals. |
| **sildenafil** (Revatio) | 10 mg injectable formulation for pulmonary hypertension. |
| **tranexamic acid** (Lysteda) | 650 mg tablets for menorrhagia. |
| **trazodone** (Oleptro) | 150 mg and 300 mg extended-release tablets for major depression. |

## RECENT LABELING CHANGES (New Warnings/Indications)

| Generic Name (Brand Name) | Labeling Change |
|---|---|
| **bismuth subsalicylate** (Maalox Total Relief) | Manufacturer will rename trade name in September 2010 to avoid confusion with other Maalox products that do not contain bismuth subsalicylate. |
| **bortezomib** (Velcade) | New dosing guidelines for patients with hepatic impairment. |
| **colesevelam** (Welchol) | New indication for treatment of hypercholesterolemia in children 10–17 yr. |

## RECENT LABELING CHANGES (New Warnings/Indications) (continued)

| | |
|---|---|
| **deferasirox** (Exjade) | New warning regarding risk of GI hemorrhage, contraindications in renal impairment, drug interaction with cholestyramine and co-morbidities for cytopenias, renal and hepatic adverse reactions. |
| **desipramine** (Norpramin) | New warning regarding use of extreme caution in patients who have cardiovascular history. |
| **didanosine** (Videx) | New warning regarding risk of non-cirrhotic portal hypertension. |
| **duloxetine** (Cymbalta) | New indication for maintenance treatment of depression. |
| **exenatide** (Byetta) | New warning regarding development of renal failure. |
| **ERYTHROPOIESIS-STIMULATING AGENTS (ESAs)** (Epogen, EPO, Procrit) **darbepoetin** (Aranesp) | Mandatory participation in ongoing risk management program to monitor and evaluation ↑ tumor growth and shortened survival in cancer patients and risk of thromboembolic phenomenon in other patient populations. |
| **fondaparinux** (Arixtra) | New Cautions for low weight patients (< 50 kg) and those with renal impairment |
| **human papillomavirus vaccine** (Gardasil) | New indication for prevention of genital warts in boys and men. |
| **LONG-ACTING BETA-AGONISTS (LABAs), aformoterol** (Brovana), **formoterol** (Foradil), **salmeterol** (Serevent) | New warning: LABAs are contraindicated without an asthma controller medication and only be used long-term when asthma cannot be adequately controlled on asthma controller medications. LABAs should be discontinued once asthma control is achieved. Pediatric/adolescent patients who need a LABA in addition to an inhaled corticosteroid should use a combination product containing both an inhaled corticosteroid such as Advair (fluticasone/salmeterol) or Symbicort (budesonide/formoterol). |
| **natalizumab** (Tysabri) | New warning: risk of progressive multifocal leukoencephalopathy (PML) ↑ with ↑ number of infusions. |
| **olanzapine** (Zyprexa) | New indication for use in adolescents 13–17 yr: New warning: Consider long term effects of hyperlipidemia and weight gain in adolescents. |
| **quetiapine** (Seroquel XR) | New indication as adjunctive treatment of major depression. |
| **olmesartan** (Benicar) | New indication for the treatment of hypertension in pediatric patients aged 6–16 yr. |
| **rasagiline** (Azilect) | New reduced restrictions on medications and foods. |
| **riluzole** (Rilutek) | New warning regarding interstitial lung disease as an adverse effect. |
| **ritonavir** (Norvir) | New warning regarding possible adverse cardiovascular interaction with saquinavir (Invirase); may possibly prolong QT or PR intervals and ↑ the risk for abnormal heart rhythms, including torsades de pointes. Avoid combined use with medications known to cause QT interval prolongation such as Class IA (such as quinidine,) or Class III (such as amiodarone) antiarrhythmic drugs; or in patients with a history of QT interval prolongation. |
| **rituximab** (Rituxan) | New indication, in combination with fludarabine and cyclophosphamide for chronic lymphocytic leukemia (CLL). |
| **rosuvastatin** (Rosuvastatin) | New indications for primary prevention of cardiovascular disease in patients at risk of a cardiac event and for treatment of hypercholesterolemia in children 10–17 yr. |
| **sibutramine** (Meridia) | New warnings/contraindications regarding ↑ risk of heart attack/stroke in high risk patients. |
| **sirolimus** (Rapamune) | New warning regarding blood level determinations; assay methods may vary. |
| **zanamavir** (Relenza) | Inhaln powder. |

## DISCONTINUED DRUGS

| Generic Name (Brand Name) | Reason for Discontinuation |
|---|---|
| **aminoglutethimide** (Cytadren) | Adrenal suppression and the need for steroid therapy. |
| **carteolol** (Cartrol) | Oral product discontinued by manufacturer; ophthalmic product still available. |
| **cloxacillin** (Tegopen) | Discontinued by manufacturer. |
| **daunorubicin lipsome** (DaunoXome) | Discontinued by manufacturer. |
| **efalizumab** (Raptiva) | Potential risk of progressive multifocal leukencephalopathy (PML). |
| **gonadorelin acetate** (Lutrepulse Kit) | Discontinued by manufacturer. |
| **gonadorelin hydrochloride** (Factrel) | Discontinued by manufacturer. |
| **molindone** (Moban) | Discontinued by manufacturer. |
| **ritodrine** (Yutopar) | Discontinued by manufacturer. |
| **trimetrexate** (Neutrexin) | Discontinued by manufacturer. |

APPENDIX B

# Combination Drugs

**Note:** The drugs listed in this section are in alphabetical order according to trade names. If the trade name does not specify dose form, the dose form is either a tablet or capsule. Following each trade name are the generic names and doses of the active ingredients contained in each preparation. For information on these drugs, look up each generic name in the combination. For inert ingredients, see drug label. **(OTC)** signifies "over-the-counter" or nonprescription medication.

**A-200 Shampoo—**0.33% pyrethrins + 4% piperonyl butoxide **(OTC)**
**Acanya Topical Gel—**1.2% clindamycin + 2.5% benzoyl peroxide
**Accuretic 10/12.5—**quinapril 10 mg + hydrochlorothiazide 12.5 mg
**Accuretic 20/12.5—**quinapril 20 mg + hydrochlorothiazide 12.5 mg
**Accuretic 20/25—**quinapril 20 mg + hydrochlorothiazide 25 mg
**Actifed Cold and Allergy—**chlorpheniramine 4 mg + phenylephrine 10 mg **(OTC)**
**Activella Tablets 0.5/0.1—**estradiol 0.5 mg + norethindrone 0.1 mg
**Activella Tablets 1/0.5—**estradiol 1 mg + norethindrone 0.5 mg
**Actoplus Met 15/500—**pioglitazone 15 mg + metformin 500 mg
**Actoplus Met 15/850—**pioglitazone 15 mg+ metformin 850 mg
**Actoplus Met XR 15/1000—**pioglitazone 15 mg + metformin extended-release 1000 mg
**Actoplus Met XR 30/1000—**pioglitazone 30 mg + metformin extended-release 1000 mg
**Adderall 5 mg—**dextroamphetamine sulfate 1.25 mg + dextroamphetamine saccharate 1.25 mg + amphetamine aspartate 1.25 mg + amphetamine sulfate 1.25 mg
**Adderall 7.5 mg—**dextroamphetamine sulfate 1.875 mg + dextroamphetamine saccharate 1.875 mg + amphetamine aspartate 1.875 mg + amphetamine sulfate 1.875 mg
**Adderall 10 mg—**dextroamphetamine sulfate 2.5 mg + dextroamphetamine saccharate 2.5 mg + amphetamine aspartate 2.5 mg + amphetamine sulfate 2.5 mg
**Adderall 12.5 mg—**dextroamphetamine sulfate 3.125 mg + dextroamphetamine saccharate 3.125 mg + amphetamine aspartate 3.125 mg + amphetamine sulfate 3.125 mg
**Adderall 15 mg—**dextroamphetamine sulfate 3.75 mg + dextroamphetamine saccharate 3.75 mg + amphetamine aspartate 3.75 mg + amphetamine sulfate 3.75 mg
**Adderall 20 mg—**dextroamphetamine sulfate 5 mg + dextroamphetamine saccharate 5 mg + amphetamine aspartate 5 mg + amphetamine sulfate 5 mg
**Adderall 30 mg—**dextroamphetamine sulfate 7.5 mg + dextroamphetamine saccharate 7.5 mg + amphetamine aspartate 7.5 mg + amphetamine sulfate 7.5 mg
**Adderall XR 5 mg—**dextroamphetamine saccharate 1.25 mg + dextroamphetamine sulfate 1.25 mg + amphetamine aspartate monohydrate 1.25 mg + amphetamine sulfate 1.25 mg
**Adderall XR 10 mg—**dextroamphetamine saccharate 2.5 mg + dextroamphetamine sulfate 2.5 mg + amphetamine aspartate monohydrate 2.5 mg + amphetamine sulfate 2.5 mg
**Adderall XR 15 mg—**dextroamphetamine saccharate 3.75 mg + dextroamphetamine sulfate 3.75 mg + amphetamine aspartate monohydrate 3.75 mg + amphetamine sulfate 3.75 mg
**Adderall XR 20 mg—**dextroamphetamine saccharate 5 mg + dextroamphetamine sulfate 5 mg + amphetamine aspartate monohydrate 5 mg + amphetamine sulfate 5 mg
**Adderall XR 25 mg—**dextroamphetamine saccharate 6.25 mg + dextroamphetamine sulfate 6.25 mg + amphetamine aspartate monohydrate 6.25 mg + amphetamine sulfate 6.25 mg
**Adderall XR 30 mg—**dextroamphetamine saccharate 7.5 mg + dextroamphetamine sulfate 7.5 mg + amphetamine aspartate monohydrate 7.5 mg + amphetamine sulfate 7.5 mg
**Advair Diskus 100—**(per actuation) fluticasone 100 mcg + salmeterol 50 mcg
**Advair Diskus 250—**(per actuation) fluticasone 250 mcg + salmeterol 50 mcg

**Advair Diskus 500**—(per actuation) fluticasone 500 mcg + salmeterol 50 mcg
**Advair HFA 45**—(per actuation) fluticasone 45 mcg + salmeterol 21 mcg
**Advair HFA 115**—(per actuation) fluticasone 115 mcg + salmeterol 21 mcg
**Advair HFA 230**—(per actuation) fluticasone 230 mcg + salmeterol 21 mcg
**Advicor 500/20**—extended-release niacin 500 mg + lovastatin 20 mg
**Advicor 750/20**—extended-release niacin 750 mg + lovastatin 20 mg
**Advicor 1000/20**—extended-release niacin 1000 mg + lovastatin 20 mg
**Advicor 1000/40**—extended-release niacin 1000 mg + lovastatin 40 mg
**Advil Cold & Sinus**—pseudoephedrine 30 mg + ibuprofen 200 mg **(OTC)**
**Advil Multi-Symptom Cold**—chlorpheniramine 2 mg + pseudoephedrine 30 mg + ibuprofen 200 mg **(OTC)**
**Advil PM Liquigels**—diphenhydramine 25 mg + ibuprofen 200 mg **(OTC)**
**Aggrenox**—aspirin 25 mg + extended-release dipyridamole 200 mg
**Alavert Allergy and Sinus**—loratadine 5 mg + pseudoephedrine 120 mg **(OTC)**
**Aldactazide 25/25**—hydrochlorothiazide 25 mg + spironolactone 25 mg
**Aldactazide 50/50**—hydrochlorothiazide 50 mg + spironolactone 50 mg
**Alesse**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Aleve-D Sinus & Cold**—naproxen 220 mg + extended-release pseudoephedrine 120 mg **(OTC)**
**Alka-Seltzer Effervescent, Original**—citric acid 1000 mg + sodium bicarbonate 1916 mg + aspirin 325 mg **(OTC)**
**Alka-Seltzer Effervescent, Extra-Strength**—citric acid 1000 mg + sodium bicarbonate 1985 mg + aspirin 500 mg **(OTC)**
**Alka-Seltzer Plus Cold & Cough Liqui-Gels**—dextromethorphan 10 mg + phenylephrine 5 mg + chlorpheniramine 2 mg + acetaminophen 325 mg **(OTC)**
**Alka-Seltzer Plus Night Cold Formula Liquid Gels**—acetaminophen 325 mg + doxylamine 6.25 mg + dextromethorphan 10 mg + phenylephrine 5 mg **(OTC)**
**Alka-Seltzer Plus Sinus Formula**—phenylephrine 7.8 mg + aspirin 325 mg **(OTC)**
**Allegra-D 12 Hour**—fexofenadine 60 mg + extended-release pseudoephedrine 120 mg
**Allegra-D 24 Hour**—fexofenadine 180 mg + extended-release pseudoephedrine 240 mg
**Allerfrim Syrup**—(per 5 ml) triprolidine 1.25 mg + pseudoephedrine 30 mg **(OTC)**
**Amoclan 200 Suspension**—(per 5 ml) amoxicillin 200 mg + clavulanate potassium 28.5 mg
**Amoclan 400 Suspension**—(per 5 ml) amoxicillin 400 mg + clavulanate potassium 57 mg
**Amoclan 600 Suspension**—(per 5 ml) amoxicillin 600 mg + clavulanate potassium 42.9 mg
**Anacin**—aspirin 400 mg + caffeine 32 mg **(OTC)**
**Anacin Max Strength**—aspirin 500 mg + caffeine 32 mg **(OTC)**
**Analpram Topical Cream**—1% hydrocortisone + 1% pramoxine
**Analpram Topical Lotion**—2.5% hydrocortisone + 1% pramoxine
**Anaplex DM Syrup**—(per 5 ml) brompheniramine 4 mg + dextromethorphan 30 mg + pseudoephedrine 60 mg
**Anexsia 5/325**—hydrocodone 5 mg + acetaminophen 325 mg
**Anexsia 5/500**—hydrocodone 5 mg + acetaminophen 500 mg
**Anexsia 7.5/325**—hydrocodone 7.5 mg + acetaminophen 325 mg
**Anexsia 7.5/650**—hydrocodone 7.5 mg + acetaminophen 650 mg
**Anexsia 10/750**—hydrocodone 10 mg + acetaminophen 750 mg
**Angeliq**—drosperinone 0.5 mg + estradiol 1 mg
**Apri**—desogestrel 0.15 mg + ethinyl estradiol 30 mcg
**Aranelle**
- **Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
- **Phase II**—norethindrone 1 mg + ethinyl estradiol 35 mcg
- **Phase III**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg

**Arthrotec 50/200**—diclofenac 50 mg + misoprostol 200 mcg
**Arthrotec 75/200**—diclofenac 75 mg + misoprostol 200 mcg
**Atacand HCT 16/12.5**—candesartan 16 mg + hydrochlorothiazide 12.5 mg
**Atacand HCT 32/12.5**—candesartan 32 mg + hydrochlorothiazide 12.5 mg
**Atacand HCT 32/25**—candesartan 32 mg + hydrochlorothiazide 25 mg

**Atacand Plus**—candesartan 16 mg + hydrochlorothiazide 12.5 mg
**Atripla**—efavirenz 600 mg + emtricitabine 200 mg + tenofovir 300 mg
**Augmentin 250**—amoxicillin 250 mg + clavulanate potassium 125 mg
**Augmentin 500**—amoxicillin 500 mg + clavulanate potassium 125 mg
**Augmentin 875**—amoxicillin 875 mg + clavulanate potassium 125 mg
**Augmentin XR**—amoxicillin 1000 mg + clavulanate potassium 62.5 mg
**Augmentin 125 Chewable**—amoxicillin 125 mg + clavulanate potassium 31.25 mg
**Augmentin 200 Chewable**—amoxicillin 200 mg + clavulanate potassium 28.5 mg
**Augmentin 250 Chewable**—amoxicillin 250 mg + clavulanate potassium 62.5 mg
**Augmentin 400 Chewable**—amoxicillin 400 mg + clavulanate potassium 57 mg
**Augmentin 125 mg Suspension**—(per 5 ml) amoxicillin 125 mg + clavulanate potassium 31.25 mg
**Augmentin 200 mg Suspension**—(per 5 ml) amoxicillin 200 mg + clavulanate potassium 28.5 mg
**Augmentin 250 mg Suspension**—(per 5 ml) amoxicillin 250 mg + clavulanate potassium 62.5 mg
**Augmentin 400 mg Suspension**—(per 5 ml) amoxicillin 400 mg + clavulanate potassium 57 mg
**Augmentin ES-600 Suspension**—(per 5 ml) amoxicillin 600 mg + clavulanate potassium 42.9 mg
**Avalide 150/12.5**—irbesartan 150 mg + hydrochlorothiazide 12.5 mg
**Avalide 300/12.5**—irbesartan 300 mg + hydrochlorothiazide 12.5 mg
**Avalide 300/25**—irbesartan 300 mg + hydrochlorothiazide 25 mg
**Avandamet 2/500**—rosiglitazone 2 mg + metformin 500 mg
**Avandamet 2/1000**—rosiglitazone 2 mg + metformin 1000 mg
**Avandamet 4/500**—rosiglitazone 4 mg + metformin 500 mg
**Avandamet 4/1000**—rosiglitazone 4 mg + metformin 1000 mg
**Avandaryl 4/1**—rosiglitazone 4 mg + glimepiride 1 mg
**Avandaryl 4/2**—rosiglitazone 4 mg + glimepiride 2 mg
**Avandaryl 4/4**—rosiglitazone 4 mg + glimepiride 4 mg
**Avandaryl 8/2**—rosiglitazone 8 mg + glimepiride 2 mg
**Avandaryl 8/4**—rosiglitazone 8 mg + glimepiride 4 mg
**Aviane**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Azor 5/20**—amlodipine 5 mg + olmesartan 20 mg
**Azor 5/40**—amlodipine 5 mg + olmesartan 40 mg
**Azor 10/20**—amlodipine 10 mg + olmesartan 20 mg
**Azor 10/40**—amlodipine 10 mg + olmesartan 40 mg
**Bactrim**—trimethoprim 80 mg + sulfamethoxazole 400 mg
**Bactrim DS**—trimethoprim 160 mg + sulfamethoxazole 800 mg
**Balziva**—norethindrone 0.4 mg + ethinyl estradiol 35 mcg
**Bayer Back & Body**—aspirin 500 mg + caffeine 32.5 mg **(OTC)**
**Bayer PM**—aspirin 500 mg + diphenhydramine 38.3 mg **(OTC)**
**Benadryl-D Allergy & Sinus Tablets**—phenylephrine 10 mg + diphenhydramine 25 mg **(OTC)**
**Benicar HCT 20/12.5**—olmesartan 20 mg + hydrochlorothiazide 12.5 mg
**Benicar HCT 40/12.5**—olmesartan 40 mg + hydrochlorothiazide 12.5 mg
**Benicar HCT 40/25**—olmesartan 40 mg + hydrochlorothiazide 25 mg
**BenzaClin Topical Gel**—1% clindamycin + 5% benzoyl peroxide
**Benzamycin Topical Gel**—5% benzoyl peroxide + 3% erythromycin
**Bicitra Solution**—(per 5 ml) sodium citrate 500 mg + citric acid 334 mg
**Bidil**—isosorbide dinitrate 20 mg + hydralazine 37.5 mg
**Blephamide Ophthalmic Suspension/Ointment**—0.2% prednisolone + 10% sodium sulfacetamide
**Brevicon**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Bromfed DM Liquid**—(per 5 mL) brompheniramine 2 mg + dextromethorphan 10 mg + pseudoephedrine 30 mg
**Bronkaid Dual Action**—ephedrine 25 mg + guaifenesin 400 mg **(OTC)**
**Bufferin**—aspirin 325 mg + calcium carbonate 158 mg + magnesium oxide 63 mg + magnesium carbonate 34 mg **(OTC)**
**Butapap 50/325**—butalbital 50 mg + acetaminophen 325 mg
**Butapap 50/650**—butalbital 50 mg + acetaminophen 650 mg
**Caduet 2.5/10**—amlodipine 2.5 mg + atorvastatin 10 mg

**Caduet 2.5/20**—amlodipine 2.5 mg + atorvastatin 20 mg
**Caduet 2.5/40**—amlodipine 2.5 mg + atorvastatin 40 mg
**Caduet 5/10**—amlodipine 5 mg + atorvastatin 10 mg
**Caduet 5/20**—amlodipine 5 mg + atorvastatin 20 mg
**Caduet 5/40**—amlodipine 5 mg + atorvastatin 40 mg
**Caduet 5/80**—amlodipine 5 mg + atorvastatin 80 mg
**Caduet 10/10**—amlodipine 10 mg + atorvastatin 10 mg
**Caduet 10/20**—amlodipine 10 mg + atorvastatin 20 mg
**Caduet 10/40**—amlodipine 10 mg + atorvastatin 40 mg
**Caduet 10/80**—amlodipine 10 mg + atorvastatin 80 mg
**Cafergot**—ergotamine 1 mg + caffeine 100 mg
**Caltrate 600+D**—vitamin D 200 IU + calcium 600 mg **(OTC)**
**Capozide 25/15**—captopril 25 mg + hydrochlorothiazide 15 mg
**Capozide 25/25**—captopril 25 mg + hydrochlorothiazide 25 mg
**Capozide 50/15**—captopril 50 mg + hydrochlorothiazide 15 mg
**Capozide 50/25**—captopril 50 mg + hydrochlorothiazide 25 mg
**Cesia**
**Phase I**—desogestrel 0.1 mg + ethinyl estradiol 25 mcg
**Phase II**—desogestrel 0.25 mg + ethinyl estradiol 25 mcg
**Phase III**—desogestrel 0.15 mg + ethinyl estradiol 25 mcg
**Cetacaine Topical Spray**—14% benzocaine + 2% tetracaine + 2% butamben + 0.005% cetyl dimethyl ethyl ammonium bromide
**Cheracol Cough Syrup**—(per 5 mL) codeine 10 mg + guaifenesin 100 mg
**Children's Advil Cold Liquid**—(per 5 mL) ibuprofen 100 mg + pseudoephedrine 15 mg **(OTC)**
**Chlor-Trimeton 4 Hour Relief**—pseudoephedrine 60 mg + chlorpheniramine 4 mg **(OTC)**
**Chlor-Trimeton 12 Hour Relief**—pseudoephedrine 120 mg + chlorpheniramine 8 mg **(OTC)**
**Ciprodex Otic Suspension**—0.3% ciprofloxacin + 0.1% dexamethasone
**Cipro HC Otic Suspension**—0.2% ciprofloxacin + 1% hydrocortisone
**Clarinex-D 12 Hour**—desloratadine 2.5 mg + pseudoephedrine 120 mg
**Clarinex-D 24 Hour**—desloratadine 5 mg + pseudoephedrine 120 mg
**Claritin-D 12 Hour**—loratadine 5 mg + pseudoephedrine 120 mg **(OTC)**
**Claritin-D 24-Hour**—loratadine 10 mg + pseudoephedrine 240 mg **(OTC)**
**Clavulin 500**—amoxicillin 500 mg +clavulanic acid 125 mg
**Clavulin 875**—amoxicillin 875 mg + clavulanic acid 125 mg
**Clavulin 125 Suspension**—(per 5 mL) amoxicillin 125 mg + clavulanic acid 31.25 mg
**Clavulin 200 Suspension**—(per 5 mL) amoxicillin 200 mg + clavulanic acid 28.5 mg
**Clavulin 250 Suspension**—(per 5 mL) amoxicillin 250 mg + clavulanic acid 62.5 mg
**Clavulin 400 Suspension**—(per 5 mL) amoxicillin 400 mg + clavulanic acid 57 mg
**ClimaraPro Transdermal Patch (release per day)**—estradiol 0.045 mg + levonorgestrel 0.015 mg
**Clorpres 15/0.1**—chlorthalidone 15 mg + clonidine 0.1 mg
**Clorpres 15/0.2**—chlorthalidone 15 mg + clonidine 0.2 mg
**Clorpres 15/0.3**—chlorthalidone 15 mg + clonidine 0.3 mg
**Co-Gesic**—acetaminophen 500 mg + hydrocodone 5 mg
**Codimal**—pseudoephedrine 30 mg + chlorpheniramine 2 mg + acetaminophen 325 mg **(OTC)**
**Codimal DH Syrup**—(per 5 mL) hydrocodone 1.66 mg + phenylephrine 5 mg + pyrilamine 8.33 mg
**Codimal DM Syrup**—(per 5 mL) phenylephrine 5 mg + pyrilamine 8.33 mg + dextromethorphan 10 mg **(OTC)**
**Codimal-L.A.**—chlorpheniramine 8 mg + pseudoephedrine 120 mg
**Codimal PH Syrup**—(per 5 mL) codeine 10 mg + phenylephrine 5 mg + pyrilamine 8.33 mg
**Col-Probenecid**—probenecid 500 mg + colchicine 0.5 mg
**Coly-Mycin S Otic Suspension**—1% hydrocortisone + neomycin base 3.3 mg/mL + colistin 3 mg/mL + 0.05% thonzonium bromide
**Colyte**—PEG 3350 240 g + sodium sulfate 22.72 g + sodium bicarbonate 6.72 g + sodium chloride 5.84 g + potassium chloride 2.98 g
**Combigan Ophthalmic Solution**—0.2% brimonidine + 0.5% timolol

**CombiPatch 0.05/0.14**—estradiol 0.05 mg/day + norethindrone 0.14 mg/day
**CombiPatch 0.05/0.25**—estradiol 0.05 mg/day + norethindrone 0.25 mg/day
**Combivent**—(per actuation) ipratropium bromide 18 mcg + albuterol 103 mcg
**Combivir**—lamivudine 150 mg + zidovudine 300 mg
**Combunox**—oxycodone 5 mg + ibuprofen 400 mg
**Congestac**—guaifenesin 400 mg + pseudoephedrine 60 mg **(OTC)**
**Contac Cold & Flu Maximum Strength Caplets**—chlorpheniramine 2 mg + phenylephrine 5 mg + acetaminophen 500 mg **(OTC)**
**Contac Cold & Flu Non-Drowsy Maximum Strength Caplets**—phenylephrine 5 mg + acetaminophen 500 mg **(OTC)**
**Coricidin HBP Chest Congestion and Cough**—dextromethorphan 10 mg + guaifenesin 200 mg **(OTC)**
**Coricidin HBP Cold and Flu**—acetaminophen 325 mg + chlorpheniramine 2 mg **(OTC)**
**Coricidin HBP Cough and Cold**—chlorpheniramine 4 mg + dextromethorphan 30 mg **(OTC)**
**Coricidin HBP Maximum Strength Flu**—acetaminophen 500 mg + chlorpheniramine 2 mg + dextromethorphan 15 mg **(OTC)**
**Cortisporin Otic Solution/Suspension**—(per mL) neomycin 3.5 mg + polymyxin B 10,000 units + hydrocortisone 10 mg
**Cortisporin Topical Cream**—(per g) neomycin 3.5 mg + polymyxin B 10,000 units + hydrocortisone 5 mg
**Corzide 40/5**—nadolol 40 mg + bendroflumethiazide 5 mg
**Corzide 80/5**—nadolol 80 mg + bendroflumethiazide 5 mg
**Cosopt Ophthalmic Solution**—2% dorzolamide + 0.5% timolol
**Coversyl Plus**—perindopril 4 mg + indapamide 1.25 mg
**Coversyl Plus LD**—perindopril 2 mg + indapamide 0.625 mg
**Creon**—lipase 6000 units + amylase 30,000 units + protease 19,000 units
**Creon**—lipase 12,000 units + amylase 60,000 units + protease 38,000 units
**Creon**—lipase 24,000 units + amylase 120,00 units + protease 76,000 units
**Cryselle**—norgestrel 0.3 mg + ethinyl estradiol 30 mcg
**Cyclessa**
- **Phase I**—desogestrel 0.1 mg + ethinyl estradiol 25 mcg
- **Phase II**—desogestrel 0.125 mg + ethinyl estradiol 25 mcg
- **Phase III**—desogestrel 0.15 mg + ethinyl estradiol 25 mcg

**Cyclomydril Ophthalmic Solution**—0.2% cyclopentolate + 1% phenylephrine
**Dallergy Caplets**—chlorpheniramine 8 mg + phenylephrine 20 mg + methscopolamine 2.5 mg
**Dallergy Extended Release**—phenylephrine 20 mg + chlorpheniramine 12 mg + methscopolamine 2.5 mg
**Dallergy-JR Capsules**—phenylephrine 20 mg + chlorpheniramine 4 mg
**Dallergy Syrup**—(per 5 mL) chlorpheniramine 2 mg + phenylephrine 8 mg + methscopolamine 0.75 mg
**Dallergy Tablets**—chlorpheniramine 4 mg + phenylephrine 10 mg + methscopolamine 1.25 mg
**Damason-P**—hydrocodone 5 mg + aspirin 500 mg
**Darvocet A500**—propoxyphene napsylate 100 mg + acetaminophen 500 mg
**Darvocet-N 50**—propoxyphene napsylate 50 mg + acetaminophen 325 mg
**Darvocet-N 100**—propoxyphene napsylate 100 mg + acetaminophen 650 mg
**Dayquil Cold & Flu Relief Liquid**—(per 5 mL) acetaminophen 325 mg + dextromethorphan 10 mg + phenylephrine 5 mg **(OTC)**
**Dayquil Sinus Liquicaps**—acetaminophen 325 mg + phenylephrine 5 mg **(OTC)**
**Deconamine**—pseudoephedrine 60 mg + chlorpheniramine 4 mg
**Deconamine SR**—pseudoephedrine 120 mg + chlorpheniramine 8 mg
**Deconamine Syrup**—(per 5 mL) pseudoephedrine 30 mg + chlorpheniramine 2 mg
**Desogen**—ethinyl estradiol 30 mcg + desogestrel 0.15 mg
**Difil-G Forte Liquid**—(per 5 mL) dyphylline 100 mg + guaifenesin 100 mg
**Difil-G Tablets**—dyphylline 200 mg + guaifenesin 300 mg
**Dilex-G Syrup**—(per 5 mL) dyphylline 100 mg + guaifenesin 200 mg
**Dilex G Tablets**—dyphylline 200 mg + guaifenesin 400 mg

**Dimetapp Cold & Allergy Elixir**—(per 5 mL) phenylephrine 2.5 mg + brompheniramine 1 mg **(OTC)**
**Dimetapp Cough & Cold DM Elixir**—(per 5 mL) phenylephrine 2.5 mg + brompheniramine 1 mg + dextromethorphan 5 mg **(OTC)**
**Dimetapp Long-Acting Cough Plus Cold Elixir**—(per 5 mL) chlorpheniramine 1 mg + dextromethorphan 7.5 mg **(OTC)**
**Dimetapp Cold & Congestion Elixir**—(per 5 mL) diphenhydramine 6.25 mg + phenylephrine 2.5 mg **(OTC)**
**Diovan HCT 80/12.5**—valsartan 80 mg + hydrochlorothiazide 12.5 mg
**Diovan HCT 160/12.5**—valsartan 160 mg + hydrochlorothiazide 12.5 mg
**Diovan HCT 160/25**—valsartan 160 mg + hydrochlorothiazide 25 mg
**Diovan HCT 320/12.5**—valsartan 320 mg + hydrochlorothiazide 12.5 mg
**Diovan HCT 320/25**—valsartan 320 mg + hydrochlorothiazide 25 mg
**Donnatal**—phenobarbital 16.2 mg + hyoscyamine 0.1037 mg + atropine 0.0194 mg + scopolamine 0.0065 mg
**Donnatal Elixir**—(per 5 mL) phenobarbital 16.2 mg + hyoscyamine 0.1037 mg + atropine 0.0194 mg + scopolamine 0.0065 mg + 23% alcohol
**Donnatal Extentabs**—phenobarbital 48.6 mg + hyoscyamine 0.3111 mg + atropine 0.0582 mg + scopolamine 0.0195 mg
**Dristan Cold Multi-Symptom Formula**—acetaminophen 325 mg + phenylephrine 5 mg + chlorpheniramine 2 mg **(OTC)**
**Duac CS Topical Gel**—1% clindamycin + 5% benzoyl peroxide
**Duetact 2/30**—glimepiride 2 mg + pioglitazone 30 mg
**Duetact 4/30**—glimepiride 4 mg + pioglitazone 30 mg
**DuoNeb**—(per 3 mL) albuterol sulfate 2.5 mg + ipratropium bromide 0.5 mg inhalation solution
**Dyazide**—hydrochlorothiazide 25 mg + triamterene 37.5 mg
**Elixophyllin-GG Liquid**—(per 15 mL) guaifenesin 100 mg + theophylline 100 mg
**Embeda 20/0.8**—morphine sulfate 20 mg + naltrexone 0.8 mg
**Embeda 30/1.2**—morphine sulfate 30 mg + naltrexone 1.2 mg
**Embeda 50/2**—morphine sulfate 50 mg + naltrexone 2 mg
**Embeda 60/2.4**—morphine sulfate 60 mg + naltrexone 2.4 mg
**Embeda 80/3.2**—morphine sulfate 80 mg + naltrexone 3.2 mg
**Embeda 100/4**—morphine sulfate 100 mg + naltrexone 4 mg
**EMLA Topical Cream**—2.5% lidocaine + 2.5% prilocaine
**Empresse**
- **Phase I**—levonorgestrel 0.05 mg + ethinyl estradiol 30 mcg
- **Phase II**—levonorgestrel 0.075 mg + ethinyl estradiol 40 mcg
- **Phase III**—levonorgestrel 0.125 mg + ethinyl estradiol 30 mcg

**Endocet 5/325**—oxycodone 5 mg + acetaminophen 325 mg
**Endocet 7.5/325**—oxycodone 7.5 mg + acetaminophen 325 mg
**Endocet 7.5/500**—oxycodone 7.5 mg + acetaminophen 500 mg
**Endocet 10/325**—oxycodone 10 mg + acetaminophen 325 mg
**Endocet 10/650**—oxycodone 10 mg + acetaminophen 650 mg
**Endodan**—oxycodone 4.88 mg + aspirin 325 mg
**Enlon Plus**—edrophonium 10 mg/mL + atropine 0.14 mg/mL
**Enpresse 28**
- **Phase I**—levonorgestrel 0.05 mg + ethinyl estradiol 30 mcg
- **Phase II**—levonorgestrel 0.075 mg + ethinyl estradiol 40 mcg
- **Phase III**—levonorgestrel 0.125 mg + ethinyl estradiol 30 mcg

**Epifoam Aerosol Foam**—1% hydrocortisone + 1% pramoxine
**Epzicom**—abacavir 600 mg + lamivudine 300 mg
**Esgic**—butalbital 50 mg + acetaminophen 325 mg + caffeine 40 mg
**Esgic-Plus**—butalbital 50 mg + acetaminophen 500 mg + caffeine 40 mg
**Estrostep Fe**
- **Phase I**—norethindrone 1 mg + ethinyl estradiol 20 mcg
- **Phase II**—norethindrone 1 mg + ethinyl estradiol 30 mcg

**Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Phase IV**—ferrous fumarate 75 mg
**Excedrin Back and Body**—acetaminophen 250 mg + aspirin 250 mg **(OTC)**
**Excedrin Extra Strength**—acetaminophen 250 mg + aspirin 250 mg + caffeine 65 mg **(OTC)**
**Excedrin Migraine**—aspirin 250 mg + acetaminophen 250 mg + caffeine 65 mg **(OTC)**
**Excedrin P.M.**—acetaminophen 500 mg + diphenhydramine citrate 38 mg **(OTC)**
**Excedrin Sinus Headache**—phenylephrine 5 mg + acetaminophen 325 mg **(OTC)**
**Excedrin Tension Headache**—acetaminophen 500 mg + caffeine 65 mg **(OTC)**
**Exforge 5/160**—amlodipine 5 mg + valsartan 160 mg
**Exforge 5/320**—amlodipine 5 mg + valsartan 320 mg
**Exforge 10/160**—amlodipine 10 mg + valsartan 160 mg
**Exforge 10/320**—amlodipine 10 mg + valsartan 320 mg
**Fansidar**—sulfidoxine 500 mg + pyrimethamine 25 mg
**Femcon Fe**—norethindrone 0.4 mg + ethinyl estradiol 35 mcg + ferrous fumarate 75 mg
**Femhrt 0.5/2.5**—norethindrone 0.5 mg + ethinyl estradiol 2.5 mcg
**Femhrt 1/5**—norethindrone 1 mg + ethinyl estradiol 5 mcg
**Ferro-Sequels**—docusate sodium 100 mg + ferrous fumarate 150 mg **(OTC)**
**Fioricet**—acetaminophen 325 mg + caffeine 40 mg + butalbital 50 mg
**Fioricet with codeine**—acetaminophen 325 mg + caffeine 40 mg + butalbital 50 mg + codeine 30 mg
**Fiorinal**—aspirin 325 mg + caffeine 40 mg + butalbital 50 mg
**Fiorinal with codeine**—aspirin 325 mg + caffeine 40 mg + butalbital 50 mg + codeine 30 mg
**Fosamax Plus D 70/2800**—alendronate 70 mg + cholecalciferol 2800 IU
**Fosamax Plus D 70/5600**—alendronate 70 mg + cholecalciferol 5600 IU
**FML-S Ophthalmic Suspension**—0.1% fluorometholone + 10% sulfacetamide
**Gas-Ban**—calcium carbonate 300 mg + simethicone 40 mg **(OTC)**
**Gaviscon Extra Strength**—magnesium carbonate 105 mg + aluminum hydroxide 160 mg **(OTC)**
**Gaviscon Extra-Strength Liquid**—(per 5 mL) aluminum hydroxide 254 mg + magnesium carbonate 237.5 mg **(OTC)**
**Gaviscon Liquid**—(per 5 mL) aluminum hydroxide 31.7 mg + magnesium carbonate 119.3 mg **(OTC)**
**Gaviscon Regular Strength**—magnesium trisilicate 14.2 mg + aluminum hydroxide 80 mg **(OTC)**
**Gelusil**—aluminum hydroxide 200 mg + magnesium hydroxide 200 mg + simethicone 25 mg **(OTC)**
**Genac Tablets**—triprolidine 2.5 mg + pseudoephedrine 60 mg **(OTC)**
**Genatuss DM Syrup**—(per 5 mL) guaifenesin 100 mg + dextromethorphan 10 mg **(OTC)**
**Glucovance 1.25/250**—glyburide 1.25 mg + metformin 250 mg
**Glucovance 2.5/500**—glyburide 2.5 mg + metformin 500 mg
**Glucovance 5/500**—glyburide 5 mg + metformin 500 mg
**Golytely**—PEG 3350 236 g + sodium sulfate 22.74 g + sodium bicarbonate 6.74 g + sodium chloride 5.86 g + potassium chloride 2.97 g
**Golytely Packets**—PEG 3350 227.1 g + sodium sulfate 21.5 g + sodium bicarbonate 6.36 g + sodium chloride 5.53 g + potassium chloride 2.82 g
**Granulex Topical Aerosol**—(per 0.8 mL) trypsin 0.12 mg + Balsam Peru 87 mg + castor oil 788 mg
**Guaituss AC Syrup**—(per 5 mL) codeine 10 mg + guaifenesin 100 mg
**Helidac**—bismuth subsalicylate 262.4-mg tablets plus metronidazole 250-mg tablets plus tetracycline 500-mg capsules in a compliance package
**Humalog Mix 50/50**—insulin lispro protamine suspension 50% + insulin lispro solution 50%
**Humalog Mix 75/25**—insulin lispro protamine suspension 75% + insulin lispro solution 25%
**Hycomine Compound**—chlorpheniramine 2 mg + acetaminophen 250 mg + phenylephrine 10 mg + hydrocodone 5 mg + caffeine 30 mg
**Hycotuss Expectorant**—(per 5 mL) guaifenesin 100 mg + hydrocodone 5 mg + 10% alcohol
**Hydromet Syrup**—(per 5 mL) hydrocodone 5 mg + homatropine 1.5 mg
**Hyzaar 50/12.5**—losartan 50 mg + hydrochlorothiazide 12.5 mg
**Hyzaar 100/12.5**—losartan 100 mg + hydrochlorothiazide 12.5 mg
**Hyzaar 100/25**—losartan 100 mg + hydrochlorothiazide 25 mg

**Ibudone 5/200**—hydrocodone 5 mg + ibuprofen 200 mg
**Ibudone 10/200**—hydrocodone 10 mg + ibuprofen 200 mg
**Imodium Multi-Symptom Relief**—loperamide 2 mg + simethicone 125 mg **(OTC)**
**Inderide 40/25**—propranolol 40 mg + hydrochlorothiazide 25 mg
**IsonaRif**—isoniazid 150 mg + rifampin 300 mg
**Janumet 50/500**—sitagliptin 50 mg + metformin 500 mg
**Janumet 50/1000**—sitagliptin 50 mg + metformin 1000 mg
**Jolessa**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Junel 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg
**Junel 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg
**Junel Fe 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg with 7 tablets of ferrous fumarate 75 mg per container
**Junel Fe 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg with 7 tablets of ferrous fumarate 75 mg per container
**Kaletra 100/25 capsules**—lopinavir 100 mg + ritonavir 25 mg
**Kaletra 200/50 capsules**—lopinavir 200 mg + ritonavir 50 mg
**Kaletra solution**—(per mL) lopinavir 80 mg + ritonavir 20 mg
**Kariva**—desogestrel 0.15 mg + ethinyl estradiol 20 mcg/10 mcg
**Kelnor**—ethinyl estradiol 35 mcg + ethynodiol 1 mg
**Lactinex**—mixed culture of *Lactobacillus acidophilus* and *L. bulgaricus* **(OTC)**
**Leena**
- **Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
- **Phase II**—norethindrone 1 mg + ethinyl estradiol 35 mcg
- **Phase III**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg

**Lessina**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Levlen**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Levlite**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Levora**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Librax**—chlordiazepoxide 5 mg + clidinium 2.5 mg
**Lida-Mantle-HC Topical Cream**—0.5% hydrocortisone + 3% lidocaine
**Limbitrol 5/12.5**—chlordiazepoxide 5 mg + amitriptyline 12.5 mg
**Limbitrol DS 10/25**—chlordiazepoxide 10 mg + amitriptyline 25 mg
**Loestrin 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg
**Loestrin 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg
**Loestrin Fe 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg with 7 tablets of ferrous fumarate 75 mg per container
**Loestrin Fe 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg with 7 tablets of ferrous fumarate 75 mg per container
**Lomotil**—diphenoxylate 2.5 mg + atropine 0.025 mg
**Lomotil Liquid**—(per 5 mL) diphenoxylate 2.5 mg + atropine 0.025 mg
**Lonox**—diphenoxylate 2.5 mg + atropine 0.025 mg
**Lo/Ovral**—ethinyl estradiol 30 mcg + norgestrel 0.3 mg
**Lopressor HCT 50/25**—metoprolol tartrate 50 mg + hydrochlorothiazide 25 mg
**Lopressor HCT 100/25**—metoprolol tartrate 100 mg + hydrochlorothiazide 25 mg
**Lopressor HCT 100/50**—metoprolol tartrate 100 mg + hydrochlorothiazide 50 mg
**Lorcet 10/650**—hydrocodone 10 mg + acetaminophen 650 mg
**Lorcet-HD**—hydrocodone 10 mg + acetaminophen 500 mg
**Lorcet Plus**—hydrocodone 7.5 mg + acetaminophen 650 mg
**Lortab 5/500**—hydrocodone 5 mg + acetaminophen 500 mg
**Lortab 7.5/500**—hydrocodone 7.5 mg + acetaminophen 500 mg
**Lortab 10/500**—hydrocodone 10 mg + acetaminophen 500 mg
**Lortab Elixir**—(per 5 mL) hydrocodone 2.5 mg + acetaminophen 167 mg
**LoSeasonique**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Losec 1-2-3 A**—omeprazole 20 mg (14 doses), clarithromycin 500 mg (14 doses), amoxicillin 1 g (14 doses) in a convenience package

**Losec 1-2-3 M**—omeprazole 20 mg (14 doses), clarithromycin 250 mg (14 doses), metronidazole 500 mg (14 doses) in a convenience package
**Lotensin HCT 5/6.25**—benazepril 5 mg + hydrochlorothiazide 6.25 mg
**Lotensin HCT 10/12.5**—benazepril 10 mg + hydrochlorothiazide 12.5 mg
**Lotensin HCT 20/12.5**—benazepril 20 mg + hydrochlorothiazide 12.5 mg
**Lotensin HCT 20/25**—benazepril 20 mg + hydrochlorothiazide 25 mg
**Lotrel 2.5/10**—amlodipine 2.5 mg + benazepril 10 mg
**Lotrel 5/10**—amlodipine 5 mg + benazepril 10 mg
**Lotrel 5/20**—amlodipine 5 mg + benazepril 20 mg
**Lotrel 5/40**—amlodipine 5 mg + benazepril 40 mg
**Lotrel 10/20**—amlodipine 10 mg + benazepril 20 mg
**Lotrel 10/40**—amlodipine 10 mg + benazepril 40 mg
**Lotrisone Topical Cream/Lotion**—0.05% betamethasone + 1% clotrimazole
**Low-Ogestrel**—norgestrel 0.3 mg + ethinyl estradiol 30 mcg
**Lufyllin-GG Elixir**—(per 15 mL) dyphylline 100 mg + guaifenesin 100 mg
**Lufyllin-GG Tablets**—dyphylline 200 mg + guaifenesin 200 mg
**Lutera**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Lybrel**—levonorgestrel 0.09 mg + ethinyl estradiol 20 mcg
**Maalox Advanced Maximum Strength Chewables**—calcium carbonate 1000 mg + simethicone 60 mg **(OTC)**
**Maalox Advanced Maximum Strength Liquid**—(per 5 mL) aluminum hydroxide 400 mg + magnesium hydroxide 400 mg + simethicone 40 mg **(OTC)**
**Maalox Advanced Regular Strength Liquid**—(per 5 mL) aluminum hydroxide 200 mg + magnesium hydroxide 200 mg + simethicone 20 mg **(OTC)**
**Magnacet 2.5/400**—oxycodone 2.5 mg + acetaminophen 400 mg
**Magnacet 5/400**—oxycodone 5 mg + acetaminophen 400 mg
**Magnacet 7.5/400**—oxycodone 7.5 mg + acetaminophen 400 mg
**Magnacet 10/400**—oxycodone 10 mg + acetaminophen 400 mg
**Malarone**—atovaquone 250 mg + proguanil 100 mg
**Malarone Pediatric**—atovaquone 62.5 mg + proguanil 25 mg
**Mapap Multi-Symptom Cold**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Marvelon**—ethinyl estradiol 30 mcg + desogestrel 0.15 mg
**Maxitrol Ophthalmic Suspension/Ointment**—(per g) neomycin 3.5 mg + 0.1% dexamethasone + polymyxin B 10,000 units
**Maxzide**—hydrochlorothiazide 50 mg + triamterene 75 mg
**Maxzide-25**—hydrochlorothiazide 25 mg + triamterene 37.5 mg
**Metaglip 2.5/250**—glipizide 2.5 mg + metformin 250 mg
**Metaglip 2.5/500**—glipizide 2.5 mg + metformin 500 mg
**Metaglip 5/500**—glipizide 5 mg + metformin 500 mg
**Micardis HCT 40/12.5**—telmisartan 40 mg + hydrochlorothiazide 12.5 mg
**Micardis HCT 80/12.5**—telmisartan 80 mg + hydrochlorothiazide 12.5 mg
**Micardis HCT 80/25**—telmisartan 80 mg + hydrochlorothiazide 25 mg
**Microgestin 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg
**Microgestin 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg
**Microgestin Fe 1/20**—norethindrone 1 mg + ethinyl estradiol 20 mcg per tablet with 7 tablets of ferrous fumarate 75 mg per container
**Microgestin Fe 1.5/30**—norethindrone 1.5 mg + ethinyl estradiol 30 mcg per tablet with 7 tablets of ferrous fumarate 75 mg per container
**Midol Menstrual Complete**—acetaminophen 500 mg + caffeine 60 mg + pyrilamine 15 mg **(OTC)**
**Midol Teen Formula**—acetaminophen 500 mg + pamabrom 25 mg **(OTC)**
**Midrin**—isometheptene 65 mg + acetaminophen 325 mg + dichloralphenazone 100 mg
**Migergot Suppositories**—ergotamine 2 mg + caffeine 100 mg
**Mircette**—desogestrel 0.15 mg + ethinyl estradiol 20 mcg/10 mcg
**Modicon**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg

**Moduret**—amiloride 5 mg + hydrochlorothiazide 50 mg
**Mononessa**—ethinyl estradiol 35 mcg + norgestimate 0.25 mg
**Motofen**—difenoxin 1 mg + atropine 0.025 mg
**Motrin Children's Cold Suspension**—(per 5 mL) ibuprofen 100 mg + pseudoephedrine 15 mg **(OTC)**
**Mucinex Cold Liquid**—(per 5 mL) guaifenesin 100 mg + phenylephrine 2.5 mg **(OTC)**
**Mucinex Cough Mini-Melts**—guaifenesin 100 mg + dextromethorphan 5 mg **(OTC)**
**Mucinex Cough Liquid**—(per 5 mL) guaifenesin 100 mg + dextromethorphan 5 mg **(OTC)**
**Mucinex D**—guaifenesin 600 mg + pseudoephedrine 60 mg **(OTC)**
**Mucinex D Maximum Strength**—guaifenesin 1200 mg + pseudoephedrine 120 mg **(OTC)**
**Mucinex DM**—guaifenesin 600 mg + dextromethorphan 30 mg **(OTC)**
**Mucinex DM Maximum Strength**—guaifenesin 1200 mg + dextromethorphan 60 mg **(OTC)**
**Murocoll-2 Ophthalmic Solution**—0.3% scopolamine + 10% phenylephrine
**Mylanta Regular Strength Liquid**—(per 5 mL) aluminum hydroxide 200 mg + magnesium hydroxide 200 mg + simethicone 20 mg **(OTC)**
**Mylanta Maximum Strength Liquid**—(per 5 mL) aluminum hydroxide 400 mg + magnesium hydroxide 400 mg + simethicone 40 mg **(OTC)**
**Mylanta Supreme Liquid**—(per 5 mL) calcium carbonate 400 mg + magnesium hydroxide 135 mg **(OTC)**
**Mylanta Ultimate Strength Chewables**—calcium carbonate 700 mg + magnesium hydroxide 300 mg **(OTC)**
**Mylanta Ultimate Strength Liquid**—(per 5 mL) aluminum hydroxide 500 mg + magnesium hydroxide 500 mg **(OTC)**
**Naphcon-A Ophthalmic Solution**—0.025% naphazoline + 0.3% pheniramine **(OTC)**
**Nasatab LA**—guaifenesin 500 mg + pseudoephedrine 120 mg
**Necon 0.5/35**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Necon 1/35**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Necon 7/7/7**
  **Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
  **Phase II**—norethindrone 0.75 mg + ethinyl estradiol 35 mcg
  **Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Necon 10/11–28**
  **Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
  **Phase II**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Neosporin Antibiotic Topical Ointment**—(per g) neomycin 3.5 mg + bacitracin 400 units + polymyxin B 5000 units **(OTC)**
**Neosporin G.U. Irrigant**—(per mL) neomycin 40 mg + polymyxin B 200,000 units
**Neosporin Ophthalmic Solution**—(per mL) polymyxin B 10,000 units + neomycin 1.75 mg + gramicidin 0.025 mg
**Neosporin + Pain Relief Antibiotic Topical Cream**—(per g) neomycin 3.5 mg + polymyxin B 10,000 units + pramoxine 10 mg **(OTC)**
**Neosporin + Pain Relief Antibiotic Topical Ointment**—(per g) neomycin 3.5 mg + polymyxin B 10,000 units + bacitracin 500 units + pramoxine 10 mg **(OTC)**
**Niferex-150 Forte**—ferrous sulfate 150 mg + vitamin B12 25 mcg + folic acid 1 mg
**Norco 5/325**—hydrocodone 5 mg + acetaminophen 325 mg
**Norco 7.5/325**—hydrocodone 7.5 mg + acetaminophen 325 mg
**Norco 10/325**—hydrocodone 10 mg + acetaminophen 325 mg
**Nordette**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Norgesic**—orphenadrine 25 mg + caffeine 30 mg + aspirin 385 mg
**Norgesic Forte**—orphenadrine 50 mg + caffeine 60 mg + aspirin 770 mg
**Norinyl 1/35**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Norinyl 1/50**—norethindrone 1 mg + mestranol 50 mcg
**Nortrel 0.5/35**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Nortrel 1/35**—norethindrone 1 mg + ethinyl estradiol 35 mcg

**Nortrel 7/7/7**
**Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Phase II**—norethindrone 0.75 mg + ethinyl estradiol 35 mcg
**Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**NuLytely**—PEG 3350 420 g + sodium bicarbonate 5.72 g + sodium chloride 11.2 g + potassium chloride 1.48 g
**Nuvaring**—etonogestrel 0.12 mg/day + ethinyl estradiol 15 mcg/day
**Nyquil Children's Liquid**—(per 15 mL) dextromethorphan 15 mg + chlorpheniramine 2 mg **(OTC)**
**Nyquil Cold & Flu Relief Liquicaps**—acetaminophen 325 mg + dextromethorphan 15 mg + doxylamine 6.25 mg **(OTC)**
**Nyquil Cold & Flu Symptom Relief Plus Vitamin C Caplets**—acetaminophen 325 mg + dextromethorphan 15 mg + doxylamine 6.25 mg + ascorbic acid 100 mg **(OTC)**
**Nyquil Cold & Flu Relief Liquid**—(per 15 mL) acetaminophen 500 mg + dextromethorphan 15 mg + doxylamine 6.25 mg **(OTC)**
**Nyquil Cough Liquid**—(per 15 mL) dextromethorphan 15 mg + doxylamine 6.25 mg **(OTC)**
**Nyquil D Liquid**—(per 15 mL) acetaminophen 500 mg + dextromethorphan 15 mg + doxylamine 6.25 mg + pseudoephedrine 30 mg **(OTC)**
**Nyquil Less Drowsy Cold & Flu Relief Liquid**—(per 15 mL) acetaminophen 325 mg + dextromethorphan 15 mg + chlorpheniramine 2 mg **(OTC)**
**Nyquil Sinus Liquicaps**—acetaminophen 325 mg + doxylamine 6.25 mg + phenylephrine 5 mg **(OTC)**
**Ocella**—drosperinone 3 mg + ethinyl estradiol 30 mcg
**Ogestrel**—norgestrel 0.5 mg + ethinyl estradiol 50 mcg
**Opcon-A Ophthalmic Solution**—0.027% naphazoline + 0.3% pheniramine **(OTC)**
**Optase Topical Gel**—(per g) trypsin 0.12 mg + Balsam Peru 87 mg + castor oil 788 mg
**Oraqix Periodontal Gel**—2.5% lidocaine + 2.5% prilocaine
**Ornex**—pseudoephedrine 30 mg + acetaminophen 325 mg **(OTC)**
**Ornex Maximum Strength**—pseudoephedrine 30 mg + acetaminophen 500 mg **(OTC)**
**Ortho-Cept**—ethinyl estradiol 30 mcg + desogestrel 0.15 mg
**Ortho-Cyclen**—ethinyl estradiol 35 mcg + norgestimate 0.25 mg
**Ortho-Evra**—norelgestromin 150 mcg/day + ethinyl estradiol 20 mcg/day
**Ortho-Novum 1/35**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Ortho-Novum 1/50**—norethindrone 1 mg + mestranol 50 mcg
**Ortho-Novum 10/11–28**
**Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Phase II**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Ortho-Novum 7/7/7–28**
**Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Phase II**—norethindrone 0.75 mg + ethinyl estradiol 35 mcg
**Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Ortho-Prefest**—estradiol 1 mg (15 tablets) and estradiol 1 mg + norgestimate 0.09 mg (15 tablets) in a 30-tablet blister package
**Ortho Tri-Cyclen**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 35 mcg
**Phase II**—norgestimate 0.215 mg + ethinyl estradiol 35 mcg
**Phase III**—norgestimate 0.25 mg + ethinyl estradiol 35 mcg
**Ortho Tri-Cyclen Lo**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 25 mcg
**Phase II**—norgestimate 0.215 mg + ethinyl estradiol 25 mcg
**Phase III**—norgestimate 0.25 mg + ethinyl estradiol 25 mcg
**Ovcon-35**—ethinyl estradiol 35 mcg + norethindrone 0.4 mg
**Ovcon-50**—ethinyl estradiol 50 mcg + norethindrone 1 mg
**P-V-Tussin**—hydrocodone 5 mg + pseudoephedrine 60 mg
**Pamprin Cramp**—acetaminophen 250 mg + pamabrom 25 mg + magnesium salicylate 250 mg **(OTC)**
**Pamprin Max**—acetaminophen 250 mg + aspirin 250 mg + caffeine 65 mg **(OTC)**
**Pamprin Multi-Symptom**—acetaminophen 500 mg + pamabrom 25 mg + pyrilamine 15 mg **(OTC)**

**Pancrease MT 4**—lipase 4000 units + amylase 12,000 units + protease 12,000 units
**Pancrease MT 10**—lipase 10,000 units + amylase 30,000 units + protease 30,000 units
**Pancrease MT 16**—lipase 16,000 units + amylase 48,000 units + protease 48,000 units
**Pancrease MT 20**—lipase 20,000 units + amylase 56,000 units + protease 44,000 units
**Parcopa 10/100**—carbidopa 10 mg + levodopa 100 mg
**Parcopa 25/100**—carbidopa 25 mg + levodopa 100 mg
**Parcopa 25/250**—carbidopa 25 mg + levodopa 250 mg
**Pediacare Children's Allergy & Cold Liquid**—(per 5 mL) phenylephrine 5 mg + diphenhydramine 12.5 mg **(OTC)**
**Pediacare Children's Multisymptom Cold Liquid**—(per 5 mL) phenylephrine 2.5 mg + dextromethorphan 5 mg **(OTC)**
**Pepcid Complete**—calcium carbonate 800 mg + magnesium hydroxide 165 mg + famotidine 10 mg **(OTC)**
**Percocet 2.5/325**—oxycodone 2.5 mg + acetaminophen 325 mg
**Percocet 5/325**—oxycodone 5 mg + acetaminophen 325 mg
**Percocet 7.5/325**—oxycodone 7.5 mg + acetaminophen 325 mg
**Percocet 7.5/500**—oxycodone 7.5 mg + acetaminophen 500 mg
**Percocet 10/325**—oxycodone 10 mg + acetaminophen 325 mg
**Percocet 10/650**—oxycodone 10 mg + acetaminophen 650 mg
**Percodan**—oxycodone 4.88 mg + aspirin 325 mg
**Percogesic**—phenyltoloxamine 30 mg + acetaminophen 325 mg **(OTC)**
**Peri-Colace**—docusate sodium 50 mg + sennosides 8.6 mg **(OTC)**
**Phrenilin**—butalbital 50 mg + acetaminophen 325 mg
**Phrenilin Forte**—butalbital 50 mg + acetaminophen 650 mg
**Polycitra Syrup**—(per 5 mL) potassium citrate 550 mg + sodium citrate 500 mg + citric acid 334 mg
**Poly-Hist DM Syrup**—(per 5 mL) phenylephrine 7.5 mg + pyrilamine 8.33 mg + dextromethorphan 10 mg
**Polysporin Topical Ointment/Powder**—(per g) polymyxin B 10,000 units + bacitracin 500 units **(OTC)**
**Polytrim Ophthalmic Solution**—(per mL) polymyxin B 10,000 units + trimethoprim 1 mg
**Portia**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Pramosone Topical Cream/Lotion/Ointment**—1% pramoxine + 1% hydrocortisone
**Pramosone Topical Cream/Lotion/Ointment**—1% pramoxine + 2.5% hydrocortisone
**PrandiMet 1/500**—repaglinide 1 mg + metformin 500 mg
**PrandiMet 2/500**—repaglinide 2 mg + metformin 500 mg
**Premphase**—conjugated estrogens 0.625 mg + medroxyprogesterone 5 mg (14 tablets) plus conjugated estrogens 0.625 mg (14 tablets) in a compliance package
**Premplus 0.625/2.5**—conjugated estrogens 0.625 mg + medroxyprogesterone 2.5 mg
**Premplus 0.625/5**—conjugated estrogens 0.625 mg + medroxyprogesterone 5 mg
**Prempro 0.3/1.5**—conjugated estrogens 0.3 mg + medroxyprogesterone 1.5 mg (28 tablets) in a compliance package
**Prempro 0.45/1.5**—conjugated estrogens 0.45 mg + medroxyprogesterone 1.5 mg (28 tablets) in a compliance package
**Prempro 0.625/2.5**—conjugated estrogens 0.625 mg + medroxyprogesterone 2.5 mg (28 tablets) in a compliance package
**Prempro 0.625/5**—conjugated estrogens 0.625 mg + medroxyprogesterone 5 mg (28 tablets) in a compliance package
**Previfem**—ethinyl estradiol 35 mcg + norgestimate 0.25 mg
**Prevpac**—amoxicillin 500-mg capsules + clarithromycin 500-mg tablets + lansoprazole 30-mg capsules in a compliance package
**Primalev 2.5/300**—oxycodone 2.5 mg + acetaminophen 300 mg
**Primalev 5/300**—oxycodone 5 mg + acetaminophen 300 mg
**Primalev 7.5/300**—oxycodone 7.5 mg + acetaminophen 300 mg
**Primalev 10/300**—oxycodone 10 mg + acetaminophen 300 mg

**Primatene Tablets**—ephedrine 12.5 mg + guaifenesin 200 mg **(OTC)**
**Primaxin 250 mg I.V. For Injection**—imipenem 250 mg + cilastatin sodium 250 mg
**Primaxin 500 mg I.V. For Injection**—imipenem 500 mg + cilastatin sodium 500 mg
**Prinzide 10/12.5**—lisinopril 10 mg + hydrochlorothiazide 12.5 mg
**Prinzide 20/12.5**—lisinopril 20 mg + hydrochlorothiazide 12.5 mg
**Prinzide 20/25**—lisinopril 20 mg + hydrochlorothiazide 25 mg
**Proctofoam-HC Rectal Foam**—1% hydrocortisone + 1% pramoxine
**Protrin**—trimethoprim 80 mg + sulfamethoxazole 400 mg
**Protrin DF**—trimethoprim 160 mg + sulfamethoxazole 800 mg
**Pylera**—bismuth subcitrate potassium 140 mg + metronidazole 125 mg + tetracycline 125 mg
**Quasense**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Quinaretic 10/12.5**—quinapril 10 mg + hydrochlorothiazide 12.5 mg
**Quinaretic 20/12.5**—quinapril 20 mg + hydrochlorothiazide 12.5 mg
**Quinaretic 20/25**—quinapril 20 mg + hydrochlorothiazide 25 mg
**Rebetron**—interferon alfa-2b (Intron A) + oral ribavirin (Rebetrol) 200 mg
**Reclipsen**—desogestrel 0.15 mg + ethinyl estradiol 30 mcg
**Reprexain 2.5/200**—hydrocodone 2.5 mg + ibuprofen 200 mg
**Reprexain 5/200**—hydrocodone 5 mg + ibuprofen 200 mg
**Reprexain 7.5/200**—hydrocodone 7.5 mg + ibuprofen 200 mg
**Reprexain 10/200**—hydrocodone 10 mg + ibuprofen 200 mg
**Respahist**—pseudoephedrine 60 mg + brompheniramine 6 mg
**Respaire-60 SR**—guaifenesin 200 mg + pseudoephedrine 60 mg
**Respaire-120 SR**—guaifenesin 250 mg + pseudoephedrine 120 mg
**RID Maximum Strength Shampoo**—0.33% pyrethrins + 4% piperonyl butoxide **(OTC)**
**Rifamate**—isoniazid 150 mg + rifampin 300 mg
**Rifater**—rifampin 120 mg + isoniazid 50 mg + pyrazinamide 300 mg
**Robaxacet-8**—methocarbamol 400 mg + acetaminophen 325 mg + codeine 8 mg
**Robaxacet**—methocarbamol 400 mg + acetaminophen 325 mg
**Robaxacet Extra Strength**—methocarbamol 400 mg + acetaminophen 500 mg
**Robitussin Children's Cough & Cold CF Liquid**—(per 5 mL) guaifenesin 50 mg + phenylephrine 2.5 mg + dextromethorphan 5 mg **(OTC)**
**Robitussin Children's Cough & Cold Long-Acting Liquid**—(per 5 mL) chlorpheniramine 1 mg + dextromethorphan 7.5 mg **(OTC)**
**Robitussin Cough & Cold CF Liquid**—(per 5 mL) guaifenesin 100 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Robitussin Cough & Cold D Liquid**—(per 5 mL) pseudoephedrine 30 mg + guaifenesin 200 mg + dextromethorphan 15 mg **(OTC)**
**Robitussin Cough & Cold Long-Acting Liquid**—(per 5 mL) chlorpheniramine 2 mg + dextromethorphan 15 mg **(OTC)**
**Robitussin Cough & Chest Congestion DM Liquid**—(per 5 mL) guaifenesin 100 mg + dextromethorphan 10 mg **(OTC)**
**Robitussin Cough & Chest Congestion DM Max Liquid**—(per 5 mL) guaifenesin 200 mg + dextromethorphan 10 mg **(OTC)**
**Robitussin Cough, Cold & Flu Liquid**—(per 5 mL) acetaminophen 160 mg + chlorpheniramine 1 mg + phenylephrine 2.5 mg + dextromethorphan 5 mg **(OTC)**
**Robitussin Nighttime Cough & Cold Liquid**—(per 5 mL) phenylephrine 2.5 mg + diphenhydramine 6.25 mg **(OTC)**
**Rolaids Extra Strength Tablets**—calcium carbonate 675 mg + magnesium hydroxide 135 mg **(OTC)**
**Rolaids Multi-Symptom Tablets**—calcium carbonate 675 mg + magnesium hydroxide 135 mg + simethicone 60 mg **(OTC)**
**Rolaids Regular Tablets**—calcium carbonate 550 mg + magnesium hydroxide 110 mg **(OTC)**
**Rondec DM Drops**—(per 1 mL) phenylephrine 3.5 mg + chlorpheniramine 1 mg + dextromethorphan 3 mg
**Rondec DM Syrup**—(per 5 mL) phenylephrine 12.5 mg + chlorpheniramine 4 mg + dextromethorphan 15 mg

**Rondec Oral Drops**—(per 1 mL) phenylephrine 3.5 mg + chlorpheniramine 1 mg
**Rondec Syrup**—(per 5 mL) chlorpheniramine 4 mg + phenylephrine 12.5 mg
**Roxicet 5/500**—oxycodone 5 mg + acetaminophen 500 mg
**Roxicet**—oxycodone 5 mg + acetaminophen 325 mg
**Roxicet Oral Solution**—(per 5 mL) acetaminophen 325 mg + oxycodone 5 mg
**Ru-Tuss DM Syrup**—(per 5 mL) guaifenesin 100 mg + pseudoephedrine 45 mg + dextromethorphan 15 mg **(OTC)**
**Rynatan**—phenylephrine 25 mg + chlorpheniramine 9 mg
**Rynatan Pediatric Suspension**—(per 5 mL) phenylephrine 5 mg + chlorpheniramine 4.5 mg
**Rynatuss**—ephedrine 10 mg + carbetapentane 60 mg + chlorpheniramine 5 mg + phenylephrine 10 mg
**Scot-Tussin DM Maximum Strength Liquid**—(per 5 mL) chlorpheniramine 2 mg + dextromethorphan 15 mg **(OTC)**
**Scot-Tussin Original Liquid**—(per 5 mL) phenylephrine 4 mg + pheniramine 13 mg + sodium salicylate 83 mg + caffeine citrate 25 mg **(OTC)**
**Scot-Tussin Senior Liquid**—(per 5 mL) guaifenesin 200 mg + dextromethorphan 15 mg **(OTC)**
**Seasonale**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg
**Seasonique**—levonorgestrel 0.15 mg + ethinyl estradiol 30 mcg/10 mcg
**Sedapap**—acetaminophen 650 mg + butalbital 50 mg
**Semprex-D**—acrivastine 8 mg + pseudoephedrine 60 mg
**Senokot-S**—sennosides 8.6 mg + docusate sodium 50 mg **(OTC)**
**Seno Sol-SS**—sennosides 8.6 mg + docusate sodium 50 mg **(OTC)**
**Septra**—trimethoprim 80 mg + sulfamethoxazole 400 mg
**Septra DS**—trimethoprim 160 mg + sulfamethoxazole 800 mg
**Silafed Syrup**—(per 5 mL) pseudoephedrine 30 mg + triprolidine 1.25 mg **(OTC)**
**Simcor 500/20**—niacin 500 mg + simvastatin 20 mg
**Simcor 750/20**—niacin 750 mg + simvastatin 20 mg
**Simcor 1000/20**—niacin 1000 mg + simvastatin 20 mg
**Sinemet 10/100**—carbidopa 10 mg + levodopa 100 mg
**Sinemet 25/100**—carbidopa 25 mg + levodopa 100 mg
**Sinemet 25/250**—carbidopa 25 mg + levodopa 250 mg
**Sinemet CR 25-100**—carbidopa 25 mg + levodopa 100 mg
**Sinemet CR 50-200**—carbidopa 50 mg + levodopa 200 mg
**Sine-Off Severe Cold**—phenylephrine 5 mg + acetaminophen 325 mg + guaifenesin 200 mg **(OTC)**
**Sine-Off Non-Drowsy Maximum Strength**—phenylephrine 5 mg + acetaminophen 500 mg **(OTC)**
**Sine-Off Sinus/Cold Medicine**—phenylephrine 5 mg + chlorpheniramine 2 mg + acetaminophen 500 mg **(OTC)**
**Solage Topical Liquid**—2% mequinol + 0.01% tretinoin
**Solia**—desogestrel 0.15 mg + ethinyl estradiol 30 mcg
**Soma Compound**—aspirin 325 mg + carisoprodol 200 mg
**Sprintec**—norgestimate 0.25 mg + ethinyl estradiol 35 mcg
**Sronyx**—levonorgestrel 0.1 mg + ethinyl estradiol 20 mcg
**Stalevo 50**—carbidopa 12.5 mg + entacapone 200 mg + levodopa 50 mg
**Stalevo 75**—carbidopa 12.5 mg + entacapone 200 mg + levodopa 75 mg
**Stalevo 100**—carbidopa 25 mg + entacapone 200 mg + levodopa 100 mg
**Stalevo 125**—carbidopa 25 mg + entacapone 200 mg + levodopa 125 mg
**Stalevo 150**—carbidopa 37.5 mg + entacapone 200 mg + levodopa 150 mg
**Stalevo 200**—carbidopa 25 mg + entacapone 200 mg + levodopa 200 mg
**Suboxone N2**—buprenorphine 2 mg + naloxone 0.5 mg
**Suboxone N8**—buprenorphine 8 mg + naloxone 2 mg
**Sudafed PE Children's Cough & Cold Liquid**—(per 5 mL) dextromethorphan 5 mg + phenylephrine 2.5 mg **(OTC)**
**Sudafed PE Cough & Cold**—phenylephrine 5 mg + guaifenesin 100 mg + acetaminophen 325 mg + dextromethorphan 10 mg **(OTC)**

**Sudafed PE Nighttime Cold**—phenylephrine 5 mg + diphenhydramine 25 mg + acetaminophen 325 mg **(OTC)**
**Sudafed PE Non-Drying Sinus**—guaifenesin 200 mg + pseudoephedrine 30 mg **(OTC)**
**Sudafed PE Severe Cold Formula**—phenylephrine 5 mg + diphenhydramine 12.5 mg + acetaminophen 325 mg **(OTC)**
**Sudafed PE Sinus & Allergy**—phenylephrine 10 mg + chlorpheniramine 4 mg **(OTC)**
**Sudafed PE Sinus Headache**—phenylephrine 5 mg + acetaminophen 325 mg **(OTC)**
**Sudafed PE Triple Action**—phenylephrine 5 mg + guaifenesin 200 mg + acetaminophen 325 mg **(OTC)**
**Sudafed Sinus & Pain 12 Hour**—pseudoephedrine 120 mg + naproxen 220 mg **(OTC)**
**Sudafed Sinus Liquicaps**—guaifenesin 200 mg + pseudoephedrine 30 mg **(OTC)**
**Sudafed Triple Action**—pseudoephedrine 30 mg + guaifenesin 200 mg + acetaminophen 325 mg **(OTC)**
**Sudal 12**—pseudoephedrine 30 mg + chlorpheniramine 4 mg
**Sulfacet-R Topical Lotion**—10% sodium sulfacetamide + 5% sulfur
**Symbicort 80/4.5**—(per actuation) budesonide 80 mcg + formoterol 4.5 mcg
**Symbicort 160/4.5**—(per actuation) budesonide 160 mcg + formoterol 4.5 mcg
**Symbyax 3/25**—olanzapine 3 mg + fluoxetine 25 mg
**Symbyax 6/25**—olanzapine 6 mg + fluoxetine 25 mg
**Symbyax 6/50**—olanzapine 6 mg + fluoxetine 50 mg
**Symbyax 12/25**—olanzapine 12 mg + fluoxetine 25 mg
**Symbyax 12/50**—olanzapine 12 mg + fluoxetine 50 mg
**Synalgos-DC**—aspirin 356.4 mg + caffeine 30 mg + dihydrocodeine 16 mg
**Synercid Powder for Injection**—quinupristin 150 mg + dalfopristin 350 mg
**Taclonex Topical Ointment/Suspension**—0.005% calcipotriene + 0.064% betamethasone
**Talacen**—acetaminophen 650 mg + pentazocine 25 mg
**Talwin NX**—pentazocine 50 mg + naloxone 0.5 mg
**Tarka 1/240**—trandolapril 1 mg (immediate release) + verapamil 240 mg (sustained release)
**Tarka 2/180**—trandolapril 2 mg (immediate release) + verapamil 180 mg (sustained release)
**Tarka 2/240**—trandolapril 2 mg (immediate release) + verapamil 240 mg (sustained release)
**Tarka 4/240**—trandolapril 4 mg (immediate release) + verapamil 240 mg (sustained release)
**Tazocin for Injection 2.25 g**—piperacillin 2 g + tazobactam 0.25 g
**Tazocin for Injection 3.375 g**—piperacillin 3 g + tazobactam 0.375 g
**Tazocin for Injection 4.5 g**—piperacillin 4 g + tazobactam 0.5 g
**Tekturna HCT 150/12.5**—aliskiren 150 mg + hydrochlorothiazide 12.5 mg
**Tekturna HCT 150/25**—aliskiren 150 mg + hydrochlorothiazide 25 mg
**Tekturna HCT 300/12.5**—aliskiren 300 mg + hydrochlorothiazide 12.5 mg
**Tekturna HCT 300/25**—aliskiren 300 mg + hydrochlorothiazide 25 mg
**Tenoretic 50**—chlorthalidone 25 mg + atenolol 50 mg
**Tenoretic 100**—chlorthalidone 25 mg + atenolol 100 mg
**Terra-Cortril Ophthalmic Suspension**—1.5% hydrocortisone acetate + 0.5% oxytetracycline
**Terramycin with Polymyxin B Sulfate Ophthalmic Ointment**—(per g) polymyxin B 10,000 units + oxytetracycline 5 mg
**Teveten HCT 600/12.5**—eprosartan 600 mg + hydrochlorothiazide 12.5 mg
**Teveten HCT 600/25**—eprosartan 600 mg + hydrochlorothiazide 25 mg
**Thera-Flu Cold & Cough Hot Liquid**—(per packet) phenylephrine 10 mg + dextromethorphan 20 mg + pheniramine 20 mg **(OTC)**
**Thera-Flu, Cold & Sore Throat Hot Liquid**—(per packet) phenylephrine 10 mg + pheniramine 20 mg + acetaminophen 325 mg **(OTC)**
**Thera-Flu Daytime Severe Cold & Cough Caplets**—phenylephrine 5 mg + dextromethorphan 10 mg + acetaminophen 325 mg **(OTC)**
**Thera-Flu Daytime Severe Cold & Cough Hot Liquid**—(per packet) acetaminophen 650 mg + phenylephrine 10 mg + dextromethorphan 20 mg **(OTC)**
**Thera-Flu Flu & Chest Congestion Hot Liquid**—(per packet) guaifenesin 400 mg acetaminophen 650 mg **(OTC)**

**Thera-Flu Flu & Sore Throat Hot Liquid**—(per packet) phenylephrine 10 mg +pheniramine 20 mg + acetaminophen 650 mg **(OTC)**

**Thera-Flu Nighttime Severe Cold & Cough Caplets**—phenylephrine 5 mg + dextromethorphan 10 mg + chlorpheniramine 2 mg + acetaminophen 325 mg **(OTC)**

**Thera-Flu Nighttime Severe Cold & Cough Hot Liquid**—(per packet) phenylephrine 10 mg + diphenhydramine 25 mg + acetaminophen 650 mg **(OTC)**

**Thera-Flu Warming Relief Cold & Chest Congestion Syrup**—(per 15 mL) guaifenesin 200 mg + acetaminophen 325 mg + phenylephrine 5 mg **(OTC)**

**Thera-Flu Warming Relief Daytime Severe Cough & Cold Syrup**—(per 15 mL) phenylephrine 5 mg +dextromethorphan 10 mg + acetaminophen 325 mg **(OTC)**

**Thera-Flu Warming Relief Flu & Sore Throat Syrup**—(per 15 mL) phenylephrine 5 mg + diphenhydramine 12.5 mg + acetaminophen 325 mg **(OTC)**

**Thera-Flu Warming Relief Nighttime Severe Cold & Cough Syrup**—(per 15 mL) phenylephrine 5 mg + diphenhydramine 12.5 mg + acetaminophen 325 mg **(OTC)**

**Tilia Fe**

**Phase I**—norethindrone 1 mg + ethinyl estradiol 20 mcg
**Phase II**—norethindrone 1 mg + ethinyl estradiol 30 mcg
**Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Phase IV**—ferrous fumarate 75 mg

**Timentin for Injection**—ticarcillin 3 g + clavulanic acid 0.1 g

**Titralac Plus**—calcium carbonate 420 mg + simethicone 21 mg **(OTC)**

**TobraDex Ophthalmic Suspension/Ointment**—0.1% dexamethasone + 0.3% tobramycin

**Treximet**—sumatriptan 85 mg + naproxen 500 mg

**Triacin-C Cough Syrup**—(per 5 mL) codeine 10 mg + pseudoephedrine 30 mg + triprolidine 1.25 mg

**Tri—Legest Fe**

**Phase I**—norethindrone 1 mg + ethinyl estradiol 20 mcg
**Phase II**—norethindrone 1 mg + ethinyl estradiol 30 mcg
**Phase III**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Phase IV**—ferrous fumarate 75 mg

**Tri-Levlen**

**Phase I**— levonorgestrel 0.05 mg + ethinyl estradiol 30 mcg
**Phase II**—levonorgestrel 0.075 mg + ethinyl estradiol 40 mcg
**Phase III**—levonorgestrel 0.125 mg + ethinyl estradiol 30 mcg

**Triaminic Chest & Nasal Congestion Liquid**—(per 5 mL) guaifenesin 50 mg + phenylephrine 2.5 mg **(OTC)**

**Triaminic Cold & Allergy Liquid**—(per 5 mL) chlorpheniramine 1 mg + phenylephrine 2.5 mg **(OTC)**

**Triaminic Cough & Sore Throat Liquid**—(per 5 mL) acetaminophen 160 mg + dextromethorphan 5 mg **(OTC)**

**Triaminic–D Multi-Symptom Cold Liquid**—(per 5 mL) pseudoephedrine 15 mg + dextromethorphan 7.5 mg + chlorpheniramine 1 mg **(OTC)**

**Triaminic Day Time Cold & Cough Liquid**—(per 5 mL) phenylephrine 2.5 mg + dextromethorphan 5 mg **(OTC)**

**Triaminic Day Time Thin Strips Cold & Cough**—phenylephrine 2.5 mg + dextromethorphan 5 mg **(OTC)**

**Triaminic Multi-Symptom Fever Liquid**—(per 5 mL) acetaminophen 160 mg + dextromethorphan 7.5 mg + chlorpheniramine 1 mg **(OTC)**

**Triaminic Night Time Cold & Cough Liquid**—(per 5 mL) phenylephrine 2.5 mg + diphenhydramine 6.25 mg **(OTC)**

**Triaminic Night Time Thin Strips Cold & Cough**—phenylephrine 5 mg + diphenhydramine 12.5 mg **(OTC)**

**Triaminic Softchews Cough & Runny Nose**—chlorpheniramine 1 mg + dextromethorphan 5 mg **(OTC)**

**Triaminic Softchews Cough & Sore Throat**—acetaminophen 160 mg + dextromethorphan 5 mg **(OTC)**

**Tri-Lo-Sprintec**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 25 mcg
**Phase II**—norgestimate 0.215 mg + ethinyl estradiol 25 mcg
**Phase III**—norgestimate 0.25 mg + ethinyl estradiol 25 mcg
**Tri-Luma Topical Cream**—0.01% fluocinolone + 4% hydroquinone + 0.05% tretinoin
**TriLyte**—PEG 3350 420 g + sodium bicarbonate 5.72 g + sodium chloride 11.2 g + potassium chloride 1.48 g
**TriNessa**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 35 mcg
**Phase II**—norgestimate 0.215 mg + ethinyl estradiol 35 mcg
**Phase III**—norgestimate 0.25 mg + ethinyl estradiol 35 mcg
**Tri-Norinyl**
**Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Phase I**—norethindrone 1 mg + ethinyl estradiol 35 mcg
**Phase I**—norethindrone 0.5 mg + ethinyl estradiol 35 mcg
**Triphasil**
**Phase I**—levonorgestrel 0.05 mg + ethinyl estradiol 30 mcg
**Phase II**—levonorgestrel 0.075 mg + ethinyl estradiol 40 mcg
**Phase III**—levonorgestrel 0.125 mg + ethinyl estradiol 30 mcg
**Tri-Previfem**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 35 mcg
**Phase I**—norgestimate 0.215 mg + ethinyl estradiol 35 mcg
**Phase I**—norgestimate 0.25 mg + ethinyl estradiol 35 mcg
**Tri-Sprintec**
**Phase I**—norgestimate 0.18 mg + ethinyl estradiol 35 mcg
**Phase I**—norgestimate 0.215 mg + ethinyl estradiol 35 mcg
**Phase I**—norgestimate 0.25 mg + ethinyl estradiol 35 mcg
**Trisulfa**—trimethoprim 80 mg + sulfamethoxazole 400 mg
**Trisulfa DS**—trimethoprim 160 mg + sulfamethoxazole 800 mg
**Trivora**
**Phase I**—levonorgestrel 0.05 mg + ethinyl estradiol 30 mcg
**Phase II**—levonorgestrel 0.075 mg + ethinyl estradiol 40 mcg
**Phase III**—levonorgestrel 0.125 mg + ethinyl estradiol 30 mcg
**Trizivir**—abacavir 300 mg + lamivudine 150 mg + zidovudine 300 mg
**Truvada**—emtricitabine 200 mg + tenofovir 300 mg
**TussiCaps 5/4**—hydrocodone 5 mg + chlorpheniramine 4 mg
**TussiCaps 10/8**—hydrocodone 10 mg + chlorpheniramine 8 mg
**Tussigon**—hydrocodone 5 mg + homatropine 1.5 mg
**Tussionex Suspension**—(per 5 mL) chlorpheniramine 8 mg + hydrocodone 10 mg
**Tussi-Organidin NR Liquid**—(per 5 mL) codeine 10 mg + guaifenesin 300 mg
**Tussi-Organidin DM NR Liquid**—(per 5 mL) guaifenesin 300 mg + dextromethorphan 10 mg
**Tylenol Allergy Multisymptom Gelcaps**—acetaminophen 325 mg + chlorpheniramine 2 mg + phenylephrine 5 mg **(OTC)**
**Tylenol Allergy Multisymptom Nighttime Caplets**—acetaminophen 325 mg + diphenhydramine 25 mg + phenylephrine 5 mg **(OTC)**
**Tylenol Children's Plus Cold & Allergy Liquid**—(per 5 mL) acetaminophen 160 mg + diphenhydramine 12.5 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Children's Plus Cold & Cough Liquid**—(per 5 mL) acetaminophen 160 mg + dextromethorphan 5 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Children's Plus Cold & Stuffy Nose Liquid**—(per 5 mL) acetaminophen 160 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Children's Plus Cold Liquid**—(per 5 mL) acetaminophen 160 mg + chlorpheniramine 1 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Children's Plus Cough & Runny Nose Liquid**—(per 5 mL) acetaminophen 160 mg + chlorpheniramine 1 mg + dextromethorphan 5 mg **(OTC)**

**Tylenol Children's Plus Cough & Sore Throat Liquid**—(per 5 mL) acetaminophen 160 mg + dextromethorphan 5 mg **(OTC)**
**Tylenol Children's Plus Flu Liquid**—(per 5 mL) acetaminophen 160 mg + chlorpheniramine 1 mg + dextromethorphan 5 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Children's Plus Multi-Symptom Cold Liquid**—(per 5 mL) acetaminophen 160 mg + dextromethorphan 5 mg + chlorpheniramine 1 mg + phenylephrine 2.5 mg **(OTC)**
**Tylenol Cold Head Congestion Daytime Caplets**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Tylenol Cold Head Congestion Nighttime Caplets**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg + chlorpheniramine 2 mg **(OTC)**
**Tylenol Cold Head Congestion Severe Caplets**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg + guaifenesin 200 mg **(OTC)**
**Tylenol Cold Multi-Symptom Daytime Caplets**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Tylenol Cold Multi-Symptom Daytime Liquid**—(per 15 mL) acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Tylenol Cold Multi-Symptom Nighttime Caplets**—acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg + chlorpheniramine 2 mg **(OTC)**
**Tylenol Cold Multi-Symptom Nighttime Liquid**—(per 15 mL) acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg + doxylamine 6.25 mg **(OTC)**
**Tylenol Cold Multi-Symptom Severe Caplets**—acetaminophen 325 mg + guaifenesin 200 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Tylenol Cold Multi-Symptom Severe Liquid**—(per 15 mL) acetaminophen 325 mg + guaifenesin 200 mg + phenylephrine 5 mg + dextromethorphan 10 mg **(OTC)**
**Tylenol Cold Severe Congestion Daytime Caplets**—acetaminophen 325 mg + pseudoephedrine 30 mg + dextromethorphan 15 mg + guaifenesin 200 mg **(OTC)**
**Tylenol Cough & Severe Congestion Daytime Liquid**—(per 15 mL) acetaminophen 325 mg + phenylephrine 5 mg + dextromethorphan 10 mg + guaifenesin 200 mg **(OTC)**
**Tylenol Cough & Sore Throat Daytime Liquid**—(per 15 mL) acetaminophen 500 mg + dextromethorphan 15 mg **(OTC)**
**Tylenol Cough & Sore Throat Nighttime Liquid**—(per 15 mL) acetaminophen 500 mg + dextromethorphan 15 mg + doxylamine 6.25 mg **(OTC)**
**Tylenol PM**—acetaminophen 500 mg + diphenhydramine 25 mg **(OTC)**
**Tylenol Severe Allergy Caplets**—diphenhydramine 12.5 mg + acetaminophen 500 mg **(OTC)**
**Tylenol Sinus Congestion & Pain Daytime Gelcaps**—acetaminophen 325 mg + phenylephrine 5 mg **(OTC)**
**Tylenol Sinus Congestion & Pain Nighttime Caplets**—acetaminophen 325 mg + chlorpheniramine 2 mg + phenylephrine 5 mg **(OTC)**
**Tylenol Sinus Congestion & Pain Severe Caplets**—acetaminophen 325 mg + guaifenesin 200 mg + phenylephrine 5 mg **(OTC)**
**Tylenol Sinus Severe Congestion Daytime Caplets**—acetaminophen 325 mg + guaifenesin 200 mg + pseudoephedrine 30 mg **(OTC)**
**Tylenol with codeine No. 3**—acetaminophen 300 mg + codeine 30 mg
**Tylenol with codeine No. 4**—acetaminophen 300 mg + codeine 60 mg
**Tylox 5/500**—oxycodone 5 mg + acetaminophen 500 mg
**Ultracet**—tramadol 37.5 mg + acetaminophen 325 mg
**Unasyn for Injection 1.5 g**—ampicillin 1 g + sulbactam 0.5 g
**Unasyn for Injection 3 g**—ampicillin 2 g + sulbactam 1 g
**Uniretic 7.5/12.5**—moexipril 7.5 mg + hydrochlorothiazide 12.5 mg
**Uniretic 15/12.5**—moexipril 15 mg + hydrochlorothiazide 12.5 mg
**Uniretic 15/25**—moexipril 15 mg + hydrochlorothiazide 25 mg
**Valturna 150/160**—aliskiren 150 mg + valsartan 160 mg
**Valturna 300/320**—aliskiren 300 mg + valsartan 320 mg
**Vanoxide HC Lotion**—0.5% hydrocortisone + 5% benzoyl peroxide 320 mg

**Vanquish Extra Strength Pain Reliever**—aspirin 227 mg + acetaminophen 194 mg + caffeine 33 mg **(OTC)**
**Vaseretic 5/12.5**—enalapril 5 mg + hydrochlorothiazide 12.5 mg
**Vaseretic 10/25**—enalapril 10 mg + hydrochlorothiazide 25 mg
**Vasocidin Ophthalmic Solution**—0.23% prednisolone + 10% sulfacetamide
**Vasocon-A Ophthalmic Solution**—0.05% naphazoline + 0.5% antazoline **(OTC)**
**Velivet**
**Phase I**—desogestrel 0.1 mg + ethinyl estradiol 25 mcg
**Phase II**—desogestrel 0.125 mg + ethinyl estradiol 25 mcg
**Phase III**—desogestrel 0.15 mg + ethinyl estradiol 25 mcg
**Vicks 44 Custom Care Chesty Cough Liquid**—(per 15 mL) guaifenesin 200 mg + dextromethorphan 20 mg **(OTC)**
**Vicks 44 Custom Care Congestion Liquid**—(per 15 mL) phenylephrine 10 mg + dextromethorphan 20 mg **(OTC)**
**Vicks 44 Custom Care Cough & Cold PM Liquid**—(per 15 mL) acetaminophen 650 mg + dextromethorphan 30 mg + chlorpheniramine 4 mg **(OTC)**
**Vicks Pediatric Formula 44E Cough & Chest Congestion Relief Liquid**—(per 15 mL) dextromethorphan 10 mg + guaifenesin 100 mg **(OTC)**
**Vicks Pediatric Formula 44M Cough & Cold Relief Liquid**—(per 15 mL) chlorpheniramine 2 mg + dextromethorphan 15 mg **(OTC)**
**Vicodin**—hydrocodone 5 mg + acetaminophen 500 mg
**Vicodin ES**—hydrocodone 7.5 mg + acetaminophen 750 mg
**Vicodin HP**—hydrocodone 10 mg + acetaminophen 660 mg
**Vicoprofen**— hydrocodone 7.5 mg + ibuprofen 200 mg
**Visine-A Ophthalmic Solution**—0.025% naphazoline + 0.3% pheniramine **(OTC)**
**Vusion Topical Ointment**—0.25% miconazole + 15% zinc oxide
**Vytorin 10/10**—ezetimibe 10 mg + simvastatin 10 mg
**Vytorin 10/20**—ezetimibe 10 mg + simvastatin 20 mg
**Vytorin 10/40**—ezetimibe 10 mg + simvastatin 40 mg
**Vytorin 10/80**—ezetimibe 10 mg + simvastatin 80 mg
**Xenaderm Topical Ointment**—(per g) trypsin 90 USP units + Balsam Peru 87 mg + castor oil 788 mg
**Yasmin**—drosperinone 3 mg + ethinyl estradiol 30 mcg
**Yaz**—drosperinone 3 mg + ethinyl estradiol 20 mcg
**Zenchent**—norethindrone 0.4 mg + ethinyl estradiol 35 mcg
**Zestoretic 10/12.5**—lisinopril 10 mg + hydrochlorothiazide 12.5 mg
**Zestoretic 20/12.5**—lisinopril 20 mg + hydrochlorothiazide 12.5 mg
**Zestoretic 20/25**—lisinopril 20 mg + hydrochlorothiazide 25 mg
**Ziac 2.5/6.25**—bisoprolol 2.5 mg + hydrochlorothiazide 6.25 mg
**Ziac 5/6.25**—bisoprolol 5 mg + hydrochlorothiazide 6.25 mg
**Ziac 10/6.25**—bisoprolol 10 mg + hydrochlorothiazide 6.25 mg
**Ziana Topical Gel**—1.2% clindamycin + 0.025% tretinoin
**Zosyn for Injection 2.25 g**—piperacillin 2 g + tazobactam 0.25 g
**Zosyn for Injection 3.375 g**—piperacillin 3 g + tazobactam 0.375 g
**Zosyn for Injection 4.5 g**—piperacillin 4 g + tazobactam 0.5 g
**Zovia 1/35**—ethynodiol 1 mg + ethinyl estradiol 35 mcg
**Zovia 1/50**—ethynodiol 1 mg + ethinyl estradiol 50 mcg
**Zydone 5/400**—hydrocodone 5 mg + acetaminophen 400 mg
**Zydone 7.5/400**—hydrocodone 7.5 mg + acetaminophen 400 mg
**Zydone 10/400**—hydrocodone 10 mg + acetaminophen 400 mg
**Zylet Ophthalmic Suspension**—0.5% loteprednol + 0.3% tobramycin
**Zyrtec-D Allergy & Congestion**—cetirizine 5 mg + pseudoephedrine 120 mg **(OTC)**

## APPENDIX C

# Ophthalmic Medications

General Info: See Appendix D for administration techniques for ophthalmic agents.
Consult health care professional regarding:
Concurrent use of contact lenses (medication or additives may be absorbed by the lens).
Concurrent administration of other ophthalmic agents (order and spacing may be important).
ADRs = adverse reactions.

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **Anesthetics** | | |
| **Uses:** Provide brief local anesthesia to allow measurement of intraocular pressure, removal of foreign bodies, or other superficial procedures. **CAUTIONS:** Repeated use may result in increased risk of CNS and cardiovascular toxicity; cross-sensitivity with some local anesthetics may occur. | | |
| **proparacaine** (Alcaine, Ophthaine, Ophthetic, Paracaine, Diocane) | **Adults and children:** 1–2 drops of 0.5% solution (single dose) | • Does not interact with ophthalmic cholinesterase inhibitors<br>• ADRs: ophthalmic—irritation; systemic—irregular heartbeat, CNS depression |
| **tetracaine** (Altracaine, Pontocaine, Tetcaine, Minims Tetracaine) | **Adults:** 1–2 drops of 0.5% solution (single dose) | • May interact with ophthalmic cholinesterase inhibitors, resulting in increased duration of action and risk of toxicity<br>• ADRs: ophthalmic—irritation; systemic—irregular heartbeat, CNS depression |
| **Antihistamines** | | |
| **Uses:** Various forms of allergic conjunctivitis. | | |
| **azelastine** (Optivar) | **Adults and children ≥3 yr:** 1 drop of 0.05% solution twice daily | • ADRs: transient burning/stinging, headache, bitter taste |
| **bepotastine** (Bepreve) | **Adults and children ≥2 yr:** 1 drop of 1.5% solution twice daily | • ADRs: taste disturbance, headache, local irritation |
| **emedastine** (Emadine) | **Adults and children ≥3 yr:** 1 drop of 0.05% solution up to 4 times daily | • ADRs: headache, drowsiness, malaise, local irritation |
| **epinastine** (Elestat) | **Adults and children ≥3 yr:** 1 drop of 0.05% solution twice daily | • ADRs: headache, local irritation |
| **ketotifen** (Alaway, Claritin Eye, Zaditor, Zyrtec Itchy Eye) | **Adults and children ≥3 yr:** 1 drop of 0.025% solution twice daily (given 6–8 hr apart) | • OTC<br>• ADRs: local irritation |
| **olopatadine** (Pataday, Patanol) | **Adults and children ≥3 yr:** *Patanol*—1 drop of 0.1% solution twice daily (given 6–8 hr apart); *Pataday*—1 drop of 0.2% solution twice daily | • Small amounts are absorbed; excreted in urine<br>• ADRs: headache, conjunctival irritation |
| **Anti-infectives/Antifungals/Antivirals** | | |
| **Uses:** Localized superficial ophthalmic infections (e.g., bacterial conjunctivitis). **CAUTIONS:** small amounts may be absorbed and result in hypersensitivity reactions. | | |
| **azithromycin** (AzaSite) | **Adults and children ≥1 yr:** 1 drop of 1% solution twice daily (given 8–12 hr apart) for 2 days, then once daily for 5 more days | • ADRs: eye irritation<br>• When used to treat ocular chlamydial infections, concurrent systemic therapy is required |
| **bacitracin** | **Adults and children:** ¼–½–in ribbon q 3–4 hr for acute infections or 2–3 times daily for mild-moderate infections | • ADRs: eye irritation |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **besifloxacin** (Besivance) | **Adults and children ≥1 yr:** 1 drop of 0.6% suspension 3 times daily (given 4–12 hr apart) for 7 days | • ADRs: headache, eye irritation |
| **ciprofloxacin** (Ciloxan) | **Adults and children >1 yr:** *Bacterial conjunctivitis*—Solution: 1–2 drops q 2 hr while awake for 2 days, then q 4 hr while awake for 5 days; Ointment: ½" ribbon 3 times daily for 2 days, then twice daily for 5 days; *Corneal ulcers*—Solution: 1–2 drops q 15 min for 6 hr, then q 30 min while awake for rest of day, then q 1 hr while awake for next 24 hr, then q 4 hr while awake for next 12 days or longer if re-epithelialization does not occur. | • May cause harmless white crystalline precipitate that resolves over time<br>• ADRs: altered taste, systemic allergic reactions, photophobia, discomfort |
| **erythromycin** (Romycin) | **Adults and children:** *Treatment of infections*—½–in ribbon 2–6 times daily<br>Infants: *Prophylaxis of ophthalmia neonatorum*—thin strip in each eye as a single dose | • ADRs: irritation |
| **gatifloxacin** (Zymar) | **Adults and children ≥1 yr:** 1 drop of 0.3% solution q 2 hr while awake (up to 8 times/day) for 2 days, then 4 times daily for 5 more days | • ADRs: irritation, headache, ↓ visual acuity, taste disturbance |
| **gentamicin** (Genoptic, Gentak, Gentesol, Alcomicin) | **Adults and children:** *Solution*—1–2 drops of 0.3% solution q 2–4 hr; *Ointment*—½–in ribbon q 8–12 hr | • ADRs: irritation, burning, stinging, blurred vision (ointment) |
| **levofloxacin** (Iquix, Quixin) | **Adults and children ≥1 yr:** *Quixin (bacterial conjunctivitis)*—1–2 drops q 2 hr while awake for 2 days (up to 8 times/day); then every 4 hr while awake for 5 more days (up to 4 times/day); *Iquix (conjunctival ulcers)*—1–2 drops q 30 min–2 hr while awake and 4–6 hr after retiring for 3 days, then 1–2 drops q 1–4 hr while awake. | • ADRs: altered taste, systemic allergic reactions, photophobia |
| **moxifloxacin** (Vigamox) | **Adults and children ≥1 yr:** 1 drop of 0.5% solution 3 times daily for 7 days. | • ADRs: irritation, ↓ visual acuity |
| **ofloxacin** (Ocuflox) | **Adults and children ≥1 yr:** *Bacterial conjunctivitis*—1–2 drops of 0.3% solution q 2–4 hr while awake for 2 days, then 4 times daily for 5 more days; *Corneal ulcer*—1–2 drops of 0.3% solution q 30 min while awake and q 4–6 hr after retiring for 2 days, then q hr while awake for 4–6 more days, then 4 times daily until cured. | • ADRs: altered taste, systemic allergic reactions, photophobia |
| **sulfacetamide** (Bleph-10, Ocu-Sulf 10, Sulfex) | **Adults and children >2 mo:** 1–2 drops of 10% solution q 2–3 hr while awake (less frequently at night) | • Cross-sensitivity with other sulfonamides (including thiazides) may occur<br>• ADRs: local irritation |
| **tobramycin** (AK-Tob, Tobrex) | **Adults and children ≥2 mo:** *Solution*—1–2 drops of 0.3% solution q 1–4 hr depending on severity of infection; *Ointment*—thin strip q 8–12 hr | • Ointment may retard corneal wound healing<br>• ADRs: irritation, burning, stinging, blurred vision (ointment) |
| **Antifungal** | | |
| **natamycin** (Natacyn) | **Adults:** 1 drop of 5% suspension q 1–2 hr for 3–4 days, then 6–8 times/day for 2–3 wk | • ADRs: irritation, swelling |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **Antivirals** | | |
| **trifluridine** (Viroptic) | **Adults and children ≥6 yr:** 1 drop of 1% solution q 2 hr (up to 9 drops/day) while awake until cornea re-epithelializes, then q 4 hr for 7 more days (not to exceed 21 days) | • ADRs: burning, stinging; keratopathy |
| **Artificial Tears/Ocular Lubricants (sterile buffered isotonic solutions/ointments)** | | |
| **Uses:** Artificial tears—keep the eyes moist with isotonic solutions and wetting agents in the management of dry eyes due to lack of tears; also provide lubrication for artificial eyes. Ocular lubricants—provide lubrication and protection in a variety of conditions including exposure keratitis, decreased corneal sensitivity, corneal erosions, keratitis sicca, during/following ocular surgery or removal of a foreign body. | | |
| **Artificial tears** (Adsorbotear, Akwa Tears, Aquasite, Artificial Tears Plus, Cellufresh, Celluvisc, Comfort Tears, Dakrina, Dry Eye Therapy, Dry Eyes Duratears Naturale, Dwelle, Eye-Lube-A, Genteal Lubricant Eye Gel, HypoTears, HypoTears PF, Isopto Alkaline, Isopto Plain, Just Tears, Lacril, Lacri-Lube NP, Lacri-Lube S.O.P., Lacrisert, Liquifilm Forte, Liquifilm Tears, LubriTears, Moisture Drops, Murine Solution, Murocel, Nature's Tears, Nu-Tears, Nu-Tears II, Nutra Tear, Paralube, Refresh, Refresh PM, Tear Drop, TearGard, Teargen, Tearisol, Tears Naturale, Tears Naturale Free, Tears Naturale II, Tears Plus, Tears Renewed, Ultra Tears, Vit-A-Drops, Viva-Drops) | **Adults and children:** *Artificial tears*—Solution: 1–2 drops 3–4 times daily; Insert: 1 insert 1–2 times daily; *Ocular lubricants*—small amount instilled into conjunctiva several times daily | • May alter effects of other concurrently administered ophthalmic medications<br>• ADRs: photophobia, lid edema stinging (insert only), transient blurred vision, eye discomfort |
| **Beta Blockers** | | |
| **Uses:** Management of chronic open-angle glaucoma and other forms of ocular hypertension (↓ the formation of aqueous humor).<br>**CAUTIONS:** Systemic absorption is minimal but may occur. Systemic absorption may result in additive adverse cardiovascular effects (bradycardia, hypotension), especially when used with other cardiovascular agents (antihypertensives, antiarrhythmics). Other systemic adverse reactions may occur, including bronchospasm or delirium (geriatric patients). Concurrent use with ophthalmic epinephrine may decrease effectiveness. | | |
| **betaxolol** (Betoptic, Betoptic S) | **Adults:** *Solution*—1–2 drops of 0.5% solution twice daily; *Suspension*—1 drop of 0.25% suspension twice daily | • ADRs: conjunctivitis, ↓ visual acuity, ocular burning, rash (may be less likely than others to cause bronchospasm if systemically absorbed) |
| **carteolol** | **Adults:** 1 drop of 1% solution twice daily | • ADRs: ocular burning, ↓ visual acuity |
| **levobunolol** (AKBeta, Betagan) | **Adults:** 1 drop of 0.25% solution 1–2 times daily or 1 drop of 0.5% solution once daily | • ADRs: conjunctivitis, ↓ visual acuity, ocular burning, rash |
| **metipranolol** (OptiPranolol) | **Adults:** 1 drop of 0.3% solution twice daily | • Lasts up to 24 hr<br>• Can be used safely with pilocarpine, epinephrine, and acetazolamide<br>• ADRs: conjunctivitis, ↓ visual acuity, ocular burning, rash |
| **timolol** (Betimol, Istalol, Timoptic, Timoptic-XE, Apo-Timop) | **Adults:** *Solution*—1 drop of 0.25–0.5% solution 1–2 times daily; *Gel-forming solution*—1 drop of 0.25–0.5% solution once daily | • Lasts up to 24 hr<br>• ADRs: conjunctivitis, ↓ visual acuity, ocular burning, rash |
| **Carbonic Anhydrase Inhibitor** | | |
| **Uses:** Management of open-angle glaucoma or other forms of ocular hypertension (↓ formation of aqueous humor).<br>**CAUTIONS:** May exacerbate kidney stones; should not be used in patients with CCr <30 mL/min; may have cross-sensitivity with sulfonamides. | | |
| **brinzolamide** (Azopt) | **Adults:** 1 drop of 1% suspension into each affected eye 3 times daily | • ADRs: burning, stinging, unusual taste |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **dorzolamide** (Trusopt) | **Adults:** 1 drop of 2% solution 3 times daily | • ADRs: bitter taste, ocular irritation or allergy |

## Cholinergics (direct-acting)

**Uses:** Treatment of open-angle glaucoma (facilitates the outflow of aqueous humor); also used to facilitate miosis after ophthalmic surgery or before examination (to counteract mydriatics).
**CAUTIONS:** Conditions in which pupillary constriction occurs should be avoided. If significant systemic absorption occurs, bronchospasm, sweating, ↑ urination and salivation may occur.

| | | |
|---|---|---|
| **acetylcholine** (Miochol-E) | **Adults:** 0.5–2 mL instilled into anterior chamber before or after securing one or more sutures | • ADRs: corneal edema, corneal clouding |
| **carbachol** (Isopto Carbachol, Miostat) | **Adults and children:** 1–2 drops of 0.01–3% solution 1–3 times daily | • ADRs: blurred vision, altered vision, stinging, eye pain |
| **pilocarpine** (Isopto Carpine, Ocusert Pilo, Pilopine HS, Miocarpine, Spersacarpine) | **Adults:** *Glaucoma*—Solution: 1–2 drops of 0.5–4% solution up to 6 times daily; Gel: ½-in. strip of 4% gel at bedtime; *Counteracting mydriatic sympathomimetics*—1 drop of 1% solution (may be repeated prior to surgery) | • ADRs: blurred vision, altered vision, stinging, eye pain, headache |

## Cholinergics (cholinesterase inhibitors)

**Uses:** Management of glaucoma not controlled with short-acting miotics or other agents; also used in varying doses for accommodative esotropia (diagnosis and treatment).
**CAUTIONS:** Enhance neuromuscular blockade from succinylcholine; intensify the actions of cocaine and some other local anesthetics; additive toxicity with antimyasthenics, anticholinergics, and cholinesterase inhibitors (including some pesticides). Use cautiously in patients with history or risk of retinal detachment.

| | | |
|---|---|---|
| **echothiophate** (Phospholine Iodide) | **Adults:** 1 drop 1–2 times daily | • Irreversible cholinesterase inhibitor<br>• May cause hyperactivity in patients with Down syndrome<br>• ADRs: blurred vision, change in vision, brow ache, miosis, eyelid twitching, watering eyes |

## Corticosteroids

**Uses:** Management of inflammatory eye conditions including allergic conjunctivitis, nonspecific superficial keratitis, infectious conjunctivitis (with anti-infectives); management of corneal injury; suppression of graft rejection following keratoplasty, prevention of postoperative inflammation.
**CAUTIONS:** Infectious ocular processes (avoid in herpes simplex keratitis), especially fungal and viral ocular infections (may mask symptoms); diabetes, glaucoma, or epithelial compromise

| | | |
|---|---|---|
| **dexamethasone** (Maxidex, Diodex, PMS Dexamethasone, RO-Dexasone, Spersadex) | **Adults and children:** *Solution*—1–2 drops of 0.1% solution q 1 hr during the day and q 2 hr during the night, gradually ↓ the dose to q 3–4 hr, then to 3–4 times daily; *Suspension*—1–2 drops of 0.1% suspension up to 4–6 times daily | • As condition improves, ↓ frequency of administration<br>• ADRs: corneal thinning, ↑ intraocular pressure, irritation |
| **difluprednate** (Durezol) | **Adults:** 1 drop of 0.05% emulsion 4 times daily beginning 24 hr after surgery and continued for 2 wk, then 2 times daily for 1 wk, then taper | • As condition improves, ↓ frequency of administration<br>• ADRs: blepharitis, photophobia, ↓ visual acuity |
| **fluorometholone** (FML, FML Forte, Flarex, Fluor-Op) | **Adults and children >2 yr:** *Suspension*—1–2 drops 2–4 times daily (up to 1–2 drops q 2–4 hr during initial 24–48 hr); *Ointment*—½-in strip 1–3 times daily (up to q 4 hr during initial 24–48 hr) | • As condition improves, ↓ frequency of administration<br>• ADRs: blurred vision (ointment), corneal thinning, ↑ intraocular pressure, irritation |
| **loteprednol** (Alrex, Lotemax) | **Adults:** *Alrex*—1 drop 4 times daily; *Lotemax*—1–2 drops 4 times daily (up to 1 drop every hr) | • Alrex (0.2% suspension) used for seasonal allergic conjunctivitis<br>• Lotemax (0.5% suspension) used for steroid-responsive inflammatory conditions and postoperatively<br>• ADRs: corneal thinning, ↑ intraocular pressure, irritation |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **prednisolone** (Omnipred, Pred Forte, Pred Mild) | **Adults and children:** 1–2 drops of 0.12–1% solution/suspension q 1 hr during the day and q 2 hr during the night until favorable response, then 1 drop q 4 hr | • As condition improves, ↓ frequency of administration<br>• ADRs: corneal thinning, ↑ intraocular pressure, irritation |
| **rimexolone** (Vexol) | **Adults:** 1–2 drops of 1% suspension 2–4 times daily (up to q 4 hr) (may use q 1–2 hr during first 1–2 days) | • As condition improves, ↓ frequency of administration<br>• ADRs: corneal thinning, ↑ intraocular pressure, irritation |
| **Cycloplegic Mydriatics**<br>**Uses:** Preparation for cycloplegic refraction; management of uveitis (not tropicamide).<br>**CAUTIONS:** Use cautiously in patients with a history of glaucoma; systemic absorption may cause anticholinergic effects such as confusion, unusual behavior, flushing, hallucinations, slurred speech, drowsiness, swollen stomach (infants), tachycardia, dry mouth. | | |
| **atropine** (Atropine-Care, Isopto Atropine) | **Adults:** *Cycloplegic refraction*—1–2 drops of 1% solution 1 hr before procedure; *Uveitis*—Solution: 1–2 drops of 1% solution 1–2 times daily (up to 4 times daily); Ointment: 0.3–0.5 cm of 1% ointment up to 3 times daily | • Effects on accommodation may last 6 days; mydriasis may last 12 days<br>• ADRs: irritation, blurred vision, photophobia |
| **cyclopentolate** (AK-Pentolate, Cyclogyl, Cylate, Pentolair, Minims) | **Adults:** 1 drop of 0.5–2% solution; may repeat in 5 min<br>**Children:** 1 drop of 0.5–2% solution; may be followed 5–10 min later by 1 drop of 0.5–1% solution<br>**Premature and small infants:** 1 drop of 0.5% solution single dose | • Peak of cycloplegia is within 25–75 min and lasts 6–24 hr<br>• Peak of mydriasis is within 30–60 min and may last several days<br>• 2% solution used for heavily pigmented iris<br>• ADRs: irritation, blurred vision, photophobia |
| **homatropine** (Isopto Homatropine, Minims Homatropine) | **Adults and children:** *Cycloplegic refraction*—1 drop of 2–5% solution, may repeat in 5–10 min for 2–3 more doses; *Uveitis*—1–2 drops of 2–5% solution 2–3 times daily (up to q 3–4 hr in adults) | • Cycloplegia and mydriasis may persist for 24–72 hr<br>• ADRs: irritation, blurred vision, photophobia |
| **scopolamine** (Isopto Hyoscine) | **Adults and children:** *Cycloplegic refraction*—1–2 drops of 0.25% solution 1 hr before procedure (repeat twice daily for 2 days in children); *Uveitis*—1 drop of 0.25% solution up to 4 times daily | • Shorter duration than atropine, but mydriasis and cycloplegia may persist for 3–7 days<br>• ADRs: irritation, blurred vision, photophobia |
| **tropicamide** (Mydral, Mydriacyl, Tropicacyl, Minims Tropicamide) | **Adults and children:** 1–2 drops of 0.5–1% solution | • Stronger solution/repeated dosing may be required in patients with dark irides<br>• Peak effect occurs in 20–40 min<br>• Cycloplegia lasts 2–6 hr; mydriasis lasts up to 7 hr<br>• ADRs: irritation, blurred vision, photophobia |
| **Immunomodulators**<br>**Uses:** To ↑ tear production when the cause of dry eye is inflammation secondary to keratoconjunctivitis sicca.<br>**CAUTIONS:** Tear production is not ↑ during concurrent use of ophthalmic NSAIDs or punctal plugs. | | |
| **cyclosporine** (Restasis) | **Adults:** 1 drop of 0.05% ophthalmic emulsion in each eye twice daily | • Emulsion should be inverted to obtain uniform opaque appearance prior to use.<br>• ADRs: irritation, blurred vision |
| **Mast Cell Stabilizers**<br>**Uses:** Vernal keratoconjunctivitis.<br>**CAUTIONS:** Require several days of treatment before effects are seen. | | |
| **cromolyn** (Crolom, Opticrom) | **Adults and children >4 yr:** 1–2 drops of 4% solution 4–6 times daily | • Do not wear contact lenses concurrently<br>• ADRs: irritation |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **lodoxamide** (Alomide) | **Adults and children ≥2 yr:** 1–2 drops of 0.1% solution 4 times daily for up to 3 mo | • ADRs: blurred vision, foreign body sensation, irritation |
| **nedocromil** (Alocril) | **Adults and children ≥3 yr:** 1–2 drops of 2% solution in each eye twice daily throughout period of exposure | • Avoid concurrent use of contact lenses<br>• ADRs: headache, ocular burning, unpleasant taste, nasal congestion |
| **pemirolast** (Alamast) | **Adults and children >3 yr:** 1–2 drops of 0.1% solution in each affected eye 4 times daily | • Symptoms may improve within a few days, but optimal response may take up to 4 wk<br>• ADRs: discomfort, dry eyes, foreign body sensation |

## Nonsteroidal Anti-inflammatory Drugs

**Uses:** Management of pain/inflammation following surgery (bromfenac, diclofenac, ketorolac, nepafenac), allergic conjunctivitis (ketorolac), inhibition of perioperative miosis (flurbiprofen).
**CAUTIONS:** Cross-sensitivity with systemic NSAIDs may occur; concurrent use of anticoagulants, other NSAIDs, thrombolytics, some cephalosporins, and valproates may ↑ the risk of bleeding. May slow/delay healing. Avoid contact lens use.

| | | |
|---|---|---|
| **bromfenac** (Xibrom) | **Adults:** 1 drop of 0.09% solution in affected eye(s) twice daily starting 24 hr after surgery and for 2 wk following | • Contains sulfites<br>• Avoid contact lenses<br>• ADRs: irritation, headache |
| **diclofenac** (Voltaren) | **Adults:** 1 drop of 0.1% solution starting 24 hr after surgery and for 2 wk following | • Do not wear hydrocel contact lenses concurrently<br>• ADRs: irritation, allergic reactions |
| **flurbiprofen** (Ocufen) | **Adults:** 1 drop of 0.03% solution q 30 min, beginning 2 hr prior to surgery (4 drops total in each eye) | • ADRs: irritation, allergic reactions |
| **ketorolac** (Acular, Acular Preservative Free, Acular LS, Acuvail) | **Adults and children >3 yr:** *Allergic conjunctivitis*—Acular: 1 drop 4 times daily (Acular); *Postoperative*—Acular: 1 drop 4 times daily in operated eye starting 24 hr after cataract surgery and for 2 wk following; Acular LS: 1 drop 4 times daily in operated eye after corneal refractive surgery for up to 4 days; Acuvail: 1 drop twice daily prior to cataract surgery and for 2 wk following; Preservative–free solution: 1 drop 4 times daily in operated eye after incisional refractive surgery for up to 3 days | • ADRs: irritation, allergic reactions |
| **nepafenac** (Nevanac ) | **Adults and Children >10 yr:** 1 drop of 0.1% suspension into affected eye(s) 3 times daily starting one day prior to cataract removal and for 2 wk following surgery | • ADRs: irritation, photophobia, headache, hypertension, nausea/vomiting |

## Ocular Decongestants/Vasoconstrictors

**Uses:** ↓ ocular congestion due to irritation by vasoconstricting conjunctival blood vessels; stronger solutions have mydriatic effects.
**CAUTIONS:** Systemic absorption may result in adverse cardiovascular effects; excessive/prolonged use may produce rebound hyperemia; use caution in patients at risk for acute angle-closure glaucoma; cardiovascular effects may be exaggerated by MAO inhibitors and dose adjustment may be required within 21 days of MAO inhibitors; ↑ risk of arrhythmias with inhalation anesthetics.

| | | |
|---|---|---|
| **naphazoline** (Albalon, Allerest, Allergy Drops, Clear Eyes Lubricating Eye Redness Reliever, Comfort Eye Drops, Degest 2, Estivin II, Nafazair, Naphcon, Ocu-Zoline, VasoClear, Vasocon, 🍁 AK-Con) | **Adults:** 1–2 drops of 0.012–0.025% solution 4 times daily as needed (for up to 3 days) or 1–2 drops of 0.1% solution q 3–4 hr as needed | • ADRs: ophthalmic-rebound hyperemia; systemic-dizziness, headache, nausea, sweating, weakness |
| **oxymetazoline** (OcuClear, Visine LR) | **Adults and children ≥6 yr:** 1–2 drops of 0.025% solution q 6 hr as needed | • ADRs: ophthalmic-rebound hyperemia; systemic-headache, insomnia, nervousness, tachycardia |

| DRUG NAME | DOSE | NOTES |
|---|---|---|
| **phenylephrine** (AK-Dilate, AK-Nefrin, Dilatair, I-Phrine, Isopto Frin, Mydfrin, Ocu-Phrin, Prefrin, Minims Phenylephrine, Spersaphrine) | **Adults:** *Decongestant*—1–2 drops of 0.12% solution up to 4 times daily as needed (for up to 3 days); *Mydriasis*—1 drop of 2.5 solution, may repeat in 10–60 min as needed<br>**Children:** *Mydriasis*—1 drop of 2.5% solution, may repeat in 10–60 min as needed | • ADRs: ophthalmic-blurred vision, irritation; systemic-dizziness, tachycardia, hypertension, paleness, sweating, trembling |
| **tetrahydrozoline** (Eyesine, Geneye, Murine Plus, Optigene 3, Visine) | **Adults:** 1–2 drops of 0.05% solution 2–4 times daily | • ADRs: ophthalmic—irritation; systemic—tachycardia, hypertension |

## Osmotics

**Uses:** ↓ superficial edema of the cornea prior to examination.

| | | |
|---|---|---|
| **glycerin** (Ophthalgan) | **Adults:** 1–2 drops prior to exam | • Avoid using in patients with hypersensitivity to chlorobutanol |

## Prostaglandin Agonist

**Uses:** Management of open-angle glaucoma (↑ outflow of aqueous humor).
**CAUTIONS:** May change eye color to brown; will form precipitate with thimerosal-containing products; can be used with other agents to ↓ intraocular pressure.

| | | |
|---|---|---|
| **bimatoprost** (Lumigan) | **Adults:** 1 drop of 0.03% solution once daily in the evening | • ADRs: local irritation, foreign body sensation, ↑ eyelash growth, ↑ brown pigmentation in iris |
| **latanoprost** (Xalatan) | **Adults:** 1 drop of 0.005% solution once daily | • ADRs: local irritation, foreign body sensation, ↑ eyelash growth, ↑ brown pigmentation in iris |
| **travoprost** (Travatan, Travatan Z) | **Adults:** 1 drop of 0.004% solution once daily in the evening | • ADRs: local irritation, foreign body sensation, ↑ eyelash growth, ↑ brown pigmentation in iris |

## Sympathomimetics

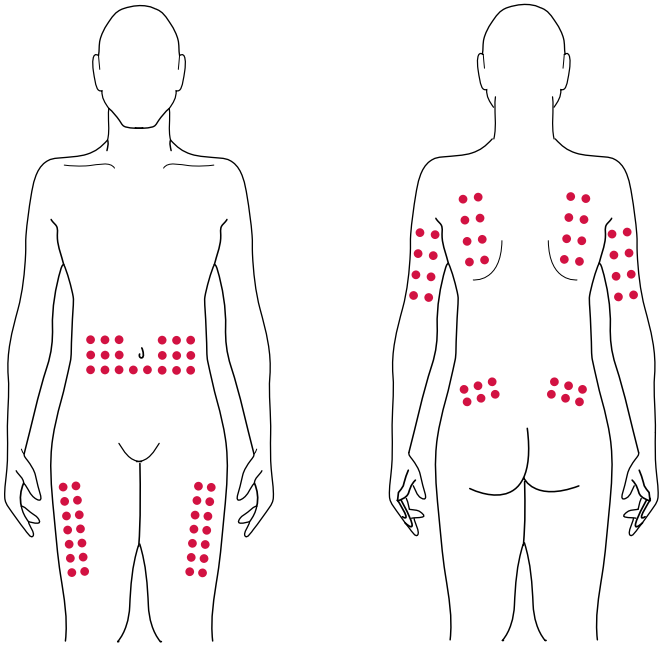
**Uses:** Management of glaucoma (↓ formation of aqueous humor).
**CAUTIONS:** Systemic absorption may result in adverse cardiovascular and CNS reactions (especially in patients with cardiovascular disease); avoid use in patients predisposed to acute angle-closure glaucoma.

| | | |
|---|---|---|
| **apraclonidine** (Iopidine) | **Adults:** *Postoperative reduction of intraocular pressure*—1–2 drops of 0.5% solution 3 times daily or 1 drop of 1% solution 1 hr before surgery and upon completion of surgery | • A selective alpha-adrenergic agonist<br>• Monitor pulse and blood pressure<br>• Avoid concurrent use with MAO inhibitors<br>• ADRs: ophthalmic-irritation, mydriasis; systemic-allergic reactions, arrhythmias, bradycardia, drowsiness, dry nose, fainting, headache, nervousness, weakness |
| **brimonidine** (Alphagan P) | **Adults:** 1 drop 3 times daily (8 hr apart) | • A selective alpha-adrenergic agonist<br>• Avoid concurrent use with MAO inhibitors<br>• Tricyclic antidepressants may ↓ effectiveness; additive CNS depression may occur with other CNS depressants, additive adverse cardiovascular effects with other cardiovascular agents<br>• ADRs: ophthalmic—irritation; systemic—drowsiness, dizziness, dry mouth, headache, weakness, muscular pain |
| **dipivefrin** (Propine) | **Adults:** 1 drop of 0.1% solution q 12 hr | • Converted to epinephrine in the eye<br>• Wait 15 min before inserting soft contact lenses<br>• ADRs: ophthalmic—local irritation, macular edema (aphakic patients); systemic—arrhythmias, hypertension |

APPENDIX D

# Medication Administration Techniques

## Subcutaneous Injection Sites



## Administration of Ophthalmic Medications

For instillation of ophthalmic solutions, instruct patient to lie down or tilt head back and look at ceiling. Pull down on lower lid, creating a small pocket, and instill solution into pocket. With systemically acting drugs, apply pressure to the inner canthus for 1–2 min to minimize systemic absorption. Instruct patient to gently close eye. Wait 5 min before instilling second drop or any other ophthalmic solutions.

For instillation of ophthalmic ointment, instruct patient to hold tube in hand for several minutes to warm. Squeeze a small amount of ointment (¼–½ in.) inside lower lid. Instruct patient to close eye gently and roll eyeball around in all directions with eye closed. Wait 10 min before instilling any other ophthalmic ointments.

Do not touch cap or tip of container to eye, fingers, or any surface.

## Administration of Medications with Metered-Dose Inhalers

Instruct patient on the proper use of the metered-dose inhaler. There are 3 methods of using a metered-dose inhaler. Shake inhaler well. (1) Take a drink of water to moisten the throat; place the inhaler mouthpiece 2 finger-widths away from mouth; tilt head back slightly. While activating the inhaler, take a slow, deep breath for 3–5 sec; hold the breath for 10 sec; and breathe out slowly. (2) Exhale and close lips firmly around mouthpiece. Administer during second half of inhalation, and hold breath for as long as possible to ensure deep instillation of medication. (3) Use of spacer. Consult health care professional to determine method desired prior to instruction. Allow 1–2 min between inhalations. Rinse mouth with

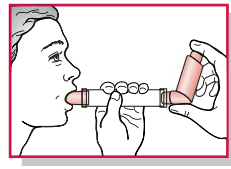
water or mouthwash after each use to minimize dry mouth and hoarseness. Wash inhalation assembly at least daily in warm running water.

For use of dry powder inhalers, turn head away from inhaler and exhale (do not blow into inhaler). Do not shake. Close mouth tightly around the mouthpiece of the inhaler and inhale rapidly.

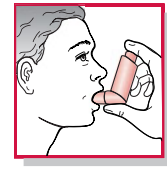
**Steps for Using Your Inhaler***

1. Remove the cap and hold inhaler upright.
2. Shake the inhaler.
3. Tilt your head back slightly and breathe out slowly.
4. Position the inhaler in one of the following ways (A or B is optimal, but C is acceptable for those who have difficulty with A or B. C is required for breath-activated inhalers):

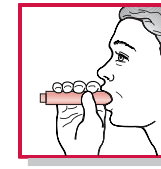
A. Open mouth with inhaler 1 to 2 inches away.



B. Use space/holding chamber (this is recommended especially for young children and for people using corticosteroids).



C. In the mouth. Do not use for corticosteroids.



D. NOTE: Inhaled dry powder capsules require a different inhalation technique. To use a dry powder inhaler, it is important to close the mouth tightly around the mouthpiece of the inhaler and to inhale rapidly.

5. Press down on the inhaler to release medication as you start to breathe in slowly.
6. Breathe in slowly (3 to 5 sec).
7. Hold your breath for 10 sec to allow the medicine to reach deeply into your lungs.
8. Repeat puff as directed. Waiting 1 minute between puffs may permit second puff to penetrate your lungs better.
9. Spacers/holding chambers are useful for all patients. They are particularly recommended for young children and older adults and for use with **inhaled corticosteroids**. Avoid common inhaler mistakes. Follow these inhaler tips:

- Breathe out before pressing your inhaler.
- Inhale slowly.
- Breathe in through your mouth, not your nose.
- Press down on your inhaler at the start of inhalation (or within the first second of inhalation).
- Keep inhaling as you press down on inhaler.
- Press your inhaler only once while you are inhaling (one breath for each puff).
- Make sure you breathe in evenly and deeply.
- If you are using a short-acting bronchodilator inhaler and a corticosteroid inhaler, use the bronchodilator first, and allow 5 min to elapse before using the corticosteroid.

Other inhalers have become available in addition to the one illustrated here. Different types of inhalers may require different techniques.

## Administration of Medications by Nebulizer

Administer in a location where patient can sit comfortably for 10–15 min. Plug in compressor. Mix medication as directed, or empty unit-dose vials into nebulizer. Do not mix different types of medications

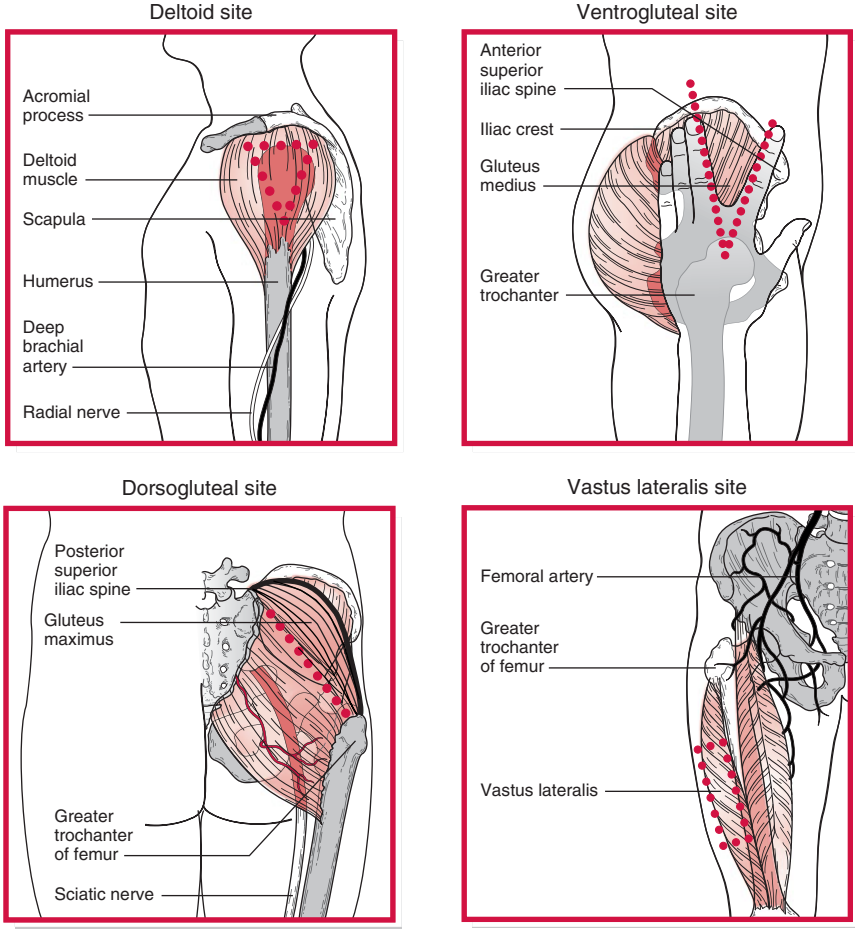
*Source: Expert Panel Report 2: Guidelines for the Diagnosis and Management of Asthma. National Asthma Education and Prevention Program, National Heart, Lung, and Blood Institute, 1997.

without checking with health care professional. Assemble mask or mouthpiece and connect tubing to port on compressor. Have patient sit in a comfortable upright position. Make sure that mask fits properly over nose and mouth and that mist does not flow into eyes, or put mouthpiece into mouth. Turn on compressor. Instruct patient to take slow deep breaths. If possible, patient should hold breath for 10 sec before slowly exhaling. Continue this process until medication chamber is empty. Wash mask in hot soapy water; rinse well and allow to air dry before next use.

## Administration of Nasal Sprays

Clear nasal passages of secretions prior to use. If nasal passages are blocked, use a decongestant immediately prior to use to ensure adequate penetration of the spray. Keep head upright. Breathe in through nose during administration. Sniff hard for a few minutes after administration.

## Intramuscular Injection Sites



The dorsogluteal site is associated with sciatic nerve injury. The deltoid and ventrogluteal sites are the preferred sites for adults; the vastus lateralis site is preferred in children under 2 yr of age.

APPENDIX E

# Formulas Helpful for Calculating Doses

## Ratio and Proportion

A ratio is the same as a fraction and can be expressed as a fraction (½) or in the algebraic form (1:2). This relationship is stated as *one is to two*.

A proportion is an equation of equal fractions or ratios.

$$\frac{1}{2} = \frac{4}{8}$$

To calculate doses, begin each proportion with the two known values, for example 15 grains = 1 gram (known equivalent) or 10 milligrams = 2 milliliters (dosage available) on one side of the equation. Next, make certain that the units of measure on the opposite side of the equation are the same as the units of the known values and are placed on the same level of the equation.

Problem A:
$$\frac{15 \text{ gr}}{1 \text{ g}} = \frac{10 \text{ gr}}{x \text{ g}}$$

Problem B:
$$\frac{10 \text{ mg}}{2 \text{ mL}} = \frac{5 \text{ mg}}{x \text{ mL}}$$

Once the proportion is set up correctly, cross-multiply the opposing values of the proportion.

Problem A:
$$\frac{15 \text{ gr}}{1 \text{ g}} \times \frac{10 \text{ gr}}{x \text{ g}}$$

$$15x = 10$$

Problem B:
$$\frac{10 \text{ mg}}{2 \text{ mL}} \times \frac{5 \text{ mg}}{x \text{ mL}}$$

$$10x = 10$$

Next, divide each side of the equation by the number with the $x$ to determine the answer. Then, add the unit of measure corresponding to $x$ in the original equation.

Problem A:
$$\frac{15x}{15} = \frac{10}{15}$$

$$x = \frac{2}{3} \text{ or } 0.6 \text{ g}$$

Problem B:
$$\frac{10x}{10} = \frac{10}{10}$$

$$x = 1 \text{ mL}$$

## Calculation of IV Drip Rate

To calculate the drip rate for an intravenous infusion, 3 values are needed:

I. The amount of solution and corresponding time for infusion. May be ordered as:

$$1000 \text{ mL over } 8 \text{ hr}$$

or

$$125 \text{ mL/hr}$$

II. The equivalent in time to convert hr to min.

$$1 \text{ hr} = 60 \text{ min}$$

III. The drop factor or number of drops that equal 1 mL of fluid. (This information can be found on the IV tubing box.)

$$10 \text{ gtt} = 1 \text{ mL}$$

Set up the problem by placing each of the 3 values in a proportion.

$$\frac{125 \text{ mL}}{1 \text{ hr}} \times \frac{1 \text{ hr}}{60 \text{ min}} \times \frac{10 \text{ gtt}}{1 \text{ mL}}$$

Units of measure can be canceled out from the upper and lower levels of the equation.
The units cancel, leaving:

$$\frac{125}{1} \times \frac{1}{60 \text{ min}} \times \frac{10 \text{ gtt}}{1}$$

Next, multiply each level across and divide the numerator by the denominator for the answer.

$$\frac{125}{1} \times \frac{1}{6 \text{ min}} \times \frac{1 \text{ gtt}}{1}$$

$$125/6 = 20.8 \text{ or } 21 \text{ gtt/min}$$

## Calculation of Creatinine Clearance (CCr) in Adults from Serum Creatinine

$$\text{Men: CCr} = \frac{\text{ideal body weight (kg)} \times (140 - \text{age})}{72 \times \text{serum creatinine (mg/dL)}}$$

$$\text{Women: CCr} = 0.85 \times \text{calculation for men}$$

## Calculation of Body Surface Area (BSA) in Adults and Children

*Dubois method:*

$$\text{SA (cm}^2\text{)} = \text{wt (kg)}^{0.425} \times 71.84$$

$$\text{SA (m}^2\text{) K} \times \sqrt[3]{\text{wt}^2 \text{ (kg)}} \text{ (common K value 0.1 for toddlers, 0.103 for neonates)}$$

*Simplified method:*

$$\text{BSA (m}^2\text{)} = \sqrt{\frac{\text{ht (cm)} \times \text{wt (kg)}}{3600}}$$

## Body Mass Index

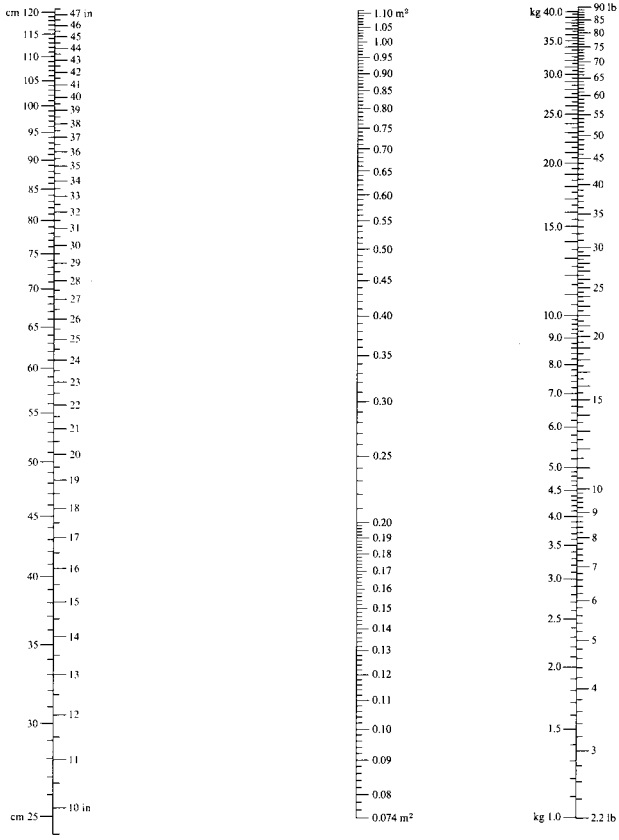
$$\text{BMI} = \text{wt (kg)/ht (m}^2\text{)}$$

APPENDIX F

# Body Surface Area Nomograms

## ESTIMATING BODY SURFACE AREA IN CHILDREN

For pediatric patients of average size, body surface area may be estimated with the scale on the left. Match weight to corresponding surface area. For other pediatric patients, use the scale on the right. Lay a straightedge on the correct height and weight points for your patient, and observe the point where it intersects on the surface area scale at center.



Reproduced from *Nelson Textbook of Pediatrics*, 16th edition. Courtesy W.B. Saunders Co., Philadelphia. PA.

## ESTIMATING BODY SURFACE AREA IN ADULTS

Use a straightedge to connect the patient's height in the left-hand column to weight in the right-hand column. The intersection of this line with the center scale estimates the body surface area.

APPENDIX G

# Normal Values of Common Laboratory Tests

## SERUM TESTS

| HEMATOLOGIC | MEN | WOMEN |
|---|---|---|
| Hemoglobin | 13.5–18 g/dL | 12–16 g/dL |
| Hematocrit | 40–54% | 38–47% |
| Red blood cells (RBC) | 4.6–6.2 million/$mm^3$ | 4.2–5.4 million/$mm^3$ |
| Mean corpuscular volume (MCV) | 76–100 (micrometer)$^3$ | 76–100 (micrometer)$^3$ |
| Mean corpuscular hemoglobin (MCH) | 27–33 picogram | 27–33 picogram |
| Mean corpuscular hemoglobin concentration (MCHC) | 33–37 g/dL | 33–37 g/dL |
| Erythrocyte sedimentation rate (ESR) | ≤20 mm/hr | ≤30 mm/hr |
| Leukocytes (WBC) | 5000–10,000/$mm^3$ | 5000–10,000/$mm^3$ |
| Neutrophils | 54–75% (3000–7500/$mm^3$) | 54–75% (3000–7500/$mm^3$) |
| Bands | 3–8% (150–700/$mm^3$) | 3–8% (150–700/$mm^3$) |
| Eosinophils | 1–4% (50–400/$mm^3$) | 1–4% (50–400/$mm^3$) |
| Basophils | 0–1% (25–100/$mm^3$) | 0–1% (25–100/$mm^3$) |
| Monocytes | 2–8% (100–500/$mm^3$) | 2–8% (100–500/$mm^3$) |
| Lymphocytes | 25–40% (1500–4500/$mm^3$) | 25–40% (1500–4500/$mm^3$) |
| T lymphocytes | 60–80% of lymphocytes | 60–80% of lymphocytes |
| B lymphocytes | 10–20% of lymphocytes | 10–20% of lymphocytes |
| Platelets | 150,000–450,000/$mm^3$ | 150,000–450,000/$mm^3$ |
| Prothrombin time (PT) | 9.6–11.8 sec | 9.5–11.3 sec |
| Partial thromboplastin time (PTT) | 30–45 sec | 30–45 sec |
| Bleeding time (duke) | 1–3 min | 1–3 min |
| (ivy) | 3–6 min | 3–6 min |
| (template) | 3–6 min | 3–6 min |

| CHEMISTRY | MEN | WOMEN |
|---|---|---|
| Sodium | 135–145 mEq/L | 135–145 mEq/L |
| Potassium | 3.5–5.0 mEq/L | 3.5–5.0 mEq/L |
| Chloride | 95–105 mEq/L | 95–105 mEq/L |
| Bicarbonate ($HCO_3$) | 19–25 mEq/L | 19–25 mEq/L |
| Total calcium | 9–11 mg/dL or 4.5–5.5 mEq/L | 9–11 mg/dL or 4.5–5.5 mEq/L |
| Ionized calcium | 4.2–5.4 mg/dL or 2.1–2.6 mEq/L | 4.2–5.4 mg/dL or 2.1–2.6 mEq/L |
| Phosphorus/phosphate | 2.4–4.7 mg/dL | 2.4–4.7 mg/dL |
| Magnesium | 1.8–3.0 mg/dL or 1.5–2.5 mEq/L | 1.8–3.0 mg/dL or 1.5–2.5 mEq/L |
| Glucose | 65–99 mg/dL | 65–99 mg/dL |
| Osmolality | 285–310 mOsm/kg | 285–310 mOsm/kg |
| Ammonia ($NH_3$) | 10–80 mcg/dL | 10–80 mcg/dL |
| Amylase | ≤130 U/L | ≤130 U/L |
| Creatine phosphokinase total (CK, CPK) | <150 U/L | <150 U/L |
| Creatine kinase isoenzymes, MB fraction | >5% in MI | >5% in MI |
| Lactic dehydrogenase (LDH) | 50–150 U/L | 50–150 U/L |
| Protein, total | 6–8 g/d | 6–8 g/d |
| Albumin | 4–6 g/dL | 4–6 g/dL |

| HEPATIC | MEN | WOMEN |
|---|---|---|
| AST | 8–46 U/L | 7–34 U/L |
| ALT | 10–30 IU/mL | 10–30 IU/mL |
| Total bilirubin | 0.3–1.2 mg/dL | 0.3–1.2 mg/dL |
| Conjugated bilirubin | 0.0–0.2 mg/dL | 0.0–0.2 mg/dL |
| Unconjugated (indirect) bilirubin | 0.2–0.8 mg/dL | 0.2–0.8 mg/dL |
| Alkaline phosphatase | 20–90 U/L | 20–90 U/L |

| RENAL | MEN | WOMEN |
|---|---|---|
| BUN | 6–20 mg/dL | 6–20 mg/dL |
| Creatinine | 0.6–1.3 mg/dL | 0.5–1.0 mg/dL |
| Uric acid | 4.0–8.5 mg/dL | 2.7–7.3 mg/dL |
| **ARTERIAL BLOOD GASES** | **MEN** | **WOMEN** |
| pH | 7.35–7.45 | 7.35–7.45 |
| $Po_2$ | 80–100 mm Hg | 80–100 mm Hg |
| $Pco_2$ | 35–45 mm Hg | 35–45 mm Hg |
| $O_2$ saturation | 95–97% | 95–97% |
| Base excess | +2–(−2) | +2–(−2) |
| Bicarbonate ($HCO_3^-$) | 22–26 mEq/L | 22–26 mEq/L |

## URINE TESTS

| URINE | MEN | WOMEN |
|---|---|---|
| pH | 4.5–8.0 | 4.5–8.0 |
| Specific gravity | 1.010–1.025 | 1.010–1.025 |

## DRUG LEVELS, THERAPEUTIC AND TOXIC CONVENTIONAL (US SYSTEM OF MEASUREMENTS)

| DRUG | THERAPEUTIC LEVEL | TOXIC LEVEL |
|---|---|---|
| acetaminophen | 10–30 mcg/mL | >200 mcg/mL at 4 hr or 50 mcg/mL at 12 hr after ingestion |
| amikacin | peak: 20–30 mcg/mL<br>trough: <8 mcg/mL | peak: >40 mcg/mL<br>trough: >10 mcg/mL |
| amiodarone | 0.5–2.5 mg/L | >2.5 mg/L |
| amitriptyline | 0.5–2.5 mcg/mL | >2.5 mcg/mL |
| amoxapine | 120–150 ng/mL | >500 ng/mL |
| carbamazepine | 4–12 mcg/mL | >15 mcg/mL |
| chloramphenicol | peak: 10–25 mcg/mL<br>trough: 5–15 mcg/mL | peak: >40 mcg/mL<br>trough: >15 mcg/mL |
| chlordiazepoxide | 0.1–3 mcg/mL | >25 mcg/mL |
| chlorpromazine | 50–300 ng/mL | >750 ng/mL |
| clonazepam | 20–80 ng/mL | >80 ng/mL |
| cyclosporine | 100–400 ng/mL | >400 ng/mL |
| desipramine | 50–300 ng/mL | >300 ng/mL |
| diazepam | 0.2–1.5 mcg/mL | >1.5 mcg/mL |
| digoxin | 0.5–2 ng/mL | >2.5 ng/mL |
| disopyramide | 2.8–7.5 mcg/mL | >7.5 mcg/mL |
| doxepin | 110–250 ng/mL | >500 ng/mL |
| ethosuximide | 40–100 mcg/mL | >100 mcg/mL |
| flecainide | 0.2–1 mcg/mL | >1 mcg/mL |
| gentamicin | peak: 6–10 mcg/mL<br>trough: <1 mcg/mL | trough: >1 mcg/mL |
| haloperidol | 5–20 ng/mL | >42 ng/mL |
| imipramine | 150–250 ng/mL | >500 ng/mL |
| kanamycin | peak: 15–30 mcg/mL<br>trough: 5–10 mcg/mL | peak: >35 mcg/mL<br>trough: >10 mcg/mL |
| lidocaine | 1.5–5 mcg/mL | >6 mcg/mL |
| lithium | 0.6–1.2 mEq/L | >1.5 mEq/L |
| meperidine | 70–500 ng/mL | >1000 ng/mL |
| mexiletine | 0.5–2 mcg/mL | >2 mcg/mL |
| morphine | 65–80 ng/mL | >200 ng/mL |
| nortriptyline | 50–150 ng/mL | >500 ng/mL |
| phenobarbital | 15–40 mcg/mL | >40 mcg/mL |
| phenytoin | 10–20 mcg/mL | >30 mcg/mL |
| primidone | 5–12 mcg/mL | >15 mcg/mL |
| procainamide | procainamide: 4–10 mcg/mL | procainamide: >10 mcg/mL |

| | | |
|---|---|---|
| | N-acetylprocainamide (NAPA): 15–25 mcg/mL | |
| propranolol | 50–100 ng/mL | >150 ng/mL |
| quinidine | 2–5 mcg/mL | >6 mcg/mL |
| salicylate | 100–400 mcg/mL | >400 mcg/mL |
| theophylline | 10–20 mcg/mL | >20 mcg/mL |
| tobramycin | peak: 6–10 mcg/mL<br>trough: <1 mcg/mL | trough: >1 mcg/mL |
| trazadone | 0.5–2.5 mcg/mL | >2.5 mcg/mL |
| valproic acid | 50–125 mcg/mL | >125 mcg/mL |
| vancomycin | trough: 10–20 mcg/mL | trough: >20 mcg/mL |

APPENDIX H

# Commonly Used Abbreviations

**ABGs** arterial blood gases
**ac** before meals
**ACE** angiotensin-converting enzyme
**ADH** antidiuretic hormone
**A-G ratio** albumin-globulin ratio
**AHF** antihemolytic factor
**ALT** alanine aminotransferase
**ANA** antinuclear antibodies
**ANC** absolute neutrophil count
**AST** aspartate aminotransferase
**ATP** adenosine triphosphate
**AV** atrioventricular
**bid** two times a day
**BMI** body mass index
**BP** blood pressure
**bpm** beats per minute
**BSA** body surface area
**BUN** blood urea nitrogen
**cap** capsule
**CBC** complete blood count
**CCr** creatinine clearance
**CHF** congestive heart failure
**COMT** catechol-O-methyltransferase
**CNS** central nervous system
**CPK** creatine phosphokinase
**CR** controlled-release
**CSF** colony-stimulating factor; cerebrospinal fluid
**CT** computed tomography
**CV** cardiovascular
**CVP** central venous pressure
**D5/LR** 5% dextrose and lactated Ringer's solution
**D5/0.9% NaCl** 5% dextrose and 0.9% NaCl; 5% dextrose and normal saline
**D5/0.25% NaCl** 5% dextrose and 0.25% NaCl; 5% dextrose and quarter normal saline
**D5/0.45% NaCl** 5% dextrose and 0.45% NaCl; 5% dextrose and half normal saline
**D5W** 5% dextrose in water
**D10W** 10% dextrose in water
**Derm** dermatologic
**dL** deciliter
**DMARD** disease-modifying antirheumatic drug
**DNA** deoxyribonucleic acid
**DVT** deep vein thrombosis
**ECG** electrocardiogram
**ECMO** extracorporeal membrane oxygenation
**EENT** eye, ear, nose, and throat
**Endo** endocrine
**ER** extended-release
**ESRD** end-stage renal disease
**F and E** fluid and electrolyte
**g** gram(s)
**GABA** gamma-aminobutyric acid
**GERD** gastroesophageal reflux disease
**GFR** glomerular filtration rate
**GI** gastrointestinal
**G6PD** glucose-6-phosphate dehydrogenase
**gt(t)** drop(s)
**GTT** glucose tolerance test
**GU** genitourinary
**Hb $A_{1c}$** hemoglobin $A_{1c}$, glycosylated hemoglobin
**HDL** high-density lipoproteins
**Hemat** hematologic
**HF** heart failure
**hr(s)** hour(s)
**HR** heart rate
**HRT** hormone replacement therapy
**IA** intra-articular
**IL** intralesional
**IM** intramuscular
**Inhaln** inhalation
**INR** international normalized ratio
**IPPB** intermittent positive-pressure breathing
**IS** intrasynovial
**IT** intrathecal
**IV** intravenous
**K** potassium
**KCl** potassium chloride
**kg** kilogram
**L** liter
**LA** long-acting
**LDH** lactic dehydrogenase
**LDL** low-density lipoproteins
**LR** lactated Ringer's solution
**M** molar

**MAOI** monoamine oxidase inhibitor
**mcg** microgram(s)
**MDI** metered dose inhaler
**mEq** milliequivalent
**Metab** metabolic
**mg** milligram(s)
**min(s)** minute(s)
**Misc** miscellaneous
**mL** milliliter(s)
**mM** millimole
**MRI** magnetic resonance imaging
**MS** musculoskeletal
**MUGA** multiple-gated (image) acquisition (analysis)
**Na** sodium
**NaCl** sodium chloride
**0.9% NaCl** 0.9% sodium chloride, normal saline
**Neuro** neurologic
**NPO** nothing by mouth
**NS** sodium chloride, normal saline (0.9% NaCl)
**NSAIDs** nonsteroidal anti-inflammatory drugs
**OCD** obsessive-compulsive disorder
**Oint** ointment
**Ophth** ophthalmic
**OTC** over-the-counter
**pc** after meals
**PCA** patient-controlled analgesia
**PO** by mouth, orally
**prn** as needed
**PT** prothrombin time
**PTT** partial thromboplastin time
**PVC** premature ventricular contraction
**q** every
**qid** four times a day
**q 2 hr** every 2 hours
**q 3 hr** every 3 hours
**q 4 hr** every 4 hours
**RBC** red blood cell count
**Rect** rectally or rectal
**REM** rapid eye movement
**Resp** respiratory
**RTU** ready to use
**Rx** prescription
**SA** sinoatrial
**subcut** subcutaneous
**sec(s)** second(s)
**SL** sublingual
**SR** sustained-release
**SSRI(s)** selective serotonin reuptake inhibitor(s)
**stat** immediately
**supp** suppository
**tab** tablet
**tbsp** tablespoon(s)
**tid** three times a day
**Top** topically or topical
**tsp** teaspoon(s)
**UK** unknown
**Vag** vaginal
**VF** ventricular fibrillation
**VLDL** very low-density lipoproteins
**VT** ventricular tachycardia
**WBC** white blood cell count
**wk(s)** week(s)
**yr(s)** year(s)

APPENDIX I

# Pregnancy Categories

## Category A

Adequate, well-controlled studies in pregnant women have not shown an increased risk of fetal abnormalities.

## Category B

Animal studies have revealed no evidence of harm to the fetus, however, there are no adequate and well-controlled studies in pregnant women. **or** Animal studies have shown an adverse effect, but adequate and well-controlled studies in pregnant women have failed to demonstrate a risk to the fetus.

## Category C

Animal studies have shown an adverse effect and there are no adequate and well-controlled studies in pregnant women. **or** No animal studies have been conducted and there are no adequate and well-controlled studies in pregnant women.

## Category D

Studies, adequate well-controlled or observational, in pregnant women have demonstrated a risk to the fetus. However, the benefits of therapy may outweigh the potential risk.

## Category X

Studies, adequate well-controlled or observational, in animals or pregnant women have demonstrated positive evidence of fetal abnormalities. The use of the product is contraindicated in women who are or may become pregnant.

**Note:** The designation UK is used when the pregnancy category is unknown.

APPENDIX J

# Controlled Substances Schedules

Classes or schedules are determined by the Drug Enforcement Agency (DEA), an arm of the United States Justice Department, and are based on the potential for abuse and dependence liability (physical and psychological) of the medication. Some states may have stricter prescription regulations. Physicians, dentists, podiatrists, and veterinarians may prescribe controlled substances. Nurse practitioners and physician's assistants may prescribe controlled substances with limitations that vary from state to state.

## Schedule I (C-I)

Potential for abuse is so high as to be unacceptable. May be used for research with appropriate limitations. Examples are LSD and heroin.

## Schedule II (C-II)

High potential for abuse and extreme liability for physical and psychological dependence (amphetamines, opioid analgesics, dronabinol, certain barbiturates). Outpatient prescriptions must be in writing. In emergencies, telephone orders may be acceptable if a written prescription is provided within 72 hr. No refills are allowed.

## Schedule III (C-III)

Intermediate potential for abuse (less than C-II) and intermediate liability for physical and psychological dependence (certain nonbarbiturate sedatives, certain nonamphetamine CNS stimulants, and certain opioid analgesics). Outpatient prescriptions can be refilled 5 times within 6 mo from date of issue if authorized by prescriber. Telephone orders are acceptable.

## Schedule IV (C-IV)

Less abuse potential than Schedule III with minimal liability for physical or psychological dependence (certain sedative/hypnotics, certain antianxiety agents, some barbiturates, benzodiazepines, chloral hydrate, pentazocine, and propoxyphene). Outpatient prescriptions can be refilled 6 times within 6 mo from date of issue if authorized by prescriber. Telephone orders are acceptable.

## Schedule V (C-V)

Minimal abuse potential. Number of outpatient refills determined by prescriber. Some products (cough suppressants with small amounts of codeine, antidiarrheals containing paregoric) may be available without prescription to patients >18 yr of age.

APPENDIX K

# Equianalgesic Dosing Guidelines

## OPIOID ANALGESICS STARTING ORAL DOSE COMMONLY USED FOR SEVERE PAIN

| NAME | EQUIANALGESIC DOSE | | STARTING ORAL DOSE | | COMMENTS | PRECAUTIONS AND CONTRAINDICATIONS |
|---|---|---|---|---|---|---|
| | ORAL* | PARENTERAL† | ADULTS | CHILDREN | | |
| **a. Morphine-like agonists (mu agonists)** | | | | | | |
| morphine | 30 mg | 10 mg | 15–30 mg | 0.3 mg/kg | Standard of comparison for opioid analgesics. Sustained release preparations (MS Contin, OramorphSR) release over 8–12 hr. Other formulations (Kadian and Avinza) last 12–24 hr. Generic sustained release morphine preparations are now available.) | For all opioids, caution in patients with impaired ventilation, bronchial asthma, increased intracranial pressure, liver failure. |
| hydromorphone (Dilaudid) | 7.5 mg | 1.5 mg | 4–8 mg | 0.06 mg/kg | Slightly shorter duration than morphine. | |
| fentanyl | | 0.1 mg | | | | |
| oxycodone | 20 mg | — | 10–20 mg | 0.3 mg/kg | | |
| methadone | 10 mg | 5 mg | 5–10 mg | 0.2 mg/kg | Good oral potency, long plasma half-life (24–36 hr). | Accumulates with repeated dosing, requiring decreases in dose size and frequency, especially on days 2–5. Use with caution in older adults. |
| levorphanol (Levodromoran) | 4 mg (acute), 1 mg (chronic) | 2 mg (acute), 1 mg (chronic) | 2–4 mg | 0.04 mg/kg | Long plasma half-life (12–16 hr, but may be as long as 90–120 hr after one wk of dosing). | Accumulates on days 2 and 3. Use with caution in older adults. |
| oxymorphone (Opana) | 10 mg | 1 mg | — | — | 5 mg rectal suppository ~5 mg morphine parenteral. | Like parenteral morphine. |

| NAME | EQUIANALGESIC DOSE ORAL* | EQUIANALGESIC DOSE PARENTERAL† | STARTING ORAL DOSE ADULTS | STARTING ORAL DOSE CHILDREN | COMMENTS | PRECAUTIONS AND CONTRAINDICATIONS |
|---|---|---|---|---|---|---|
| meperidine (Demerol) | Not recommended | Not recommended | Not Recommended | | Slightly shorter acting than morphine accumulates with repetitive dosing causing CNS excitation; avoid in children with impaired renal function or who are receiving monoamine oxidase inhibitors.‡ | Use with caution. Normeperidine (toxic metabolite) accumulates with repetitive dosing causing CNS excitation and a high risk of seizure. Avoid in children, renal impairment and patients on monoamine oxidase inhibitors.‡ |
| **b. Mixed agonists–antagonists (kappa agonists)** | | | | | | |
| nalbuphine (Nubain) | — | 10 mg | — | — | Not available orally, not scheduled under Controlled Substances Act. | Incidence of psychotomimetic effects lower than with pentazocine; may precipitate withdrawal in opioid-dependent patients. |
| butorphanol (Stadol) | — | 2 mg | — | — | Like nalbuphine. Also available in nasal spray. | Like nalbuphine. |
| pentazocine (Talwin) | 50 mg | 30 mg | — | — | | |
| **c. Partial agonist** | | | | | | |
| buprenorphine (Buprenex) | — | 0.4 mg | — | — | Lower abuse liability than morphine; does not produce psychotomimetic effects. Sublingual tablets now available both plain and with naloxone for opioid-dependent patient management for specially certified physicians. These tablets are not approved as analgesics. | May precipitate withdrawal in narcotic-dependent patients; not readily reversed by naloxone; avoid in labor. |

*Starting dose should be lower for older adults.
†These are standard parenteral doses for acute pain in adults and can also be used to convert doses for IV infusions and repeated small IV boluses. For single IV boluses, use half the IM dose. IV doses for children > 6 mo. = parenteral equianalgesic dose times weight (kg)/100.
‡Irritating to tissues with repeated IM injections.
Modified from *American Pain Society, Principles of Analgesic Use in the Treatment of Acute Pain and Cancer Pain*, ed.6. American Pain Society, 2008.

## GUIDELINES FOR PATIENT-CONTROLLED INTRAVENOUS OPIOID ADMINISTRATION FOR ADULTS WITH ACUTE PAIN

| DRUG | USUAL STARTING DOSE AFTER LOADING | USUAL DOSE RANGE | USUAL LOCKOUT (MIN) | USUAL LOCKOUT RANGE (MIN) |
|---|---|---|---|---|
| Morphine (1 mg/mL) | 1 mg | 0.5–2.5 mg | 8 | 5–10 |
| Hydromorphone (0.2 mg/mL) | 0.2 mg | 0.05–0.4 mg | 8 | 5–10 |
| Fentanyl (50 mcg/mL) | 20 mcg | 10–50 mcg | 6 | 5–8 |

*Standard concentrations for most PCA machines are listed in parentheses.
Modified from *American Pain Society, Principles of Analgesic Use in the Treatment of Acute Pain and Cancer Pain*, ed.6. American Pain Society, 2008.

## FENTANYL TRANSDERMAL DOSE BASED ON DAILY MORPHINE DOSE

| ORAL 24-HR MORPHINE (mg/day) | TRANSDERMAL FENTANYL (mg/day) | FENTANYL TRANSDERMAL (mcg/hr) |
|---|---|---|
| 30–90 | 0.6 | 25 |
| 91–150 | 1.2 | 50 |
| 151–210 | 1.8 | 75 |
| 211–270 | 2.4 | 100 |
| 271–330 | 3.0 | 125 |
| 331–390 | 3.6 | 150 |
| 391–450 | 4.2 | 175 |
| 451–510 | 4.8 | 200 |
| 511–570 | 5.4 | 225 |
| 571–630 | 6.0 | 250 |
| 631–690 | 6.6 | 275 |
| 691–750 | 7.2 | 300 |
| For each additional 60 mg/day | +0.6 | +25 |

*A 10-mg IM or 60-mg oral dose of morphine every 4 hr for 24 hr (total of 60 mg/day IM or 360 mg/day oral) was considered approximately equivalent to fentanyl transdermal 100 mcg/hr.

APPENDIX L

# Recommendations for the Safe Handling of Hazardous Drugs*

Hazardous Drugs (HDs) have toxic, carcinogenic, mutagenic, and/or teratogenic potential, may cause irritation to the skin, eyes, and mucous membranes, and may cause ulceration and necrosis of tissue. For these obvious reasons, health care workers must minimize their exposure to these chemicals. The U.S. Department of Labor, Occupational Safety & Health Administration (OSHA) has laid out very specific recommendations called Guidelines for the Safe Handling of Hazardous Drugs, which can be found at http://www.osha.gov/dts/osta/otm/otm_vi/otm_vi_2.html. Refer to this document and your facility's policy and procedure manuals for detailed recommendations.

## Means of Exposure

Exposure to HDs occurs during preparation and administration of these drugs or during patient care. Inhalation of aerosolized particles, accidental exposure to skin and eyes, and handling contaminated linens or equipment are the primary potential routes of exposure. Even when great care is taken, splattering, spraying, and aerosolization of HDs can occur when withdrawing the needle from a drug vial, opening an ampule, or expelling air from a syringe. Blood, body fluids, and excreta can contain HDs and expose staff to potentially dangerous amounts of hazardous drugs.

## Protecting Against Exposure

Preparation of HDs should occur in a specified area called a Biological Safety Cabinet (BSC). If a BSC is not available, the nurse or other staff member preparing an HD should wear a respirator with a high-efficiency filter and full face coverage or partial face coverage with splash goggles and a respirator. Staff should also wear protective gowns and don two sets of latex gloves. Tuck gloves in at the wrist (inner glove under cuff, outer glove over cuff).

Use aseptic technique when preparing the drug for administration and handle equipment carefully to prevent dripping, spraying, or other exposure. Once prepared, wipe bags or bottles with moist gauze to remove spray or spills and swab entry ports with alcohol. Label all syringes and IV bags with a warning label and standard labeling. If being transported, the bag, bottle, or vial should be packaged in a sealed plastic bag and placed inside a secure container. Excess solution should be discarded in a covered disposable container.

## Administration of HDs

Wear the same personal protective equipment (PPE) (gown, gloves, splash goggles) for administering the HD as for preparing it. Always wear a respirator when administering aerosolized drugs. In addition to wearing PPE, obtain the following equipment to use during administration: gauze for cleanup, alcohol wipes, disposable plastic-backed absorbent liner, puncture-resistant container (for needles/syringes), resealable plastic bag with warning label and other accessory warning labels.

*Controlling occupational exposure to hazardous drugs. OSHA Technical Manual. Section VI: Chapter 2. Available at http://www.osha.gov/dts/osta/otm/otm_vi_2.html. Accessed December 17, 2007.

## Caring for Patients Receiving HDs

The following precautions are recommended:

- Observe standard precautions.
- Wear gown and gloves when in the patient's room for 48 hr following administration of a hazardous drug.
- Wear eye protection if splashing is possible .
- Wear a gown and gloves when handling contaminated laundry. Bag contaminated linens separately .

## Managing Spills

Have spill kits available in areas where HDs are handled. The kit should include splash goggles, 2 pairs of gloves, utility gloves, gown, 2 sheets of absorbent material, spill-control pillows (2 sizes), "sharps" container, and 2 large HD disposal bags.

- Clean up spills only when properly protected and using the facility's procedure.
- Report area of spill to administrative staff.
- For small spills (less than 5 mL or 5 g), mop up liquids with absorbent gauze or use damp gauze to pick up solid contaminated material. Broken fragments should be picked up with a scoop and disposed in a sharps container. Wash the area three times with detergent followed by water.
- Isolate large spill areas and use absorbent sheets or spill-control pads . Use damp cloths if a powder is spilled. Spills greater than 150 mL (or 1 vial) require decontamination.

## If Exposure Occurs

Risk of injury can be minimized by following these steps:

- Immediately remove gloves and gown.
- Immediately wash the affected skin with soap and water.
- Flood eyes at eyewash fountain or flush with water or isotonic eyewash for at least 15 min.
- Obtain medical attention and follow protocols for specific exposure.
- Document exposure.

APPENDIX M

# Food Sources for Specific Nutrients

## Potassium-Rich Foods

artichoke
avocados
bananas
cantaloupe
cassava
dried fruits
grapefruit
honey dew
jack fruit
kiwi
kohlrabi
lima beans
mango
meats
milk
dried peas and beans
nuts
oranges/orange juice
papaya
peaches
pears
plantains
pomegranate
potatoes (white and sweet)
prunes/prune juice
pumpkin
rhubarb
salt substitute
spinach
sunflower seeds
Swiss chard
tomatoes/tomato juice
vegetable juice
winter squash

## Sodium-Rich Foods

baking mixes (pancakes, muffins)
barbecue sauce
buttermilk
butter/margarine
canned chili
canned seafood
canned soups
canned spaghetti sauce
cured meats
dry onion soup mix
"fast" foods
frozen dinners
macaroni and cheese
microwave dinners
Parmesan cheese
pickles
potato salad
pretzels, potato chips
salad dressings (prepared)
salt
sauerkraut
tomato ketchup

## Calcium-Rich Foods

broccoli
canned salmon/sardines
clams
cream soups
greens: collard and turnip
molasses (blackstrap)
oysters
refried beans
spinach
tofu

## Vitamin K-Rich Foods

asparagus
beans
broccoli
brussel sprouts
cabbage
cauliflower
collards
green tea
kale
milk
mustard greens
spinach
swiss chard
turnips
yogurt

## Low-Sodium Foods

baked or broiled poultry
canned pumpkin
cooked turnips
egg yolk
fresh vegetables
fruit
grits (not instant)
honey
jams and jellies
lean meats
low-calorie mayonnaise
macaroons
potatoes
puffed wheat and rice
red kidney and lima beans
sherbet
unsalted nuts
whiskey

## Foods That Acidify Urine

cheeses
corn
cranberries
eggs
fish
grains (breads and cereals)
lentils
meats
nuts (Brazil, filberts, walnuts)
pasta
plums
poultry
prunes
rice

## Foods That Alkalinize Urine

all fruits except cranberries, prunes, plums
all vegetables (except corn)
milk
nuts (almonds, chesnuts)

## Foods Containing Tyramine

aged cheeses (blue, Boursault, brick, Brie, Camembert, cheddar, Emmenthaler, Gruyère, mozzarella, Parmesan, Romano, Roquefort, Stilton, Swiss)
American processed cheese
avocados (especially over-ripe)
bananas
bean curd
beer and ale
caffeine-containing beverages (coffee, tea, colas)
caviar
chocolate
distilled spirits
fermented sausage (bologna, salami, pepperoni, summer sausage)
liver
meats prepared with tenderizer
miso soup
over-ripe fruit
peanuts
raisins
raspberries
red wine (especially Chianti)
sauerkraut
sherry
shrimp paste
smoked or pickled fish
soy sauce
vermouth
yeasts
yogurt

## Iron-Rich Foods

cereals
clams
dried beans and peas
dried fruit
leafy green vegetables
lean red meats
molasses (blackstrap)
organ meats

## Vitamin D-Rich Foods

canned salmon, sardines, tuna
cereals
fish
fish liver oils
fortified milk
nonfat dry milk

APPENDIX N

# Insulins and Insulin Therapy

The goal of therapy for diabetic patients is to provide insulin coverage that most closely resembles endogenous insulin production and results in the best glycemic control without hypoglycemia. Although daytime control of hyperglycemia may be accomplished with bolus doses of rapid-acting insulin analogs, elevations in fasting glucose may remain a problem. If fasting blood glucose levels remain elevated, the basal insulin dose (intermediate or long-acting) may have to be adjusted.

Most insulins used today are recombinant DNA human insulins. Produced through genetic engineering, synthetic human insulin is "manufactured" by yeast or nonpathogenic *E. coli*. In recent years, pharmaceutical companies have developed several new types and formulations of insulin.

Different insulins are distinguished by how quickly they are absorbed, the time and length of peak activity, and overall duration of action. Onset, peak, and duration of action times are approximate and vary according to individual factors such as injection site, blood supply, concurrent illnesses, lifestyle, and exercise level. These factors can vary from patient to patient and can vary in any patient from day to day.

There are 4 kinds of insulins: rapid-acting, short-acting, intermediate-acting, and long-acting and premixed combinations.

## Rapid-Acting Insulins

Rapid-acting insulins are analogs of regular insulin. An analog is a chemical structure very similar to another but differing in one component. Humalog (lispro), Apidra (glulisine), and Novolog (aspart) are rapid-acting insulin analogs. The amino acid sequences of these analogs are nearly identical to human insulin. They differ in the positioning of certain proteins, which allow them to enter the bloodstream rapidly—within 10 min of subcutaneous injection. This closely mimics the body's own insulin response and allows greater flexibility in eating schedules for diabetic patients. Also, because these insulins leave the bloodstream quickly, the risk of hypoglycemic episodes several hours after the meal is lessened. The peak time for rapid-acting insulins is 1–2 hr and the duration is 3–4 hr. Rapid-acting insulin solutions are clear. Both insulin aspart and insulin glulisine can be given intravenously.

## Short-Acting Insulin

Regular insulin is short-acting insulin and is available commercially as Humulin R or Novolin R. The onset of regular insulin is 0.5–1 hr; its peak activity occurs 2–3 hr after subcutaneous injection and its duration of action is 6–8 hr. This time/action profile makes rigid meal scheduling necessary, as the patient must estimate that a meal will occur within 45 min of injection. Short-acting insulin solutions are clear. Regular insulin can be given intravenously.

## Intermediate-Acting Insulins

Intermediate-acting insulin contain protamine, which delays onset, peak, and duration of action to provide basal insulin coverage. Basal insulins are given to control blood glucose levels throughout the day when not eating. Commercially, intermediate-acting insulins are available as Humulin N or Novolin N. (The "N" stands for NPH). Action starts between 1 and 4 hr after injecting. Peak activity occurs between 6 and 12 hr. Duration of action lasts 18–24 hr. The addition of protamine causes the cloudy appearance of intermediate-acting insulins and results in the formulation being a suspension rather than a solution. This is why these insulins must be gently mixed before administering. Intermediate-acting insulins can be mixed with short- or rapid-acting insulins to provide both basal and bolus coverage.

## Long-Acting Insulins

Long-acting insulins have the most delayed onset and the longest duration of all insulins. Products include Lantus (insulin glargine), and Levemir (insulin detemir). Peaks are not as prominent in long-acting insulins. In fact, insulin glargine has no real peak action because it forms slowly dissolving crystals in the subcutaneous tissue. The onset of action of insulin glargine is 1 hr after subcutaneous injection. Full activity occurs within 4 to 5 hr and remains constant for 24 hr. Even though insulin glargine and insulin detemir are clear solutions, neither can be diluted or mixed with any other insulin or solution. Mixing insulin glargine or insulin detemir with other insulin products can alter the onset of action and time to peak effect. If bolus insulin is to be given at the same time as insulin glargine or insulin detemir, two separate syringes and injection sites must be used.

## Combination Insulins

Various combinations of premixed insulins are available, containing fixed proportions of two different insulins, usually a short- and an intermediate-acting insulin. Typically the intermediate-acting insulin makes up 70% to 75% of the mixture, with rapid- or short- acting insulin making up the remainder. Onset, peak, and duration vary according to each specific product. Brand names of these products include Humulin 70/30 (70% NPH, 30% regular), Humalog Mix 75/25 (75% insulin lispro protamine suspension and 25% insulin lispro), Humalog Mix 50/50 (50% insulin lispro protamine suspension and 50% insulin lispro), and Novolin 70/30 (70% NPH, 30% regular), or Novolog 70/30 (70% insulin aspart protamine suspension and 30% insulin aspart).

| BRAND NAME | GENERIC NAME | TYPE OF INSULIN | ONSET/PEAK/DURATION |
|---|---|---|---|
| Apidra | insulin glulisine | Rapid-acting | <15 min/1–2 hr/3–4 hr |
| Humalog | insulin lispro | Rapid-acting | <15 min/1–2 hr/3–4 hr |
| Novolog | insulin aspart | Rapid-acting | <15 min/1–2 hr/3–4 hr |
| Humulin R | regular insulin | Short-acting | ½–1 hr/2–3 hr/3–6 hr |
| Novolin R | regular insulin | Short-acting | ½–1 hr/2–3 hr/3–6 hr |
| Humulin N | NPH | Intermediate-acting | 2–4 hr/4–10 hr/10–16 hr |
| Novolin N | NPH | Intermediate-acting | 2–4 hr/4–10 hr/10–16 hr |
| Levemir | insulin detemir | Long-acting | minimal peak; lasts up to 24 hr |
| Lantus | insulin glargine | Long-acting | no peak; lasts up to 24 hr |

APPENDIX O

# Canadian and U.S. Pharmaceutical Practices

In the United States and Canada, most drugs are prescribed and used similarly. However, certain processes and actions of the U.S. and Canadian pharmaceutical industries differ in significant ways, affecting both consumers and health care providers. Safety, marketing, and availability are three of these issues.

## Safety

Controversy related to the importation of medications from Canada by U.S. consumers has sometimes raised concerns about the safety of these drugs. These fears are unfounded; in fact, the Canadian approval and manufacturing processes are very similar to U.S. processes. Both countries have pharmaceutical-related standards, laws, and policies to ensure that chemical entities marketed for human diseases and conditions are safe and effective. The process of taking a new drug from the laboratory to the pharmacy shelves includes:

**Scientific development.** The process begins with research. Scientists develop a new molecular entity targeted at a specific disease, symptom, or condition.

**Patenting.** The manufacturer applies for a patent, which prevents other drug companies from manufacturing a chemically identical drug. Patent protection lasts 17 years in the United States and 20 years in Canada. After the patent expires, any manufacturer can make generic versions of the chemical; generics typically cost much less than the brand-name drug.

**Pre-clinical testing.** Before the drug is taken by human subjects, pre-clinical testing of the chemical is performed on animals. Testing helps identify drug action, toxicity effects, side effects, adverse reactions, dosage amounts and routes, and administration procedures. This phase can take 3 to 5 years.

**Permission to begin clinical testing.** Once the drug is found to have demonstrable positive health effects and to be safe for animals, the manufacturer applies for permission to begin clinical studies on human subjects. In the United States, this is called New Drug Application (NDA) and is administered by the Food and Drug Administration (FDA). In Canada, this is called a Clinical Trial Application (CTA) and is administered by Health Canada.

**Clinical trials.** Clinical trials are initiated to establish the potential benefits and risks for humans. Several sub-phases are required in the clinical trials phase whereby increasingly larger sample sizes are used.

- Phase 0: A new designation for first-in-human trials, which are designed to assess whether the drug affects humans in the manner expected.
- Phase I: Between 20 and 80 healthy volunteers are recruited to assess safety, tolerance, dosage ranges, pharmacokinetics, and pharmacodynamics.
- Phase II: Up to 300 patients with the disease are enrolled to assess efficacy and toxicity. Variables from Phase I trials may also be assessed.
- Phase III: Between 1000 and 3000 patients are entered into a randomized, double-blind study designed to confirm effectiveness, compare the new treatment with existing treatments, and study side effects further.
- Phase IV: Ongoing surveillance of the drug after it receives approval and is marketed to assess for rare or long-term effects.

**Approval.** The results of the clinical studies are reviewed by Health Canada in Canada and by the FDA in the United States. These regulatory bodies assess every aspect of the drug, including the labeling. The approval process has been deemed excessively long by physicians and patients anxious to try new remedies for refractory or terminal diseases, and efforts have been made to shorten the process in both countries. Although approval times for new drugs were found to be significantly longer in Canada, it has been noted that significantly fewer drugs have been pulled from the market for safety reasons. Statistically, Canadians remove 2% of new drugs for safety reasons, whereas 3.6% of new drugs are taken off the market in the United States.[1]

**Marketing.** Once a drug has been approved, it can be prescribed to consumers or, if it does not require a prescription, purchased by them.

**Post-Marketing Surveillance.** More clinical data become available when the drug is marketed and used by many people for longer periods of time. Pharmacovigilance is the term used to refer to the process of ongoing assessment of a drug's safety and effectiveness during this phase.

## Differences Between Canadian and U.S. Drug Pricing and Marketing

One major difference between the two countries is pricing. In Canada, the Patented Medicine Prices Review Board (PMPRB) regulates the prices manufacturers can charge for prescription and nonprescription medicines. This is to ensure that prices are not excessive. No such controls exist in the United States, which is why many citizens purchase their medications from Canadian online pharmacies. One study found that U.S. citizens can save approximately 24% if they buy their medications from Canadian pharmacies rather than from a U.S. chain pharmacy.[2]

Another difference is in advertising. In the United States, manufacturers can market drugs directly, and forcefully, to consumers, a controversial privilege that has resulted in consumers requesting specific medications despite not necessarily understanding the complete risks and benefits. In Canada, such advertising is limited and subject to the approval of the Advertising Standards Canada (ASC) agency and the Pharmaceutical Advertising Advisory Board (PAAB). To address this issue in the United States, the Institute of Medicine (IOM) has recommended that the FDA ban direct-to-consumer advertising for the first 2 years after a drug is marketed. Such a delay may help to prevent large numbers of people experiencing side effects not observed in the clinical trials, such as occurred with sildenafil (Viagra) when several patients died or developed vision problems in the first months after marketing began.

## Drug Schedule, Availability, and Pregnancy Category Differences

Most Canadian provinces (with the exception of Québec) use drug schedules similar to U.S. schedules of controlled substances. Canada uses four categories, whereas the United States uses five (see Appendix J for controlled substance schedules). The Canadian drug schedules are:

- **Schedule I:** Available only by prescription and provided by a pharmacist.
- **Schedule II:** Available only from a pharmacist; must be kept in an area with no public access.
- **Schedule III:** Available via open access in a pharmacy (over-the-counter).
- **Unscheduled:** Can be sold in any store without professional supervision.

Another difference is in availability. Some potentially dangerous drugs—such as heparin, insulin, and codeine-containing cough medicines—are available only with a prescription in the United States but are available over-the-counter in Canada. Similarly, some Canadian drugs are available in combinations not found in the United States (see Appendix B for new Canadian combination drugs).
Although Canada currently does not have pregnancy categories like the United States, it is developing them. Canadian prescribers practice under the premise that no drug should be given to a pregnant woman unless the benefits to the mother clearly outweigh the potential risks to the fetus. Canadian health care providers may refer to a drug's FDA pregnancy category for guidance (see Appendix I).

APPENDIX P

# Routine Pediatric and Adult Immunizations

Immunization recommendations change frequently. For the latest recommendations see http://www.cdc.gov/nip.

## ROUTINE PEDIATRIC IMMUNIZATIONS (0–18 yr)

| GENERIC NAME (BRAND NAMES) | ROUTE/DOSAGE | CONTRAINDICATIONS/ PRECAUTIONS | ADVERSE REACTIONS/SIDE EFFECTS | NOTES |
|---|---|---|---|---|
| Diphtheria toxoid, tetanus toxoid, and acellular pertussis vaccine (DTaP, Daptacel, Infanrix, Tripedia) | 0.5 mL IM at 2, 4, 6, 15–18 mo and 4–6 yr (1st dose may be given as early as age 6 wk; 4th dose may be given at 12 mo). | Acute infection; previous CNS damage; convulsions. | Redness, tenderness, induration at site; fever; malaise; myalgia; urticaria; hypotension; neurologic reactions; allergic reactions (all less than with DTwP). | Individual components may be given as separate injections if unusual reactions occur. |
| Tetanus toxoid, **reduced** diphtheria toxoid, and acellular pertussis vaccine absorbed (Tdap, Adacell, Boostrix) | 0.5 mL IM given at age 11–12 yr if 5 yr have elapsed since last dose of DTaP; one-time dose may be given to all adolescents who have not received previous Tdap. | Previous reactions to DTaP; progressive neurological disease; recent (within 7 days) CNS pathology. | Fatigue, headache, gastrointestinal symptoms, pain at injection site. | Pertussis protection in addition to diphtheria and tetanus designed to protect against older children becoming ill with pertussis from passing it on to very young unprotected children in whom the disease has heightened morbidity. |
| Polio vaccine, inactivated (IPV, IPOL, Poliovax) | 0.5 mL IM or subcut at 2, 4, and 6–18 mo and at 4–6 yr (1st dose may be given as early as age 6 wk). | Hypersensitivity to neomycin, streptomycin, or polymyxin B; acute febrile illness; pregnancy. | Erythema, induration, pain at injection site; fever. | Oral polio vaccine (OPV) is no longer recommended for use in the United States. |
| Measles, mumps, and rubella vaccines (M-M-R II) | 0.5 mL subcut at 12–15 mo and at 4–6 yr. | Allergy to egg, gelatin, or neomycin; active infection; severe immunosuppression (in the absence of severe immunosuppression, HIV is not a contraindication); pregnancy. | Burning, stinging, pain at injection site; arthritis/arthralgia; fever; encephalitis; allergic reactions. | If unusual reactions occur, individual components may be given as separate injections. Immunosupression may ↓ antibody response to injection and ↑ the risk of viral transmission. |

| GENERIC NAME (BRAND NAMES) | ROUTE/DOSAGE | CONTRAINDICATIONS/ PRECAUTIONS | ADVERSE REACTIONS/SIDE EFFECTS | NOTES |
|---|---|---|---|---|
| Haemophilus b conjugate vaccine (Hib, PedvaxHIB, ActHIB, Hiberix) | *ActHIB*—0.5 mL IM at 2, 4, and 6 mo, with a booster at 12–15 mo; *PedvaxHIB*—0.5 mL IM at 2 and 4 mo, with a booster dose at 12–15 mo; *Hiberix*—can only be used for the booster dose (any of the products can be used for the booster dose). | If co-administered with other immunizations, consider contraindications of all products. | Induration, erythema, tenderness at injection site; fever. | |
| Hepatitis B vaccine (HepB, Engerix-B, Recombivax HB) | 0.5 mL IM at 0, 1–2, and 6–18 mo. Dose is same for patients age 0–19 yr. *Infants born to HBsAg-positive mothers:* Administer 0.5 mL of hepatitis B immune globulin IM and 1st dose of hepatitis B vaccine; give 2nd and 3rd doses of hepatitis B vaccine at 1 mo and 6 mo, respectively. | Hypersensitivity to yeast. | Local soreness. | A 2-dose series (separated by ≥4 mo) of the adult formulation (Recombivax HB) can be used in children 11–15 yr. |
| Meningococcal conjugate vaccine (MCV4, Menactra) | 0.5 mL IM single dose at 11-12 yr or at age 13–18 yr if not previously vaccinated. | Hypersensitivity to any components. | Fatigue, malaise, anorexia, pain at injection site. | Routine vaccination with meningococcal vaccine also is recommended for college freshmen living in dormitories who are previously unvaccinated and children ≥2 yr who are at high risk (anatomic or functional asplenia; persistent complement component deficiency; travel or reside in areas in which meningococcal disease is hyperendemic or epidemic). |
| Varicella vaccine (Var, Varivax) | 0.5 mL subcut at 12–15 mo and at 4–6 yr (2nd dose may be given earlier if ≥3 mo have elapsed since the 1st dose); for persons 7–18 yr who have not been vaccinated or without a history of chickenpox, 2 doses should be given (≥3 mo apart if 7–12 yr or ≥28 days apart if ≥13 yr). | Allergy to gelatin or neomycin; active infection; immunosuppression (including HIV); pregnancy. | Local soreness, fever. | Given to children and adolescents who do not have evidence of immunity. Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission. |

| GENERIC NAME (BRAND NAMES) | ROUTE/DOSAGE | CONTRAINDICATIONS/ PRECAUTIONS | ADVERSE REACTIONS/SIDE EFFECTS | NOTES |
|---|---|---|---|---|
| Hepatitis A vaccine (HepA, Havrix, Vaqta) | Should be given to all children age 12–23 mo; give a total of 2 doses of pediatric formulation (each 0.5 mL) IM at least 6 mo apart. | Acute febrile illness | Local reactions, headache. | Also recommended in children ≥2 yr who live in areas with high rates of hepatitis A or are in other high-risk groups (e.g., chronic liver disease, clotting factor disorders, illicit drug users). |
| Pneumococcal conjugate vaccine (7–valent) (PCV, Prevnar) | 0.5 mL IM at 2, 4, 6, and 12–15 mo. | Hypersensitivity to all components including diphtheria toxoid; moderate to severe febrile illness. | Erythema induration, tenderness, nodule formation at injection site, fever. | One dose may also be given to previously unvaccinated healthy children age 24–59 mo. For high-risk children (e.g., sickle cell disease; anatomic or functional asplenia; chronic cardiac, pulmonary, or renal disease; diabetes; HIV; immunosuppression; cochlear implant) age 24–59 mo, give 2 doses (≥8 wk apart) if previously received <3 doses or 1 dose if previously received 3 doses. |
| Pneumococcal polysaccharide vaccine (PPSV, Pneumovax 23) | 0.5 mL IM or subcut ≥8 wk after final dose of PCV in high-risk children ≥2 yr (see Notes section for pneumococcal conjugate vaccine for definition of high risk). | Hypersensitivity to all components including diphtheria toxoid; moderate to severe febrile illness. | Erythema induration, tenderness, nodule formation at injection site, fever. | A 2nd dose may be given 5 yr later in children with immunosuppression, sickle cell disease, or anatomic/functional asplenia. |
| Influenza vaccine *injection (trivalent inactivated):* (Afluria, Fluarix, FluLaval, Fluvirin, Fluzone; *intranasal (live attenuated):* (FluMist) | ***Injection:*** *Age 6–35 mo:* 2 doses of 0.25 mL IM given 4 wk apart for initial season, then one dose annually. *Age 3–8 yr:* 2 doses of 0.5 mL IM given 4 wk apart for initial season, then one dose annually. *Age ≥9 yr:* 0.5 mL IM single dose annually.<br>**Intranasal:** *Age 2–8 yr:* If not previously vaccinated with influenza vaccine—2 doses of 0.2 mL (given as 0.1 mL in each nostril) 4 wk apart, then one dose annually. If previously vaccinated with influenza vaccine—1 dose of 0.2 mL (given as 0.1 mL in each nostril) annually. *Age ≥9 yr:* 1 dose of 0.2 mL (given as 0.1 mL dose in each nostril) annually. | Hypersensitivity to eggs/egg products. Hypersensitivity to thimerosal (injection only). Avoid use in patients with acute neurologic compromise. Fluvirin should only be used in children ≥4 yr. Fluarix should only be used in children ≥3 yr. FluMist should be avoided in pregnancy; chronic pulmonary (including asthma), cardiovascular (not hypertension), renal, hepatic, neurological, hematologic, or metabolic (including diabetes) disorders; immunosuppression (including HIV); chronic salicylate therapy (children 6 mo–18 yr). | *Injection:* local soreness, fever, myalgia, possible neurologic toxicity. *Intranasal:* upper respiratory congestion, malaise. | Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission with intranasal route. |

| GENERIC NAME (BRAND NAMES) | ROUTE/DOSAGE | CONTRAINDICATIONS/ PRECAUTIONS | ADVERSE REACTIONS/SIDE EFFECTS | NOTES |
|---|---|---|---|---|
| Human papillomavirus vaccine (HPV, Gardasil) | 0.5 mL IM in males and females age 9–26 yr, repeat at 2 and 6 mo after 1st dose. | Hypersensitivity to yeast; pregnancy. | Headache, dizziness, fever, nausea, diarrhea, syncope, local soreness. | Used to prevent cervical, vulvar, and vaginal cancer caused by HPV types 16 and 18 in females and to prevent genital warts caused by HPV types 6 and 11 in males and females. |
| Rotavirus vaccine (RV, Rotarix [RV1], RotaTeq [RV5]) | *Rotarix*—1 mL PO at 2 and 4 mo; *RotaTeq*—2 mL PO at 2, 4, and 6 mo. First dose of either product may be given as early as age 6 wk; final dose should be given no later than age 8 mo. | History of uncorrected congenital malformation of GI tract (Rotarix). | Fever, irritability, diarrhea, vomiting. | Series should not be started in infants older than 15 wk. |

**Nursing Implications:**

**Assessment**

Assess previous immunization history and history of hypersensitivity.

Assess for history of latex allergy. Some prefilled syringes may use latex components and should be avoided in those with hypersensitivity.

**Potential Nursing Diagnoses**

Infection, risk for (Indications).

Knowledge, deficient, related to medication regimen (Patient/Family Teaching).

**Implementation**

Measles, mumps, and rubella vaccine; trivalent oral poliovirus vaccine; and diphtheria toxoid, tetanus toxoid, and pertussis vaccine may be given concomitantly.

Do not administer FluMist concurrently with other vaccines, or in patients who have received a live virus vaccine within 1 mo or an inactivated vaccine within 2 wk of vaccination.

Administer each immunization by appropriate route:

**PO:** Rotavirus.

**Subcut:** measles, mumps, rubella, polio, varicella, pneumococcal polysaccharide.

**IM:** diphtheria, tetanus toxoid, pertussis, polio, Haemophilus b, hepatitis B, meningococcal conjugate, hepatitis A, pneumococcal conjugate, pneumococcal polysaccharide, influenza injection, human papillomavirus.

**Intranasal:** FluMist.

**Patient/Family Teaching**

Inform parent of potential and reportable side effects of immunization. Notify health care professional if patient develops fever higher than 39.4°C (103°F); difficulty breathing; hives; itching; swelling of eyes, face, or inside of nose; sudden, severe tiredness or weakness; or convulsions.

Review next scheduled immunization with parent.

**Evaluation**

Prevention of diseases through active immunity.

## ROUTINE ADULT IMMUNIZATIONS

| GENERIC NAME (BRAND NAMES) | INDICATIONS | DOSAGE/ROUTE | CONTRAINDICATIONS | ADVERSE REACTIONS/SIDE EFFECTS |
|---|---|---|---|---|
| Hepatitis A vaccine (HepA, Havrix, Vaqta*) | High-risk groups (e.g., chronic liver disease, clotting factor disorders, illicit drug users, men who have sex with men, some health care workers, food handlers); travel to endemic areas; recent (<2 wk) exposure to HepA (if ≤40 yr). | 1 mL IM, followed by 1 mL IM 6–18 mo later (adult dose form). | Hypersensitivity to alum or 2-phenoxyethanol. | Local reactions, headache. |
| Hepatitis B vaccine (HepB, Engerix-B, Recombivax HB) | High-risk patients (e.g., household contacts or sex partners of HBsAg-positive persons, IV drug users, sexually active persons not in a monogamous relationship, men who have sex with men, HIV, STDs, hemodialysis, health care workers, inmates); chronic liver disease; all unvaccinated adolescents. | 3 doses of 1 mL IM, given at 0, 1–2, and 4–6 mo. | Anaphylactic allergy to yeast. | Local soreness. |
| Human papillomavirus vaccine (HPV, Gardasil) | All previously unvaccinated women through age 26 yr. Also recommended for males through age 26 yr for prevention of genital warts caused by HPV types 6 and 11. | 0.5 mL IM, repeat at 2 and 6 mo after initial dose. | Hypersensitivity to yeast; pregnancy. | Headache, dizziness, fever, nausea, diarrhea, syncope, local soreness. |
| Influenza vaccine *injection (trivalent inactivated):* (Afluria, Fluarix, FluLaval, Fluvirin, Fluzone); *intranasal (live attenuated):* (FluMist) | All adults. | *Injection:* 0.5 mL IM annually. *Intranasal (for adults <50 yr):* Single 0.2 mL dose (given as 0.1 mL in each nostril) annually. | Hypersensitivity to eggs/egg products. Hypersensitivity to thimerosal (injection only). Patients with acute neurologic compromise. FluMist should be avoided in pregnancy; chronic pulmonary (including asthma), cardiovascular (not hypertension), renal, hepatic, neurological, hematologic, or metabolic (including diabetes) disorders; immunosuppression (including HIV); age ≥50 yr. | *Injection:* local soreness, fever myalgia, possible neurologic toxicity. *Intranasal:* upper respiratory congestion, malaise. Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission with intranasal route. |

| GENERIC NAME (BRAND NAMES) | INDICATIONS | DOSAGE/ROUTE | CONTRAINDICATIONS | ADVERSE REACTIONS/SIDE EFFECTS |
|---|---|---|---|---|
| Measles, mumps, and rubella vaccines (M-M-R II) | Adults born in 1957 or later with unreliable history of MMR illness or immunization; high-risk groups (e.g., health care workers, college students, international travelers); women of childbearing age (with no evidence of rubella immunity or immunization). | 0.5 mL subcut, 1 or 2 doses in adults born in 1957 or later with unreliable history; high–risk groups should receive a total of 2 doses given 1 mo apart. | Allergy to egg, gelatin, or neomycin; active infection; severe immunosuppression (in the absence of severe immunosuppression, HIV is not a contraindication); pregnancy (also avoid becoming pregnant for 4 wk after immunization). | Burning, stinging, pain at injection site; arthritis/arthralgia; fever; encephalitis; allergic reactions. Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission. |
| Meningococcal conjugate vaccine (MCV4, Menactra) | College freshmen living in dormitories who are previously unvaccinated; anatomic or functional asplenia; persistent complement component deficiency; travel or reside in areas in which meningococcal disease is hyperendemic or epidemic). | 0.5 mL IM single dose. Revaccination with MCV4 is indicated in patients previously vaccinated with MCV4 or meningococcal polysaccharide vaccine (MPSV4) and who also remain at ↑ risk for infection (revaccinate after 5 yr of previous dose) | Hypersensitivity to any components. | Fatigue, malaise, anorexia, pain at injection site. |
| Pneumococcal polysaccharide vaccine (PPSV, Pneumovax 23) | All adults ≥65 yr; high-risk patients (e.g., chronic cardiac or pulmonary disease [including asthma], chronic liver disease, alcoholism, diabetes, cigarette smoker, anatomic or functional asplenia, sickle cell disease; immunosuppression (including HIV), cochlear implants). | 0.5 mL IM or subcut; one-time revaccination should also be given ≥5 yr after 1st dose to those ≥65 yr (if 1st dose was given before age 65) and to high-risk patients. | Hypersensitivity to all components including diphtheria toxoid. | Erythema induration, tenderness, nodule formation at injection site, fever. |
| Tetanus toxoid, **reduced** diphtheria toxoid and acellular pertussis vaccine absorbed (Tdap, Adacell, Boostrix) | Single dose should be given instead of Td in adults (19–64 yr) if they received their last dose of Td ≥10 yr ago (and did not previously receive a dose of Tdap). | 0.5 mL IM to replace one dose of DTaP. | Previous reactions to DTaP; progressive neurological disease; recent (within 7 days) CNS pathology. | Fatigue, headache, gastrointestinal symptoms, pain at injection site |

| GENERIC NAME (BRAND NAMES) | INDICATIONS | DOSAGE/ROUTE | CONTRAINDICATIONS | ADVERSE REACTIONS/SIDE EFFECTS |
|---|---|---|---|---|
| Tetanus-diphtheria (Td, Decavac) | All adults who lack written documentation of a primary series consisting of ≥3 doses of tetanus– and diphtheria–toxoid–containing vaccine; booster dose should be given to all adults every 10 yr (see info above regarding use of Tdap to replace one dose of Td in booster series). | *Unimmunized:* 2 doses 0.5 mL IM 1–2 mo apart, then a 3rd dose 6–12 mo later; *immunized:* 0.5 mL IM booster every 10 yr. | Neurologic or severe hypersensitivity reaction to prior dose. | Local pain and swelling. |
| Varicella vaccine (Var, Varivax) | Any adult without a history of chickenpox or herpes zoster (shingles), a history of receiving 2 doses of varicella vaccine, or laboratory evidence of immunity. Health care workers and pregnant women born in U.S. before 1980 who do not meet the above criteria should be tested for immunity. | 0.5 mL subcut; repeated 4–8 wk later. | Allergy to gelatin or neomycin; active infection; immunosuppression (including HIV); pregnancy (also avoid becoming pregnant for 4 wk after immunization). | Local soreness, fever. Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission. |
| Zoster vaccine (Zos, Zostavax) | All adults ≥60 yr (regardless of previous history of chickenpox or herpes zoster). | 0.65 mL subcut single dose. | Allergy to gelatin or neomycin; active infection; immunosuppression (including HIV); pregnancy. | Local soreness, fever. Immunosuppression may ↓ antibody response to injection and ↑ the risk of viral transmission. |

*Less commonly used vaccines are not included.

APPENDIX Q

# Administering Medications to Children

## General Guidelines

Medication administration to a pediatric patient can be challenging. Prescribers should order dosage forms that are age appropriate for their patients. If a child is unable to take a particular dosage form, ask the pharmacist if another form is available or for other options.

## Oral Liquids

Pediatric liquid medicines may be given with plastic medicine cups, oral syringes, oral droppers, or cylindrical dosing spoons. Parents should be taught to use these calibrated devices rather than using household utensils. If a medicine comes with a particular measuring device, do not use it with another product. For young children, it is best to squirt a little of the dose at a time into the side of the cheek away from the bitter taste buds at the back of the tongue.

## Eye Drops/Ointments

Tilt the child's head back and gently press the skin under the lower eyelid and pull the lower lid away slightly until a small pouch is visible. Insert the ointment or drop (1 at a time) and close the eye for a few minutes to keep the medicine in the eye.

## Ear Drops

Shake otic suspensions well before administration. For children <3 yr, pull the outer ear outward and downward before instilling drops. For children ≥3 yr, pull the outer ear outward and upward. Keep child on side for 2 min and instill a cotton plug into ear.

## Nose Drops

Clear nose of secretions prior to use. A nasal aspirator (bulb syringe) or a cotton swab may be used in infants and young children. Ask older children to blow their nose. Tilt child's head back over a pillow and squeeze dropper without touching the nostril. Keep child's head back for 2 min.

## Suppositories

Keep refrigerated for easier administration. Wearing gloves, moisten the rounded end with water or petroleum jelly prior to insertion. Using your pinky finger for children <3 yr and your index finger for those ≥3 yr, insert the suppository into the rectum about ½ to 1 inch beyond the sphincter. If the suppository slides out, insert it a little farther than before. Hold the buttocks together for a few minutes and have the child hold their position for about 20 min, if possible.

## Topicals

Clean affected area and dry well prior to application. Apply a thin layer to the skin and rub in gently. Do not apply coverings over the area unless instructed to do so by the prescriber.

## Metered-Dose Inhalers

Generally the same principles apply in children as in adults, except the use of spacers is recommended for young children (see Appendix D).

APPENDIX R

# Pediatric Dosage Calculations

Most drugs in children are dosed according to body weight (mg/kg) or body surface area (BSA) (mg/$m^2$). Care must be taken to properly convert body weight from pounds to kilograms (1 kg = 2.2 lb) before calculating doses based on body weight. Doses are often expressed as mg/kg/day or mg/kg/dose, therefore orders written "mg/kg/d" which is confusing, *require further clarification from the prescriber*.

Chemotherapeutic drugs are commonly dosed according to body surface area which requires an extra verification step (BSA calculation) prior to dosing. Medications are available in multiple concentrations, therefore *orders written in "mL" rather than "mg" are not acceptable and require further clarification*.

Dosing also varies by indication, therefore diagnostic information is helpful when calculating doses. The following examples are typically encountered when dosing medication in children.

## Example 1.

Calculate the dose of amoxicillin suspension in mLs for otitis media for a 1-yr-old child weighing 22 lb. The dose required is 40 mg/kg/day divided BID and the suspension comes in a concentration of 400 mg/5 mL.

| | |
|---|---|
| Step 1. Convert pounds to kg: | 22 lb × 1 kg/2.2 lb = 10 kg |
| Step 2. Calculate the dose in mg: | 10 kg × 40 mg/kg/day = 400 mg/day |
| Step 3. Divide the dose by the frequency: | 400 mg/day ÷ 2 (BID) = 200 mg/dose BID |
| Step 4. Convert the mg dose to mL: | 200 mg/dose ÷ 400 mg/5 mL = **2.5 mL BID** |

## Example 2.

Calculate the dose of ceftriaxone in mLs for meningitis for a 5-yr-old weighing 18 kg. The dose required is 100 mg/kg/day given IV once daily and the drug comes pre-diluted in a concentration of 40 mg/mL.

| | |
|---|---|
| Step 1. Calculate the dose in mg: | 18 kg × 100 mg/kg/day = 1800 mg/day |
| Step 2. Divide the dose by the frequency: | 1800 mg/day ÷ 1 (daily) = 1800 mg/dose |
| Step 3. Convert the mg dose to mL: | 1800 mg/dose ÷ 40 mg/mL = **45 mL once daily** |

## Example 3.

Calculate the dose of vincristine in mLs for a 4-yr-old with leukemia weighing 37 lb and is 97 cm tall. The dose required in 2 mg/$m^2$ and the drug comes in 1 mg/mL concentration.

| | |
|---|---|
| Step 1. Convert pounds to kg: | 37 lb × 1 kg/2.2 lb = 16.8 kg |
| Step 2. Calculate BSA (see Appendix F): | $\sqrt{}$16.8 kg × 97 cm/3600 = 0.67 $m^2$ |
| Step 3. Calculate the dose in mg: | 2 mg/$m^2$ × 0.67 $m^2$ = 1.34 mg |
| Step 4. Calculate the dose in mL: | 1.34 mg ÷ 1 mg/mL = **1.34 mg** |

APPENDIX S

# Pediatric Fluid and Electrolyte Requirements

## How to calculate maintenance fluid requirements in children:

1. **Body Surface Area Method** (commonly used in children >10 kg):

$$1500–2000 \text{ mL/m}^2\text{/day} \div 24 = \text{fluid rate in mL/hr}$$

Example: Calculate maintenance fluids in mL/hr for a child with a BSA = 0.8 $m^2$.

Answer: $1500 \text{ mL/m}^2\text{/day} \times 0.8 \text{ m}^2 = 1200 \text{ mL/day} \div 24 \text{ hr} = 50 \text{ mL/hr}$
$2000 \text{ mL/m}^2\text{/day} \times 0.8 \text{ m}^2 = 1600 \text{ mL/day} \div 24 \text{ hr} = 66.6 \text{ mL/hr}$

Range: 50–66.6 mL/hr.

2. **Body Weight Method**

| | |
|---|---|
| <10 kg | 100 mL/kg/day |
| 11–20 kg | 1000 mL + 50 mL/kg for each kg >10 |
| >20 kg | 1500 mL + 20 mL/kg for each kg >20 |

Example: Calculate maintenance fluids in mL/hr for a child weighing 25 kg.

Answer: $1500 \text{ mL} + 20 \text{ mL/kg} \times 5 \text{ kg} = 1500 \text{ mL} + 100 \text{ mL} = 1600 \text{ mL}$
$1600 \text{ mL} \div 24 \text{ hr} = 66.6 \text{ mL/hr}$

## Daily Electrolyte Requirements in Children

| | |
|---|---|
| Sodium | 2–6 mEq/kg/day |
| Potassium | 2–4 mEq/kg/day |
| Calcium | 1–4 mEq/kg/day* |
| Magnesium | 0.3–0.5 mEq/kg/day |
| Phosphorous | 0.5–2 mmol/kg/day* |

*Neonates may require the higher end of the calcium and phosphorous dosage range due to rapid bone development.

## Conditions that May Alter Fluid Requirements in Children

**Fever**
**Hyperventilation**
**Sweating**
**Hyperthyroidism**
**Renal failure**
**Diarrhea**

## Oral Rehydration Therapy (ORT)

ORT is as effective as IV therapy in managing fluid and electrolytes in children with mild to moderate dehydration due to diarrhea. Commercially available premixed ORT solutions typically contain low concentrations of glucose (2–3%), 45–75 mEq/L sodium, 20–25 mEq/L potassium, 30–35 mEq/L of citrate (bicarbonate source). Low sugar content provides little caloric support but facilitates intestinal sodium and water absorption. All commercially available ORT solutions are equally safe and effective, and are preferred over household remedies (e.g., colas, juices, chicken broth) which are not formulated based on the physiology of acute diarrhea.

APPENDIX T

# Early Management of Anaphylactic Reactions

1. **Discontinue suspected drug.**
   (stop IV, tourniquet IM or subcut site.)

2. **Maintain airway.**
   Aminophylline or other bronchodilators may be required for severe respiratory distress.

3. **Administer *epinephrine*.**
   **IM, Subcut (Adults):** 0.3–0.5 mg, may repeat q 5–15 min
   **IM, Subcut (Children):** 0.01 mg/kg, or 0.1 mg may repeat q 5–15 min
   **IV (Adults):** 0.1 mg over 5 min or 1–4 mcg/min infusion
   **IV (Children):** 0.01 mg/kg/dose or 0.1–0.2 mg over 5 min, may repeat q 30 min or 0.1–1.5 mcg (maximum)/kg/min infusion

4. **Administer *antihistamines*.**
   May prevent recurrence and decrease intensity of reaction.
   ***diphenhydramine*** (Benadryl)
   **IM, IV (Adults):** 50–100 mg single dose, may follow with 50 mg every 6 hr for 1–2 days
   **IM, IV (Children):** 5 mg/kg/day in divided doses q 6–8 hr (not to exceed 300 mg/day), may follow with oral therapy for 1–2 days
   ***cimetidine*** (Tagamet)
   **IV (Adults):** 300 mg q 6 hr
   **IV (Children):** 25–30 mg/kg/day in 6 divided doses

5. **Support blood pressure.**
   If necessary, use fluids and/or vasopressors. Patients receiving beta blockers may be resistant to the effects of vasopressers.

6. **Administer corticosteroids.**
   (may decrease intensity of reaction.)
   ***hydrocortisone*** (Solu-Cortef)
   **IV (Adults and Children):** 100–1000 mg, may follow with 7 mg/kg/day IV or oral therapy for 1–2 days.

7. **Document reaction.**
   in medical record, inform patient/family to carry identification.

APPENDIX U

# The Cytochrome P450 System: What Is It and Why Should I Care?[1]

Looking beyond the obvious takes time, energy, insight, and fortitude; yet this is what we are called to do. We are nurses—tireless care providers. Yet, when the subject of the liver's enzyme system, also called the cytochrome P450 system, is discussed, we feel the urge to run the other way...or better yet, to just ignore the conversation. Yet, can we do this as the tireless care provider? The answer to this question is clear and simple: no, we cannot. This is because numerous medications, nutrients, and herbal therapies are metabolized through the cytochrome P450 (CYP450) enzyme system. This system can be inhibited or induced by drugs, and once altered can be clinically significant in the development of drug-drug interactions that may cause unanticipated adverse reactions or therapeutic failures. This article will review the basic concepts of the CYP450 system and relate these concepts to clinically significant altered responses.

The CYP450 enzymes are essential for the production of numerous agents including cholesterol and steroids. Additionally, these enzymes are necessary for the detoxification of foreign chemicals and the metabolism of drugs. CYP450 enzymes are so named because they are bound to membranes within a cell (cyto) and contain a heme pigment (chrome and P) that absorbs light at a wavelength of 450 nm when exposed to carbon monoxide.[2] There are more than 50 CYP450 enzymes, but the CYP1A2, CYP2C19, CYP2D6, CYP1A2, CYP3A4, and CYP3A5 enzymes are responsible for metabolizing 45% of drug metabolism. The CYP2D6 (20–30%), the CYP2C9 (10%) and the CYP2E1 and CYP1A2 (5%) complete this enzyme system.[3]

Drugs that cause CYP450 drug interactions are referred to as either inhibitors or inducers. An inducing agent can increase the rate of another drug's metabolism by as much as two- to threefold which develops over a period of a week. When an inducing agent is prescribed with another medication, the dosage of the other medication may need to be adjusted since the rate of metabolism is increased and the effect of the medication reduced. This can lead to a therapeutic failure of the medication. Conversely, if a medication is taken with an agent that inhibits it metabolism, then the drug level can rise and possibly result in a harmful or adverse effect. Information regarding a drug's CYP450 metabolism and its potential for inhibition or induction can be found on the drug label and accessed through the U.S. Food and Drug Administration (FDA) or manufacturer's websites.[2]

When we assess our patients and provide management modalities, these are implemented within a framework of the patient's heritage, race, and culture. This is also true in pharmacology as well (i.e., "pharmacogenetics"). This concept is important to examine since we know that there exists genetic variability, which may influence a patient's response to commonly prescribed drug classes. This genetic variability can be defined as polymorphism. Seven percent of Caucasians and two to seven percent of African Americans are poor metabolizers of drugs dependent on CYP2D6, which metabolizes many beta blockers, antidepressants, and opioids. This is because the drug's metabolism via CYP450 enzymes exhibits genetic variability.[2]

Recently, researchers have studied the genetic variability in metabolism among women who were prescribed tamoxifen and medications that inhibit the CYP2D6 enzyme. To review, tamoxifen is biotransformed to the potent anti-estrogen, endoxifen, by this enzyme. CYP2D6 genetic variation (individuals considered extensive metabolizers versus poor metabolizers) and inhibitors of the enzyme markedly reduce endoxifen plasma concentrations in tamoxifen-treated patients.

The researchers concluded that CYP2D6 metabolism is an "independent predictor of breast cancer outcome in post-menopausal women receiving tamoxifen for early breast cancer. Determination of CYP2D6 genotype may be of value in selecting adjuvant hormonal therapy and it appears CYP2D6 inhibitors should be avoided in tamoxifen-treated women".[4] Do oncology patients come to us with only their cancer and its treatment? No, they come with multifaceted dimensions and co-morbid conditions such as hypertension, dyslipidemia, depression, seizure disorders, etc. For example, several antidepressants (paroxetine [Paxil] and fluoxetine [Prozac]) are inhibitors of metabolism when given with drugs me-

tabolized through the CYP2D6 enzyme, such as haloperidol (Haldol), metoprolol (Lopressor), and hydrocodone. Thus, the therapeutic response can be accentuated. Medications that inhibit the CYP3A4 enzyme such as amiodarone and antifungals, can affect the therapeutic response of fentanyl, alprazolam (Xanax), and numerous statins; as a result, the effect of these drugs can be enhanced leading to potential toxic levels.[5]

At times, these CYP 450 inducers and inhibitors are commonly ingested items such grapefruit juice and tobacco. In the case of grapefruit juice, there are numerous medications known to interact with grapefruit juice including statins, antiarrhythmic agents, immunosuppressive agents, and calcium channel blockers. Furthermore, the inhibition of the enzyme system seems to be dose dependent; thus, the more a patient drinks, the more the inhibition that occurs. Additionally, the effects can last for several days if grapefruit juice is consumed on a regular basis. Luckily, the effect of this is not seen with other citrus juices.

Hopefully, this brief review has opened the door to your inquisitive nature on how the liver's enzyme system is effected by numerous medications and why some patients experience clinically significant unanticipated adverse reactions or therapeutic failures.

| **CYP1A2** | | |
|---|---|---|
| **Substrates** | **Inhibitors** | **Inducers** |
| Alosetron, Amitriptyline, Clozapine, Cyclobenzaprine, Desipramine, Diazepam, Fluvoxamine, Imipramine, Mexiletine, Mirtazapine, Olanzapine, Propranolol, Ropinirole, Theophylline, (R)-Warfarin | Cimetidine, Ciprofloxacin, Fluvoxamine, Ketoconazole, Lidocaine, Mexiletine | Carbamazepine, Cigarette smoke, Phenobarbital, Rifampin |

# Measurement Conversion Table

## Metric System Equivalents

1 gram (g) = 1000 milligrams (mg)
1000 grams = 1 kilogram (kg)
.001 milligram = 1 microgram (mcg)
1 liter (L) = 1000 milliliters (ml)
1 milliliter = 1 cubic centimeter (cc)
1 meter = 100 centimeters (cm)
1 meter = 1000 millimeters (mm)

## Conversion Equivalents

***Volume***

1 milliliter = 15 minims (M) = 15 drops (gtt)

5 milliliters = 1 fluidram = 1 teaspoon (tsp)

15 milliliters = 4 fluidrams = 1 tablespoon (T)

30 milliliters = 1 ounce (oz) =2 tablespoons

500 milliliters = 1 pint (pt)

1000 milliliters = 1 quart (qt)

***Weight***

1 kilogram = 2.2 pounds (lb)
1 gram (g) = 1000 milligrams = 15 grains (gr)
0.6 gram= 600 milligrams = 10 grains
0.5 gram= 500 milligrams = 7.5 grains
0.3 gram= 300 milligrams = 5 grains
0.06 gram= 60 milligrams = 1 grain

***Length***

2.5 centimeters = 1 inch

## Centigrade/Fahrenheit Conversions

$C = (F - 32) \times {}^{5}/_{9}$
$F = (C \times {}^{9}/_{5}) + 32$
